Not offered 1962–63. Statistical methods applied to analysis of production, supply, and demand; utility and disutility; interest and taxation; exchange. Emphasis on interpretation of results in terms of probability, correlation, and regression of time series. Admission by permission of the instructor.

205–6 *Advanced Business and Economic Statistics* (3–3)
Not offered 1962–63. Application of statistical methods to specific problems utilizing case method when possible. Emphasis on source materials, role of statistical methods, techniques of analysis, interpretation and presentation of results. Original work is required of each student. Prerequisite: Statistics 112 or the equivalent.

207 *Operations Analysis* (3) Bright
Fall—evening. Basic concepts and techniques of operations analysis as applied to problems in business management and economic research. An introduction to the processes of linear programming, game theory, and queueing theory. Admission by permission of the instructor.

211 *Theory of Sampling* (3) Bright
Spring—evening. Problems of sampling and sample design. Admission by permission of the instructor.

212 *Nonparametric Statistical Inference* (3)
Not offered 1962–63. Spring—1964. Statistical inference when the form of the underlying distribution is unknown; sign tests; rank order statistics; theory of runs; nonparametric discriminant analysis.

217 *Analysis of Variance II* (3)
Not offered 1962–63. Advanced theory of the applications of the linear hypothesis to research problems. Distributions of the analyses of variance. Extensions to multiple classifications with unequal cell frequencies. Studies of multiple contrasts and their importance. Normal versus non normal problems.

218 *Correlation and the Chi-square Test II* (3)
Not offered 1962–63. Spring 1965. Theoretical analysis of simple, partial, and multiple regression. Examination of various distributions encountered. Rank correlation techniques and their distributions. Distribution of the chi-square statistic.

257–58 *Advanced Mathematical Statistics* (3–3) Kupperman
Academic year—evening. Random variables and probability distributions, distribution functions and their properties, convergence theorems, regression and correlation, multivariate normal distribution, asymptotic and exact sampling distributions, estimation, hypothesis testing.

259–60 *Advanced Mathematical Probability* (3–3)
A year course; credit is not given for the first half until the second half is completed.
Not offered 1962–63. Modern theories and asymptotic laws; elementary theory of definite integration; limit theorems in probability.

* Statistics 191, 193, and 194 or the equivalent are prerequisite to all third-group courses.

261–62 *Information Theory for Engineers* (3–3) Kullback
Academic year—evening. The elements of information theory and its statistical and probabilistic background from an elementary point of view (nonmeasure-theoretic). Measures of information, entropy, and their properties. Discrete stochastic sources. Message ensembles. The transmission of information, channels, channel capacity. Encoding and decoding including error detection and correction. The fundamental theorems of information theory.

263–64 *Statistical Inference* (3–3) Greenhouse
A year course, credit is not given for the first half until the second half is completed. Academic year—evening. Sample space; methods for estimating population parameters; fiducial inference and its application to testing hypotheses; valid, efficient, and exact estimation; Student's distribution; variance distribution; sampling statistics. Prerequisite or concurrent registration: Statistics 257–58 or the equivalent.

265–66 *Multivariate Analysis* (3–3)
A year course, credit is not given for the first half until the second half is completed. Not offered 1962–63. Tests of significance, generalized variance and covariance, tests of independence, canonical and vector correlations, multivariate, normal distribution, generalized Student's ratio, problems of estimation, applications to factor analysis.

267–68 *Characteristic Functions* (3–3)
A year course, credit is not given for the first half until the second half is completed. Not offered 1962–63. Fourier integrals, set functions, inversion formulas, limit theorems, applications to the distribution problem in statistics.

269 *Sequential Testing* (3)
Not offered 1962–63.

270 *Statistical Decision Theory* (3)
Not offered 1962–63.

271–72 *Statistical Information Theory* (3–3)
A year course, credit is not given for the first half until the second half is completed. Not offered 1962–63. Basic concepts, definitions, and formulas of information theory; their significance and general properties. Shannon's coding theorem, channel capacity, and transmission of information; inequalities of information theory and sufficiency; applications to statistical problems of discrimination and hypothesis testing. Asymptotic distribution theory of information; analysis of contingency tables; loss of information due to grouping and sequential analysis; comparison of experiments. Kullback

273–74 *Stochastic Processes* (3–3)
A year course, credit is not given for the first half until the second half is completed. Academic year—evening. Fundamental notions of stochastic processes; random walks; Markov processes; differential processes; Gaussian processes; applications. The Staff

295–96 *Reading and Research* (3–3)
Academic year—as arranged. Admission by permission of the instructor. The Staff

299–300 *Thesis* (3–3)

Courses Offered in Special Programs

In addition to the regular courses announced above the University offers the following courses for students enrolled in the following special programs: Navy Graduate Financial Management Program, Air Force Advanced Management Program, Engineering Administration, and Hospital Administration.

101 *Basic Principles of Statistical Methods* (3)
Variables and attributes, averages and dispersion, elementary principles of sampling, introduction to the making of statistical decisions.

119 *The Bases of Statistical Decision Making* (arr.)
Introduction to the techniques of decision making, with emphasis on applications rather than theory. Includes: binomial distribution, normal distribution, Type I and II errors, estimation, research methodology, and problems of inference.

120 *Principles of Statistical Analysis* (3)
Introduction to the basic concepts of statistical analysis, measures of central tendency, dispersion, normal distribution, basic statistical inference including estimation and testing hypotheses.

250 *Managerial Statistics and Quality Control* (3)
The application of statistical principles and practices to management and quality control. Emphasis is placed on the use of statistical techniques in making management decisions, controlling quality and standardization. Prerequisite: Statistics 107 or the equivalent.

ZOOLOGY

BIOLOGY*

1-2 *Introductory Biology** (4–4) The Staff
An interdepartmental course. Lecture (2 hours), laboratory (4 hours).
Biology 1—Plant Sciences (4): fall—day and evening; spring—day and evening.
Biology 2—Animal Sciences (4): fall—day and evening; spring—day and evening.
This course is designed to provide the nonscience student with an understanding of the life sciences and to serve as a basis for those who may wish to continue in some aspect of biology. It is the introductory course leading to all second- and third group courses in botany and zoology, and is taught jointly by the staff members of the two departments. Designed to be taken in either sequence; students may be registered for either 1 or 2 at the beginning of the academic year, depending on laboratory space available. Material fee, $10 a semester.

* Beginning with the academic year 1965–66: Biology 1-2 *Introductory Biology* (4–4) replaces Botany 1-2 *General Botany* (4–4) and Zoology 1-2 *Introduction to Zoology* (4–4). Botany 1-2 and Zoology 1-2 will be offered for the last time in the summer of 1965.

THE GEORGE WASHINGTON UNIVERSITY

Washington 6, D. C.

Academic programs leading to degrees are offered in the following colleges and schools:

Columbian College of Arts and Sciences: Associate in Arts (A.A.), Associate in Science (A.S.), Bachelor of Arts (A.B.), Bachelor of Science (B.S.), Bachelor of Science in Medical Technology (B.S. in Med. Tech.), Master of Arts (A.M.), Master of Fine Arts (M.F.A.), and Master of Science (M.S.)

Graduate Council: Doctor of Philosophy (Ph.D.)

School of Medicine: Doctor of Medicine (M.D.)

National Law Center:

Law School: Bachelor of Laws (LL.B.)

Graduate School of Public Law: Master of Laws (LL.M.), Master of Comparative Law (M.Comp.L.), Master of Comparative Law (American Practice) (M.Comp.L. (Am.Prac.)), and Doctor of Juridical Science (S.J.D.)

School of Engineering: Engineering Technologist Certificate (Eng. Tech. Cert.), Bachelor of Civil Engineering (B.C.E.), Bachelor of Electrical Engineering (B.E.E.), Bachelor of Mechanical Engineering (B.M.E.), Bachelor of Science in Engineering (B.S. in Eng.), Master of Science in Engineering (M.S. in Eng.), Master of Engineering Administration (M.E.A.), and Doctor of Science (D.Sc.)

School of Pharmacy: Bachelor of Science in Pharmacy (B.S. in Phar.)

School of Education: Bachelor of Arts in Education (A.B. in Ed.), Bachelor of Science in Home Economics (B.S. in H.E.), Bachelor of Science in Physical Education (B.S. in P.E.), Master of Arts in Education (A.M. in Ed.), Advanced Professional Certificate (A.P.C.), and Doctor of Education (Ed.D.)

School of Government, Business and International Affairs: Bachelor of Arts in Government (A.B. in Govt.), Bachelor of Business Administration (B.B.A.), Master of Arts in Government (A.M. in Govt.), Master of Business Administration (M.B.A.), and Doctor of Business Administration (D.B.A.)

College of General Studies: Associate in Arts (A.A.), Associate in Science (A.S.), Associate in Secretarial Administration (A.Sec.Adm.), Bachelor of Arts (A.B.), Bachelor of Science in Cartography (B.S. in Cart.), Master of Arts (A.M.), Master of Arts in International Affairs (A.M. in I.A.), Master of Business Administration (M.B.A.), and Master of Public Administration (M.P.A.)

ANNUAL ISSUES OF THE UNIVERSITY BULLETIN

Requests for the following publications should be addressed as indicated.

CALENDAR OF THE SCHOOL OF EDUCATION

1962–63

1962

FALL SEMESTER:

Orientation Assembly: all new students	Sept 14 ..... Fri
Curriculum assemblies: new students attend one	Sept 14 and 17..... Fri and Mon
Placement tests	Sept 18 ..... Tues
Registration	Sept 20–22* ..... Thurs–Sat
Classes begin	Sept 24 ..... Mon
Subjects of Master's theses of Feb candidates due	Oct 5 ..... Fri
Dissertation subjects of June Ed.D. candidates due	Oct 5 ..... Fri
General Education activities plans due from A.B. in Ed. Feb entrants.....	Oct 22 ..... Mon
Application for Feb graduation due in Registrar's Office	Oct 31 ..... Wed
Graduate Studies Committee meets	Nov 2 ..... Fri
Application for Nov Ed.D. Comprehensive examinations due	Nov 3 ..... Sat
Veterans Day. Holiday	Nov 12 ..... Mon
Ed.D. comprehensive examinations	Nov 17 ..... Sat
Thanksgiving recess	Nov 22–24 ..... Thurs–Sat
Ed.D. and A.M. in Ed. Jan comprehensive examination applications due	Dec 5 ..... Sat
Christmas recess	Dec 22–Jan 2 ..... Sat–Wed

1963

Classes resume	Jan 3 ..... Thurs
Theses and dissertations of Feb. candidates due	Jan 3 ..... Thurs
Ed.D. and A.M. in Ed. comprehensive examinations	Jan 5 ..... Sat
Graduate Studies Committee meets	Jan 18 ..... Fri
Examination period	Jan 21–26 ..... Mon–Sat

SPRING SEMESTER:

Registration	Jan 31–Feb 2* ..... Thurs–Sat
Spring semester classes begin	Feb 4 ..... Mon
Subjects of Master's theses of June candidates due	Feb 8 ..... Fri
Winter Convocation	Feb 22 ..... Fri
Application for June graduation due in Registrar's Office	Feb 28 ..... Thurs
General education activities plans due from A.B. in Ed. Feb entrants.....	March 4 ..... Mon
Ed.D. dissertations of June candidates due	March 29 ..... Fri

* Thursday and Friday from 12:00 to 8:00 P.M., Saturday from 8:30 A.M. to 1:00 P.M.

Dissertation subjects of Feb 1964 Ed.D. candidates due	March 30 ..... Sat
Application for 1963–64 scholarships due	April 1 ..... Mon
Easter recess	April 12–17 ..... Fri–Wed
Ed.D. and A.M. in Ed. April comprehensive examination applications due	April 13 ..... Sat
Ed.D. and A.M. in Ed. comprehensive examinations	April 27 ..... Sat
Master's theses of June candidates due	May 1 ..... Wed
Graduate Studies Committee meets	May 10 ..... Fri
Examination period	May 20–25 ..... Mon–Sat
Memorial Day. Holiday	May 30 ..... Thurs
Baccalaureate service	June 2 ..... Sun
Commencement	June 5 ..... Wed.

SUMMER SESSIONS:

Twelve-week session: registration and first day of classes for first six-week evening classes	June 10 ..... Mon
Nine-week workshop session: registration for first-block classes	June 17 ..... Mon
Eight-week session: registration	June 17 ..... Mon
Nine-week workshop session: first-block classes begin	June 18 ..... Tues
Eight-week classes begin	June 18 ..... Tues
Independence Day. Holiday	July 4 ..... Thurs
Nine-week workshop session: registration for second-block three-week classes	July 8 ..... Mon
Six-week session: registration	July 8 ..... Mon
Nine-week session: second-block three-week classes begin	July 9 ..... Tues
Six-week session: classes begin	July 9 ..... Tues
Ed.D. and A.M. in Ed. July comprehensive examination applications due	July 10 ..... Wed
Twelve-week session: first six-week evening classes end	July 19 ..... Fri
Twelve-week session: registration and first day of classes for second six-week evening classes	July 22 ..... Mon
Ed.D. and A.M. in Ed. comprehensive examinations	July 24 ..... Wed
Nine-week session: registration and first day of classes for third-block three-week classes	July 29 ..... Mon
Graduate Studies Committee meets	Aug 7 ..... Wed
Eight-week session ends	Aug 9 ..... Fri
Nine-week session: third-block three-week classes end	Aug 16 ..... Fri
Six-week session ends	Aug 16 ..... Fri
Twelve-week session: second six-week evening classes end	Aug 30 ..... Fri

THE BOARD OF TRUSTEES

THE UNIVERSITY

The Board of Trustees of the University is composed of the President of the University ex officio and the following persons by election:

Newell Windom Ellison, A.B., LL.B., LL.D., *Chairman*
Edward Karrick Morris, LL.D., *Secretary*
Godfrey Leon Munter, A.B., LL.B., LL.D., *Assistant Secretary*

Walter Maximillian Bastian, LL.B., LL.D.
Wiley Thomas Buchanan, Jr.
Leonard Carmichael, Ph.D., Sc.D., LL.D., Litt.D., L.H.D., D.C.L.
Eugene Cassin Carusi, A.M., J.D.
R. Roy Dunn
Robert Vedder Fleming, LL.D., *Chairman Emeritus*
Charles Carroll Glover, Jr., A.M., LL.B., LL.D.
Phillip L. Graham, A.B., LL.B., L.H.D.
Brooks Hays, A.B., LL.B., L.L.D.
John Edgar Hoover, LL.M., LL.D.
Frank Atherton Howard, B.S. in M.E., LL.B., Sc.D.
Joseph D. Hughes, B.S., LL.B., LL.M., LL.D.
Alfred Henry Lawson, LL.B., L.L.D.
John Keown McKee
Benjamin Mosby McKelway, Litt.D.
James Matlack Mitchell, A.M.
George Edward Muth, A.B., LL.B.
Charles Emory Phillips, LL.B., LL.M.
Frederick A. Reuter, M.D.
Charles Sylvanus Rhyne, LL.B., D.C.L., LL.D.
Donald D'Arcy Shepard, LL.B.
Carleton D. Smith
Sidney William Souers, A.B., LL.D.
Lewis L. Strauss, Sc.D., LL.D., L.H.D.
Corin Strong, Ph.B., LL.D.
James Cornelius Van Story, Jr., A.M.
James Edwin Webb, A.B., LL.D.
Frank Harvey Weitzel, A.B., LL.B.
John Johnston Wilson, LL.B.
Watson W. Wise, Ph.B.

Honorary Trustees

Clarence Aiken Aspinwall, LL.D.
Truman James Briggs, Ph.D., Sc.D., D.Eng., LL.D.
Mrs. Wilbur John Carr
Mrs. Joshua Evans, Jr., A.B., Ed.D.
James S. Grant, 3d, B.S., Graduate United States Engineers School, LL.D., Sc.D.
Gilbert Grosvenor, A.M., LL.D., Litt.D., Sc.D.
Alexander Wetmore, Ph.D., Sc.D.
Charles Stanley White, M.D., Sc.D.
Boyd Bennett Wilson

Nominated by the alumni.

OFFICERS OF ADMINISTRATION

THE UNIVERSITY

Thomas Henry Carroll, B.S., M.B.A., D.C.S., LL.D., *President*
Oswald Symister Colclough, B.S., LL.B., LL.D., Sc.D., *Provost and Dean of Faculties*
Henry William Herzog, B.S., *Treasurer*
Tamis Wilson Borden, A.B., *Administrative Secretary*
Claud Max Farrington, A.M., *Assistant to the President*
Joseph Young Ruth, A.B., *Director of Admissions*
Frederick Russell Houser, A.M. in Govt., *Registrar; Secretary of the Faculties*
John Russell Mason, A.M., M.S. in L.S., *Librarian; Curator of Art*
William David Johnson, B.S. in B.A., *Comptroller*
Charles William Cole, Ph.D., *Dean of the Summer Sessions*
Benjamin Douglass Van Evera, Ph.D., Sc.D., *Dean for Sponsored Research*
Virginia Randolph Kirkbride, A.M., Ed.D., *Director of Activities for Women*
Paul Vernon Bissell, Ph.D., *Director of Activities for Men; Director of Veterans Education*
Joseph Richard Sizoo, A.M., D.D., Litt.D., LL.D., L.H.D., S.T.D., *Director of University Chapel*
Alan Thomas Deibert, A.M., *Adviser to Students from Foreign Countries*
Richard Bernard Castell, A.B., M.D., *Director of Health Administration*
Loretta May Stallings, A.M., *Director of Women's Athletics*
Robert Faris, B.S., *Director of Men's Athletics*
Edward Martin Wall, A.B., LL.B., *Director of Air Science*
John Francis Latimer, Ph.D., *Associate Dean of Faculties; University Marshal*

THE SCHOOL OF EDUCATION

James Harold Fox, A.M., Ed.D., *Dean of the School of Education*
Blake Smith Root, A.M., Ed.D., *Assistant Dean of the School of Education*

THE SCHOOL OF EDUCATION

THE FACULTY AND STAFF OF INSTRUCTION*

EMERITUS FACULTY

RUTH HARRIET ATWELL, A.M., *Professor Emeritus of Physical Education for Women*
FRANCES KIRKPATRICK, A.M., *Professor Emeritus of Home Economics*

ACTIVE FACULTY

DONNA ABBEY, B.S., *Instructor in Physical Education for Women*
PAT ABERNETHY, A.B., *Lecturer in Physical Education*
JOHN GAGE ALLEE, JR., Ph.D., *Professor of English Philology*
GROVER LAMARR ANGEL, A.M., Ed.D., *Professor of Education*
ROBERT EDWARD BAKER, A.M., Ed.D., *Associate Professor of Education*
MARCELLA BERNSTEIN, A.M., *Lecturer in Education*
JOHN GORDON BOSWELL, A.M. in Ed., *Lecturer in Education*
HAROLD FREDERICK BRIGHT, Ph.D., *Professor of Statistics*
KENNETH BROWN, Ph.D., *Professorial Lecturer in Education*
ELIZABETH BURTNER, A.M., *Professor of Physical Education for Women*
JOHN LANSING CAMERON, A.M., *Associate Professorial Lecturer in Education*
WESLEY THOMAS CARROLL, Ph.D., *Professor of Education*
MARY ELLEN COLEMAN, A.M., *Associate Professor of Education; Director of the Reading Clinic*
KATHRYN GUDGEL COOK, A.M., *Professorial Lecturer in Education*
BEVERLY ANDERSON CRUMP, B.S., Ed.M., *Associate Professorial Lecturer in Education*
HAROLD CUSHMAN, A.M., *Lecturer in Education*
KNIGHT DAVID DARLAND, A.M., Ed.D., *Professorial Lecturer in Education*
VINCENT JAMES DEANGELIS, B.S. in P.E., A.M. in Ed., *Professor of Physical Education for Men*
HARRY GRUBB DETWILER, Ed.D., *Associate Professor of Education*
HERBERT WHITTINGTON ELLER, B.S., A.M. in Ed., *Assistant Professor of Education*
WILLIAM BENJAMIN EVANS, JR., Ed.D., *Lecturer in Education*
JAMES HAROLD FOX, A.M., Ed.D., *Professor of Education*
LINDALE HARPSTER GEORGE, B.S. in P.E., A.M. in Ed., A.P.C., *Assistant Professor of Physical Education for Women*
JOHN GIANCASPRO, A.M. in Ed., *Associate Professorial Lecturer in Education*
EDWARD GOLDSTEIN, A.M., *Lecturer in Education*
RAYMOND GEORGE HANKEN, B.S. in P.E., A.M. in Ed., *Professor of Physical Education for Men*
JOHN HOLDEN, Ph.D., *Professorial Lecturer in Education*
THELMA HUNT, Ph.D., M.D., *Professor of Psychology*
CLAYTON HUTCHINS, Ph.D., *Professorial Lecturer in Education*
MARY GAYLE INGRAM, A.M., Ed.D., *Assistant Professor of Physical Education for Women*

* The President of the University, the Dean of Faculties of the University, the Dean and Assistant Dean of the School, the Registrar of the University, the Director of Admissions of the University, Professors, Associate Professors, Assistant Professors, and Instructors constitute the Faculty.
† On leave of absence fall semester 1962-63.

BURNICE HERMAN JARMAN, A.M., Ed.D., Litt.D., *Professor of Education*
EVA MAYNE JOHNSON, Ph.D., *Associate Professor of Psychology*
HOWARD ODIN JOHNSON, A.M., Ed.D., *Professorial Lecturer in Education*
BARNARD DEJEAN JOY, A.M., Ed.D., *Professorial Lecturer in Education*
SAMUEL KAVRUCK, B.S., A.M. in Govt., Ed.D., *Associate Professorial Lecturer in Education*
JOSEPH HENRY KRUPA, M.S., Ed.D., *Professor of Physical Education for Men*
JOHN CARL LANG, A.M., Ed.D., *Professorial Lecturer in Education*
HELEN BENNETT LAWRENCE, A.M., *Professor of Physical Education for Women*
CHESTER ELWOOD LEESE, Ph.D., *Fry Professor of Physiology*
EDWIN MARION LOGAN, A.M., Ed.D., *Associate Professorial Lecturer in Education*
FLORENCE MARY LUMSDEN, A.M., Ed.D., *Professorial Lecturer in Education*
ANTHONY MARINACCIO, Ph.D., *Professorial Lecturer in Education*

GENERAL INFORMATION

INTRODUCTORY

It is the purpose of the School of Education to prepare teachers, counselors, and administrators for the higher ranges of educational service and to offer opportunities to teachers of experience to extend their education. The School includes the departments of Education, Physical Education, and Home Economics. It offers both graduate and undergraduate work. Other departments of the University provide general education and subject-matter courses needed for a well-balanced program of teacher education. In addition to programs of study leading to the degrees, the School offers nondegree programs for certification.

Special curricula are provided for liberal arts graduates, housewives, and retired military personnel who wish to prepare for teaching. The School also provides a wide range of courses of interest to emergency teachers who wish to qualify for teaching certificates and teachers who wish to renew licenses.

Laboratory and clinical facilities are provided by the University Reading and Speech clinics. In cooperation with public and private schools and a wide variety of social agencies, ample opportunity for field experience is provided.

The schedule of courses is arranged to meet the convenience of both full-time and part-time students. By attending evening, Saturday, and summer classes, teachers in the schools of the metropolitan Washington area and others within commuting range may complete all the requirements for a degree without giving up their positions.

HISTORICAL DEVELOPMENT

The University began offering professional courses for teachers in 1904–5 and in 1907 it established a Division of Education. In 1909, the Division of Educa-

* The Dean and Assistant Dean of the School of Education are members ex officio of all committees.
† Elected by the Faculty.
‡ Appointed by the Dean.

tion became the Teachers College which, in its early years, was concerned largely with teacher preparation on the undergraduate level.

In 1928, the Teachers College became the School of Education and greater provision was made for advanced study. Since that time the graduate enrollment has steadily increased with the result that today the School has a considerably larger number of graduate than undergraduate students.

ADVANTAGES OF STUDY IN THE NATION'S CAPITAL

Washington is rich in the resources needed by teachers, counselors, and administrators to supplement classroom instruction. In addition to the library facilities of the University, the Library of Congress; the Library of the Department of Health, Education, and Welfare; and many special collections provide unexcelled opportunities for reading and research. The operation of all branches of the National Government may be observed. Among the art galleries are the National Gallery of Art, the Corcoran Gallery of Art, the Freer Art Gallery, Phillips Memorial Gallery, and the National Museum. The music calendar of Washington is a full one, and includes concerts by the National Symphony Orchestra, Philadelphia Orchestra, and the Boston Symphony Orchestra. Those interested in science find many resources for study at the National Museum, the National Zoological Park, the United States Botanic Garden, and the Aquarium of the Fish and Wildlife Service, Department of the Interior. Students have unique opportunities to become acquainted with the work of the Office of Education, the National Education Association, the American Council on Education and many other national organizations with headquarters in Washington.

ACADEMIC STATUS

The George Washington University is accredited by the regional accrediting agency, the Middle States Association of Colleges and Secondary Schools. This is important to students who wish to transfer credits from one institution to another.

The University is on the approved list of the American Association of University Women and is a member of the College Entrance Examination Board.

The School of Education is accredited by the National Council for Accreditation of Teacher Education, is a member of the American Association of Colleges for Teacher Education, and was a charter member of the National Association of Colleges and Departments of Education prior to the merger of that association with others to form the American Association of Colleges for Teacher Education.

THE EDUCATION OF TEACHERS

Programs of study for the education of teachers are based upon the assumption that every teacher should have a broad general education, adequate mastery of the content of instruction, and professional competence.

The relative emphasis placed upon each of these aspects of the total education of teachers varies in accordance with the purposes of each program. For instance, elementary school teachers, since they teach all subjects, require content preparation of greater breadth and less specialization than secondary school teachers.

It is the view of the School of Education that an acceptable minimum education

for teaching requires not less than four years of full-time study or the equivalent part-time study. For superior preparation teachers are urged to plan for five years of full-time study or the equivalent part-time study.

The student may choose any one of the following three plans to achieve superior educational preparation for teaching:

1. Upon receiving the Bachelor's degree, he may take a teaching position and, after acquiring some professional experience, return to the School for graduate study leading to the Master's degree. This plan enables students with Bachelor's degrees to start earning immediately and, by teaching experience, to illuminate graduate study which will follow. However, by delaying acquisition of the Master's degree the student cannot command the higher salary usually associated with this degree and may prejudice his opportunity for promotion.

2. The student may choose to pursue full-time graduate study leading to the Master's degree immediately after receiving the Bachelor's degree. This plan is of advantage to students who wish to defer the decision to seek a Master's degree until completion of the undergraduate program and to students transferring from other institutions, whose transferred credits fit more readily into this plan than into the five-year plan discussed below. Both this program and the five-year program enable the student to command a higher beginning salary and be considered for early promotion.

3. For those whose professional aims are established at the beginning of the junior year, the School offers a five-year integrated program of study leading to the Bachelor's and Master's degrees conferred simultaneously. This program permits careful planning from the outset to meet the demands of the teaching position for which the student is preparing; it permits adequate mastery of the content of instruction in two teaching fields; and advances the professional sequence of courses to the fourth and fifth years, thus providing a more adequate academic preparation. Students are advised to choose the five-year program if possible.

The first two years of all programs of study are administered by Columbian College of Arts and Sciences of the University. During these two college years the student is encouraged to follow the curriculum designed to prepare him for the program of studies he wishes to pursue later in the School of Education. Students who have followed other curricula may be admitted to the School of Education with deficiencies which they must make up before graduation. Members of the Faculty of the School of Education serve as advisers to students enrolled in Columbian College of Arts and Sciences curricula leading to degree programs in the School of Education. For each registration students must have their programs approved by their advisers. They are also urged to seek counsel in the budgeting of time for the inclusion of extracurricular student activities and off-campus cultural opportunities for the development of a well-rounded personality.

THE BACHELOR'S DEGREES

BACHELOR OF SCIENCE IN PHYSICAL EDUCATION*

Bachelor of Science in Physical Education for Men

There are three curricula leading to this degree. The curriculum in Physical Education with an academic Minor is designed to prepare students for teaching

* Physical Education may also be chosen as a minor teaching field by candidates for the degree of Bachelor of Arts in Education. See page 19

positions in smaller schools where it is necessary to teach an academic subject in addition to physical education. The curriculum in Physical and Health Education prepares for the teaching of physical education in the larger schools. The curriculum in Physical Education and Recreation is planned for those who wish to be prepared to direct programs of recreation in addition to the teaching of physical education.

Prerequisite

The following two-year curriculum offered in the lower division of Columbian College of Arts and Sciences, is required for admission to the School of Education as a candidate for the degree of Bachelor of Science in Physical Education for Men.

		Semester Hours
English	English 1 or 1X, 2	8
Science	Biology 1–2* (Freshman year)	8
	Chemistry 3–4 (Sophomore year)	8
Social Studies	History 71–72; Political Science 1 and 9, 1 and 10, or 9–10	6
	Anthropology 1 and Sociology 2	6
Major Prerequisites	Physical Education 41, 43–44, 47; Speech 1 or 11 (Freshman year)	10
	Physical Education 45–46, 49, 50, 58; Psychology 1, 22 (Sophomore year)	18
Elective		2
	Total	64

Curriculum Requirements

The minimum requirements for this degree are 66 semester hours, distributed as follows:

Curriculum in Physical Education With an Academic Minor

		Semester Hours
	JUNIOR YEAR	
Education 108	Human Development, Learning, and Teaching	3
Education 123	Society and the School	3
Physical Education 105	Adapted Physical Education and Physical Examinations	1
Physical Education 107	Teaching Recreational Dance	4
Physical Education 113–14	Practice in Teaching Physical Education	3
Physical Education 121	School and Community Health Programs	3
Physical Education 122	Methods and Materials for Health Education	3
Physiology 115	Physiology	4
Academic Teaching Field		6
Elective		3
	Total	33

		Semester Hours
	SENIOR YEAR	
Education 131	Principles and Methods of Secondary School Teaching	6–9
Education 134	Student Teaching in Secondary Schools	3
Physical Education 103	History and Principles of Physical Education	4
Physical Education 115–16	Teaching Team Sports in Secondary Schools	3
Physical Education 131	Tests and Measurements in Physical Education	3

* An interdepartmental course offered by the departments of Botany and Zoology. The student may register in either department.

		Semester Hours
Physical Education 138	Organization and Administration of Physical Education	3
Academic Teaching Field		8–11
	Total	30–36

Curriculum in Physical and Health Education

JUNIOR YEAR		Semester Hours
Education 108	Human Development, Learning, and Teaching	3
Education 123	Society and the School	3
Physical Education 107	Teaching Recreational Dance	1
Physical Education 109–10	Leadership Organization in the Intramural Program	4
Physical Education 113–14	Practice in Teaching Physical Education	4
Physical Education 121	School and Community Health Programs	3
Physical Education 122	Methods and Materials for Health Education	3
Physiology 115	Physiology	3
Elective		9
	Total	33

SENIOR YEAR		Semester Hours
Education 131	Principles and Methods of Secondary School Teaching	3
Education 134	Student Teaching in Secondary Schools	6–9
Physical Education 103	History and Principles of Physical Education	3
Physical Education 105	Adapted Physical Education and Physical Examinations	3
Physical Education 115–16	Teaching Team Sports in Secondary Schools	4
Physical Education 131	Tests and Measurements in Physical Education	3
Physical Education 138	Organization and Administration of Physical Education	3
Elective		5–8
	Total	30–36

Curriculum in Physical Education and Recreation

JUNIOR YEAR		Semester Hours
Education 108	Human Development, Learning, and Teaching	3
Education 123	Society and the School	3
Physical Education 48	Introduction to Recreation	2
Physical Education 107	Teaching Recreational Dance	1
Physical Education 109–10	Leadership Organization in the Intramural Program	4
Physical Education 113–14	Practice in Teaching Physical Education	4
Physical Education 121	School and Community Health Programs	3
Physical Education 132	Camp Leadership	1
Physical Education 151–52	Recreational Leadership Activities	6
Elective		6
	Total	33

SENIOR YEAR		Semester Hours
Education 131	Principles and Methods of Secondary School Teaching	3
Education 134	Student Teaching in Secondary Schools	6–9
Physical Education 103	History and Principles of Physical Education	3
Physical Education 122	Methods and Materials for Health Education	3
Physical Education 131	Tests and Measurements in Physical Education	3
Physical Education 138	Organization and Administration of Physical Education	3
Physical Education 161	Community Organization for Recreation	3

		Semester Hours
Physical Education 162	Administration of Community Recreation Programs	3–6
Elective		
	Total	30–36

Bachelor of Science in Physical Education for Women

The Physical Education major curriculum is designed to prepare students for teaching in elementary and secondary school programs of physical education.

Within this curriculum there is opportunity for specialization in dance, corrective physical education, health education, and recreation.

The student wishing to prepare to teach another subject in addition to physical education may do so by using her elective hours to work toward a minor teaching field. Relevant work completed in Columbian College of Arts and Sciences may be counted.

PREREQUISITE

The following two-year curriculum, offered in the lower division of Columbian College of Arts and Sciences, prepares for the Bachelor of Science in Physical Education curriculum in the School of Education.

		Semester Hours
English	English 1 or 1X, 2	6
	English 51–52, 71–72, or 91–92	6
Physical Education	1–2, 11–12	4
Science	Biology 1–2* (Freshman year)	8
	Chemistry 3–4 (Sophomore year)	8
Social Studies	History 39–40, 71–72; Political Science 1 and 9, 1 and 10, or 9–10; or Anthropology 1 and Sociology 2	6
Major Prerequisites	Physical Education 43–44 (Freshman year)	4–6
	Physical Education 49, 50, 51 52; Psychology 1, 22	16–18
	(Sophomore year)	2–6

Total.....	30–36

BACHELOR OF ARTS IN EDUCATION

The objective of programs leading to the degree of Bachelor of Arts in Education is to provide (1) general educational backgrounds; (2) functional command of ideas, concepts, knowledge, and skills in one or more teaching fields; (3) mastery of basic professional information and skills adequate for the beginning teacher; and (4) development of attitudes needed for success in teaching. Since the contents of teaching fields differ in scope and complexity, some programs are longer than others in terms of semester hours. None require less than 126 semester hours of satisfactory work, exclusive of required Physical Education.

Normally, from 60 to 64 semester hours of the total requirement are completed in Columbian College of Arts and Sciences of the University or in an equivalent institution elsewhere.

General Education

The general educational backgrounds needed by prospective teachers are obtained through: (1) precollege education, (2) college courses, (3) work experience, (4) leadership activities, (5) participation in student campus activities, and (6) utilization of off-campus cultural opportunities.

College course requirements of the pre-Education curriculum.—Course requirements depend in part upon the senior high school credits presented for college admission. They are as follows:

English	Semester Hours
English 1 or 1X, 2: English Composition.....	6

Before students are registered in English 1, they are tested in the minimum essentials of vocabulary, spelling, grammar, standard usage, and writing skill. Those students who show marked superiority may, upon passing further tests, be exempted from one or both semesters of the English Composition course; those who are inadequately prepared are assigned to English 1X. English 1 or 1X is a prerequisite to all other courses in English.

One of the following survey courses in literature.....	6
English 51–52: Introduction to English Literature	
English 71–72: Introduction to American Literature	
English 91–92: Introduction to European Literature	

Foreign Languages	
French, German, Latin, Russian, or Spanish.....	12

A student offering for admission four acceptable high school units of a single foreign language, or the equivalent, is not required to take any foreign language. If he offers three units, he must complete the second semester of the second-year college course in the same language. If he offers two units, he must complete the entire second-year college course in the same language. If he offers one unit, he must complete the second semester of the first-year college course and the second-year course in the same language.

Semester Hours

Physical Education

Physical Education 1–2 and 11–12
A student may be exempted from this requirement if registered for less than three courses or regularly employed during the day.

Science

Three semesters (two in biological science and one in physical science or vice versa) to supplement senior high school courses in these fields and chosen from the following 9-12

- Biology 1–2: Survey in Biology*
- Chemistry 3–4: Fundamentals of Physical Sciences
- Chemistry 11–12: General Chemistry
- Geology 1–2: Introductory Geology
- Physics 11, 12: Introductory Physics

(A student offering for admission two or more acceptable senior high school units in the above areas of science may be exempted from one semester of this requirement.)

Mathematics

Two semesters to supplement senior high school courses chosen from the following 6

- Mathematics 3: College Algebra
- Mathematics 6: Plane Trigonometry
- Mathematics 9: General Mathematics I
- Mathematics 10: General Mathematics II

Social Studies

History 71–72: The Development of the Civilization of the United States or 6
Political Science 1 and 9, 1 and 10, or 9–10 6
Another Social Science chosen from the following courses 3

- Economics 1–2: Principles of Economics
- Geography 51, 52: Introduction to Geography; World Regions
- History 39–40: The Development of European Civilization
- History 71–72: The Development of the Civilization of the United States
- Political Science 1 and 9, 1 and 10, or 9–10: Introduction to Government; Government of the United States
- Religion 59–60: History of Religion
- Anthropology 1: Man, Culture, and Society I
- Sociology 2: Man, Culture, and Society II

(A student offering for admission two or more acceptable senior high school units in the Social Studies may be exempted from this requirement.)

Other Courses

Psychology 1: General Psychology 3
Psychology 22: Educational Psychology 3
Speech 1: Effective Speaking (or 11: Voice and Diction, if the Department so advises) 3

Students who demonstrate marked superiority in Speech may be exempted from this requirement. Such exemption is granted only on the recommendation of the Department of Speech.

Academic Electives

Electives may be increased through the various exemptions 60

Minimum required credits 120

Work experience, leadership activities, participation in student campus activities, and ***the utilization of off-campus cultural opportunities.***—Obviously, these cannot

* An interdepartmental course offered by the departments of Botany and Zoology. The student may register in either department.

be prescribed. Nevertheless, they constitute an important part of the general educational background of prospective teachers. In conference with a staff member of the Department of Education assigned as his general adviser, the student is expected to plan adequate experiences in these areas. Not later than one month after matriculation in the School of Education the student must file in the Office of the Dean a statement of such plans approved by his adviser. He must also keep his adviser informed concerning the fulfillment of his plans and to this end include in plans filed, scheduled conferences with his adviser.

Success of the student in enriching his general educational background by these means will be taken into consideration at the end of the first semester of the junior year when the faculty will review the qualifications of candidates to determine any who are not of sufficient promise as prospective teachers to warrant continuation of their candidacies. Success in these activities will also be considered when the list of candidates is again reviewed early in the last semester of the senior year immediately after the results of the National Teacher Examinations are available. In estimating the success of the student in this connection, more weight will be given to evidence of initiative, eagerness to make the most of each experience, balance, and quality of experience than to the number of different experiences.

Although the student is not required to establish a program of nonacademic activities until he becomes a degree candidate in the School of Education, he is advised to do so as soon as he enters the University. To this end, he should consult the pre-Education adviser soon after entering. Whatever is accomplished in this connection while in Columbian College of Arts and Sciences will reduce the obligations of the student after admission to the School of Education.

Teaching-Field Preparation

Teaching-field preparation depends upon the kind of teaching position for which the student is preparing. Those planning to teach in elementary schools need a degree of competency in several fields. Those preparing to teach in junior or senior high schools, as a rule, must demonstrate competency in a major teaching field and a minor teaching field. With the approval of the student's adviser, preparation in a minor teaching field may be omitted in order to permit additional study in the major teaching field. Ordinarily, students preparing to teach in evening schools for adults are required to prove competency in only one teaching field.

The student should begin teaching-field preparation while in the lower division of Columbian College of Arts and Sciences and should make provision for it in planning his program of studies.

Teaching-field requirements include satisfactory completion of prescribed academic courses in one or more fields, a satisfactory score on the special field examination of the National Teacher Examinations,* and satisfactory completion of the prescribed special methods courses.

Prescribed academic courses vary in number in accordance with the scope and complexity of the teaching field and the license requirements of the various

* Special field examinations of the National Teacher Examinations are available in elementary education; early childhood education, biology and general science, English language and literature, industrial arts; mathematics; chemistry, physics, and general science; foreign language; music education; home economics; and art education.

Students preparing to teach history or geography take the special field examination in social studies.

Students preparing to teach in fields in which special field examinations are not available (language and speech) must obtain a satisfactory score on a special field examination given by the instructor in the special methods course involved.

states. Minimum academic course requirements for each major teaching field are listed on succeeding pages. Minor teaching-field requirements are somewhat less than those of a major field. They are determined in conference with an adviser. Students preparing to teach on the elementary level are advised to use free electives to increase their mastery of content in an academic field or an area of specialization, e.g.—Physical Education, etc.

The prescribed course in special methods is concerned primarily with methods of initiating, guiding, and evaluating learning experiences dealing with the content of the teaching field. It attempts to bring to the student specific suggestions drawn from the accumulated experience of successful teachers. However, in addition, the course reviews the teaching-field content currently in use in schools and the examination at the end of the course provides the final test of competency in the teaching field.

Prescribed Courses in the Various Teaching Fields

	Semester Hours
ART	
Six semester hours from the following	6
Art 1: Art Appreciation	
Art 31–32: Survey of Western Art	
Art 71–72: Introduction to the Arts in America	
Art 101–2: Ancient Art	
Art 103: Medieval Art	
Art 104: Renaissance Art in Italy I	
Art 107: Eighteenth Century Art in Europe	
Art 109: Nineteenth Century Art in Europe	
Art 110: Contemporary Art	
Art 113: Baroque Art in Italy	6
Art 114: Baroque Art in the North	
Six Semester hours from the following	
Art 105: Renaissance Art in Italy II	
Art 106: Renaissance Art in the North	
Art 111: Classical Archeology	
Art 112: Art of Egypt and the Ancient Orient	
Art 115: Christian Iconography	
Art 120: Art of China and Japan	24
Art 203: Primitive Art	
Art 207: Modern Architecture	
Twenty-four semester hours from the following	
Art 21–22: Basic Composition and Techniques	
Art 41–42: Drawing and Perspective	
Art 65–66: Drawing and Painting I—Life, Still Life, and Portrait	
Art 81–82: Sculpture I	
Art 125–26: Drawing and Painting II—Life, Still Life, and Portait	
Art 127–28: Drawing and Painting II—Life and Portrait	
Art 157–58: Print Making	
Art 165–66: Drawing and Painting II—Life and Portrait	
Art 175–76: Advanced Composition	
Art 179–80: Sculpture II	36
Art 183–84: Commercial Art

Total	60

* Not required for the minor teaching field.
† Not required for the minor.

Professional Education

The basic professional information, skills, and attitudes needed by beginning teachers are provided through a sequence of courses to be taken in the junior and senior years. Lectures and class discussions are closely coordinated with field work. Instruction is differentiated to meet the needs of those preparing to teach on the various levels—elementary school, junior high school, senior high school, and adult.

PROFESSIONAL COURSES—SECONDARY	Semester Hours
Education 108: Human Development, Learning, and Teaching	3
Education 112: Educational Measurements or Statistics 104: Statistics in Psychology and Education I	3
Education 123: Society and the School	3

Education 123: Society and the School	3
Education 135: Student Teaching in Elementary Schools	9
Total	30

Human Development, Learning, and Teaching.—Students enrolled in the four-year programs leading to the degree of Bachelor of Arts take this course in the junior year. Those enrolled in five-year programs take it in the fourth year.

This course attempts to promote a functional understanding of the nature of human growth, development, and learning, illustrated by observation of children in learning situations; the nature of teaching based on principles of human growth, development, and learning, illustrated by observation of school situations. At least an equal amount of time is spent in observation and study of the application of these characteristics and principles to classroom situations. Class discussion normally revolves around these field experiences.

The course is also intended to provide the student with exploratory experiences of assistance to him in deciding whether to choose the profession of teaching. The student's performance in connection with the course is one of the factors considered when the Faculty reviews the list of candidates who have completed the first semester of the junior year (fourth year for those enrolled in five-year programs).

Society and the School.—This course is also taken in the junior year by candidates enrolled in four-year programs (fourth year by those in five-year programs).

The course attempts to promote an understanding and appreciation of the role of schools in the sound promotion of the enduring interests of our democratic society. More particularly, it attempts to develop a functional understanding of the contributions of all social agencies in the education of people and of desirable cooperative working relations that help the school to play its part as a member of the institutional "team" of the community.

The course is also concerned with study of the school as a whole—its purposes, program of studies, out-of-class activities, general organization, and major instructional problems. Although schools at all levels are studied, students give particular attention to schools at the level within which they are preparing to teach.

Classes meet for lecture and discussion for one two-hour meeting each week. At least an equal amount of time is spent in field study. During the course each student studies cooperating social institutions. Extended study of schools at the level of the student's special interest is supplemented by briefer studies of schools at other levels. Class discussion is largely determined by field experiences.

This course is also intended to provide the student with exploratory experiences of guidance value. The performance of the student in the first half of the course is also given careful consideration by the Faculty in its review of the list of candidates at the beginning of the second semester of the junior year (fourth year for those enrolled in five-year programs).

Principles and Methods of Secondary School Teaching.—Those enrolled in four-year programs take this course in the senior year. Those enrolled in five-year programs take it in the fifth year.

The course is concerned with the skills needed by teachers in connection with classroom management, teaching techniques, homeroom procedures, administrative routines, activity sponsorship, group planning, and public relations.

Classes meet for two one-hour meetings each week for lecture and discussion. At least an equal amount of time is spent in field study.

Special Methods Courses in Secondary Schools.—Associated with each teaching field is a course dealing with its special teaching problems. In addition to the study of practices followed by successful teachers, actual teaching content as found in current texts and courses of study is reviewed. Needed content, not included in academic courses available for teaching-field preparation, is taught in these courses.

Student Teaching in Secondary Schools.—This course is taken in the senior year by students enrolled in four-year programs (in the fifth year by those in five-year programs).

It begins with the observation of classroom teaching in selected situations. Assumption of responsibility for teaching functions is gradual, leading eventually to practice in the complete direction of classroom activities. Those preparing to teach in secondary schools have the opportunity of observing and doing practice teaching in both major and minor teaching fields on the senior high school level. The course is directed by full-time members of the Faculty of the School of Education. The work of each student is under the direct supervision of a critic teacher, selected because of unusual success in teaching, ability to supervise, and broad understanding of educational problems. Critic teachers are part-time members of the instructional staff of the School. Student teaching is done in the public schools of the metropolitan area of Washington, assuring practice in situations comparable to those the student is likely to face on becoming a teacher.

Methods in Elementary Education.—Those enrolled in four-year programs take this course in the fall semester of the senior year. Those enrolled in five-year programs take it in the fall semester of the fifth year.

The course offers an integrated approach to general and special methods of instruction in elementary schools. It includes discussion of general skills needed in classroom management, administrative duties, group planning, and public relations. Special techniques of instruction include those needed in teaching arithmetic; science; social studies; and the language arts (reading, literature for children, oral and written expression, spelling, and handwriting). The planning of units of work and the evaluation of pupil progress are also discussed.

Students are required to devote each morning to the prescribed activities of this course. Three mornings a week (9:00–12:00 A.M.) are normally devoted to lectures and discussions by three staff members of the Department of Education. Two mornings a week are spent in observation of and participation in classroom instruction in cooperating public schools of the Metropolitan Area.

Educational Measurement.—Those enrolled in four-year programs usually take this course in the senior year. Those enrolled in five-year programs take it in the fifth year.

The course is concerned with ways of discovering and appraising student needs, the selection of pertinent tests, the construction of teacher-made objective and essay-type tests, and the interpretation of test results for guidance purposes.

The course meets for two hours once a week for classroom instruction. Out-of-class assignments include practice in the construction, administration, and scoring of tests.

Student Teaching in Elementary Schools.—This course is taken in the senior year by students enrolled in four-year programs and in the fifth year by those enrolled in five-year programs.

Students who have not had previous teaching experience are normally assigned to student teaching for a period of twelve weeks. At the request of the student, this assignment may be divided between two different grade levels. An attempt is made to arrange a student-teaching placement in a school system within the Metropolitan Area of Washington and at the grade levels most appropriate in view of ultimate employment aims. Guidance is provided as the student learns to assume responsibility for the major teaching activities.

Students are not asked to take complete charge of a class at the beginning of the student-teaching period. Assumption of full responsibility for teaching activities is gradual and is preceded by an initial period of guided participation and instruction. Toward the end of his assignment the student teacher takes full charge of the class for a considerable period.

Each student is supervised by a member of the Faculty of the School of Education. A cooperating teacher, chosen for proven teaching ability and the capacity to carry on a satisfactory supervisory relationship, is in direct charge of the student-teaching experience.

Special Curricula in Elementary Education

Students preparing for elementary school teaching may also qualify as teachers of French, Spanish, remedial speech, and physical education. Programs should be planned in conference with an adviser.

Attitudes Needed for Success in Teaching

The development of attitudes that motivate professional behavior consistent with the nature of the learning-teaching process is basic to success in teaching. Among the most important of these attitudes are: appreciation of the role of learning in human improvement, respect for intellectual proficiency and true scholarship, objective thinking, and a sense of mission as a member of an important profession.

The responsibility for developing and strengthening attitudes favorable to success in teaching is shared by all parts of the program of teacher education. General education provides a foundation of information essential to an understanding of the course of human events, skills that promote effective social intercourse, the bases of perspective, and an appreciation of cultural development. Teaching-field preparation stimulates intellectual curiosity and respect for objective scholarship in contrast to rationalization. Professional education is organized in a sequence of learning activities primarily based upon the results of research concerning the ways in which the learner grows and develops.

To help students understand the role of education in society and human development and, thus, strengthen a sense of mission and pride in becoming members of the teaching profession, professional courses are closely related to field experiences, and students are encouraged to discuss freely varying viewpoints concerning goals and the interpretation of research data.

Since individual needs in the development of attitudes vary widely, students are encouraged to confer frequently with staff members. Conference hours are designated for this purpose.

FIVE-YEAR PROGRAMS LEADING TO THE DEGREES OF BACHELOR OF ARTS AND MASTER OF ARTS IN EDUCATION

Five-year programs are designed: to permit more adequate teaching-field and professional preparation, to prepare for special teaching positions, and to meet teaching-certificate requirements based upon five years of preparation.

Students in these programs usually devote the third year to additional teaching-field preparation and general education. Ordinarily, teaching-field preparation is continued in the fourth year and the first two professional courses (Education 108 and 123) are taken. The work of the fifth year includes the remaining undergraduate professional courses and the balance of graduate courses needed to meet the requirements of the degree of Master of Arts.

Candidates must have a quality-point index of at least 2.50 before beginning the work of the fourth year. As much as 18 semester hours of the work of the fourth year may be taken for graduate credit. Student Teaching in Secondary Schools, and Student Teaching in Elementary Schools taken in the fifth year, may not be taken for graduate credit.

Candidates enrolled in five-year programs on the secondary school level are able to prepare more adequately in their major or minor teaching fields, or in both. Additional teaching-field courses must be approved by the adviser in the teaching field concerned.

The five-year plan of study also provides an opportunity for candidates to prepare to teach "common learnings" courses in one or more of the various core curriculum plans now found in many secondary schools. Such programs need to be carefully planned to meet the demands of the situation in which the candidate hopes to teach.

A number of cities and some states require five years of satisfactory preparation before issuing certain teaching certificates. Candidates seeking such certificates should familiarize themselves with the requirements of the school system or state concerned and plan their programs accordingly.

Candidates enrolled in five-year programs on the elementary school level are able, in addition to preparation as regular classroom teachers, to prepare for special positions such as: teacher of a foreign language, specialist in remedial speech, specialist in remedial reading, and itinerant teacher of Physical Education.

Five-year programs must meet all the requirements of the degrees of Bachelor of Arts and Master of Arts in Education, and must be approved by the adviser designated for these programs.

THE DEGREE OF MASTER OF ARTS IN EDUCATION

Programs of study leading to the degree of Master of Arts in Education are designed to enable prospective teachers and teachers of experience to increase their knowledge of professional and academic information and skills, prepare for special types of educational service, and provide opportunities for graduates of liberal arts or other nonteacher education institutions to acquire needed professional education.

From the various related departments of the University, the student and his adviser select courses to give the student an adequate background in his chosen field of service. The prospective high school or junior high school teacher will ordinarily include study in the subject which he is planning to teach as well as in professional education.

Programs for teachers-in-service and experienced teachers planning to re-enter the profession are differentiated from those for students without teaching experience. Additional information concerning these programs may be obtained by writing or telephoning to the Dean.

Graduate programs of study are available in the following fields: (1) adult education, (2) classroom teaching—to include strengthening mastery of teaching field, (3) comparative education, (4) curriculum, (5) elementary education, (6) employee training, (7) guidance, (8) history of education, (9) philosophy of education, (10) reading, (11) school administration—secondary or elementary school principalship, and (12) secondary education.

ADMISSION TO CANDIDACY

To be admitted to candidacy for the degree of Master of Arts in Education the applicant must (1) hold a Bachelor's degree from an accredited institution, (2) have an undergraduate quality-point index of 2.50 or above (*C*+ average), (3) have demonstrated a genuine interest in teaching, and (4) have personality traits that give promise of better than average success as a teacher. Those wishing to prepare for careers in guidance or administration must have had at least two years of successful teaching experience. Candidates whose undergraduate preparation does not include equivalents of the basic requirements of the Bachelor of Arts in Education must make up deficiencies.

Advanced Standing

For the record, advanced standing is granted for approved courses taken at other accredited institutions, but a minimum of 30 semester hours must be completed at this University as a matriculated candidate for the degree.

Advanced courses completed in this University in excess of the requirements for the Bachelor's degree may be credited toward the Master's degree to the extent of 12 semester hours, if the work fits in with the student's plan of specialization and is approved in writing by the Dean before being undertaken.

Advanced standing is not granted for work completed three or more years before application for admission or readmission to Master's candidacy.

REQUIREMENTS FOR THE DEGREE

Plan of Study

The plan of study leading to the degree of Master of Arts in Education requires a minimum of 33 hours of graduate credit. The plan may, at the student's option, include a thesis carrying 6 hours of graduate credit. Whether or not a student selects the thesis option, a minimum of 18 hours, including a course in educational research methods and procedures, must be from courses planned primarily for graduate students (third group courses). A minimum of 12 hours, not including the thesis or the research course must be from courses offered by the Department of Education.

Programs may include additional teaching-field preparation. In such cases, however, undergraduate and graduate courses combined must be at least equivalent to the undergraduate requirements for the degree of Bachelor of Arts in Education (see pages 11–24).

Programs are planned initially in conference with an admissions adviser in the Office of the School of Education and subsequently with a designated adviser in the candidate's area of specialization. They take into consideration the interest of the candidate, the previous background, certification requirements of the state and locality in which he plans to teach.

All degree requirements must be completed within a period of six years after admission to study.

Residence

Candidates for the degree of Master of Arts in Education must complete satisfactorily at this University, as matriculated candidates in the School of Education, a minimum of 30 semester hours, 9 of which, with the approval of the adviser, may be in the Off-Campus Division of the College of General Studies.

The Thesis

If a candidate selects the thesis option, the thesis must conform to standards prescribed. A statement of these standards may be obtained at the Office of the Dean.

The thesis subject must be approved in writing by the candidate's adviser and filed in the Office of the Dean by the date announced in the Calendar. The thesis in its final form must be presented to the Dean no later than the date announced in the Calendar. Printed copies of detailed regulations regarding the form and reproduction of the thesis (see page 39) are available in the Office of the Dean.

Payment of tuition for the thesis will entitle the candidate, during the academic year of registration, to the advice and direction of the member of the Faculty under whom the thesis is to be written. In case a thesis is unfinished, an additional successive academic year may be granted without further tuition payment. The student must, however, be registered in residence during this period. If the preparation of

the thesis extends beyond the two-year period it must be registered for again and tuition paid on the same basis as for a repeated course.

Comprehensive Examination

In addition to the course examinations, the candidate must pass a comprehensive examination in two parts: (1) a general three-hour examination concerned with an integrated understanding of the foundations of professional education, and (2) a special three-hour examination concerned with the candidate's area of specialization.

THE ADVANCED PROFESSIONAL CERTIFICATE

This program is designed to prepare teachers for more effective service in their chosen fields and to enable them to qualify for a higher step in the local salary scale.

The program of studies leading to the Certificate is selected by the candidate and his adviser from the various related departments of the University in accordance with the student's needs. In general it includes 30 hours of graduate credit beyond the Master's degree. The candidate wishing to increase his teaching proficiency may include additional study in his teaching field.

ADMISSION TO CANDIDACY

The requirements for admission to candidacy for the Advanced Professional Certificate are (1) the degree of Bachelor of Arts in Education or Bachelor of Science in Physical Education from this University, or the equivalent from another institution of higher learning; (2) a Master's degree from an accredited institution of higher learning; (3) at least two years of successful teaching experience; and (4) a permanent teaching license. The applicant who is unable to meet the admission requirements may be admitted with deficiencies to be met by satisfactorily completing prerequisites in addition to the specified program of graduate study. Each applicant must be interviewed by a member of the Faculty of the School of Education.

Advanced Standing and Transfer of Credit

Advanced standing is granted for appropriate graduate work completed in other accredited higher institutions. However, a minimum of 18 semester hours must be completed at this University as a matriculated candidate in the School of Education. The candidate is encouraged to include in his program study at other accredited higher institutions when such study seems to be in his best interest. Advanced standing is not granted for work completed three or more years before application for admission or readmission.

REQUIREMENTS FOR THE CERTIFICATE

Plans of Study

In planning his program the candidate should give first consideration to his particular needs. If his study for the Master's degree was largely in professional education, he may need courses in his teaching field. If his Master's preparation was in a content field, he may need professional study.

The program must include, in addition to any prerequisites, a minimum of 30 hours of graduate credit, 24 hours of which must be in third-group courses (or the equivalent at other institutions). A maximum of 6 semester hours of graduate credit

in second-group courses may be included, a minimum of 12 hours in courses offered by the School of Education must be included.

Residence

Candidates for the Advanced Professional Certificate must complete satisfactorily at this University a minimum of 18 semester hours in courses offered on the campus. The balance of the program may include courses in the Off-Campus Division of the College of General Studies or in other approved institutions of higher learning. The candidate is not required to pursue his program of study continuously. On request, a leave of absence is granted for a period not to exceed three years.

THE DEGREE OF DOCTOR OF EDUCATION

The School of Education offers programs of advanced study leading to the degree of Doctor of Education. These programs are under the supervision of the Committee on Graduate Studies and provide opportunities for study leading to the following professional objectives: school superintendent, secondary school principal, elementary school principal, supervisor, director of guidance, director of curriculum development, professor of education, and specialist in educational research, employee training, or adult education. All programs require study of interrelated areas of education as well as a doctoral dissertation in the major field of study.

Each program is divided into two parts. The first consists of preparation for and the passing of comprehensive examinations in each of four supporting fields and a major field of study. The second is composed of research investigation and the writing of a dissertation in the major field of interest and culminates in the final oral examination.

Admission

The applicant must possess adequate preparation for advanced study including graduate work in fields prerequisite to his objective equivalent to that required for the degree of Master of Arts in Education at this University, at least three years of successful pertinent educational experience, acceptable personal qualities, and a capacity for creative scholarship and effective leadership.

The applicant first arranges for a preliminary interview with the Assistant Dean for Advanced Graduate Studies to explore his needs in relation to the resources of the School of Education and to provide the guidance needed to proceed with an application for advanced study.

To be admitted to graduate study for the degree, the applicant must be accepted by the Committee on Graduate Studies on the basis of the following factors: (1) his previous scholastic and professional record, (2) the results of prescribed admission tests including the Aptitude Test of the Graduate Record Examination, (3) individual evaluation through personal conferences with at least three faculty members including the major professor under whom the applicant desires to pursue his work, and (4) the outcome of a group interview with the Committee on Graduate Studies.

Committee on Graduate Studies

The responsibility for selection of supporting and major fields rests with the candidate. Each applicant when he appears before the Committee on Graduate Studies should be prepared to present an outline of his plan of study including the selection of major and supporting fields and the tools of investigation needed for the comple-

tion of a doctoral dissertation. The tools may include one foreign language or more, statistical methods, or historical criticism. Candidates with less preparation than that normally required for a Bachelor's and Master's degree in Education must make up their deficiencies either prerequisite to or as part of their graduate work.

Study for the Major and Supporting Field Examinations

The requirements for the degree of Doctor of Education cannot be stated in semester hours, but they consist in general of at least two to three years of full-time work, or the equivalent of part-time work, beyond the degree of Master of Arts in Education. Upon admission to study for the first part of a doctoral program the applicant is assigned to a Committee which prescribes and directs his studies. The Committee is composed of professors who will direct the student's work in the major and four supporting fields. Preparation for and the passing of supporting field examinations precedes preparation for and taking the final examination in the major field.

A student is required to consult individually with supporting and major field professors in order to determine the requirements for each field of study and to receive guidance in preparation for each examination. Supporting field examinations are written and are six hours in length. The major field examination is twelve hours in length, six hours on each of two successive days. Upon satisfactory completion of all supporting and major field examinations the student, upon recommendation of the Committee on Graduate Studies, is permitted to pursue the second part of his doctoral program.

The Dissertation and the Final Examination

The student permitted to continue the second part of a doctoral program is assigned to a Master in Research, generally the major field adviser. Throughout the remainder of the program, the candidate is responsible solely to his Master in Research. Two additional faculty members assist the Master in reading the first draft of the candidate's dissertation. When the dissertation is considered acceptable, the Master recommends the candidate to the Dean for the final oral examination.

The final oral examination must be passed at least three weeks before the degree is to be conferred. The examination is conducted by a committee of the Faculty appointed by the Dean, supplemented by at least two leaders in the candidate's field of study from outside the University. The examination is open to the public. Candidates who successfully pass the oral examination are recommended for the degree by the Faculty of the School of Education.

Residence and Continuous Study

All the preparation for the degree must be done in residence. The student must maintain continuous registration in the School of Education, except when the Committee on Graduate Studies has granted a leave of absence. Failure to maintain registration in each semester of the academic year may result in lapse of candidacy. Subsequent readmission is subject to whatever new conditions and regulations have been established by the Committee on Graduate Studies.

There is no formal regulation concerning the minimum amount of time to be spent in preparation for the minor and supporting field examinations or as a candidate engaged in doctoral research. The supporting and major field examinations, however, must be completed within five years of the date of admission and the entire program must be completed within eight years, regardless of full-time or part-time

study. Each candidate is required to complete one semester or more of his program in full-time study. Full-time study in two nine-week Summer Sessions is equivalent to full-time study for one semester.

READING CLINIC

To help children and adults with reading difficulties the University operates a diagnostic and corrective reading clinic. Children may be referred by principals, teachers, or parents. Adults may apply by telephone.

To arrange for a clinical examination of reading status, address The George Washington University Reading Clinic, 2018 I Street NW., or telephone FEderal 8-0250, Extension 491, for an appointment. The Clinic is open for appointments Monday through Friday, from 9:00 A.M. to 5:00 P.M.

Fees.—The fee for individual diagnosis is $35; for individual instruction, $5 a lesson; for semi-individual instruction, $4 a lesson; for instruction in small groups with common reading difficulties, $3.25 a lesson. All fees are payable in advance at the Office of the Cashier.

SPECIAL CURRICULA

The School of Education provides special curricula for liberal arts graduates, housewives, and retired military personnel who wish to prepare for teaching. Those seeking certification through completion of a program of teacher preparation approved by the National Council for Accreditation of Teacher Education but who do not wish to work for a degree, may enroll in a certification program if they meet the admission, sholarship, and personality requirements of degree candidates. The School also provides a wide range of courses of interest to teachers who wish to renew licenses. See "Application for Admission", below.

ADMISSION

APPLICATION FOR ADMISSION AND READMISSION

Forms for application for admission or readmission are available at the Office of the Director of Admissions, 2029 G Street NW., Washington 6, D. C.; telephone: FE 8-0250, extension 344. The application for admission*, with a $10 application fee and a recent, signed photograph, should be returned to the Office of the Director of Admissions.

Application for admission or readmission for degree candidacy, together with all required credentials, should be received by July 1 for the fall semester, January 1 for the spring semester, and May 1 for the Summer Sessions to insure consideration. Late applications will be considered only if the application form and all required credentials are received in the Admissions Office no later than two weeks prior to the first day of registration for the semester or session for which application is made. Exceptions may be made under extraordinary circumstances, at the discretion of the Director of Admissions.

An applicant who has attended one or more institutions of higher learning must

* An application for readmission does not require a fee unless it involves transfer to a college, school, or division of the University other than the one in which the applicant was last registered. In this case, a $5 transfer fee is required.

request each registrar to mail directly *to the Office of the Director of Admissions* a transcript of his record, *even though credits were not earned.*

Admission to graduate study.—A student with a Bachelor's degree from this University who wishes to work toward a Master's degree *must* apply, at the Office of the Director of Admissions, for admission to graduate study.

READMISSION

A student previously registered in the University who was not registered on-campus during the immediately preceding semester (summer session excluded), must apply for readmission in the Office of the Director of Admissions. If he applies as a degree candidate and was previously registered as a nondegree student, or if he has attended one or more higher institutions during his absence from the University, he must have complete, official transcripts sent to the Office of the Director of Admissions from each institution attended. Applications for readmission are considered on the basis of regulations currently effective.

ENTRANCE REQUIREMENTS

For the Bachelor's Degrees

Bachelor of Arts in Education or *Bachelor of Science in Physical Education.*—The satisfactory completion of the two-year curriculum in Education or Physical Education offered in the lower-division of Columbian College of Arts and Sciences (see pages 8, 10, 11–12), or the equivalent from another accredited higher institution, or a certificate of graduation from an approved normal school or the equivalent is required. The applicant must have a quality-point index of 2.00 (average grade of *C*) counting *Incomplete* grades as *F*. He must have demonstrated a genuine interest in teaching, possess personality traits that give promise of success as a teacher.

Applicants in the Metropolitan Washington Area must have a personal conference with the Assistant Dean of the School of Education in charge of admission or with one of his assistants. Applicants from a distance who are strongly recommended as good teacher prospects by a member of the Faculty of another institution may be admitted without a personal conference.

Applicants who have not completed requirements in the appropriate pre-Education curriculum in Columbian College of Arts and Sciences, or the equivalent at other accredited institutions, may be admitted to the School of Education with deficiencies. Such deficiencies must be removed before graduation and in the sequence prescribed by the student's adviser.

Advanced Standing

An applicant for advanced standing may be considered for admission upon presentation of satisfactory credentials from an accredited institution of higher learning. The student must be in good standing as to scholarship and conduct and must be eligible to return to the previously attended institution in the semester for which he seeks admission to this University. Credit for transferred work will be assigned by the School of Education to the extent that it meets the requirements for the degree sought at this University and subject to the University regulations concerning satisfactory subsequent work.

The applicant who is unable to meet the admission requirements may be admitted

with deficiencies to be met by satisfactorily completing prerequisites in addition to the specified program of graduate study. Each applicant must be interviewed by a member of the Faculty of the School of Education. The applicant seeking to qualify for a higher level in the local salary scale must have his program approved by the appropriate representative of the school system employing him.

REGISTRATION

A student cannot register for classes until he has received a letter of admission to the University, issued by the Office of the Director of Admissions.

A student who has previously matriculated in the University, but who has not been in attendance during the semester prior to registration (summer session excluded) should file an application for readmission in the Office of the Director of Admissions two weeks in advance of registration.

No registration is accepted for less than a semester or one summer session.

A student may not register concurrently in this University and another institution without the prior permission of the dean of the college, school, or division in which he is registered in this University. Registration in more than one college, school, or division of the University requires the written permission of the deans concerned, *prior to registration.* Allowance for credit for work done concurrently will be at the discretion of the appropriate Committee on Admission and Advanced Standing.

FEES AND FINANCIAL REGULATIONS

By authorization of the Board of Trustees, the following fees have been adopted, effective September 1962:

Tuition Fees

Except work taken by a candidate for a Doctor's degree:	
Full-time program (15 hours or more), a semester	$500.00
Part-time program, for each semester hour	33.00
For the degree of Doctor of Education:	
For work* leading to and including the general examination	1,100.00
For work leading to and including the final examination	1,100.00

Additional Course Fees

In certain courses additional fees, such as laboratory and material fees, are charged as indicated in the course descriptions. These fees are charged by the semester and, unless otherwise indicated, may be defrayed in three payments when the tuition is paid in this manner. Breakage of apparatus is charged against the individual student. When breakage is in excess of the normal amount provided for in the laboratory fee the individual student will be required to pay such additional charges as are determined by the department concerned.

Graduation Fees

Wherein a degree is conferred	25.00
Wherein an Advanced Professional Certificate is conferred	25.00

* This fee does not cover the cost of tuition for elementary courses (numbered 1–100).

Fee for Binding Master's Thesis	6.00
Fee for Printing Summary of Doctoral Dissertation	85.00

Special Fees

Application fee, charged each applicant for admission as a degree candidate, nonrefundable	10.00
Application fee, charged each applicant for admission to nondegree teacher certificate programs, nonrefundable	10.00
Application fee, charged each applicant for admission to nondegree status, nonrefundable	5.00
Application for Transfer fee, charged* each applicant for transfer within the University from one college, school, or division to another, except in cases of normal progression, nonrefundable	5.00
Admission tests (when required)	6.00–12.00
Late-registration fee, charged each student who fails to register within the designated period	5.00
Change fee, charged each student for each change in program involving one or more than one course	2.00
Service fee, charged each student for late payment of tuition (see "Payment of Fees")	1.00
Reinstatement fee, charged each student who is reinstated after suspension for delinquency in fees	5.00
Residence fee, charged each student wishing to maintain "in residence" status during any semester of absence from the University or after completion of tuition requirements	33.00
For special physical examination	2.00
For each examination to qualify for advanced standing and for each special examination	5.00
English tests for foreign students, when required	5.00
Laboratory checkout fee, charged each student in chemistry courses who fails to check out of the laboratory by the time set by the instructor	3.00
Transcript fee, charged for each transcript of record after the first	1.00

Registration in the University entitles each student to the following University privileges: (1) the issuance of one certified transcript of record, if and when desired; (2) the services of the Placement Office; (3) the use of University library; (4) gymnasium privileges; (5) admission to all athletic contests, unless otherwise specified; (6) subscription to the *University Hatchet*, the student newspaper; (7) admission to University debates; (8) medical attention and hospital services as described on pages 43–44. These privileges, with the exception of the issuance of transcripts, terminate, and a student is no longer in residence, when he withdraws or is dismissed from the University.

PAYMENT OF FEES

All fees are payable at the Office of the Cashier, 725 Twenty-first Street NW. No student is permitted to complete registration or to attend classes until all fees are paid. Fees for each semester are due and payable in advance at the time of registration.

In exceptional cases, subject to the approval of the Treasurer, the student may sign a contract for semester charges, except for fees payable in advance, permitting payments as follows:

Fall Semester.—One-third at the time of registration; one-third on the first working day† in November; one-third on the first working day† in December.

* Payable at the time of application for transfer or readmission.
† The University work week is Monday through Friday, inclusive.

Spring Semester.—One-third at the time of registration; one-third on the first working day* in March; one-third on the first working day* in April.

Arrangements for the above may be made with the Office of the Cashier at the time of registration.

A student who fails to meet payments when due, but who pays his fees within the following two weeks of the date on which payment is due, is charged a service fee of $2. A student who fails to meet payments within these two weeks after payment is due will be automatically suspended and may not attend classes until he has been officially reinstated and has paid all accrued fees and a reinstatement fee of $5.

A student suspended for failure to meet payments when due may not be reinstated for the semester after two weeks from the date of suspension. Applications for reinstatement are to be made to the Office of the Cashier.

An auditor pays all fees chargeable to the student registered for credit except the late-registration fee.

WITHDRAWALS AND REFUNDS

Fall Semester

Full-time program.—Complete withdrawal from the University dated on or before the last working day* in October or November, cancellation of two-thirds or one-third, respectively, of the full-time program charges.

Partial withdrawal dated on or before the last working day* in October or November, cancellation of two-thirds or one-third, respectively, of the difference between the charges for the full-time program and the hourly charges of the part-time program continuing in effect.

Part-time program.—Withdrawal dated on or before the last working day* in October or November, cancellation of two-thirds or one-third, respectively, of tuition charges.

Spring Semester

Full-time program.—Complete withdrawal from the University dated on or before the last working day* in February or March, cancellation of two-thirds or one-third, respectively, of the full-time program charges.

Partial withdrawal dated on or before the last working day* in February or March, cancellation of two-thirds or one-third, respectively, of the difference between the charges for the full-time program and the hourly charges of the part-time program continuing in effect.

Part-time program.—Withdrawal dated on or before the last working day* in February or March, cancellation of two-thirds or one-third, respectively, of tuition charges.

No refund or reduction will be allowed on any withdrawal dated after the last working day* in November (fall semester) or March (spring semester).

A student enrolled in a full-time program, who drops or adds a course and continues to be in a full-time program, will have no financial adjustments of tuition made other than those involving course fees.

In no case will a refund be made of the first third of the total tuition charges unless the registration is in advance and is cancelled before the regular registration

* The University work week is Monday through Friday, inclusive.

day. In this case a withdrawal fee of $5 is charged and tuition fees refunded. In no case will tuition be reduced or refunded because of nonattendance upon classes.

Payment applies only to the semester for which a registration charge is incurred and in no case will this payment be credited to another semester.

Any student in chemistry or pharmacy who fails to check out of the laboratory on or before the date set by the instructor, unless excused by the instructor, will be charged a checkout fee in the amount of $3. A student who drops a course before the end of the semester must check out of the laboratory at the next regular laboratory period.

Any student enrolled in the Air Force ROTC who fails to turn in uniforms, equipment, and textbooks, on separation from the Corps, will be charged the value of the missing items.

Authorization to withdraw and certification for work done will not be given a student who has not a clear financial record.

Students are encouraged to provide their own cash funds until they can make banking arrangements in the community.

REGULATIONS

AMOUNT OF WORK

Fifteen to 17 semester hours of credit constitute a normal program. A student with a quality-point index of 3.00 or higher, may, with the permission of the Dean, enroll for 18 or 19 hours. No student may enroll for more than 19, except by permission of the Committee on Scholarship.

A student employed 15 hours or less a week may carry a normal program of college work.

A student employed from 16 to 25 hours a week may enroll for 12 or 13 hours. Such a student with a quality-point index of 3.00 or higher may, with special permission of the Dean, enroll for 15 or 16 hours.

A student employed from 26 to 34 hours a week may enroll for 9 or 10 hours. Such a student with a quality-point index of 3.00 or higher may, with special permission of the Dean, enroll for 12 or 13 hours.

A student employed 35 hours or more a week may enroll for 6 or 7 hours. Such a student with a quality-point index of 3.00 or higher may, with special permission of the Dean, enroll for 9 or 10 hours.

A student who increases his hours of employment after registration or at any time during a semester must report immediately to the Dean so that his program may be adjusted, if necessary.

ATTENDANCE

A student may not attend classes until registration is completed and fees due are paid. Regular attendance is required. A student may be dropped from any course for undue absence.

SCHOLARSHIP

A student who fails to maintain the scholarship requirements of the School of Education may be dismissed from the University.

Grades

Grades are mailed to the student through the Office of the Registrar at the close of each semester. They are not given out by instructors.

Undergraduate.—The following grading system is used: *A*, excellent; *B*, good; *C*, average; *D*, passing; *F*, failing. Whenever a grade has not been assigned the symbol *I* (incomplete) or the symbol *W* (authorized withdrawal) will be recorded. The symbol *I* indicates that a satisfactory explanation has been given the instructor for the student's failure to complete the required work of the course. An "incomplete" cannot be made up after the lapse of one calendar year except by written permission of the dean's council of the college, school, or division concerned. Courses from which a student has withdrawn by proper authorization will be indicated by the symbol *W*. A student may not repeat for grade a course in which he has received a grade of *D* or above, unless required to do so by the department concerned. A written statement to this effect must be submitted to the Registrar by the appropriate departmental chairman.

Graduate.—For graduate work, grades are indicated as *E* (excellent), *S* (satisfactory), *U* (unsatisfactory), *I* (incomplete).

The Quality-Point Index

Undergraduate scholarship is computed in terms of the quality-point index, obtained by dividing the number of quality points by the number of semester hours for which the student has registered, both based on the complete record in this University.

Quality points are computed from grades as follows: *A*, four points; *B*, three points; *C*, two points; *D*, one point; *F*, no points, for each semester hour for which the student has registered. Courses marked *W* or *I* are not considered in determining the index, except that courses marked *I* will be considered when a formal grade is recorded, or at the close of a calendar year, whichever occurs first. If an "incomplete is not superseded by a proper grade within the allotted time, it is computed as zero quality points. Grades in courses taken at another institution are not considered in computing the quality-point index.

Academic Dishonesty

Evidence of dishonesty on the part of any student will result in his suspension by the Dean upon recommendation of the Dean's Council.

A student found guilty of dishonesty will be suspended for a stated period and will be deprived of credit for all courses in which he is enrolled during the semester in which the dishonest act occurs. A disciplinary grade of "Failure—Academic Dishonesty" will be recorded for each such course, and this grade will be employed in computation of the quality-point index.

If a student suspended because of academic dishonesty should be readmitted, he may be required to repeat for grade all courses for which a disciplinary grade has been recorded, and both the grade earned on repetition and the disciplinary "Failure—Academic Dishonesty" grade will be employed in computation of the quality-point index.

Probation

A student who fails to maintain a quality-point index of at least 2.00 is placed on probation. He remains on probation as long as his index is below 2.00, or until his probation is removed by the Committee on Scholarship.

Suspension

A student on probation who fails to raise his index to 2.00 within the time specified may be suspended. A student who fails one-half or more of the minimum of 16 semester hours may be suspended.

A student suspended for poor scholarship may, within ten days, appeal his case to the Committee on Scholarship through the Dean. If the case appears to be remediable and the student seems likely to improve in his scholarship, the Committee may readmit him on probation. A student denied readmission may again, after the lapse of a calendar year, petition the Committee through the Dean for readmission. A student suspended twice will not be readmitted.

WITHDRAWAL

Withdrawal from a course or from the University, *without academic or financial penalty*, requires the permission of the Dean. Permission to withdraw from the University will not be granted a student who does not have a clear financial record.

Withdrawal between the last working day* in October and the end of the fall semester and between the last working day* in February and the end of the spring semester is permitted only in exceptional cases.

All charges for courses dropped without the approval of the Dean must be met by the student. Reporting the dropping of a course to an instructor does not effect its discontinuance.

CHANGES IN PROGRAM OF STUDIES

Changes within the School.—A student may not change or drop courses (see "withdrawals", above) or change his status to that of auditor except with the approval of the Dean, upon presentation of adequate reasons for such changes.

Change from one section to another of the same course may be made with the approval of the Dean and the department concerned.

Change from one major subject to another within the same college or school may be made with the approval of the Dean. All requirements of the course of study to which the change is made must be met.

Transfer within the University.—Transfer from one college, school, or division to another may be made only with the approval of the deans concerned. Application for transfer must be made to the Director of Admissions on the form provided by his office.

Students wishing to transfer from the Division of University Students to the School of Education should note that a maximum of 45 semester hours will be accepted in transfer.

In order to provide degree candidates with proper academic counsel and the benefits of integrated programs of study, the faculties of the various colleges and schools have established minimum residence requirements and regulations with regard to supervision of the work done in the student's major field. In addition, various special regulations regarding course sequence, selection of electives, and advisory approval of programs apply in particular curricula. Students transferring within the University are advised to study carefully the graduation requirements and to note that in all undergraduate divisions 30 semester hours including *at least 12 semester hours* in the major field, must be completed *in residence* in the school or college from which the degree is sought. Upon transfer the student should consult the dean concerned and understand clearly the requirements he must fulfill.

* The University work week is Monday through Friday, inclusive.

CREDIT

Credit is given only after registration for a course and satisfactory completion of the required work.

On request the Registrar will issue to undergraduate degree candidates a balance sheet showing the amount of work completed.

In special instances, a person who has been admitted to the University may be registered, with the permission of the instructor, as an "auditor" in a class (no academic credit). An auditor is not required to take active part in the exercises or to take examinations. A student who takes a course as an auditor may not take the same course later for credit.

Transcripts of Record

Official transcripts of student records will be issued on request of the student or former student. No charge is made for the first copy; a fee of one dollar is charged for each one thereafter. No certificate of work done will be issued for a person who does not have a clear financial record.

SUMMER SCHOOL CREDIT

A student who plans to attend summer school sessions at another institution with the intention of having credits so obtained apply toward graduation from this University must first secure the written approval of the Dean. In no event will such credits be recognized to an amount in excess of that which might be earned in a similar period in this institution.

GRADUATION REQUIREMENTS

To be recommended for graduation a student must have met the admission requirements of the college or school in which he is registered, completed satisfactorily the scholarship, curriculum, residence, and other requirements for the degree for which he is registered, and be free from all indebtedness to the University.

Application for Graduation.—It is the student's responsibility to file an application for graduation in the Office of the Registrar at the time of registration for the last semester of the senior or final year.

Students expecting to complete, during the Summer Sessions, requirements for degrees to be awarded at the February convocation, must apply for graduation as a part of registration for the Summer Sessions.

Scholarship.—The undergraduate student must maintain a quality-point index of at least 2.00.

Candidates for the Master's degree and the Advanced Professional Certificate must obtain at least a grade of *Satisfactory* (*B* level) on each course of the required minimum graduate program and must maintain a quality-point index of at least 2.50 on all prerequisite courses.

Curriculum.—Curriculum requirements for the Bachelor's degrees are stated on pages 7–24; for the Master's degree, on pages 24–28.

Residence.—The undergraduate student and the Master's candidate must complete a minimum of one year or 30 semester hours in residence. Not more than 9 hours

of this requirement may be satisfied by off-campus courses. Summer work may be counted in residence, but in no case may the period of residence aggregate less than thirty weeks. Unless special permission is granted by the Dean to pursue work elsewhere, the work of the senior or final year must be completed in residence.

Candidates for the Advanced Professional Certificate must meet a minimum residence requirement of 18 semester hours taken on campus.

Degree candidates are expected to maintain continuous residence by registering for at least one course in each of two of the three terms (fall, spring, summer). Candidates who are unable to enroll for a course but wish to use the library facilities and consult staff members may, with the permission of the Dean, register "in residence" by paying the residence fee. Candidates, who for reasons beyond their control, must temporarily discontinue their studies may be granted leave of absence for one or two terms, on petition to the Dean's Council.

Students who complete degree requirements during the Summer Sessions and are cleared for February graduation by the Registrar are not required to register "in residence" for the fall semester.

National Teacher Examinations.—All candidates for the Bachelor of Arts degree in the School of Education are required to take the National Teacher Examinations at one of the regularly scheduled administrations conducted in February, July, and October. Candidates expecting to graduate in June should take the examinations the previous February. Those expecting to graduate in February should take the examinations the previous July or October.

Students will receive individual reports of test scores and may avail themselves of the regular transcript services of the Educational Testing Service. A copy of test scores must be forwarded to the School of Education.

Each senior required to take the National Teacher Examinations must register for them in the Office of the Dean at least thirty days prior to the date of the administration of the examinations. Details concerning time, place, registration, and fees may be obtained in the Office of the School of Education.

Thesis or Dissertation.—A thesis or dissertation submitted in partial satisfaction of requirements for the Master's or Doctor of Education degrees must be presented in its final form to the Dean no later than the date specified in the Calendar. Three complete copies of each are required. It is the responsibility of the candidate for a graduate degree to obtain from the Dean a printed copy of the regulations governing the styling and reproduction of the thesis or dissertation, which are rigidly enforced.

Accepted theses and dissertations, with accompanying drawings, become the property of the University and are deposited in the University Library, where the duplicate copies are bound and made available for circulation. Permission to publish or adapt material in them must be secured from the appropriate Dean.

Attendance and Conduct.—The University reserves the right to refuse to confer a degree upon a candidate whose attendance or conduct has been unsatisfactory.

Presence at Graduation.—Presence at the graduation exercises is required of the candidate unless the work for the degree was completed during the summer term or written application for graduation *in absentia* has been approved by the Dean.

Honors

With distinction.—In all undergraduate divisions of the University the degree may be conferred "with distinction", at the discretion of the Faculty, if a student attains

a quality-point index of 3.50 or higher on all work taken at this institution. To be eligible for this honor a student must have completed at this institution at least one-half of the work required for the degree.

Special honors.—Special honors may be awarded by the Faculty to any member of the graduating class for outstanding achievement in the student's major field of work on recommendation of the major department, under the following regulations:

1. The student must have his candidacy for special honors approved by the faculty member representing the major department or field not later than the beginning of the senior year.

2. The student must meet such other conditions as may be set at the time his candidacy is approved.

3. No student will be awarded special honors unless he has a quality-point index of at least 3.00 on all work taken at this institution.

4. To be eligible for honors a student must have completed at this institution at least one-half of the work required for the degree.

THE LIBRARY

A student registered in the University is entitled to the reference use of the University Library. The Student Identification Card, issued upon the payment of fees, must be presented as identification.

Library books, with the exception of those in the Law and Medical collections, may be drawn for home use for a period of two weeks. Any book which does circulate is subject to recall by the Librarian at any time. Reserve books and periodicals for collateral reading must be used in the reading rooms when the Library is open. With special permission they may be drawn for overnight use when the Library closes. A fine of twenty-five cents will be charged for the first hour or fraction of an hour and five cents for each hour or fraction thereafter that a reserve book is overdue. Grades of a student will be withheld until his library record is clear.

Hours

The University Library is open from 9:00 A.M. to 10:00 P.M. each class day (Saturday 9:00 A.M. to 5:00 P.M.), and from 2:00 to 6:00 P.M. on Sunday.

RIGHT TO DISMISS STUDENTS

The right is reserved by the University to dismiss or exclude any student from the University, or from any class or classes, whenever, in the interest of the student or the University, the University Administration deems it advisable to do so.

RIGHT TO CHANGE RULES

The University and its various colleges, schools, and divisions reserve the right to modify or change requirements, rules, and fees. Such regulations shall go into force whenever the proper authorities may determine.

PROPERTY RESPONSIBILITY

The University is not responsible for the loss of personal property in any University building. A "Lost and Found" Office is maintained in the Student Union.

FELLOWSHIPS, SCHOLARSHIPS, PRIZES, FINANCIAL AID

FELLOWSHIPS, GRADUATE SCHOLARSHIPS, AND ASSISTANTSHIPS

The following fellowships, graduate scholarships, and assistantships are available. Unless otherwise specified, applications should be submitted not later than March 1 preceding the period for which the award is to be made. They should be directed to the chairman of the department or the dean of the school concerned and addressed to The George Washington University, Washington 6, D. C.

University Teaching Fellowships.—Assigned for the academic year to the various departments of instruction. The applicant is expected to be a prospective candidate for a Doctoral degree in the general field of his future doctoral study. Each teaching fellow receives an annual stipend (on a nine-month basis) of up to $2,000 plus tuition and laboratory fees for whatever schedule of study or research his fellowship duties permit him to carry. Tuition and laboratory fees may not exceed $500. Stipends vary with the work load of the individual teaching fellow. Normally a University teaching fellow renders half-time service in classroom or laboratory assignments to the department of instruction directing his doctoral study. Application should be made to the chairman of the department of instruction concerned.

Graduate Teaching Assistantships.—Open in various departments of instruction to candidates for the Master's degrees. Each graduate teaching assistant renders a designated unit of service to his major department of instruction, and receives, depending upon his teaching or laboratory assignment, up to $2,000 on a nine-month basis plus tuition and laboratory fees for the program of studies which the duties of his assistantship permit him to carry. Tuition and laboratory fees may not exceed $600. Application should be made to the chairman of the department of instruction concerned.

SCHOLARSHIPS AND PRIZES

The following scholarships and prizes are limited to students in the School of Education. The University offers many others which are open to School of Education students. A special bulletin containing a complete list and full information may be obtained from the Chairman of the Committee on Scholarships, The George Washington University, Washington 6, D. C.

Scholarships are awarded for the academic year unless otherwise specified and are credited in equal parts for each semester. Each holder must carry a full schedule of academic work during the period for which the scholarship is awarded.

Scholarship application should be made in writing on or before April first for the following academic year and, unless otherwise specified, should be addressed to the Chairman of the Committee on Scholarships, The George Washington University, Washington 6, D. C. Awards are made during the month of April. All scholarships begin with the fall semester.

Mildred Green Memorial Scholarship Fund (1959).—Established by Alpha Theta Chapter of Pi Lambda Theta, provides annual tuition aid for a student in the School of Education, upon the recommendation of the donor.

Anna Spicker Hampel Scholarship (1949).—Established by Evelyn Hampel Young in memory of her mother, provides tuition aid for a young married woman in the School of Education or Columbian College of Arts and Sciences.

Elizabeth V. Brown Scholarship Fund (1925).—A Columbian Women Scholarship

memorial fund of $1,200 for tuition aid, established by the College Women's Club of Washington, D. C., and restricted to the School of Education.

Phi Delta Kappa Prize.—Awarded annually by Beta Gamma Chapter to the outstanding senior man in the teacher education program in the School of Education.

Pi Lambda Theta Prize.—Awarded annually by Alpha Theta Chapter to the outstanding senior woman in the teacher education program in the School of Education.

FINANCIAL AID

University Loan Fund.—The Trustees of the University have made available a fund for short-term loans to students to provide for partial payment of tuition. Application should be made three days prior to the dates on which tuition installments are due.

Home Economics Loan Fund.—A fund of $382, given by the D. C. Home Economics Association, is available for loans to senior girls majoring in Home Economics.

National Defense Student Loan Fund.—This fund is available to full-time undergraduate and graduate students who are in need of financial assistance. Priority is given those applicants who express a wish to teach in elementary or secondary schools, and whose academic background indicates a superior capacity or preparation in science, mathematics, engineering, or a modern foreign language. After application for admission to the University has been completed, application on forms prescribed for this loan fund must be filed in the Office of the Treasurer no later than July first for the fall semester, December first for the spring semester, and May first for the Summer Sessions.

For complete information on other Fellowships, Scholarships, Prizes, Financial Aid, request the Special Bulletin on the subject, which is available in the Office of the Committee on Scholarships, The George Washington University, Washington 6, D. C.

A list of banks and commercial finance firms offering various types of tuition payment plans is available through the Office of the Treasurer.

STUDENT LIFE

LIVING ACCOMMODATIONS

The University maintains seven residence halls. Meals are served at the Student Union.

Admission to the University does not include a room reservation. A separate application for a room should be made well in advance (for the fall semester by May first, for the spring semester by January first). Rooms are leased for the academic year, and a deposit of $50, which is credited toward the fall semester room charge, is required. If notice of withdrawal or cancellation of room reservation is received prior to June 30, $25 of the deposit will be refunded. Room rentals are payable in advance by the semester.

Forms for application, together with detailed information, may be obtained from

the Director of Activities for Women, Woodhull House, 2033 G Street NW. or the Director of Activities for Men, Building Q, 2029 H Street NW.

Information concerning private rooming and boarding facilities near the University may be obtained at the Housing Office, Lisner Auditorium. The reservation of rooms in private houses must be made by students.

All girls (except freshmen) under the age of twenty-one, who are enrolled for twelve or more semester hours of academic work at the University and who are not living with their parents or relatives, may live outside the residence halls only with the permission and approval of the Director of Activities for Women, and upon receipt of written requests from parents. In no case will permission be granted for such girls to live outside the residence halls except with persons approved by the Director of Activities for Women.

Freshman girls may live outside the residence halls only with their parents or with immediate relatives with the written approval of their parents.

John Quincy Adams Residence Hall for men provides triple rooms with bath. Rooms rent at $345 a person for the academic year.

John C. Calhoun Residence Hall for men provides double rooms at $330 a person for the academic year.

William H. Crawford Residence Hall for women provides double rooms at $405 a person for the academic year.

Hancock Residence Hall for women provides single rooms at $535 and double rooms at $405 a person for the academic year.

Dolly Madison Residence Hall for women provides double rooms at $405 a person for the academic year.

Hattie M. Strong Residence Hall for women provides single rooms at $470 and double rooms at $405 a person for the academic year.

Welling Residence Hall for men provides a limited number of double rooms at $300 a person for the academic year.

HEALTH ADMINISTRATION

The University maintains a health service that is primarily diagnostic in its intent. For medical emergencies and health consultations there is, on the Campus, a Student Health Clinic open from 9:00 A.M. to 5:00 P.M. with physician and nurse in attendance. There is also a rest room for women, with a graduate nurse in charge.

Medical privileges include: (1) physical examination of every student entering from secondary school;* (2) three visits by the University physician or surgeon, to office or residence (District of Columbia), in any one illness, exclusive of a special-ist, surgical operation, laboratory, or X-ray examination; (3) hospitalization, including board and nursing, in the University Hospital for not more than one week during any twelve-month period—the necessity to be determined by the Director of Health Administration.† All additional hospital charges for operating room, laboratory, anesthetics, X-ray, medications, or any other special service must be paid by the student. The duration of hospitalization period (maximum, one week) is also to be determined by the Director of Health Administration.

This medical benefit applies only to illness or disability incurred while currently enrolled in the University. It does not apply to illness or disability incurred between the last day of examinations for a semester or summer session and completion of registration for the next semester or summer session.

* A charge of $2 for a special physical examination is made by the University if a student fails to appear for a physical examination during the period set for this purpose.

† See Rule 5, for exception.

The student is allowed, if he so desires, to engage physicians and nurses of his own choice, but when he does so he will be responsible for the fees charged.

Rules: (1) The Director of Health Administration is empowered to limit or deny the medical benefits where, in his discretion, a student has, by his misconduct or breach of the rules of the University, made himself ineligible; (2) the Director of Health Administration has authority to determine the necessity and length of hospitalization; (3) a student not currently enrolled or one who has severed his connection with the University is ineligible for medical benefits; (4) a student intending to train for an athletic team is required to pass a thorough examination at the beginning of each semester; (5) hospitalization is not available to those students availing themselves of other hospitalization coverage for the same illness.

The University is not responsible for injuries received in intercollegiate or intramural games, or in any of the activities of the physical education departments.

HONOR SOCIETIES AND PROFESSIONAL ORGANIZATIONS

Alpha Pi Epsilon.—An honorary Home Economics Sorority whose purposes include the improvement of scholarship and leadership standards among Home Economics students.

Phi Delta Kappa.—An international professional fraternity for men in Education, to promote fellowship based on common interests and ideals which make possible group action for the development of free public education through research, service, and leadership.

Pi Lambda Theta.—A national honorary association for women in Education, dedicated to the conception of education as a profession.

Student National Education Association.—Provides members with opportunities for developing personal and professional competency through an understanding of the history, ethics, and programs of the organized teaching profession.

COURSES OF INSTRUCTION

The University reserves the right to withdraw any course announced.

Explanation of Course Numbers

First-group courses.—Courses numbered from 1 to 100 are planned for students in the freshman and sophomore years. With the approval of the adviser and the Dean, they may also be taken by juniors and seniors. In certain instances, they may be taken by graduate students to make up undergraduate deficiencies or as prerequisite to advanced courses, but they may not be credited toward a higher degree.

Second-group courses.—Courses numbered from 101 to 200 are planned for students in the junior and senior years. They may be credited toward higher degrees only when registration for graduate credit has been approved before the mid-point of the course by the Dean of the School of Education and by the officer of instruction concerned, and when the completion of additional work has been certified by the officer of instruction.

Third-group courses.—Courses numbered from 201 to 300 are planned primarily for graduate students. They are open, with the approval of the officer of instruction, to qualified seniors.

Indication of the Amount of Credit

The number of semester hours of credit given for the satisfactory completion of a course is indicated in parentheses after the name of the course. Thus, a year course giving three hours of credit each semester is marked (3–3), and a semester course giving three hours of credit is marked (3).

DEPARTMENT OF EDUCATION

Courses offered by the Department of Education are of two types: those designed for the preservice education of candidates and those planned for the inservice education of teachers, counselors, and administrators.

Preservice courses devote two or three hours a week to lecture and discussion supplemented by a minimum of two hours a week of related field work. A clinical approach to the study of educational problems is used—lectures and discussions revolving around observed practices.

Inservice courses meet once a week for a two-hour period. Class work is supplemented by extensive reading assignments, the preparation of reports, and field work. A student enrolled in one of these courses should plan to devote not less than seven hours a week, exclusive of class time, to the work of the course.

Ample opportunity is provided to study teaching or administrative problems of special interest. To enable students to consult with instructors regarding individual problems, a conference hour is scheduled immediately before or after the class period.

Only the courses designed to provide professional information and skills are listed below. For courses needed for general education or teaching-field preparation, see the catalogue for the Division of University Students. In addition to courses offered in the Department of Education a number of professional courses for teachers are offered in the departments of Psychology, Speech, and Statistics. These are listed below together with courses offered by the Department of Education.

Whenever possible, the exact hour of class meeting is stated. Hours for classes not yet scheduled may be found in the Schedule of Classes for the semester concerned.

A *Reading Clinic*

Coleman and Staff

Diagnosis of reading difficulties; individual or group lessons without academic credit. Fee: for individual diagnosis, $35; for individual instruction, $5 a lesson; for semi-individual instruction, $4 a lesson; for instruction in small groups with common reading difficulties, $3.25.

Second Group

108 *Human Development, Learning, and Teaching* (3) Baker, McCauley

(Formerly Education 109–10)

Lecture (2 hours), conference (1 hour), field work (2 hours)—as arranged. Fall and spring—section A: M 1:10–3:10 P.M., section B: F 7:10–9:10 P.M.; summer 1962 (as Education 109–10 (3–3)) (Baker, McCauley, Lang). For the general student as well as the prospective teacher. Principles of effective teaching based on an understanding of human development and the nature of learning. Prerequisite: Psychology 22 or 121.

111 *Methods in Elementary Education* (12) Baker and Staff

Fall—Monday through Friday 9:10–12 A.M. For seniors in the elementary school curriculum. Methods, materials, appraisal, and field experiences in elementary schools. Problems and procedures in teaching the language arts (including reading, literature

for children, oral and written expression, spelling, and handwriting), arithmetic and science, social studies. Planning units of work, general classroom procedures, and evaluation of pupil progress. Observation and participation two mornings a week. Prerequisite: Education 108 and 123.

112 *Educational Measurement* (3) McCauley
Fall—T 3:10–5:10 P.M.; spring—T 7:35–9:35 P.M.; summer 1962 (Cook). Scope, needs, services to students, selection and construction of teacher made tests, interpretation of tests for evidence purposes. Prerequisite: Education 108 and 123.

113 *Elementary School Art* (3) Nowlin
Fall and spring: lecture and laboratory—M 6:10–9 P.M., field work—as arranged; summer 1962 (Crump). For undergraduates in the elementary school curriculum. Materials and methods. Prerequisite: Psychology 1 and 22, or 121. Material fee, $4.50.

114 *Elementary School Music* (3) Reed
Fall and spring—Th 7:30–9:35 P.M., field work (2 hours)—as arranged; summer 1962 (Mitchell). For undergraduates in the elementary school curriculum. Materials and methods. Prerequisite: Psychology 1 and 22, or 121.

115 *Teaching of Reading in the Elementary School** (3) Parker
Spring—W 7:10–9:10 P.M., field work (2 hours)—as arranged; summer 1962. A basic course in methods, techniques, materials, and activities essential to a good elementary school reading program. Prerequisite: Education 108 and 123 or teaching experience.

116 *Elementary School Social Studies** (3) Evans
Fall—F 7:10–9:10 P.M., field work (2 hours)—as arranged; summer 1962 (Cushman). For teachers. Content, methods, materials, and activities essential in the elementary school curriculum. Prerequisite: Education 108 and 123 or teaching experience.

117 *Elementary School Science** (3) St. Cyr
Spring—F 6:10–9 P.M., field work (2 hours)—as arranged; summer 1962. For teachers. Content, methods, materials, and activities essential in the elementary school curriculum. Prerequisite: Education 108 and 123 or teaching experience.

120 *Elementary School Arithmetic** (3) Scott
Spring—Th 7:35–9:35 P.M., field work (2 hours)—as arranged; summer 1962 (Baker). For teachers. Content, methods, materials, and activities essential in the elementary school curriculum. Prerequisite: Education 108 and 123 or teaching experience.

123 *Society and the School* (3) St. Cyr and Staff
(Formerly Education 121–22)
Lecture (2 hours), conference (1 hour), field work (2 hours)—as arranged. Fall and spring—section A: W 1:10–3:10 P.M., section B: M 6:10–8:10 P.M.; summer 1962—offered as Education 121-22 (3–3) (St. Cyr, Eller, Scott). For the general student as well as the prospective teacher. Historical and social development of education at local, national, and international levels; cooperation of the school with other community agencies; functions of school personnel.

128 *Children's Literature** (3) Walker
Spring—M 7:10–9:10 P.M., field work (2 hours)—as arranged; summer 1962 (Wilson). For teachers. Exploring and evaluating the newer books for children and the children's classics, understanding the contribution of literature in child development, appreciating children's original expressions. Prerequisite: Psychology 1 and 22.

131 *Principles and Methods of Secondary School Teaching* (3) Detwiler, Myers, Stalling
Fall—section A: TTh 12:30–1:45 P.M., section B: MW 4:30–5:45 P.M.; spring—MW 4:30–5:45 P.M. Field work as arranged. For seniors in the secondary school curriculum. Course, unit, and lesson planning; practical techniques used in connection

* This course may not be taken by students who have completed or plan to enroll in Education 111.

with motivation, the assignment, group procedures, directing study, individual differences, evaluation, clerical routines, disciplines, the homeroom, activity sponsorship, public relations. Prerequisite: Education 108 and 123.

134 *Student Teaching in Secondary Schools* (6 to 9) Detwiler and Staff

134A: fall—as arranged; 134A, 134B, 134C, and 134D: spring—as arranged. For seniors in the secondary school curriculum. Sections A and B are for full-time academic majors (Detwiler). Section C is for academic majors in the intensive program (Detwiler). Section D is for physical education majors (Myers, Stallings). Student teaching fee, $50. Admission by permission of the instructor. Prerequisite: Education 108 and 123.

135 *Student Teaching in Elementary Schools* (9) Baker

135A and 135B: spring—as arranged. For seniors in the elementary school curriculum. Student teaching fee, $50. Admission by permission of the instructor. Prerequisite: Education 108 and 123.

Special Methods Courses*

To be elected in the senior year after substantial preparation in the teaching fields concerned by the students in the secondary school curriculum. Course requirements and hours of credit vary with license requirements. Practices of successful teachers are studied and actual teaching content as found in current texts and courses of study is reviewed.

136 *Teaching English* (2 to 4) Lumsden

Spring—M 7:10–9 P.M., field work (2 hours)—as arranged. Prerequisite*: 18 semester hours in English.

137 *Teaching Speech* (2 to 4) Kosh

Spring—T 7:35–9:35 P.M., lecture (2 hours)—evening, field work (2 hours)—as arranged. Prerequisite*: 18 semester hours in Speech or the permission of the instructor.

138 *Teaching Social Studies* (2 to 4)

Spring—Th 7:35–9:35 P.M., field work (2 hours)—as arranged. Prerequisite*: 24 semester hours of social studies

140 *Teaching Mathematics* (2 to 4) Brown

Spring—Th 7:35–9:35 P.M., field work (2 hours)—as arranged. Prerequisite*: Mathematics through calculus.

144 *Teaching Science* (2 to 4) Eller

Spring—T 7:35–9:35 P.M., field work (2 hours)—as arranged. Prerequisite*: 24 to 40 semester hours of science.

146 *Teaching Foreign Languages* (2 to 4) McSpadden

Spring—T 5:10–7 P.M., field work (2 hours)—as arranged. Prerequisite*: 18 semester hours of one foreign language.

148 *Teaching Home Economics* (2 to 4) Towne

Spring—as arranged. Prerequisite*: 30 semester hours of Home Economics.

150 *Teaching Business Subjects* (2 to 4) Shott

Spring—S 9:10–11 A.M. Prerequisite*: 30 semester hours of business education.

Third Group†

203–4 *Comparative Education* (3–3) Jarman

Not offered 1962–63. Comparison of foreign educational systems with those of the United States, particularly those of Russia, West Germany, Denmark, Switzerland, France, the British Isles, Canada, and Australia.

205–6 *The Curriculum*‡ (3–3) St. Cyr

Academic year—S 11:10 A.M.–1:10 P.M. For experienced teachers. *First half:*

* Prerequisite to all special methods courses: Education 108, 123, and 131. Additional prerequisites as stated under each course.

† A degree from an accredited institution is prerequisite to all third-group courses.

‡ Prerequisite: adequate professional preparation.

curriculum foundations and issues; comparison of curriculum patterns. *Second half:* principles and procedures in curriculum development; group consideration of student problems.

St. Cyr

207 *Curriculum Materials** (3)

Summer 1962. For experienced teachers. Construction of courses of study, resource units, classroom teaching aids, and inexpensive materials; direct application to students' own situations.

Lang

208 *Human Development, Learning, and Teaching* (3)
(Formerly Education 201–2)

Lecture (2 hours), conference (1 hour), field work (2 hours)—as arranged. Fall and spring—M 7:10–9:10 P.M. For graduate students. Principles of effective teaching based on an understanding of human growth and development and the nature of learning. Prerequisite: Psychology 1 and 22, or 121.

McCauley

209 *Child Growth and Development* (3)

Fall—W 7:10–9:10 P.M. An interdisciplinary approach to child development taking into account such factors as society and culture, socialization, and socializing agents with particular emphasis on the home and school.

McCauley

210 *Adolescent Growth and Development* (3)

Spring—W 7:10–9:10 P.M. A consideration of physical, intellectual, and cultural backgrounds of adolescence with particular emphasis on social development, adjustment to organized society, educational development and adjustment to school, and home relationships.

McCauley

211 *Evaluation in Education** (3)

Fall—Th 7:35–9:35 P.M. Concept of evaluation, relationship between evaluation of ends and means, steps involved in the evaluation of learning outcomes. As the course progresses each student develops solutions for evaluation problems related to his work situation.

McCauley

212 *Educational Measurement* (3)

Spring—Th 7:35–9:35 P.M. Basic measurement techniques; construction, selection, administration, and interpretation of objective and essay-type examinations; statistical analysis of test results; laboratory experiences in the use of test instruments.

Jarman

213–14 *History of Education* (3–3)

Academic year—T 7:35–9:35 P.M. *First half:* the European backgrounds of American education. *Second half:* the evolution of the American school system.

215 *Education of Exceptional Children** (3)

Fall—Th 7:35–9:35 P.M. For classroom teachers. A survey of current problems in the education and guidance of exceptional pupils. Nature and needs of those physically, mentally, or emotionally handicapped; needs of the gifted. Resources for help in correction, diagnosis, therapy, education, and guidance.

216 *Education of Slow-learning Children** (3)

Not offered 1962–63. Identification, nature, and needs of slow-learning elementary and junior high school children. Emphasis on diagnosis and treatment of learning difficulties.

Jarman

217–18 *Philosophy of Education** (3–3)

Academic year—M 7:10–9:10 P.M.; summer 1962—Education 218 (3) (Darland). *First half:* designed to help students formulate a personal philosophy of education. *Second half:* social foundations of education—a study of the forces that shape the policies and offerings of the school.

Baker

219 *Elementary School Classroom Procedures** (3)

Summer 1962. Current classroom practices with particular emphasis on ways of planning, unit teaching, techniques in discipline; individual and group evaluation techniques, resources for learning, providing for individual differences.

* Prerequisite: adequate professional preparation.

223–24 *Reading Problems** (3-3) Coleman
Academic year—W 7:10–9:10 P.M. For experienced teachers. Study of reading difficulties on elementary and secondary school levels; classroom and clinical procedures in solving reading problems.

225 *Elementary School Reading* (3) Coleman
Summer 1962. For experienced teachers. Developmental and remedial approaches to reading problems. Demonstration of diagnostic and corrective techniques used by the classroom teacher and the reading specialist.

226 *Reading in Secondary Schools* (3) Coleman
Spring—T 7:35–9:35 P.M. For experienced teachers. Consideration of special problems in the content areas; diagnostic and corrective techniques and materials for the classroom teacher; reading improvement programs.

227 *Basic Issues in Elementary Education* (3) Baker
Fall—S 9:10–11:10 A.M. A consideration of basic issues in the purposes, organization, and conduct of elementary education. Emphasis on the philosophical and psychological roots of fundamental assumptions as they relate to classroom practices.

228 *Instructional Areas in Elementary Education* (3) Baker
Spring—S 9:10–11:10 A.M. Critical appraisal of the objectives, organization, content, and teaching methods in the language arts, arithmetic, social studies, science, arts and crafts, health and physical education.

229 *Administration of Elementary Education* (3)
Fall—F 7:10–9:10 P.M.; summer 1962 (Carroll). For experienced teachers and administrators. Administration as a means of achieving instructional objectives, organizing learning and teaching activities, handling supplies and equipment, maintaining the building, and integrating school and community life. Emphasis upon guide lines to action.

231 *Secondary School Classroom Procedures** (3) Giancaspro
Fall—Th 7:35–9:35 P.M.; summer 1962 (Detwiler). Survey of current classroom practices with particular attention to selected topics such as teacher-pupil planning, group procedures, pupil security, initiatory and culminating activities, individual and group evaluation techniques, teaching aids, etc.; review of recent literature.

233 *Audio-visual Education** (3) Logan
Spring; lectures (2 hours), laboratory (1 hour)—F 6:30–9:30 P.M.; summer 1962. Role of audio-visual materials in learning; selection, evaluation, and use of materials; administrative problems in the care, operation, maintenance, and use of audio-visual materials and equipment. Material fee, $7.

241 *Education of the Gifted** (3) Rashid
Spring—W 7:10–9:10 P.M.; summer 1962. For classroom teachers. Nature and discovery of giftedness; provisions for the gifted in regular classes; experimental projects.

243 *Human Relations in the Classroom** (3) Marinaccio
Summer 1962. Principles and practices involved in interpersonal relationships between learner and teacher and among learners.

245 *School and Community** (3) Angel
Fall and spring—T 7:35–9:35 P.M.; summer 1962. The school as an important member of a team of social agencies that builds the community.

247 *Vocational Education** (3) Walsh
Fall—M 7:10–9:10 P.M. Development in the United States; current conceptions, agencies involved, problems, and trends.

251 *Guidance in Elementary and Secondary Schools** (3) McDaniels
Fall and spring—M 7:10–9:10 P.M.; summer 1962 (Detwiler). A survey course: scope; needs; organization of the program; services to students, the instructional staff, and the administration; personnel needed for the program.

* Prerequisite: adequate professional preparation.

252 *Organization and Administration of Guidance Services* (3)
Not offered 1962–63. Designed for guidance directors and supervisors and experienced school counselors who hope to qualify for such positions in the near future. Prerequisite: a minimum of 15 semester hours of approved graduate work in Measurement and Guidance.

253 *Analysis of the Individual for Purposes of Counseling* (3)
(Formerly Psychology 236)
Fall and spring—T 7:35–9:35 P.M.; summer 1962—offered as Psychology 236. A detailed study of individual analysis techniques with practice in handling such methods. Prerequisite: Education 112 or the equivalent. Root

254 *The Junior High School** (3)
Not offered 1962–63. Purposes, organization, core program, guidance, developing course of study, extra-classroom activities. Root

255–56 *Secondary Education** (3–3)
Academic year—S 9:10–11:10 A.M.; summer 1962 (Root, Giancaspro). *First half:* current proposals for the improvement of secondary education. *Second half:* current problems in each of the subject-matter fields.

257 *Occupational and Educational Information* (3)
(Formerly Psychology 229)
Fall and spring—F 7:10–9:10 P.M. Designed to acquaint vocational and educational counselors with the basic occupational and educational information necessary in counseling. Sources of data and techniques of collecting, analyzing, and disseminating for purposes of guidance.

258 *Techniques of Counseling* (3)
(Formerly Psychology 228)
Fall and spring—Th 7:35–9:35 P.M.; summer 1962—offered as Psychology 228. An intensive study of the educational and psychological processes involved in counseling interviews. Specific types of vocational, educational, and personal counseling problems will be discussed. Prerequisite: 12 semester hours in testing and guidance, including Education 253 and 257. In exceptional cases Education 253 or 257 may be taken concurrently with 258. Johnson

259–60 *Secondary School Management** (3–3)
Academic year—S 9:30 A.M.–3 P.M. For experienced teachers and administrators with two years of successful teaching in secondary schools. Management planning, execution, and control; criteria of good management, construction of the master schedule; leadership problems incident to the development of new policies and programs.

261–62 *Practicum in Guidance* (3–3)
Academic year—as arranged. Supervised practical instruction in school guidance. Prerequisite: graduate work in counseling. Admission by permission of the Chairman of the department. Root

263–64 *Employee Training* (3–3)
Academic year—W 7:10–9:10 P.M. *First half:* nature and purpose, review of major programs—orientation, supervisory, apprentice, clerical skills, communication. *Second half:* administrative problems and practices, training media, coordination with other management functions. Prerequisite: adequate professional preparation or two years of experience in employee training. Lumsden

265–66 *Teaching Secondary School English* (3–3)
Not offered 1962–63. A refresher course for teachers of English. Discussion of new approaches to high school content. Offered in cooperation with the departments of English and Speech. *First half:* communication skills—structural linguistics, composition, and speech. *Second half:* American and English literature. Whipple

267–68 *Teaching Secondary School Social Studies* (3–3)
Academic year—W 7:10–9:10 P.M. A refresher course for teachers of the Social studies. Discussion of new approaches to high school content. Offered in coopera-

* Prerequisite: adequate professional preparation.

tion with the departments of History, Political Science, Geography, Economics, and Sociology and Anthropology.

271 *The Teacher and School Administration** (3) Fox
Fall—W 7:10–9:10 P.M.; summer 1962 (Carroll). A survey course for teachers and prospective administrators. Education and world affairs, national agencies, role of the state, local administration, school finance, legal controls, school plant, public support, democratic administrative procedures, improving teaching conditions.

272 *The Teacher and School Supervision** (3) Fox
Spring—W 7:10–9:10 P.M.; summer 1962. Nature, organization, human relationships, and techniques.

273–74 *Teacher Education** (3–3)
Not offered 1962–63. *First half:* aims, objectives, and basic issues; study of outstanding and experimental programs. *Second half:* recruitment and selection, general education, teaching-field preparation, professional sequences, laboratory experiences.

275 *School Finance** (3) Hutchins
Summer 1962. Educational financial theory, practice, and control, including methods of financing.

276 *Seminar: Public Relations in School Administration** (3) Joy
Not offered 1962–63. Purposes, gathering materials, disseminating agencies, publicity media, public participation in policy making.

277 *Administration of School Personnel** (3) Carroll
Summer 1962. Techniques and problems of administration related to more effective service of staff personnel.

278 *School Law** (3) Remmlein
Summer 1962. Sources and scope of school law; legal rights and responsibilities of teachers, pupils, and taxpayers. Other legal problems of major interest to the group.

279–80 *Adult Education** (3–3) Detwiler, Holden
Academic year—T 7:35–9:35 P.M.; summer 1962—Education 280 (3) (Detwiler). *First half:* current concepts and objectives, agencies involved, programs on all levels—international through community. *Second half:* the adult as a learner, the teacher of adults, learning-teaching activities, administration of adult education programs.

283–84 *Higher Education** (3–3) Jarman
Academic year—Th 7:35–9:35 P.M. *First half:* development, present status, and outlook for American colleges; purposes of higher education, current and projected programs; trends in curriculum, instruction, administration, and evaluation of outcomes. *Second half:* principles in development of college programs; study of curricula in liberal arts and professional fields; relationship of institutional services and facilities to the instructional program.

285 *Extra-classroom Activities** (3)
Not offered 1962–63. Nature and purposes of selected activities—homeroom, clubs, assemblies, school publications, student council, interscholastic contest; particular attention to sponsorship, participation, finance, and evaluation.

287–88 *Clinical Study of Reading Problems** (3–3) Coleman
Academic year—F 5:10–7 P.M. For advanced students. Diagnostic and corrective work under supervision of the Reading Clinic. Each student is expected to diagnose and treat pupils who are retarded in reading. Case studies are presented and criticized. Prerequisite: Education 223–24 or the equivalent. Material fee, $5 a semester.

289 *Supervisory Problems in Reading** (3) Coleman
Not offered 1962–63. For experienced teachers, principals, supervisors, and superintendents. Considers the problems involved in planning, reorganizing, and improving the total reading program, in promoting cooperative effort on the part of the staff toward increasing teaching efficiency.

* Prerequisite: adequate professional preparation.

291 *Planning the School Plant* (3) Cameron
Not offered 1962–63. Selection of sites; evaluation of existing buildings; utilization of present facilities; adaptation to curricular needs; building, operation, and maintenance problems.

293–94 *Research* (3–3) The Staff
Academic year—as arranged. Individual research under the guidance of a member of the staff. Program and conferences arranged with an instructor.

295 *Educational Research Methods and Procedures* (3)
Fall—M 7:10–9:10 P.M.; spring—Th 7:35–9:35 P.M.; summer 1962. Required of all candidates for graduate degrees in Education. To be taken early in the student's graduate program. Prerequisite: an elementary course in statistics.

296 *Seminar in Educational Research* (3)
Spring—M 7:10–9:10 P.M. Designed to help students analyze scientific approaches to problems in education; evaluate the application of research techniques to typical problems; define, organize, and conduct research studies; and prepare proposals for sponsored research. Required of all candidates for the Doctor of Education degree and open, with permission, to candidates for other advanced degrees. Prerequisite: Education 295 or the equivalent.

297 *Reading in Education* The Staff
Fall and spring—W 5:10–6 P.M.; summer 1962. To assist those preparing for the comprehensive examinations. No credit toward degree requirements. Tuition fee, $33.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged. Required of all Master of Arts candidates writing Master's theses.

DEPARTMENTS OF PHYSICAL EDUCATION

The following courses are offered by the Department of Physical Education for Men and the Department of Physical Education for Women. Whenever possible the departments offer lecture courses jointly.

First Group

43–44 *Techniques of Physical Education Motor Activities* (2–2) DeAngelis, George, Krupa
Academic year—day. Fundamental skills, rules, and organization. Locker and towel fee,* $4.50 a semester.

45–46 *Teaching Individual and Dual Sports in Secondary Schools* (2–2) (men) Hanken, Krupa
Academic year—day. Tennis, golf, swimming, wrestling, badminton, bowling. Locker and towel fee,* $4.50 a semester.

47 *Introduction to Physical Education* (2) (men) Myers
Fall—day. An orientation course presenting the problems of physical education, vocational analysis, scientific foundations, and scope of field.

48 *Introduction to Recreation* (2) (men) Hanken
Spring—day. The role of recreation in modern living; current practices in community recreation work; standards of training, experience, and salary; types of leadership.

49 *Human Anatomy* (3) Stallings
Fall—day. The structure of the human body. Basic course for physical education majors. Also open to both men and women not majoring in Physical Education. Prerequisite: Biology 1–2.†

* The locker and towel fee is required for registration in one or more of the activity courses.
† An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.

50 *Kinesiology* (3) Lawrence
Spring—day. A study of the anatomical mechanism of movement, analysis of the action of muscles in physical education activities. Prerequisite: an approved course in anatomy.

51–52 *Teaching Physical Education Activities* (2–2) (women) The Staff
1963–64 and alternate years: academic year—day. Team sports: basketball, hockey, softball, soccer, speedball. Individual and dual sports: tennis, badminton, archery, swimming and diving, lifesaving and water safety. Gymnastics: tumbling apparatus and trampoline. Locker and towel fee,* $4.50 a semester.

58 *First Aid and Care of Athletic Injuries* (2) DeAngelis
Spring—day. Prevention and emergency care of injuries of all types, with special reference to first aid, civil defense, bandaging, and massage. Prerequisite: Biology 1–2.†

SECOND GROUP

101 *Physical Education in the Elementary School* (3) Burtner, Snodgrass
Fall—day; spring—evening. Physical growth and development of the child and adolescent. Survey of age characteristics and organization of physical education activities for the various age levels in elementary school, playground, and settlement house programs. Methods and materials of tumbling, games, dance, and self-testing activities.

103 *History and Principles of Physical Education* (3) Myers, Stallings
Fall—day. Survey of history as it relates to contemporary physical education. Study of aims, objectives, and philosophy of physical education.

105–6 *Adapted Physical Education and Physical Examinations* (3–3) Lawrence
Academic year—day. Cause and correction of faulty body mechanics, physical examination methods for the diagnosis of postural defects, prescription of exercises, and program adaptation. Prerequisite: Physical Education 49 and 50.

107 *Teaching Recreational Dance* (1 to 2) Ingram
Fall—day. Methods and materials for teaching the country and social dances of America and the folk dances of other countries to secondary-school age and adult groups. Square-dance calling is included. Locker and towel fee,* $4.50.

109–10 *Leadership Organization in the Intramural Program* (2–2) (men) DeAngelis
Academic year—day. Principles of administration, organization, and supervision of intramural activities in the physical education program of the junior high school, senior high school, and college.

111–12 *Teaching Physical Education Activities* (2–2) (women) The Staff
1962–63 and alternate years: academic year—day. Continuation of methods and materials in activities listed under Physical Education 51–52. Locker and towel fee,* $4.50 a semester.

113–14 *Practice in Teaching Physical Education Activities* (2 to 4–2 to 4) The Staff
Academic year—as arranged. Principles and methods applied to learning and teaching physical education activities. Supervised laboratory. Locker and towel fee,* $4.50 a semester.

115–16 *Teaching Team Sports in Secondary Schools* (2 to 4–2 to 4) (men) DeAngelis, Hanken
Academic year—day. Football, basketball, baseball, track and field. Locker and towel fee,* $4.50 a semester.

* The locker and towel fee is required for registration in one or more of the activity courses.
† An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.

117 *Teaching Modern Dance* (1 to 2) Burtner
1962–63 and alternate years: fall—day. Techniques for the teaching of movement as a medium of expression. Practical work in body technique, composition, and the analysis of accompaniment for dance including instrumental, voice, and percussion. Application is made to both secondary school and adult age levels. Locker and towel fee.* $4.50.

118 *Dance Production* (1 to 2) Burtner
1962–63 and alternate years: spring—day. Planning and staging of performances for demonstrations, dance concerts, and folk festivals. Lighting, costuming, sets, and make-up. Choreography for concerts, musicals, and plays for students taking course for two credits. Locker and towel fee.* $4.50.

121 *School and Community Health Programs* (3) Krupa
Fall—evening. Health services, healthful environment, health instruction, sources of material for general health knowledge. Prerequisite: Biology 1–2.†

122 *Methods and Materials for Health Education* (3) Stallings
Spring—evening. Methods and materials for teaching health at each age level. Prerequisite: Biology 1–2.†

131 *Tests and Measurements in Physical Education* (3) Krupa
Fall—day. Critical survey of tests in physical activities, methods of test construction, elementary statistics.

132 *Camp Leadership* (1 to 2) Stallings
Spring—day. Philosophy and techniques of camp counseling; survey of organization and programs including outdoor education. Also open to both men and women not majoring in Physical Education.

136 *Survey of Dance History and Dance Forms* (3) Burtner
1963–64 and alternate years: spring—as arranged. The development of dance from primitive ritual to present day recreational and art forms of the dance. Includes ethnologic dance, practice and discussion of fundamental movement techniques, and composition.

138 *Organization and Administration of Physical Education* (3) Krupa, George, Stallings
Spring—as arranged. Organization and administration of physical education programs in elementary and secondary schools and in colleges. Study of plants, fields, equipment, and programs.

151–52 *Recreational Leadership Activities* (1 to 3–1 to 3) Abernethy
1963–64 and alternate years: academic year—evening. *First half:* basic skills for the preschool and school-age child. Laboratory practice in crafts, music, dramatics, physical and social activities. *Second half:* basic skills for the teen-age and adult. Arts and crafts, dramatics, physical and social activities.

161 *Community Organization for Recreation* (3) Thompson
1962–63 and alternate years: fall—evening. Resources, principles, and methods in organizing community recreation services.

162 *Administration of Community Recreation Programs* (3) Thompson
1962–63 and alternate years: spring—evening. Factors and problems in administering recreation including surveys, legislation, program, area, facilities, leadership, finance, and public relations.

* The locker and towel fee is required for registration in one or more of the activity courses.

† An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.

REQUIRED AND ELECTIVE COURSES FROM OTHER DEPARTMENTS

PSYCHOLOGY

22 *Introduction to Educational Psychology* (3) ———

Fall—evening; spring—day. Consideration of individual and group differences, adjustments, and the psychology of learning in relation to education and training.

29 *Child Psychology* (3) Johnson

Fall—day; spring—evening; summer 1962. A genetic approach to the study of the child. Special emphasis is placed on the socialization process, learning, and the child's view of the world.

121 *Educational Psychology* (3) ———

Spring—evening. Advanced course in educational psychology. Designed for those with background in education and psychology.

129 *Introduction to Counseling* (3) ———

Fall—evening; summer 1962. A survey of the basic principles, techniques, and procedures as applied to vocational, educational, and personal counseling.

131 *Psychological Tests* (3) Hunt

Fall—day; spring—evening; summer 1962. A survey of psychological tests and their more common uses in business, industry, government, law, medicine, and education. Material fee, $7.

141 *Leadership, Group Behavior, and Student Life* (3) Kirkbride

Fall—day. A survey of the foundations of leadership, of the factors which underlie effective participation in group activities, and of the interrelations between the student and his university.

144 *Personnel Psychology* (3) ———

Fall—evening; spring—evening. Psychological concepts and techniques in personnel management and supervision. Applications to government, industry, and military organizations.

225 *Seminar: Mental Hygiene* (3) Lindley

Fall—evening; spring—day. A study of mental health problems with special attention to needs of counselors.

226 *Seminar: Clinical Psychology of Childhood and Adolescence* (3) Johnson

Spring—evening. A survey of behavior and personality disorders.

231 *Test Construction* (3) Mosél

Fall—evening. The principles underlying test construction; statistical techniques in the construction, evaluation, and standardization of psychological, educational, and vocational tests. Prerequisite: a course in tests and measurements and an elementary course in statistics.

233 *Individual Psychological Testing* (3) Johnson

Fall and spring—day. Instruction and practice in giving of the Binet and Wechsler tests. Prerequisite: an elementary course in tests and measurements. Material fee, $7.

STATISTICS

53 *Introduction to Statistics in Psychology and Education* (3) The Staff

Lecture (2 hours), laboratory (2 hours). Fall—day and evening; spring—day and evening. Sources of data, tabulation, charts and graphs, averages, dispersion, quartiles and percentiles, raw scores and derived scores, frequency distributions, reliability

and validity of tests, normal curve, correlation, elementary sampling, and an introduction to estimation and tests of hypotheses. Prerequisite: one entrance unit in algebra. Laboratory fee, $9.

Bright

104 *Statistics in Psychology and Education I* (3)

Fall: lecture (2 hours), laboratory (2 hours)—Saturday morning; summer 1962. Introductory study of statistical techniques necessary for application of statistics in research problems in psychology and education. Laboratory fee, $9.

Bright

105 *Statistics in Psychology and Education II* (3)

Spring: lecture (2 hours), laboratory (2 hours)—Saturday morning. Advanced study of statistical techniques necessary for an application of statistics in research problems. Analysis of variance, correlation techniques, chi-square applications, and sampling theory. Prerequisite: Statistics 53 or 104. Laboratory fee, $9.

THE GEORGE WASHINGTON UNIVERSITY

Washington 6, D. C.

Academic programs leading to degrees are offered in the following colleges and schools:

Columbian College of Arts and Sciences: Associate in Arts (A.A.), Associate in Science (A.S.), Bachelor of Arts (A.B.), Bachelor of Science (B.S.), Bachelor of Science in Medical Technology (B.S. in Med. Tech.), Master of Arts (A.M.), Master of Fine Arts (M.F.A.), and Master of Science (M.S.)

Graduate Council: Doctor of Philosophy (Ph.D.)

School of Medicine: Doctor of Medicine (M.D.)

National Law Center:

Law School: Bachelor of Laws (LL.B.)

Graduate School of Public Law: Master of Laws (LL.M.), Master of Comparative Law (M.Comp.L.), Master of Comparative Law (American Practice) (M.Comp.L. (Am.Prac.)), and Doctor of Juridical Science (S.J.D.)

School of Engineering: Engineering Technologist Certificate (Eng. Tech. Cert.), Bachelor of Civil Engineering (B.C.E.), Bachelor of Electrical Engineering (B.E.E.), Bachelor of Mechanical Engineering (B.M.E.), Bachelor of Science in Engineering (B.S. in Eng.), Master of Science in Engineering (M.S. in Eng.), Master of Engineering Administration (M.E.A.), and Doctor of Science (D.Sc.)

School of Pharmacy: Bachelor of Science in Pharmacy (B.S. in Phar.)

School of Education: Bachelor of Arts in Education (A.B. in Ed.), Bachelor of Science in Home Economics (B.S. in H.E.), Bachelor of Science in Physical Education (B.S. in P.E.), Master of Arts in Education (A.M. in Ed.), Advanced Professional Certificate (A.P.C.), and Doctor of Education (Ed.D.)

School of Government, Business and International Affairs: Bachelor of Arts in Government (A.B. in Govt.), Bachelor of Business Administration (B.B.A.), Master of Arts in Government (A.M. in Govt.), Master of Business Administration (M.B.A.), and Doctor of Business Administration (D.B.A.)

College of General Studies: Associate in Arts (A.A.), Associate in Science (A.S.), Associate in Secretarial Administration (A.Sec.Adm.), Bachelor of Arts (A.B.), Bachelor of Science in Cartography (B.S. in Cart.), Master of Arts (A.M.), Master of Arts in International Affairs (A.M. in I.A.), and Master of Business Administration (M.B.A.)

ANNUAL ISSUES OF THE UNIVERSITY BULLETIN

Requests for the following publications should be addressed as indicated.

College of General Studies.....Dean of the College of General Studies
Columbian College of Arts and Sciences.....Director of Admissions
Division of University Students.....Director of Admissions
Fellowships, Scholarships, Prizes,

THE BOARD OF TRUSTEES

The Board of Trustees of the University is composed of the President of the University ex officio and the following persons by election:

Newell Windom Ellison, A.B., LL.B., LL.D., *Chairman*
Edward Karrick Morris, LL.D., *Secretary*
Godfrey Leon Munter, A.B., LL.B., LL.D., *Assistant Secretary*

Walter Maximillian Bastian, LL.B., LL.D.
*Daniel LeRay Borden, A.M., M.D., Sc.D.
Wiley Thomas Buchanan, Jr.
Leonard Carmichael, Ph.D., Sc.D., LL.D., Litt.D., L.H.D., D.C.L.
Eugene Cassin Carusi, A.M., J.D.
R. Roy Dunn
Robert Vedder Fleming, LL.D., *Chairman Emeritus*
Charles Carroll Glover, Jr., A.M., LL.B., LL.D.
Philip L. Graham, A.B., LL.B., L.H.D.
Brooks Hays, A.B., LL.B., LL.D.
John Edgar Hoover, LL.M., LL.D.
Frank Atherton Howard, B.S. in M.E., LL.B., Sc.D.
Joseph D. Hughes, B.S., LL.B., LL.M., LL.D.
Alfred Henry Lawson, LL.B., LL.D.
John Keown McKee
Benjamin Mosby McKelway, Litt.D.
James Matlack Mitchell, A.M.
*George Edward Muth, A.B., LL.B.
*Frederick A. Reuter, M.D.
*Charles Sylvanus Rhyne, LL.B., D.C.L., LL.D.
Donald D'Arcy Shepard, LL.B.
Carleton D. Smith
Sidney William Souers, A.B., LL.D.
Lewis L. Strauss, Sc.D., LL.D., L.H.D.
L. Corrin Strong, Ph.B., LL.D.
*James Cornelius Van Story, A.M.
James Edwin Webb, A.B., LL.D.
*Frank Harvey Weitzel, A.B., LL.B.
Alexander Wetmore, Ph.D., Sc.D.
Watson W. Wise, Ph.B.

HONORARY TRUSTEES

Clarence Aiken Aspinwall, LL.D.
Lyman James Briggs, Ph.D., Sc.D., D.Eng., LL.D.
Mrs. Wilbur John Carr
Mrs. Joshua Evans, Jr., A.B., Ed.D.
Ulysses S. Grant, 3d, B.S., Graduate United States Engineers School, LL.D., Sc.D.
Gilbert Grosvenor, A.M., LL.D., Litt.D., Sc.D.
Charles Stanley White, M.D., Sc.D.
Lloyd Bennett Wilson

---

* Nominated by the alumni.

OFFICERS OF ADMINISTRATION*

Thomas Henry Carroll, B.S., M.B.A., D.C.S., LL.D., *President*
Oswald Symister Colclough, B.S., LL.B., LL.D., Sc.D., *Provost and Dean of Faculties*
Henry William Herzog, B.S., *Treasurer*
Tamis Wilson Borden, A.B., *Administrative Secretary*
Claud Max Farrington, A.M., *Assistant to the President*
Joseph Young Ruth, A.B., *Director of Admissions*
Frederick Russell Houser, A.M. in Govt., *Registrar; Secretary of the Faculties*

THE DIVISION OF UNIVERSITY STUDENTS

Elmer Louis Kayser, Ph.D., LL.D., *Dean of the Division of University Students*
John Gage Allee, Jr., Ph.D., *Associate Dean of the Division of University Students*

* For the year 1961-62.

THE UNIVERSITY

HISTORY AND ORGANIZATION

The idea of a university in the Capital of the Nation was sponsored by George Washington, who during his public life urged the establishment of such an institution and who in his will left fifty shares of stock in the Potomac (Canal) Company for the endowment of a university to be established in the District of Columbia "to which the youth of fortune and talents from all parts thereof might be sent for the completion of their Education in all the branches of polite literature;—in arts and Sciences,—in acquiring knowledge in the principles of Politics & good Government".

The George Washington University operates under a charter granted by an act of Congress of February 9, 1821, to Columbian College in the District of Columbia. In 1873 the name was changed to "Columbian University" and in 1904 to "The George Washington University".

The University as it is now organized consists of Columbian College of Arts and Sciences, which offers work leading to Associate's, Bachelor's, and Master's degrees; the Graduate Council, which offers work leading to the degree of Doctor of Philosophy; the professional schools, which include Medicine; Law; Engineering; Pharmacy; Education; and Government, Business, and International Affairs; the College of General Studies; the Division of University Students; the Division of Special Students; the Division of Air Science; and the Summer Sessions.

The George Washington University is a privately endowed University located on a well planned campus in the center of Washington within a few blocks of the White House. The government and educational management of the University are vested in a self-perpetuating Board of Trustees, with the President of the University serving as an ex officio member of the Board.

ACADEMIC STATUS

The George Washington University is accredited by its regional accrediting agency, the Middle States Association of Colleges and Secondary Schools. This is important to students who wish to transfer credits from one institution to another.

The University is on the approved list of the American Association of University Women and is a member of the College Entrance Examination Board.

EDUCATIONAL FACILITIES

Buildings, grounds, and equipment are valued at approximately $27,000,000.

The buildings of Columbian College of Arts and Sciences; the Graduate Council; the National Law Center; the Law School and the Graduate School of Public Law; the School of Engineering; the School of Pharmacy; the School of Education; the School of Government, Business, and International Affairs; the College of General Studies; the Division of University Students; the Division of Special Students; the Division of Air Science; the University Hospital and Outpatient Department; and the Cancer Clinic are located between Nineteenth and Twenty-fourth Streets and between Pennsylvania Avenue and G Street NW. The School of Medicine is at Fourteenth and H Streets NW. The buildings of the University are as follows:

John Quincy Adams Hall, 730 Nineteenth Street. Residence hall for men.

Bacon Hall, 2000 H Street. Named in honor of the late Joel Smith Bacon, President of the University from 1843 to 1854. Offices of the Dean of the Graduate Council, the Dean of the Graduate School of Public Law, the Dean for Sponsored Research, the Assistant to the President, the Development Division, the Forensic Medicine Institute, the Management Research Group, the Educational Counselor. Offices and lounge for the Law Faculty; the Alumni Office; Alumni Reception Room.

Binney Hall, 2018 Eye Street. Named in honor of the late Joseph Getchell Binney, President of the University from 1855 to 1858. Offices, classrooms, and laboratories of the Reading Clinic.

John C. Calhoun Hall, 2100 Eye Street. Residence hall for men.

Chapin Hall, 2128 H Street (rear). Named in honor of the late Stephen Chapin, President of the University from 1828 to 1841. Offices and classrooms of the Air Force ROTC.

Corcoran Hall, 725 Twenty-first Street. Named in honor of the late William W. Corcoran, benefactor of the University and a former member of the Board of Trustees. Offices of the Treasurer, the Cashier, the departments of Chemistry and Physics; Chemistry Research Project; the chemistry and physics laboratories; classrooms.

William H. Crawford Hall, 2119 H Street. Residence hall for women.

Davis-Hodgkins House, 731 Twenty-second Street. Offices and lounges of engineering students' organizations.

Everglades Apartments, 2223 H Street. Residence hall for nurses.

Faculty Club House, 714 Twenty-first Street.

Gymnasium, 2010–12 H Street.

Hall of Government, 710 Twenty-first Street. The gift of the late Mrs. Henry Alvah Strong, former Trustee of the University. Offices of the Dean of the School of Government, Business, and International Affairs; the departments of Accounting, Business and Public Administration, Economics, History, Political Science, and Statistics. Offices of the Air Force Advanced Management Program, Air Force Military and Economics Program, and Navy Graduate Financial Management Program; classrooms.

Harlan-Brewer House, 1923 H Street. Offices of law student organizations; lounges, reading rooms.

Health Care and Hospital Administration Building, 816 Twenty-first Street. Offices and seminar rooms of Health Care and Hospital Administration Program.

Hospital and Outpatient Department, Washington Circle.

Hospital Staff Office Building, 818 Twenty-second Street.

International House, 2110 G Street. Office of the Adviser to Students from Foreign Countries; club rooms.

Lisner Auditorium, 730 Twenty-first Street. The gift of the late Abram Lisner, former Trustee of the University. The Auditorium; Lisner Lounge; offices and classrooms of the Department of Speech, the Speech Clinic, and the housing officer; Athletic Ticket Office.

Dolly Madison Hall, 736 Twenty-second Street. Residence hall for women.

James Monroe Hall, 2115 G Street. Offices of the deans of Columbian College of Arts and Sciences, the Division of University Students, the School of Education; the departments of Education, English (English and American Literature), Germanic Languages, Journalism, Mathematics, Psychology, and Secretarial Studies; classrooms.

Office of the President, 2003 G Street. Offices of the President, the Provost and Dean of Faculties, Associate Dean of Faculties, Administrative Secretary, and department of Classical Languages.

Placement Office, 2114 G Street.

Samson Hall, 2036 H Street. Named in honor of the late George Whitefield Samson, President of the University from 1859 to 1871. Comptroller's Office; Disbursing Office; offices of the departments of Chemistry, Geology, and Physics.

School of Medicine, 1335–1339 H Street. Offices of the Dean and Staff of the School of Medicine; the Medical Library; laboratories; lecture rooms; research laboratories; student and faculty lounges; and University Medical Bookstore.

Sorority Halls:

2112 G Street. Apartments of Kappa Alpha Theta and Kappa Delta sororities.

2129 G Street. Apartments of Pi Beta Phi, Chi Omega, Sigma Kappa, Alpha Delta Pi, Delta Zeta, Zeta Tau Alpha, and Kappa Kappa Gamma sororities.

2131 G Street. Apartment of Delta Gamma Sorority.

2137 F Street. Apartment of Alpha Epsilon Phi Sorority.

802 Twenty-first Street. Apartment of Phi Sigma Sigma Sorority.

Staughton Hall, 707 Twenty second Street. Named in honor of the late William Staughton, President of the University from 1821 to 1827. Offices and laboratories of the Navy Logistics Research Project.

Stockton Hall, 720 Twentieth Street. Named in honor of the late Rear Admiral Charles Herbert Stockton, President of the University from 1910 to 1918. Law School; offices of the National Law Center and the Dean and Faculty of the Law School; library; and lecture halls.

Hattie M. Strong Hall, 620 Twenty-first Street. Named in honor of the donor, the late Mrs. Henry Alvah Strong, former Trustee of the University. Residence hall for women.

Student Union, 2125 G Street. Offices of student organizations, student cafeteria and snack bar, reading room, lounge, game and music room, and the "Lost and Found" Office.

Tompkins Hall of Engineering, 725 Twenty-third Street. The gift of the late Charles H. Tompkins, former Trustee of the University. Offices of the Dean of the School of Engineering; the departments of Civil, Electrical, and Mechanical Engineering; the programs in Engineering Administration, Engineering Science, and Metrology; the Center for Measurement Science; Electronics Research Project, Computer Research Project, National Aeronautics Space Administration; Engineering testing laboratories, general laboratories, drafting rooms, and classrooms.

University Book Store, 2120 H Street. University Medical Bookstore, 1335 H Street.

University Library, 2023 G Street. The gift of the late Abram Lisner, former Trustee of the University. The library, rooms of the Board of Trustees, Faculty Conference Room, classrooms, office of the Dean of the National Law Center.

The Helen L. and Mary E. Warwick Memorial Building, 2300 K Street. Diagnostic and treatment rooms, and research laboratories of The George Washington University Cancer Clinic.

Welling Hall, 814 Twenty second Street. Named in honor of the late James Clarke Welling, President of the University from 1871 to 1894. Residence hall for men.

Woodhull House, 2033 G Street. Gift of the late General Maxwell Van Zandt Woodhull, former Trustee of the University. Office of the Director of Activities for Women; meeting rooms for student activities.

Building A, 2026 G Street. Offices of the Department of Romance Languages.

Building B, 2024 G Street. Offices, laboratories, and classrooms of the Department of Home Economics.

Building C, 2029 G Street. Offices of the Registrar and the Director of Admissions; offices and laboratories of the departments of Botany, Geology, and Zoology; language laboratories; classrooms.

Building D, 2013 G Street. Offices of the Business Manager, Maintenance; Mail Room; Human Resources Research Project.

Building E, 2003 G Street. Offices of the President, the Provost and Dean of Faculties, Associate Dean of Faculties, and Administrative Secretary; office of the Department of Classical Languages.

LIBRARY FACILITIES

The Library collections of the University are housed in the University Library and in the departmental libraries of law and medicine.

These collections contain approximately 361,100 volumes—278,600 in the University Library, 58,000 in the Law Library, and 24,500 in the Medical Library. Approximately 10,000 volumes a year are added to the Library's resources. Endowments, supplementing the University appropriation, provide books in the fields of American civilization, American Literature, foreign service, history, public finance, and the social sciences; and gifts from many sources have enriched the collections. The Libraries currently receive 2,100 periodicals.

Information concerning the use of the Libraries may be obtained at the Library service desks. A classified list on cards of selected recent acquisitions is available at frequent intervals, in addition to the complete information in the card catalogue. Monthly art exhibits are held on the first and second floors of the University Library during the academic year.

The hours of the University Library and the Law Library are Monday through Friday, 9:00 A.M. to 10:00 P.M.; Saturday, 9:00 A.M. to 5:00 P.M.; Sunday, 2:00 to 6:00 P.M. The Medical Library is open Monday through Friday, 9:00 A.M. to 10:00 P.M.; Saturday, 9:00 A.M. to 5:00 P.M.

THE DIVISION OF UNIVERSITY STUDENTS*

E. L. Kayser, *Dean;* J. G. Allee, Jr., *Associate Dean*

THE DEAN'S COUNCIL†

I. B. Hansen, F. E. Johnston, R. D. Kennedy

GENERAL INFORMATION

INTRODUCTORY

The Division of University Students was established in 1930 to make the regular course offerings of the University more generally available to members of this metropolitan community and others, not at the time candidates for degrees in this University. In this Division are registered mature students who wish to undertake university courses for credit or as auditors. University students may be employed in government or industry, taking courses to increase their vocational fitness or to inform them on new developments in the arts and sciences. They may be taking courses as a matter of personal interest for cultural enrichment. Such students may be candidates for higher degrees in other institutions, sent here for special work as part of a graduate program. They may be undergraduates, matriculated in other colleges, taking summer sessions courses only or courses for transfer during the regular academic year with the approval of their own institution. To serve members of such groups and others, not enrolled in degree-granting branches of the University, is the function of the Division of University Students.

ADMISSION

The University accepts both men and women. Students are admitted at the beginning of each semester and summer session.

The right is reserved to refuse admission to any student with an academic record which creates doubt of his ability to succeed in college or who, for any other reason, would not be an acceptable student.

Application for Admission and Readmission

Forms for application for admission or readmission are available at the Office of the Director of Admissions, 2029 G Street NW., Washington 6, D. C.; telephone: FE 8-0250, extension 344.

Application for admission‡ to *nondegree status* in the Division of University Students, must be received, with a $5 application fee and necessary credentials, no later than the Saturday preceding the first day of registration, as stated in the University calendar.

---

* This listing of Administrative Officers is for the year 1961–62.

† The Dean of Faculties, the Dean and the Associate Dean of the Division are members ex officio of the Council.

‡ An application for readmission does not require a fee unless it involves transfer to a college, school, or division of the University other than the one in which the applicant was last registered. In this case, a $3 transfer fee is required.

Readmission

A student previously registered in the University who was not registered on-campus during the immediately preceding semester (summer session excluded) must apply for readmission in the Office of the Director of Admissions.

ENTRANCE REQUIREMENTS*

Good character and an academic background appropriate for the program of studies contemplated are required.

Students 21 years of age or over who are not interested in working for a degree in this University may be considered for admission to the Division of University Students to take courses for which they have adequate preparation, as evidenced by previous scholastic records.

Students under 21 years of age who meet the entrance requirements of Columbian College of Arts and Sciences but who are not seeking degree candidacy at this University may be admitted to the Division of University Students to pursue programs of study approved by the Dean.

If a student currently or previously registered in the Division of University Students applies for admission to degree candidacy, a maximum of 45 semester hours of credit will be considered for assignment, in so far as these credits are appropriate toward the degree sought.

In special instances, with the permission of the instructor, a person may be considered for admission as an auditor in a class without being required to take active part in the exercises or to pass examinations, but no credit will be allowed for such attendance.

REGISTRATION

A student cannot register for classes until he has received a letter of admission to the University, issued by the Office of the Director of Admissions (see "Admission", page 7).

A student previously registered in the University who was not on-campus during the immediately preceding semester (summer sessions excluded), must apply for readmission in the Office of Admissions.

No registration for credit is accepted for less than a semester or one summer session.

A student may not register concurrently in this University and another institution without the prior permission of the dean of the college, school, or division in which he is registered in this University. Registration in more than one college, school, or division of the University requires the written permission of the deans concerned, *prior to registration.* Allowance for credit for work done concurrently will be at the discretion of the appropriate Committee on Admission and Advanced Standing.

Time and Place of Registration

Registration for the Division of University Students is conducted in Building C, 2029 G Street NW., during the following periods: *fall semester,* September 20 and 21, 12:00 to 8:00 P.M.; September 22, 10:00 A.M. to 1:00 P. M. *Spring semester,* January 31 and February 1, 12:00 to 8:00 P.M., February 2, 10:00 A.M. to 1:00 P.M.

* Entrance requirements are established by the faculties of the several colleges, schools, and divisions. The Director of Admissions, as agent for the faculties, administers regulations governing admission, readmission, and transfer.

FEES AND FINANCIAL REGULATIONS

Fees paid by students cover only a portion of the cost of their instruction and of the operation of the University. Income from endowment funds, grants, and gifts from alumni and friends of the institution make up the difference.

The fees listed, effective during the academic year 1961–62, are subject to change upon action of the Board of Trustees.

Tuition Fees

For each semester hour for which the student registers except for courses in Engineering	$30.00
For each semester hour for which the student registers for courses in Engineering	35.00

Additional Course Fees

In certain courses additional fees, such as laboratory and material fees, are charged as indicated in the course descriptions. These fees are charged by the semester and, unless otherwise indicated, may be defrayed in three payments when the tuition is paid in this manner. Breakage of apparatus is charged against the individual student. When breakage is in excess of the normal amount provided for in the laboratory fee the individual student will be required to pay such additional charges as are determined by the department concerned.

Special Fees

Application fee, charged each applicant for admission to nondegree status, nonrefundable	5.00
Application for Transfer fee, charged* each applicant for transfer within the University from one college, school, or division to another, except in cases of normal progression, nonrefundable	5.00
Admission tests (when required)	6.00–12.00
Late-registration fee, charged each student who fails to register within the designated period	5.00
Change fee, charged each student for each change in program: dropping or adding a course, changing from one section to another within a course, change of status (from auditor to credit status or vice versa), and change in credit hours for a course	2.00
Withdrawal fee, charged in special cases	5.00
Service fee, charged each student for late payment of tuition (see "Payment of Fees")	2.00
Reinstatement fee, charged each student who is reinstated after suspension for delinquency in fees	5.00
For each examination to qualify for advanced standing and for each special examination	5.00
English test for foreign students (when required)	5.00
Laboratory checkout fee, charged each student in chemistry and pharmacy courses who fails to check out of the laboratory by the time set by the instructor	3.00
Transcript fee, charged for each transcript of record after the first	1.00

Registration in the University entitles each student to the following University privileges: (1) the issuance of one certified transcript of record, if and when desired; (2) the services of the Placement Office; (3) the use of University library; (4) gymnasium privileges; (5) admission to all athletic contests, unless otherwise specified; (6) subscription to the *University Hatchet*, the student newspaper; (7) admission to University debates; (8) medical attention and hospital services as described under Health Administration. These privileges, with the exception of the issuance of transcripts, terminate, and a student is no longer in residence, when he withdraws or is dismissed from the University.

*Payable at the time of application for transfer or readmission.

PAYMENT OF FEES

All fees are payable at the Office of the Cashier, 725 Twenty-first Street NW. No student is permitted to complete registration or attend classes until all fees are paid. Fees are due and payable in advance at the time of each registration.

With the approval of the Treasurer, the student may sign a contract for semester charges, except for fees payable in advance, permitting payments as follows:

Fall Semester.—One-third at the time of registration; one-third on the first working day* in November; one-third on the first working day* in December.

Spring Semester.—One-third at the time of registration; one-third on the first working day* in March; one-third on the first working day* in April.

Arrangements for the above may be made with the Office of the Cashier at the time of registration. Installment-due notices are mailed. However, nonreceipt of notice is no excuse for failure to meet obligations when due.

A student who fails to meet payments when due, but pays his fees within the following two weeks of the date on which payment is due, is charged a $2 service fee. A student who fails to meet payments within these two weeks after payment is due is automatically suspended and may not attend classes until he has been officially reinstated and paid all accrued fees and a $5 reinstatement fee.

A student suspended for failure to meet payments when due may not be reinstated for the semester after two weeks from the date of suspension. Applications for reinstatement are to be made to the Office of the Cashier.

An auditor pays all fees chargeable to the student registered for credit except the late-registration fee.

WITHDRAWALS AND REFUNDS

Applications for withdrawal from the University or for change in class schedule must be made in person or in writing to the Dean. Notification to an instructor is not an acceptable notice (see "Withdrawal", pages 12 and 13).

In authorized withdrawals and changes in schedule, financial adjustments will be made as follows:

Fall Semester

Withdrawal dated on or before the last working day* in October or November cancellation of two-thirds or one-third, respectively, of tuition charges.

Spring Semester

Withdrawal dated on or before the last working day* in February or March, cancellation of two-thirds or one-third, respectively, of tuition charges.

No refund or reduction will be allowed on any withdrawal dated after the last working day* in November (fall semester) or March (spring semester).

In no case will a refund be made of the first third of the total tuition charges. In no case will tuition be reduced or refunded because of nonattendance upon classes.

Payment applies only to the semester for which a registration charge is incurred and in no case will this be credited to another semester.

Students in chemistry or pharmacy who fail to check out of the laboratory on or before the date set by the instructor, unless excused by the instructor, will be charged

* The University work week is Monday through Friday, inclusive.

a $3 checkout fee. A student who drops a course before the end of the semester must check out of the laboratory at the next regular laboratory period.

Authorization to withdraw and certification for work done will not be given a student who has not a clear financial record.

Students are encouraged to provide their own cash funds until they can make banking arrangements in the community.

REGULATIONS

A student enrolled in the University is required to conform to the following University regulations and to comply with the rules and regulations of the college, school, or division in which he is registered.

A student who withdraws or is suspended, or is otherwise absent from the University for one semester or more, may re-enter and continue his work only under the rules and regulations in force at the time of his return.

If a student knowingly makes a false statement or conceals material information on an application for admission, registration card, or any other University document, his registration may be canceled and he will be ineligible (except by special action of the Dean) for subsequent registration in any unit of the University.

ATTENDANCE

A student may not attend classes until registration is completed and fees due are paid. Regular attendance is required. A student may be dropped from any course for undue absence.

A student suspended for any cause may not attend classes during the period of suspension.

SCHOLARSHIP REQUIREMENTS

A student who fails to maintain the scholarship requirements of this Division may be dismissed from the University.

Grades

Grades are mailed to the student through the Office of the Registrar at the close of each semester. They are not given out by instructors.

Undergraduate.—The following grading system is used: *A*, excellent; *B*, good; *C*, average; *D*, passing; *F*, failing. Whenever a grade has not been assigned the symbol *I* (incomplete) or the symbol *W* (authorized withdrawal) will be recorded. The symbol *I* indicates that a satisfactory explanation has been given the instructor for the student's failure to complete the required work of the course. An "incomplete" cannot be made up after the lapse of one calendar year except by written permission of the dean's council of the college, school, or division concerned. Courses from which a student has withdrawn by proper authorization will be indicated by the symbol *W*. A student may not repeat for grade a course in which he has received a grade of *D* or above, unless required to do so by the department concerned. A written statement to this effect must be submitted to the Registrar by the appropriate departmental chairman.

Graduate.—For graduate work, grades are indicated as *E* (excellent), *S* (satisfactory), *U* (unsatisfactory), *I* (incomplete).

The Quality-Point Index

Undergraduate.—Scholarship is computed in terms of the quality-point index, obtained by dividing the number of quality points by the number of semester hours for which the student has registered, both based on the complete record in this University.

Quality points are computed from grades as follows: *A*, four points; *B*, three points; *C*, two points; *D*, one point; *F*, no points, for each semester hour for which the student has registered. Courses marked *W* or *I* are not considered in determining the index, except that courses marked *I* will be considered when a formal grade is recorded, or at the close of a calendar year, whichever occurs first. If an "incomplete" is not superseded by a proper grade within the allotted time, it is computed as zero quality points. Grades in courses taken at another institution are not considered in computing the quality-point index.

Probation

A student must maintain a quality-point index of at least 2.00, or be placed on probation. He remains on probation as long as his index is below 2.00.

Suspension

A student whose index falls below 1.50 is subject to suspension.

A student suspended for poor scholarship may apply for readmission after an interval of one calendar year. A student suspended twice for poor scholarship will not be readmitted.

Examinations

Examinations are scheduled at the end of each semester or at the completion of the course.

Academic Dishonesty

Evidence of dishonesty on the part of any student will result in his suspension from the University upon the recommendation of the Dean's Council.

A student found guilty of dishonesty will be suspended for a stated period and will be deprived of credit for all courses in which he is enrolled during the semester in which the dishonest act occurs. A disciplinary grade of "Failure—Academic Dishonesty" will be recorded for each such course, and this grade will be employed in computation of the quality-point index.

If a student suspended because of academic dishonesty should be readmitted, he may be required to repeat for grade all courses for which a disciplinary grade has been recorded, and both the grade earned on repetition and the disciplinary "Failure—Academic Dishonesty" grade will be employed in computation of the quality-point index.

WITHDRAWAL

Withdrawal from a course or from the University, *without academic or financial penalty*, requires the permission of the Dean. Permission to withdraw from the University will not be granted a student who does not have a clear financial record. (See "Fees and Financial Regulations", pages 9–11.)

Withdrawal between the last working day* in October and the end of the fall

* The University work week is Monday through Friday, inclusive.

semester and between the last working day* in February and the end of the spring semester is permitted only in exceptional cases.

All charges for courses dropped without the approval of the Dean must be met by the student. Reporting the dropping of a course to an instructor does not effect its discontinuance.

CHANGES IN PROGRAM OF STUDIES

Changes within a College, School, or Division.—A student may not change or drop courses (see "withdrawals", above) or change his status to that of auditor except with the approval of the Dean.

Change from one section to another of the same course may be made with the approval of the Dean and the department concerned.

Transfer within the University.—Transfer from one college, school, or division to another may be made only with the approval of the deans concerned.

Students wishing to transfer from the Division of University Students to a degree granting college or school of the University should note that a maximum of 45 semester hours will be accepted in transfer and that in all undergraduate divisions, except the lower division of Columbian College of Arts and Sciences and the College of General Studies, 30 semester hours, including *at least 12 semester hours* in the major field, must be completed *in residence* in the school or college from which the degree is sought. Upon transfer the student should consult the dean concerned and understand clearly the requirements he must fulfill.

CREDIT

Credit is given only after registration for a course and satisfactory completion of the required work.

In special instances, a person who has been admitted to the University may be registered, with the permission of the instructor, as an "auditor" in a class (no academic credit). An auditor is not required to take active part in the exercises or to take examinations.

Transcripts of Record

Official transcripts of student records will be issued on request of the student or former student. No charge is made for the first copy; a fee of one dollar is charged for each one thereafter. No certificate of work done will be issued for a person who does not have a clear financial record.

THE LIBRARY

A student registered in the University is entitled to the reference use of the University Library. The Student Identification Card issued upon the payment of fees, must be presented as identification.

The loan period for most books available for home circulation is two weeks, with an additional two-week renewal. A fine of five cents will be charged for each day a book is overdue. Any book which does circulate is subject to recall by the Librarian at any time. Reserve books for collateral reading must be used in the reading rooms when the Library is open. With special permission they may be drawn for overnight use when the Library closes. A fine of twenty-five cents will be charged

* The University work week is Monday through Friday, inclusive.

for the first hour or fraction of an hour and five cents for each hour or fraction thereafter that a reserve book is overdue. Grades of a student will be withheld until his library record is clear.

RIGHT TO DISMISS STUDENTS

The right is reserved by the University to dismiss or exclude any student from the University, or from any class or classes, whenever, in the interest of the student or the University, the University Administration deems it advisable to do so.

RIGHT TO CHANGE RULES

The University and its various colleges, schools, and divisions reserve the right to modify or change requirements, rules, and fees. Such regulations shall go into force whenever the proper authorities may determine.

PROPERTY RESPONSIBILITY

The University is not responsible for the loss of personal property in any University building. A "Lost and Found" Office is maintained in the Student Union.

HEALTH ADMINISTRATION

The University maintains a health service that is primarily diagnostic in its intent. For medical emergencies and health consultations there is, on the Campus, a Student Health Clinic open from 9:00 A.M. to 5:00 P.M. with physician and nurse in attendance. There is also a rest room for women, with a graduate nurse in charge.

Medical privileges include: (1) physical examination of every student entering from secondary school;* (2) three visits by the University physician or surgeon, office or residence (District of Columbia), in any one illness, exclusive of a specialist, surgical operation, laboratory, or X-ray examination; (3) hospitalization, including board and nursing, in the University Hospital for not more than one week during any twelve-month period—the necessity to be determined by the Director of Health Administration.† All additional hospital charges for operating room, laboratory, anesthetics, X-ray, medications, or any other special service must be paid by the student. The duration of hospitalization period (maximum, one week) is also to be determined by the Director of Health Administration.

This medical benefit applies only to illness or disability incurred while currently enrolled in the University. It does not apply to illness or disability incurred between the last day of examinations for a semester or summer session and completion of registration for the next semester or summer session.

The student is allowed, if he so desires, to engage physicians and nurses of his own choice, but when he does so he will be responsible for the fees charged.

Rules: (1) The Director of Health Administration is empowered to limit or deny the medical benefits where, in his discretion, a student has, by his misconduct or breach of the rules of the University, made himself ineligible; (2) the Director of Health Administration has authority to determine the necessity and length of hospitalization; (3) a student not currently enrolled or one who has severed his connection with the University is ineligible for medical benefits; (4) a student intend-

* A charge for a special physical examination is made by the University if a student fails to appear for a physical examination during the period set for this purpose.

† See Rule (3) for exception.

ing to train for an athletic team is required to pass a thorough examination at the beginning of each semester; (5) hospitalization is not available to those students availing themselves of other hospitalization coverage for the same illness.

The University is not responsible for injuries received in intercollegiate or intramural games, or in any of the activities of the physical education departments.

VETERANS EDUCATION

The George Washington University is approved to provide training for those who are eligible under the provisions of Public Laws 634, 190, 550, 16 and 894. The Office of Veterans Education, Building Q, 2029 H Street NW., operates as a service bureau for such persons interested in studying at the University and acts in a liaison capacity between the University and the Veterans Administration.

Eligible persons are advised to consult this Office concerning the procedure for securing educational benefits before applying to the Veterans Administration for certification. The Veterans Administration is on Constitution Avenue at Twentieth Street NW., Washington 25, D. C.

THE READING CLINIC

The Reading Clinic, 2018 Eye Street NW., offers individual diagnostic and corrective services for all levels: primary, elementary, secondary, and adult. In addition special reading improvement classes are conducted on the high school and adult level.

A complete diagnosis includes psychological tests; vision, hearing, and dominance tests; and the various reading and spelling tests. Results are interpreted and a written report is presented in conference with the parents or the individual.

The special reading classes for high school students and adults are offered throughout the year at stated intervals. Emphasis is placed on improvement of vocabulary, speed, comprehension, and study skills. Machines such as the tachistoscope, rate accelerator, and controlled reader are also used for increasing speed of comprehension.

Fees.—The fee for individual diagnosis is $35; for individual instruction, $5 a lesson; for semi-individual instruction, $4 a lesson; for instruction in small groups with common reading difficulties, $3.25 a lesson. All fees are payable in advance at the Office of the Cashier.

THE SPEECH CLINIC

The Speech Clinic, Lisner Auditorium, 730 Twenty-first Street NW., offers diagnostic and corrective work for children and adults with such speech difficulties as stuttering, lisping, cleft palate, cerebral palsy, asphasia, foreign accent, voice, and articulatory problems.

Fees.—There is no charge for the diagnosis. The fee for individual instruction is $7 an hour; for group instruction, $4 an hour. Fees are payable at the Office of the Cashier.

THE TESTING AND COUNSELING CENTER

The Testing and Counseling Center, 718 Twenty-first Street NW., offers services which are available to students enrolled in the University, to high school students, and to adults of the community.

The services are designed to assist individuals in the evaluation of their educational and vocational potentialities and objectives, diagnose academic difficulties, provide educational and vocational literature and information, and refer individuals to qualified agencies for assistance with problems not handled by the Center.

The Center provides special testing services including: diagnostic tests prescribed by the School of Engineering, admissions tests for the University and for other educational institutions, and tests for business and industry.

Fees.—Except for specialized testing, the fee covers testing and counseling based on the results of the tests. For students who are currently registered as degree candidates in the University, the fee is $7.50; for students currently enrolled in the University but not as degree candidates, the fee is $30; for graduates of the University, $30; for community clients, $45. Fees for specialized testing are dependent upon the services involved. All fees are payable at the Office of the Center.

STUDENT LIFE

LIVING ACCOMMODATIONS

The University maintains seven residence halls. For detailed information, request the special bulletin, which is available at the offices of the Director of Activities for Men and the Director of Activities for Women.

STUDENT UNION

The Student Union, 2125 G Street NW., is the center for student life. From the cafeteria on the first floor to the reading room on the fourth floor, it is well planned to meet the students' need for meals, study, recreation, and activities. In addition to the recreation lounge and social lounge the Student Union provides office space for the Student Council and for the other major student organizations.

The Student Activities Office, also in the Student Union, has available information concerning the student organizations and campus events.

RELIGIOUS LIFE

The University recognizes the contribution that religion makes to the life of its students and encourages them to participate in the religious organizations of their choice. These various denominational groups form a link between the University and the religious community. The advisers of the religious organizations are available for counseling.

University Chapel

The University Chapel is a nonsectarian service of worship for the University community. The service is held Wednesday of each week from 12:10 to 12:30 o'clock at 1906 H Street NW. Among the guest speakers are representative clergymen of Washington. The Director of Chapel is available for counseling on personal problems.

THE PLACEMENT OFFICE

The Placement Office, 2114 G Street NW., provides assistance to students and alumni seeking full-time, part-time, temporary, or permanent employment. The Office maintains a registry of positions available in many fields, both locally and nationally.

and refers qualified applicants for consideration. The Office administers the On-Campus Industrial and Government Recruitment Interview Program for seniors and graduate students, in which well over 150 private companies, as well as certain government agencies, participate. This program offers outstanding employment opportunities to persons seeking careers.

Students and alumni interested in placement are asked to register in person at the Office and to select from written descriptions of current openings positions for which they wish referral. Those interested in planning careers are invited to study the information on career fields and the brochures of business and industrial organizations, government agencies, etc., which are on display in advance of campus visits by recruiting officers. The services of the Counseling Center (see pages 15–16) are available to students and alumni wishing career guidance.

The Placement Office is open from 9:00 A.M. to 5:00 P.M., Monday through Friday.

INTERNATIONAL HOUSE

International House, 2110 G Street NW., is the social center for students from foreign countries. A series of teas, dances, and other forms of entertainment, and the use of club rooms and lounge enable students to become acquainted and feel at home in the University.

The International Students' Society welcomes as members students from other lands as well as North American students.

The Adviser to Students from Foreign Countries, whose office is in International House, is available for advice and guidance.

COURSES OF INSTRUCTION

On the following pages of this CATALOGUE, under the alphabetically arranged names of the departments of instruction, are listed the courses of instruction offered by the University in the summer of 1962 and in the academic year 1962–63. The courses as here listed are subject to some slight change. The University reserves the right to withdraw any course announced.

HOURS OF INSTRUCTION

Classes are scheduled in the morning, afternoon, and evening. Evening and daytime sections of the same course are identical, are taught by the same staff of instructors, and carry the same amount of credit. By taking the evening and summer classes and extending the time of study beyond the usual four years, a part-time student may complete the requirements and obtain a degree.

EXPLANATION OF COURSE NUMBERS

First-group courses.—Courses numbered from 1 to 100 are planned for students in the freshman and sophomore years. With the approval of the adviser and the dean, they may also be taken by juniors and seniors. In certain instances, they may be taken by graduate students to make up undergraduate deficiencies or as prerequisite to advanced courses, but they may not be credited toward a higher degree.

Second-group courses.—Courses numbered from 101 to 200 are planned for students in the junior and senior years. They may be credited toward higher degrees only when registration for graduate credit has been approved at the beginning of the course by the dean responsible for the graduate work and by the instructor, and when the completion of additional work has been certified by the instructor.

Third-group courses.—Courses numbered from 201 to 300 are planned primarily for graduate students. They are open, with the approval of the instructor to qualified seniors; they are not open to other undergraduates.

INDICATION OF THE AMOUNT OF CREDIT

The number of semester hours of credit given for the satisfactory completion of a course is, in most cases, indicated in parentheses after the name of the course. Thus, a year course giving 3 hours of credit each semester is marked (3–3), and a semester course giving 3 hours of credit is marked (3). A semester hour usually consists of the completion of one fifty-minute period of class work or of one laboratory period a week for one semester.

ACCOUNTING*

Professors R. D. Kennedy *(Chairman)*, Edwin Lewis, J. O. Eaton
Professorial Lecturers F. C. Brimacombe, J. L. Buckler, F. V. Demaret, Frank Higginbotham, C. A. McLaughlin, C. L. Simpson, L. W. Hamilton, I. E. Steele
Associate Professor F. C. Kurtz
Associate Professorial Lecturer O. C. Disler
Lecturer E. E. Pontius, Jr.
Instructor M. G. Gallagher

First Group

1-2 *Introductory Accounting* (3–3) — Kennedy and Staff

First half: fall—day and evening; spring—day and evening; summer 1962. *Second half:* fall—day and evening; spring—day and evening; summer 1962. *First half:* basic principles underlying accounting records, preparation of the work sheet and financial statements, accounting for single proprietorships and partnerships. *Second half:* accounting for corporations and introduction to cost accounting, analysis of financial statements, and valuation and amortization problems. Prerequisite to Accounting 2: Accounting 1 or permission of the instructor.

3 *General Accounting* (3) — Kennedy and Staff

Not offered 1962–63. Study of accounting systems and accounting for single proprietorships and corporations, with emphasis on accounting theory, terminology, and the analysis and interpretation of accounting data.

Second Group

101 *Cost Accounting* (3) — Eaton

Fall—day and evening; summer 1962. Theory and purposes of industrial cost accounting; treatment of systems of cost control and determination; and analysis and interpretation of cost data. Prerequisite: Accounting 1–2.

102 *Advanced Cost Accounting* (3) — Eaton

Spring—evening. Advanced cost accounting theory and problems with emphasis on development and analysis of standard costs, the use of cost data for managerial control, and distribution cost accounting. Prerequisite: Accounting 101 or permission of the instructor.

111 *Financial Statement Analysis* (3) — Kennedy, Steele

Fall—day; spring—evening; summer 1962. Methods and techniques of preparing, analyzing, and interpreting financial statements for the guidance of operating executives, directors, stockholders, and creditors; influence of price level changes on accounting data; determination and interpretation of trends and ratios. Prerequisite: Accounting 1–2 or permission of the instructor.

115 *Survey of Accounting* (3) — Disler, Gallagher

Fall—evening; spring—evening; summer 1962. Accounting for single proprietorships and corporations with emphasis on the use of accounting information in the management process; study of theory, terminology, and the analysis and interpretation of accounting data. Not open for credit to Accounting or Business Administration majors.

121–22 *Intermediate Accounting* (3–3) — Gallagher, Simpson

Academic year—day and evening. *First half:* valuation and amortization problems of current assets, long-term investments, tangible fixed assets, intangible assets, and deferred charges; accounting for current, noncurrent, contingent, and estimated liabilities. Prerequisite to 121: Accounting 2 or permission of the instructor. *Second half:* accounting for the organization, financing, operation, and dissolution of corporations and partnerships; basic principles of consignment and installment sales. Prerequisite to 122: Accounting 121 or permission of the instructor.

* The Staff of Instruction here listed is for the academic year 1961–62.

132 *Accounting Theory* (3) Kennedy
Spring—day. Development of basic accounting principles and concepts with special reference to current thought expressed by the American Institute of Certified Public Accountants and the American Accounting Association. Prerequisite: 6 hours of accounting.

141 *Governmental Accounting* (3) Lewis
Fall—evening. Problems relating to governmental appropriation accounts, encumbrances, and fund accounting. Emphasis on municipal and state government accounting with an introduction to federal accounting. Prerequisite: Accounting 1-2 or permission of the instructor.

144 *Federal Accounting* (3) Lewis
Spring—evening. Accounting procedures in the Federal Government, with emphasis on agency level accounts, implementation of accrued expenditure legislation, and accounting support for cost-based budgets. Accounts of the United States Treasury; current concepts of allotment, obligation, and disbursement accounting and reporting. Prerequisite: Accounting 141 or permission of the instructor.

147 *Federal Budgeting* (3) Lewis
Not offered 1962–63. Budgetary procedures in the Federal Government, with emphasis on agency level budget programming, budget formulation and the techniques for achieving management objectives through the budget process; cost-based budgeting; expenditure programming and accrued expenditure limitations; revenue estimating. Prerequisite: Accounting 144 or extensive experience in federal budgeting.

161 *Income Tax Accounting* (3) Kurtz
Fall—evening. Problems involved in the federal income taxation of individuals and corporations, differences between tax accounting and financial accounting, social security taxes. Prerequisite: Accounting 1–2.

162 *Federal Tax Practice* (3) Kurtz
Spring—evening. Advanced problems of federal tax practice such as the tax treatment of partnerships, estates, trusts, corporate reorganizations, foreign income, and gifts; use of the tax services; assessment, collection, and refund procedures. Prerequisite: Accounting 161 or the permission of the instructor.

171 *Auditing* (3) Eaton
Fall—evening; spring—day. Duties and responsibilities of auditors: principles and procedures of making audits, techniques of verifying each financial statement item, preparation of audit working papers and reports. Prerequisite: Accounting 121–22.

172 *Auditing Practice* (3) Eaton
Spring—evening. Preparation of audit reports, accounting statements to be filed with Securities and Exchange Commission, and current developments of auditing standards and practice. Prerequisite: Accounting 171 or permission of the instructor.

181 *Accounting Systems* (3) Lewis
Fall—evening. Theory and procedure of designing and installing accounting systems for collecting, recording, analyzing, and presenting accounting data. Prerequisite: Accounting 101, 121–22, and 171, or permission of the instructor.

191 *Advanced Accounting* (3) Kurtz, Simpson
Fall—evening; summer 1962. Consolidated statements, statement of affairs, realization and liquidation reports, and estate and trust accounting. Prerequisite: Accounting 121–22.

193 *Business Budgeting* (3) Lewis, Buckler
Fall—day; spring—evening; summer 1962. Principles, techniques, and procedures involved in the development, installation, and operation of a system of budgetary control to aid in the management of commercial and industrial organizations. Prerequisite: Accounting 1–2.

196 *Accounting Policy and Control* (3) Lewis
Not offered 1962–63. Accounting decision-making and analytical techniques, em-

phasizing the financial policy and operational role of the accountant and his contribution to enterprise management. Readings, cases, and problems form a basis for class discussions. Prerequisites: Accounting 101, 111, 161, and 171, or permission of the instructor.

198 *Professional Accounting Review* (3) Lewis

Spring—evening. Review and coordination of the principles and techniques developed in the accounting curriculum, in preparation for general practice in the field of accountancy and for professional accounting examinations. Prerequisite: Accounting 101, 141, 162, 171, and 191, or permission of the instructor.

THIRD GROUP

211–12 *Managerial Accounting* (3–3) Kennedy, Higginbotham

First half: not offered 1962–63. *Second half:* fall—evening. *First half:* analysis of the accounting system with special reference to the use of financial and operating records and accounting reports as tools of management; a study of valuation and amortization problems including the influence of price level changes on accounting data. Prerequisite: Accounting 1–2 or 3. *Second half:* a survey of internal accounting controls, commercial budgets, and cost accounting systems used by management in directing and controlling a business. Prerequisite to Accounting 212: Accounting 211 or permission of the instructor.

215 *Survey of Managerial Accounting* (3) Higginbotham

Spring—evening. Nature, preparation, analysis, and interpretation of accounting reports; study of cost accounting, business budgeting, and internal accounting controls with emphasis on their use in the management process. Prerequisite: Accounting 1–2, 3, or 115.

231 *Contemporary Accounting Theory* (3) Kurtz, Higginbotham

Spring—evening; summer 1962. Advanced accounting principles and concepts and recent theories concerned with the valuation and amortization of assets and determination of income. Admission by permission of the instructor.

246 *Governmental Accounting and Budgeting Problems* (3)

Not offered 1962–63. Advanced principles and practices in federal accounting relationship to general policy and administration. Prerequisite: Accounting 144 or permission of the instructor.

275 *Internal Control and Auditing* (3) Kurtz

Summer 1962. Internal accounting controls; review and appraisal of accounting systems, procedures, and managerial policies with respect to their effectiveness and profitableness. Emphasis on the use of internal control and auditing as an aid to management. Prerequisite: Accounting 171 or permission of the instructor.

295–96 *Seminar in Accounting* (3–3) Kennedy

Academic year—evening. Selected accounting research topics and problems; individual oral and written reports. Admission by permission of the instructor.

297–98 *Accounting Reading and Research* (3–3) Kennedy and Staff

Academic year—as arranged; summer 1962.

299–300 *Thesis* (3–3) Kennedy and Staff

Academic year—as arranged; summer 1962.

ANATOMY*

Professors I. R. Telford *(Chairman)*, Paul Calabrisi
Professorial Lecturer T. D. Stewart
Associate Professors F. D. Allan, T. N. Johnson
Assistant Professors J. B. Christensen, J. C. Bartone
Clinical Instructors R. N. Brown, L. E. Church, L. C. Dearden

---

Special Lecturer B. S. Blumberg

201–2 *Gross Anatomy* (8–2) — Calabrisi and Staff
Academic year—as arranged. For qualified nonmedical graduate students. Same as Anatomy 101–2. Anatomy 201—laboratory fee, $21; Anatomy 202—laboratory fee, $16.

203 *Human Embryology* (2) — Allan and Staff
Spring—as arranged. For qualified nonmedical graduate students. Same as Anatomy 103. Laboratory fee, $8.

204 *Neuroanatomy* (3) — Johnson and Staff
Fall—as arranged. For qualified nonmedical graduate students. Same as Anatomy 104. Laboratory fee, $13.

205 *Microscopic Anatomy* (4) — Telford and Staff
Fall—as arranged. For qualified nonmedical graduate students. Same as Anatomy 105. Laboratory fee, $13.

221–22 *Seminar* (1–1) — Telford and Staff
Academic year: 1 hour a week—as arranged. Research reports and discussions of special topics by the Staff and graduate students. For graduate students. Medical students are encouraged to attend.

249–50 *Introduction to Medical Research*† (3–3) — The Staff
Academic year—Wed., 1:00 to 6:00 P.M. Primarily for graduate students. A comprehensive introduction to the major medical research techniques—statistical, physical, chemical, electrical, and radioisotopic—as applied to biological materials in the medical sciences. Laboratory fee, $7.50 a semester.

295–96 *Research* (arr.) — The Staff
Academic year—as arranged. Fee to be arranged.

299–300 *Thesis* (3–3)

ART*

Professors D. C. Kline *(Chairman)*, W. A. MacDonald
Associate Professor L. P. Leite
Associate Professorial Lecturer Grace Evans
Assistant Professor George Steiner
Studio Lecturers on the Staff of the Corcoran School of Art Edmund Archer, Richard Lahey, Jessalee Sickman, Heinz Warneke, C. E. Forsythe, Kenneth Hine, Harry Gates, Jack Perlmutter, Alexander Russo

* The Staff of Instruction here listed is for the academic year 1961–62.
† This is an interdepartmental course. The student should register in the department directing his research.

ART HISTORY AND THEORY

First Group

1 *Art Appreciation* (3) — MacDonald
Fall—day; spring—day; summer 1962. A study of the language and function of art in its various media, the development of styles, aesthetic principles, theories, and the ideas in art through the ages. (Primarily for nonmajors.)

31–32 *Survey of Western Art* (3–3) — Leite
Academic year—day. A survey of the arts in the Western World from prehistoric to modern times. A foundation for further study in the history of art.

71–72 *Introduction to the Arts in America* (3–3) — Kline
Academic year—evening; summer 1962—Art 71 (3). Painting, sculpture, and architecture of America, with selected references to the crafts and popular arts. *First half:* from Colonial beginnings to the Republican Age. *Second half:* from early 19th century to the present.

101 *Greek and Roman Architecture* (3) — MacDonald
Fall—day.

102 *Greek and Roman Sculpture* (3) — MacDonald
Spring—day.

103 *Medieval Art* (3) (Formerly Art 102) — Evans
Fall—day. A study of architecture, sculpture, and painting from the formative states of Christian Art in the Byzantine Age through the Romanesque and Gothic periods.

104 *Renaissance Art in Italy I* (3) — Leite
Fall—day. The early developments from the 13th to the 15th century.

105 *Renaissance Art in Italy II* (3) — Leite
Spring—day. The High Renaissance and Mannerism.

106 *Renaissance Art in the North* (3) — Leite
Summer 1962. A study of the painting in the Netherlands, Germany, France, Spain, and Portugal.

107 *Eighteenth Century Art in Europe* (3) — Evans
Spring—day. The development of painting, sculpture, and architecture in 18th century Europe.

109 *Nineteenth Century Art in Europe* (3) — Leite
Fall—day. Painting and sculpture from Academism to Symbolism.

110 *Contemporary Art* (3) — Leite
Spring—day; summer 1962. Painting and sculpture in 20th century Europe.

111 *Classical Archeology* (3) — MacDonald
Not offered 1962–63. A study of archeological monuments of classical civilizations, with intensive study of one or more areas selected from architecture, sculpture, painting, or minor arts.

112 *Art of Egypt and the Ancient Orient* (3) — MacDonald
Spring—day. A study of the art of Mesopotamia, Anatolia, Egypt, and Persia.

113 *Baroque Art in Italy* (3) — Leite
Fall—day. The development of painting, sculpture, and architecture in the 16th and 17th centuries in Italy.

114 *Baroque Art in the North* (3)
Not offered 1962–63. The development of painting, sculpture, and architecture in the 16th and 17 centuries in Holland, Flanders, Spain, France, Germany, and England.

115 *Christian Iconography* (3) (Formerly Art 210) Leite
Not offered 1962–63. The origins and development of Christian symbols and themes from Early Christian to modern times.

116 *Classical Iconography* (3) (Formerly Art 211) MacDonald
Not offered 1962–63. The origin and development of myths in classical art.

120 *Art of China and Japan* (3) (Formerly Art 204) Kline
Fall—day. The architecture, painting, and sculpture of China, Korea, and Japan.

141 *Interior Decoration* (3) Kline
Fall—day. A study of the principles of decoration dealing with furniture designs and ensemble layout, draperies, color, accessories, and lighting.

142 *House Planning* (3) Kline
Spring—day. Study of the contemporary house for family living, including site problems, the case plan, materials of building, and climate conditioning.

143 *Folk Arts in America* (3) Kline
Not offered 1962–63. Ceramics, woodcarving, ironwork, decorative painting, weaving, and other crafts; selected references to American folk music.

THIRD GROUP

203 *Primitive Art** (3) Kline
Summer 1962. The arts of prehistoric and primitive man in Europe in the pre-Columbian Americas, Oceania, and Africa.

207 *Modern Architecture* (3) Kline
Spring—day. The development of modern architecture and building technology in Europe and America from the late 19th century to the present.

243 *Seminar in American Art* (3) Kline
Not offered 1962–63.

244 *Seminar in Naturalism and Realism* (3) Leite
Not offered 1962–63. A reading knowledge of French is desirable.

245 *Seminar in Romanticism* (3) Leite
Not offered 1962–63. A reading knowledge of French and German is desirable.

246 *Seminar in Classical Art* (3) MacDonald
Fall—day.

247 *Seminar in Symbolism* (3) Leite
1962–63 and every third year: spring—day.

248 *Studies in Classical Art* (3) MacDonald
Summer 1962.

261–62 *Theory and Criticism* (3–3) (Formerly Art 161–62) MacDonald
Academic year—evening. The history of theory and criticism in Classical, Medieval, Renaissance, and Modern times.

271–72 *Museum Techniques*† (arr.) MacDonald
Academic year—as arranged. Assignments in intern training in museum work. Students may take this course three days a week from 9:00 A.M. to 5:00 P.M. throughout the academic year and earn 3 credits a semester; or they may take it intensively, 5 days a week from 9:00 A.M. to 5:00 P.M., and earn 6 credits in one semester.

289–90 *Thesis* (3–3) The Staff
Academic year—as arranged; summer 1962.

* May be taken for undergraduate credit with the approval of the instructor.
† Primarily for candidates for the degree of Master of Arts in the field of Museology and students in the Special Program in Museum Training.

DRAWING AND PAINTING, SCULPTURE, AND COMMERCIAL ART

First Group

21–22 *Basic Composition and Techniques** (3–3) Forsythe
Academic year—day and evening; summer 1962—Art 21 (3). Study of the fundamentals of two- and three-dimensional composition; an investigation of materials and their application.

41–42 *Drawing and Perspective* (3–3) Russo
Academic year—day and evening; summer 1962—Art 41 (3). An introductory course in object and figure drawing and mechanical perspective.

65–66 *Drawing and Painting I—Life, Still Life, and Portrait* (3–3) The Staff
Academic year—day; summer 1962—Art 65 (3).

81–82 *Sculpture I* (3–3) Warneke
Academic year—day and evening.

Second Group

125–26 *Drawing and Painting II—Life, Still Life, and Portrait* (6–6) Sickman
Academic year—day.

127–28 *Drawing and Painting II—Life and Portrait* (6–6) Archer
Academic year—day and evening.

135 *Commercial Design* (3) Hine
Summer 1962. Studies of the principles and applications of graphic design.

157–58 *Print Making* (6–6) Perlmutter
Academic year—day. Relief printing and wood block, with special reference to western and eastern techniques.

159–60 *Anatomy and Techniques* (6–6) Russo
Academic year—day. Special problems in anatomy and drawing and painting of the life model in action.

165–66 *Drawing and Painting II—Life and Portrait* (6–6) Lahey
Academic year—day and evening; summer 1962—Art 165 (3)†.

175–76 *Advanced Composition* (6–6) Forsythe
Academic year—day and evening; summer 1962—Art 175 (3)†. Advanced problems in creative design and composition; development of representational skills.

179–80 *Sculpture II* (6–6) Warneke
Academic year—day and evening. Portrait-life modeling and composition in clay, plaster and wood carving.

183–84 *Commercial Art* (6–6) Hine
Academic year—day and evening. Instruction in fundamental principles: to analyze, visualize, and skillfully express ideas.

185–86 *Advanced Commercial Art* (6–6) Hine
Academic year—day and evening. Practice in the development of professional techniques for thumb-nail and comprehensive layouts; preparation of professional portfolio.

189–90 *Advanced Sculpture* (6–6) Warneke
Academic year—day and evening. Advanced problems in modeling and direct carving. (Restricted to students who have completed 18 hours of sculpture).

* Art 21–22 is prerequisite to all other studio courses.
† May be taken for 6 semester hours with the approval of the instructor.

THIRD GROUP

265–66 *Painting III* (6–6) — The Staff
Academic year—day and evening; summer 1962—Art 265 (3)*.

275 *Painting IV* (6) — The Staff
Fall—as arranged; spring—as arranged; summer 1962—Art 275 (3)*.

279–80 *Sculpture III* (6–6) — Warneke
Academic year—as arranged.

281 *Sculpture IV* (6) — Warneke
Fall—as arranged; spring—as arranged.

299–300 *Thesis* (3–3) — The Staff
Academic year—as arranged; summer 1962.

MUSIC

FIRST GROUP

3–4 *Music Appreciation* (3–3) — Steiner
Academic year—day and evening; summer 1962—Music 3 (3). An introduction to the historical sequences of musical style, the elements of music principle and musical forms, the works of the chief composers, and the study of instruments and other media of musical presentation.

5–6 *Fundamentals of Music* (3–3) — Steiner
Academic year—evening. Elements of music—basic concepts of pitch, rhythm, scales, intervals and chords, notation and terms.

51–52 *Orchestra* (1–1) — Steiner
Academic year—evening. Preparation and performance of orchestral literature. Prerequisite: audition before Director.

SECOND GROUP

103–4 *History of Music* (3–3)
Academic year—day; summer 1962—Art 103 (3). The development of music in the Western World from the Early Christian era to the 20th century.

131–32 *Harmony* (3–3)
Academic year—evening. Chord structure, inversions, modulations, figured and unfigured bass. Practice in elementary harmonic writing.

RELATED COURSE IN ANOTHER DEPARTMENT

Classical Languages and Literatures 71–72 *Greek and Roman Backgrounds in Literature* (3–3)

* May be taken for 6 semester hours with the approval of the instructor.

BIOCHEMISTRY*

Professors J. H. Roe *(Emeritus)*, C. R. Treadwell *(Chairman)*
Professorial Lecturers W. R. Carroll, Irving Gray, Arthur Weissbach
Associate Professor B. W. Smith
Associate Professorial Lecturer Leon Swell
Assistant Professors G. V. Vahouny, J. M. Bailey
Associate H. W. Clark, Jr.

Special Lecturer Sidney Udenfriend

221–22 *General Biochemistry* (4–4) — Vahouny
Academic year—Tues. and Thurs., 8:00 to 12:00 A.M. A lecture and laboratory course for nonmedical students. Prerequisite: Chemistry 152. Material fee, $15 a semester.

224 *Biochemistry of the Enzymes* (1) — Weissbach
Spring—Mon., 5:00 P.M. Lecture course dealing with the biochemistry of the enzymes and enzyme reactions. Prerequisite: Biochemistry 113 or 221.

225–26 *Biochemical Procedures* (3–3) — Smith and Staff
Academic year—as arranged. A laboratory course. Material fee, $16 a semester.

227–28 *Biochemistry Seminar* (1–1) — The Staff
First half: Fri., 5:00 P.M. *Second half:* Fri., 4:00 P.M. The current literature in the field of biochemistry, mainly for graduate students, but open to a limited number of specially qualified medical students.

232 *Proteins and Amino Acids* (1) — Carroll
Spring—Wed., 5:00 P.M. A lecture course. Prerequisite: Biochemistry 113 or 221.

241 *Isotopes* (2) — Gray
Fall—Sat., 8:00 A.M. Theoretical characterization of isotopes and their applications in biology. Attention will be given to counting, health physics and radiation safety, autoradiography and chromotography.

249–50 *Introduction to Medical Research** (3–3) — Bailey
Academic year—Wed., 1:00 to 6:00 P.M. Primarily for graduate students. A comprehensive introduction to the major medical research techniques—statistical, physical, chemical, electrical, and radioisotopic—as applied to biological materials in the medical sciences. Laboratory fee, $7.50 a semester.

251 *Carbohydrate Metabolism* (1) — Roe
1962–63 and alternate years: fall—Sat., 9:00 A.M. A lecture course. Prerequisite: Biochemistry 114 or 222.

261 *Biochemistry of the Lipids* (1) — Swell, Treadwell
Fall—Sat., 12:00 A.M. A lecture course. Prerequisite: Biochemistry 114 or 222.

295–96 *Research in Biochemistry* (arr.) — The Staff
Academic year—as arranged.

299–300 *Thesis* (3–3) — The Staff

BIOLOGY

SEE THE DEPARTMENTS OF BOTANY AND ZOOLOGY.

* The Staff of Instruction here listed is for the academic year 1961–62

BOTANY*

Professor R. B. Stevens *(Chairman)*
Professorial Lecturer L. B. Smith
Associate Research Professor J. M. Kaper
Associate Professorial Lecturers Kittie Parker, Caroline Adams, R. S. Sigafoos, Edward Hacskaylo, H. M. Cathey
Lecturers G. A. Livingston, W. A. Shropshire, Jr.

BIOLOGY†

First Group

The Staff

1–2 *Introductory Biology*† **(4–4)**

An interdepartmental course. Lecture (2 hours), laboratory (4 hours).
Biology 1—Plant Sciences (4): fall—day and evening; spring—day and evening.
Biology 2—Animal Sciences (4): fall—day and evening; spring—day and evening.
This course is designed to provide the nonscience student with an understanding of the life sciences and to serve as a basis for those who may wish to continue in some aspect of biology. It is the introductory course leading to all second- and third-group courses in botany and zoology, and is taught jointly by the staff members of the two departments. Designed to be taken in either sequence; students may be registered for either 1 or 2 at the beginning of the academic year, depending on laboratory space available. Material fee, $10 a semester.

BOTANY

Second Group†

Parker

105 *Field Botany* **(3)**

Lecture (1 hour), laboratory and field (4 hours). 1963 and alternate summers. A course, primarily for nonspecialists, emphasizing local flora.

Hacskaylo, Shropshire

106 *Plant Growth* **(3)**

Lecture (2 hours), laboratory (2 hours). Summer 1962 (as Botany 116). 1963 and alternate summers. A course, primarily for nonspecialists, emphasizing practical problems of growing and caring for plants. Material fee, $8.

Bowman

107–8 *Organic Evolution*† **(3–3)**

1962–63 and alternate years: academic year—day; 1963–64 and alternate years: academic year—evening. A study of the theories of organic evolution and present ideas on the principal lines of development in the plant and animal kingdoms; a review of the contributions to an understanding of the mechanisms involved in this process from the fields of genetics and cytology.

Adams

109–10 *Plant Morphology* **(3–3)**

1963–64 and alternate years. *First half:* seed plants—lecture (2 hours), laboratory (2 hours); material fee, $8. *Second half:* lower groups—lecture (1 hour), laboratory and field (4 hours).

Bowman

115–16 *Cytology*‡ **(3–3)**

Lecture and laboratory. 1962–63 and alternate years: academic year—evening; 1963–64 and alternate years: academic year—day; summer 1962—Botany 115 (3) (as Biology 115). Plant and animal cells and their components, including the chromosomes

---

* The Staff of Instruction here listed is for the academic year 1961–62.
† Biology 1–2 is prerequisite to all second-group courses, except by permission of the instructor. Beginning with the academic year 1962–63, Biology 1–2 *Introductory Biology* (4–4) replaces Botany 1–2 *General Botany* (3–3) and Zoology 1–2 *Introduction to Zoology* (4–4). Botany 1–2 and Zoology 1–2 will be offered for the last time in the summer of 1962.
‡ An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.

and their role in heredity, with training in the preparation of materials for study. Material fee, $8 a semester.

125–26 *Plant Taxonomy* (3–3) Parker
Lecture (1 hour), laboratory and field (4 hours). 1963–64 and alternate years.

127 *Genetics** (3)
Fall—evening. A lecture course in which the general principles are illustrated with specific examples of inheritance in plants and animals, including man.

131–32 *Mycology* (3–3) Stevens, Hacskaylo
Lecture (2 hours), laboratory (2 hours). 1962–63 and alternate years: academic year—evening. Material fee, $8 a semester.

133–34 *Plant Pathology* (3–3) Stevens
Lecture (2 hours), laboratory (2 hours). 1963–64 and alternate years. Material fee, $8 a semester.

135–36 *Plant Physiology* (3–3) Cathey
Lecture (2 hours), laboratory (2 hours). 1962–63 and alternate years: academic year—evening. Prerequisite: Chemistry 11–12 or permission of the instructor. Material fee, $8 a semester.

140 *Cell Physiology** (3) Shropshire
Spring—evening. The fundamental physiology of protoplasm. Prerequisite: Chemistry 12.

141–42 *Plant Ecology* (3–3) Sigafoos
Lecture (1 hour), laboratory and field (4 hours). 1962–63 and alternate years: academic year—evening.

Third Group

201–2 *Seminar: Cytology** (3–3) Bowman
Academic year—evening.

221–22 *Seminar: Taxonomy* (3–3) Smith
1962–63 and every fourth year: academic year—as arranged.

231–32 *Seminar: Mycology and Plant Pathology* (3–3) Stevens
1964–65 and every fourth year.

235–36 *Seminar: Plant Physiology* (3–3) Cathey, Hacskaylo
1963–64 and every fourth year.

241–42 *Seminar: Plant Ecology* (3–3) Sigafoos
1965–66 and every fourth year.

295–96 *Research* (arr.) The Staff
Academic year—as arranged; summer 1962—Botany 295 (arr.) Fee to be arranged.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged; summer 1962.

* An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.

BUSINESS AND PUBLIC ADMINISTRATION*

Professor A. R. Johnson, J. L. Jessup, J. C. Dockeray ***(Chairman)***, D. S. Brownt, A. M. Woodruff, G. C. Jacobus, R. B. Eastin, F. H. Gibbs, R. F. Ericson, G. L. Lippitt, T. H. Carroll

Professorial Lecturers M. E. Ogdon, K. E. Stromsem, J. L. Krieger, C. W. Clewlow, W. G. Torpey, J. N. Stonesifer, A. C. Lazure, K. F. McClure, F. L. Shaffner, C. E. Houston, C. G. Berns, Edward McCrensky, S. N. Alexander, Robert Kaye, L. C. Collins, J. P. Murphy

Associate Professors John Clayton, Leonard Prestwich, Waldo Sommers, D. R. Cloutier, L. I. Gintzig, T. R. Bennett II

Associate Professorial Lecturers John Provan, J. R. Snitzler, F. K. McTyier, V. B. Lewis, George Idelson, J. A. Morrow, Ross Pollock

Assistant Professors A. D. Larson, R. E. Griffiths, H. R. Page

Lecturers R. J. Bond, J. F. Doubleday, W. L. Jobanek, D. K. Good

BUSINESS AND PUBLIC ADMINISTRATION

Third Group

201 *Advanced Administrative Management* (3) Eastin, Ericson, Gibbs
(Replaces Business Administration 201 and Public Administration 210)
Fall—day and evening; spring—evening. An advanced course in administration emphasizing principles and practices common to administrative units of all kinds.

204 *Quantitative Factors in Administration* (3)
Spring—evening. Developments in quantitative methods of administration. Morrow

205 *Seminar in Communication and Executive Action* (3)
(Formerly Public Administration 242)
Spring—evening. Seminar in the communications processes. Research and analysis, identification of factors relating to receptivity; the dynamics of communication. Torpey

206 *Personnel Management* (3)
(Formerly Public Administration 231)
Fall—evening. Basic principles; structure and organization of personnel offices; responsibilities; interagency relationships; personnel staffing, training, and work measurement.

207–8 *Human Relations in Administration* (3-3) Bennett, Brown
(Replaces Business Administration 275–76, and Public Administration 241)
Academic year—evening. Individual, group, intergroup, and other human behavior and development; application of social science research to administration. Practical applications will be emphasized. Ericson

262 *Contemporary Administrative Theory and Practice* (3)
(Formerly Public Administration 262)
Spring—evening. Current theories and trends in management with particular attention to the behavioral sciences communications and applicability of research. Clewlow

268 *Management Engineering* (3)
(Formerly Business Administration 268)
Fall—day and evening; spring—evening. Analysis of the techniques for initiation and implementation of management engineering programs, with emphasis on organization and methods surveys including the study of work measurements, work simplification management audits, and other management improvement programs.

* The Staff of Instruction here listed is for the academic year 1961–62.
† On leave of absence fall semester 1961–62

287 *Relation of Government to Business* (3) Clayton
(Formerly Business Administration 287)
Spring—evening. Activities of government in their relation to business management in such areas as labor relations, wages, production, and prices.

BUSINESS ADMINISTRATION

Second Group

101 *Introduction to Business* (3) _____
(Formerly Business Organization and Combination)
Fall—day and evening; spring—day; summer 1962. The business environment; its effects upon the decision making process.

102 *Fundamentals of Management* (3) Ericson, Page
Fall—day and evening; spring—day and evening; summer 1962. Planning, organizing, directing, coordinating, and controlling the activities of the administrative unit; evolution of management thinking.

105 *Personnel Management* (3) Eastin, Stonesifer
Fall—day; spring—evening; summer 1962. Industrial personnel and manpower programs, organizations and policy in personnel activities.

106 *Problems in Personnel Management* (3) Eastin, Stonesifer
Spring—day. Principles of manpower management illustrated by cases drawn from business, industry, and government. Prerequisite: Business Administration 105.

107 *Labor-Management Contracts* (3) Sommers
Fall—day; spring—evening. Management's role in the negotiation and administration of collective bargaining agreements, as essential to development of good labor-management relations.

109 *Office Management* (3) _____
Fall—evening; spring—evening. Organization and layout of an office, use of office machines and appliances, planning and execution of work, supervision problems.

113 *Real Estate* (3) Doubleday
Fall—evening. Fundamentals of real estate practice; leasing and property management; valuation, financing, and taxation.

121 *Risk Management* (3) Doubleday
Spring—evening. A general course in underlying principles of property, life, marine, and casualty insurance, and the function of insurance in the economic life of a business or individual.

122 *Life Insurance and Estate Planning* (3) Doubleday
Spring—evening. Life insurance contracts, their use in providing protection and estate development.

131 *Business Finance* (3) Clayton
Fall—day; spring—day and evening. Basic principles involved in the financing of business enterprises. Prerequisite: Accounting 1–2.

136 *Credit Management* (3) _____
Spring—evening. Types and sources of credit information, credit relationships from the standpoint of the commercial bank and the commercial business enterprise. Prerequisite: Accounting 1–2.

138 *Investments* (3) Dockeray, Shaffner
Spring—evening; summer 1962. Analysis of factors of investment credit with application to different types of investments, proper selection of investments for various classes of investors, regulation. Prerequisite: Accounting 1–2.

141 *Principles of Marketing* (3) Prestwich
Fall—evening; spring—day; summer 1962. An introduction to marketing structure and its relation to the total economy, consumer and demand analysis, retailing, wholesaling, major marketing management problems and policies. Prerequisite: Economics 1–2.

142 *Marketing Management Problems* (3) Prestwich
Spring—day. Practical problems of retailers, wholesalers, and manufacturers considered through the use of cases and text material; fundamental considerations in marketing decisions and the nature of the problem-solving process. Prerequisite: Business Administration 141.

143 *Marketing Research* (3) Prestwich
Fall—day. Principles and practices of marketing research with particular emphasis upon basic methods and techniques, sources and interpretation of data, and presentation of results.

145 *Sales Management* (3) Eastin
Spring—evening. Organization of the sales department, sales planning and forecasting, quotas, territories, performance standards, and analysis and control of distribution costs. Prerequisite: Business Administration 141.

147 *Advertising* (3) Idelson
Fall—evening. Advertising as a function of marketing and merchandising; uses and limitations of advertising as a tool of management; fundamentals involved in getting a finished advertisement before potential customers; evaluation, criticism, and control of advertising.

150 *Procurement and Materials Management* (3) Prestwich
Spring—evening. Purchasing organization, procedures, and policies; market relationships; selection of merchandise and sources of supply; procurement information and records; evaluation of procurement practices in industry and government.

153 *Principles of Personal Selling* (3) Prestwich
Summer 1962. Basic principles that underlie personal selling and the practical application of these principles. Emphasis is given to the human factor. Career opportunities and the role of selling in our economy are also considered.

158 *Traffic Management* (3) Kaye
Spring—evening. Organization and records of traffic department, routing of shipments, services by carriers, rates and charges, relation of shipper to transportation agencies.

161 *Commercial Law: Contracts, Sales, Agency, and Bailments* (3) Berns, Collins, McClure
Fall—day and evening.

162 *Commercial Law: Negotiable Instruments, Property, Mortgages* (3) Berns, Collins, Murphy
Spring—day and evening.

163 *Law in Relation to the Form of Business Units: Corporations, Partnerships, and Trusts* (3) Murphy
Fall—evening.

171 *Principles of Transportation* (3) Clayton
Fall—evening. Impact of transport on society; development, economic characteristics, services, rates, and regulation of the various modes of domestic intercity transportation.

172 *Public Utilities* (3) Clayton
Not offered 1962–63. Legal and economic meaning of the public utility concept; development, services, economic characteristics, ratemaking, and regulation of the various utility industries, with particular emphasis on electric, gas, telephone, and urban transit industries.

173 *Commercial Motor Transportation* (3) Clayton
Fall—evening. Organization, management, services, economic characteristics, rates, and regulation of motor transport firms; highways and highway financing considered from the point of view of both producers and users of the services.

174 *Commercial Air Transportation* (3) Clayton
Spring—evening. Organization, management, services, economic characteristics, rates, and regulation of air transport firms; policies and activities of the government in the development, promotion, and control of air transport.

175 *Introduction to Foreign Trade* (3) Kaye
Fall—evening. Terminology, trade usages and practices, conditions essential to successful trading, economic bases of international trade, obstacles to trade, tariffs, impact of governmental controls on private trade. Prerequisite: Economics 1–2.

176 *Exporting and Importing* (3) Kaye
Not offered 1962–63. Policy and operating problems of foreign trade, financing, documentation, packing and transportation of shipments, ocean marine insurance, and U. S. Customs procedure and formalities.

178 *Foreign Markets* (3) Ogdon
Spring—evening. Pattern of world trade by countries and commodities, methods of preparing market surveys, selected regional market analyses. Prerequisite: Economics 1–2.

191 *Business Reports and Analyses* (3) ———
Fall—evening. Sources of management information, array and analysis of data, interpretation and presentation of the findings.

193 *Management Communication* (3) Morrow
Fall—evening; spring—day. A survey course in the problems of communication; written communication; style and format; oral communication: oral briefing and presentation; group leadership; rapid reading; completed staff work; and related subjects.

195 *Controllership* (3) ———
Fall—evening. The duties, responsibilities, and place of the controller in a business organization; relations of controller to other departments and regulatory bodies; and the controller's relation to price setting and inventories, depreciation policies, internal auditing, expense control and budgeting; and financial reports to management, stockholders, and employees. Prerequisite: Accounting 1–2. Open to seniors.

197 *Introduction to Business Policy* (3)
Not offered 1962–63. Significance of business policies in management; formulation of policies; relation of various organizational levels to policy making; some significant policies, including case problems.

198 *Case Problems in Management* (3) Eastin, Page
Fall—day and evening; spring—day and evening. Principals and techniques of management illustrated by cases drawn from business and industry. Prerequisite: Business Administration 102, 105, 131, 141.

THIRD GROUP

201 *Advanced Management* (3)
Summer 1962. An advanced course in management emphasizing principles of management in relation to business enterprise.

209 *Seminar in Personnel Management* (3) Eastin
Fall—evening. Discussion of industrial personnel and manpower management, and research in advanced problems.

210 *The Personnel Manager* (3) Jessup
Spring—evening. The job of the personnel manager and his place in the organization; relations of the personnel manager to other executives; the personnel manager's policy roles and his relations with the chief executive. Key problems of the senior personnel executive.

213 *Urban Land Management* (3) Woodruff
Spring—evening. Background course for the developing curriculum in city planning. The course traces the forces that lie behind investment decisions which in turn determine the development of cities.

218 *Introduction to Data Processing* (3) Doubleday
Fall—evening; spring—evening. A survey of modern data processing systems with emphasis on the management problems associated with the installation and use of such systems.

219–20 *Data Processing: Mechanics and Applications* (3–3) Alexander, Glaser
Academic year—evening. Characteristics of major computer systems; relation to their selection and application to administrative processes. Feasibility studies. Relationship of data processing and quantitative methods of management. Case studies. Prerequisite: Business Administration 218.

227 *Linear Programming* (3)
Fall—evening. Introduction to the vocabulary and methodology of management science through the study of linear programming techniques. Case studies. Minimum mathematical tools are included.

228 *Introduction to Operations Research for Management* (3)
Spring—evening. Operations research as an approach to the solution of management problems. Emphasis is on the relevance and limitations of operations research. Practical applications are examined. Minimum mathematical tools are included.

231 *Corporate Financial Problems* (3) Dockeray, Houston
Fall—evening. Financial practice in promotion, consolidation, and mergers; capital structure adjustments; and reorganization.

232 *Seminar in Business Finance* (3) Dockeray, Houston
Spring—evening; summer of 1962. Research in advanced financial problems.

237 *Security Analysis* (3) Dockeray, Shaffner
Fall—evening. An advanced course in the applications of investment principles and analytical techniques to the selection of investments. Prerequisite: Business Administration 138.

238 *Seminar in Investments* (3) Dockeray, Shaffner
Not offered 1962–63. Research in investment problems, techniques of selection and the management of various types of funds. Prerequisite: Business Administration 138.

241–42 *Seminar in Marketing* (3–3) Johnson, Prestwich
Academic year—evening. An advanced course in marketing, emphasizing special and current problems in the field. (Business Administration 241 is not a prerequisite for Business Administration 242.)

250 *Contract Administration* (3) Lazure
Fall—evening. The management of government contracts with private suppliers.

251 *Seminar in Retail Management* (3) Prestwich
Not offered 1962–63. Research in retailing practices, with emphasis on trends, new developments, and current problems.

255–56 *Seminar in Foreign Trade* (3) Ogden
Not offered 1962–63. Research, analysis, and discussion of foreign trade institutions, public and private.

273–74 *Readings in Business* (3–3) The Staff
Academic year—as arranged. Advanced readings in the fields of finance, marketing, and personnel management. Admission by permission of the instructor.

278 *The Dynamics of Business* (3) Clayton
Not offered 1962–63. An analysis of the structure of American business, including a study of trend and cyclical change in economic activity and their bearing upon governmental policy.

286 *Management in the Armed Forces* (3) Jessup
Fall—evening. Special problems of military organization and management; applicability of business management techniques to the armed forces.

288 *Executive Leadership* (3) Krieger
Fall—evening. Examination of principles and problems of executive leadership and development; intensive consideration of basic issues and guides to executive action in business and public administration; review of the literature, significant research findings, and practical illustrations.

291 *Seminar in Business Management* (3) Ericson, Page
Fall—evening; spring—evening. Research on various phases of management as practice in American industry.

293–94 *Business Research* (3–3) The Staff
Summer 1962.

296 *Seminar in Controllership* (3)
Spring—evening. Research on advanced problems of the controller in all types of business organization and the Federal Government.

297 *Case Studies in Business Administration* (3) Jessup
Academic year—evening. Problems of management are analyzed with the view of developing a practical solution; cases are used to show the problems of personnel in marketing, industrial management, finance, etc.

299–300 *Thesis* (3–3) Dockeray and Staff
Academic year—evening; summer 1962.

HOSPITAL ADMINISTRATION

Third Group

202 *Introduction to Medical Care Administration* (3) Griffiths
Lecture and discussion (2 hours), laboratory (2 hours). Fall—day and evening. Survey of organizations and activities involved in the maintenance of community health, national public health, hospital bodies, communicable diseases, preventive medicine, medical terminology, biostatistics, and environmental sanitation.

203–4 *Hospital Organization and Management I-II* (3–3) Gintzig
Lecture and discussion (2 hours), laboratory (2 hours). Academic year—day and evening. The history and current character of institutional medical care. Organizational functions and structure of various kinds of hospitals, including psychiatric homes for aged, nursing homes, group clinics, and others related to health care administration. The laboratory is conducted by guest faculty. Prerequisite to Hospital Administration 204: Hospital Administration 203.

205 *Hospital Management Procedures* (3) Gintzig
Lecture and discussion—(2 hours), laboratory (2 hours). Fall—day and evening. A survey of hospital law; a study of hospital forms, procedures, and systems; hospital programs pertaining to disaster relief, safety, fire prevention; personnel, purchasing, and volunteer services; and the operational peculiarities of hospital departments. Prerequisite: Hospital Administration 203.

206 *Case Studies in Hospital Administration* (3) Gibbs
Spring—day and evening. A discussion of general ideas about administration as applied to practical cases. Emphasis is placed on policy making, planning, and controlling in hospitals. Prerequisite: Business and Public Administration 201 and Hospital Administration 203.

207 *Hospital Management Analysis* (3) Gintzig
Lecture (2 hours), laboratory (2 hours). Spring—day and evening. Methods of collecting, analyzing, reporting, and using information that can be made available to administrators of hospitals and other medical care institutions. One day each week is

spent in a medical care institution. This time is devoted to an investigation on which written and oral reports are based. Prerequisite: Business and Public Administration 268 and Hospital Administration 203, 205.

209 *Hospital Finance and Planning* (3) Griffiths

Lecture (2 hours), laboratory (2 hours). Spring—day and evening. Medical economics to include sources of hospital income; fund raising drives; methods of procuring, using, budgeting, and accounting for hospital funds; pre-payment plans, impact on community of the cost of medical care. Regional and specific aspects of hospital planning, designing, constructing, equipping, and supplying. Prerequisite: Hospital Administration 202, 203.

285–86 *Readings in Medical Care Administration* (3–3) The Staff

Academic year—as arranged. Advanced studies in various aspects of hospital, nursing home, and other medical care administration and management. Admission by permission of the Coordinator.

293–94–95 *Hospital Residency I* (3–3–3) Gibbs

The twelve-month residency, beginning June 1 or July 1 of each year, has four major objectives: work experience under a qualified preceptor; periodic seminars with University staff; periodic written progress reports of work accomplished; and a final written report of a major investigation. (Other courses may be substituted for Hospital Administration 294–95 as appropriate.)

296–97–98 *Hospital Residency II* (3–3–3) Gibbs

For selected students who take a second year of residency. The Staff

299–300 *Thesis* (3–3)

Academic year—as arranged.

PUBLIC ADMINISTRATION

Third Group

211 *Problems of Governmental Organization* (3)

Fall—evening; summer 1962. Theories and principles of organization; analysis of problem areas in administration, such as decentralization, staff-line, field-headquarters, and executive-legislative relationships.

212 *Case Studies in Public Administration* (3)

Spring—evening; summer 1962. Analysis and discussion of problems in public management, approached by the group using primarily the case method. Brown

213 *Administration in Government* (3)

Fall—evening; spring—evening. Selected topics in problems of federal administration, with particular attention to the role of Congress and the public in the administrative processes.

215 *Seminar in Comparative Administrative Systems* (3)

Fall—evening. Examination and analysis of the administrative systems of the major foreign governments with particular attention to practices applicable to administration in the United States. Sommers

221–22 *Staff Functions in Government* (3–3)

Academic year—evening. Designed primarily to provide an understanding of the nature, use, and problems of the staff functions as tools of management. Survey of such staff areas as personnel, budgeting, controllership, procurement, property management, the agency lawyer, security, public relations and information, planning, research, the secretariat, management engineering, auditing, accounting, and administrative services. Sommers

225–26 *Internship in the Administrative Processes* (3–3)

Academic year—as arranged. This course is open only to persons selected by government agencies for participation in approved intern programs.

232 *Federal Personnel Procedures* (3) Torpey
Spring—evening; summer 1962. Study of such personnel functions as recruitment, selection, placement, promotion, supervision, evaluation, classification, and training. Practical problems of personnel administration.

233 *Seminar in Manpower Development and Utilization* (3) Sommers
Fall—evening. Research projects and case studies in ways and means of increasing employee potential, use of training programs, executive development, incentive systems.

237 *Intermediate Management and Supervision* (3) Eastin
Fall—evening. The role of the supervisor and intermediate manager, methods for improving group performance, work measurement, pertinent regulations governing federal personnel.

251 *Governmental Budgeting* (3)
Fall—evening; spring—evening; summer 1962. The role of budgeting in management; the principles and practices of budgetary formulation and administration.

252 *Seminar in Planning and Programming* (3) Jacobus
Fall—evening. Performance budgeting; relating the work program to the fiscal program; budgetary evaluation. This course is primarily for students who have completed Public Administration 251.

254 *Controllership in the Federal Services* (3) Krieger
Spring—evening. Function of the controller in federal agencies; special problems analyzed; comparison of the controller function in government and business.

259 *Government Procurement and Property Management* (3)
Not offered 1962–63. Principles and problems of government procurement; accounting and inventory; storage; development of specifications; property management.

260 *Seminar in Policy Formulation and Administration* (3) Jacobus
Fall—evening. Development and administration of agency goals and objectives, influence of individuals upon them; factors involving informal organization such as internal pressure groups, use of sanctions, and role of executive in furthering administrative policy.

261 *Public Opinion and the Administrator* (3) Stromsem
Fall—evening. Theories, techniques, and methods of working with the public; the use of interest groups in developing governmental programs; evaluating public relations programs; the importance of timing; use of public opinion measurement techniques.

271 *Reading and Conference Course in Public Management and Administration* (3) Brown
Not offered 1962–63. The purpose of this course is to provide advanced students with directed reading in specific areas of public management and administration.

272 *Seminar in Public Personnel Administration* (3) The Staff
Spring—as arranged. The purpose of this course is to provide advanced students with directed reading in specific areas of public personnel administration.

297 *Seminar in Public Administration* (3) The Staff
Summer 1962. Advanced research on various phases of public administration including methods of policy formulation and control, the application of systems to management, administration problems of bureaucratic relationships.

299–300 *Thesis* (3–3) The Staff
Academic year—evening; summer 1962.

CHEMISTRY*

Professors B. D. Van Evera, S. N. Wrenn, C. R. Naeser *(Chairman)*, R. C. Vincent, W. F. Sager, R. E. Wood, T. P. Perros
Associate Professors J. W. Harkness, W. E. Schmidt, D. G. White
Associate Professorial Lecturer Margaret McPherson
Assistant Professors R. C. Sentz, Margaret Ethier

First Group

3–4 *Fundamentals of Physical Science* (4–4) Schmidt, Ethier
A year course: credit is not given for the first half until the second half is completed. Lecture (3 hours), laboratory (3 hours). Academic year—day. Introduction to methods and achievements of physical science, covering selected topics in chemistry, physics, astronomy, and geology. For nonscience majors. Laboratory fee, $11 a semester.

11–12 *General Chemistry* (4–4) The Staff
A year course: credit is not given for the first half until the second half is completed. Lecture (2 hours), laboratory (4 hours), recitation (1 hour). *First half:* fall—day and evening; spring—day and evening; summer 1962. *Second half:* fall—day and evening; spring—day and evening; summer 1962. Elementary course in general chemistry. Prerequisite: one year of high school algebra. Laboratory fee, $18 a semester.

13–14 *General Chemistry* (4–4) White
A year course: credit is not given for the first half until the second half is completed. Lecture (2 hours), laboratory (4 hours), recitation (1 hour). Academic year—day and evening. A terminal course in general chemistry for students in the School of Engineering except those selecting the curriculum leading to the degree of Bachelor of Science in Engineering with a chemistry option. Those students should register for Chemistry 11–12 in their first year. Prerequisite: Physics 11 and Mathematics 21 or 29. Laboratory fee, $18 a semester.

21 *Qualitative Inorganic Analysis* (4) Vincent
Lecture (2 hours), laboratory (6 hours). Fall—day and evening; spring—day and evening; summer 1962. Theoretical and practical study of methods of separating and identifying the more common cations and anions using semi-micro techniques. Prerequisite: Chemistry 12 or a placement examination which may be waived at the discretion of the instructor. Laboratory fee, $18.

22 *Quantitative Inorganic Analysis I* (4) Schmidt
Lecture (2 hours), laboratory (6 hours). Spring—day and evening; summer 1962. Theory and practice of quantitative analysis by typical volumetric and gravimetric procedures. Prerequisite: Chemistry 21. Laboratory fee, $18.

Second Group

111–12 *Physical Chemistry Lectures* (3–3) Wood
A year course: credit is not given for the first half until the second half is completed. Academic year—day and evening. Introduction to physical chemistry. Students registering for Chemistry 111–12 must register concurrently for Chemistry 113–14 unless they already have adequate credit for physical chemistry laboratory. Prerequisites: either (1) Chemistry 22 and 152, Mathematics 22 or 30, Physics 13 or 15, or (2) Chemistry 21, Mathematics 22 or 30, Physics 14.

113–14 *Physical Chemistry Laboratory* (2–2) Wood
A year course: credit is not given for the first half until the second half is completed. Academic year—day (also Saturday). Laboratory to accompany Chemistry 111–12.

* The Staff of Instruction here listed is for the academic year 1961–62

Students registering for Chemistry 113–14 must register concurrently for Chemistry 111–12 unless they already have credit for lectures in physical chemistry. Laboratory fee, $18 a semester.

122 *Quantitative Inorganic Analysis II* (4) Schmidt
Lecture (2 hours), laboratory (6 hours). Fall—day and evening. Continuation of Chemistry 22 including theory and practice of separations, organic reagents, electrochemistry, and colorimetry in analysis. Prerequisite: Chemistry 22. Laboratory fee, $18.

134 *Descriptive Inorganic Chemistry* (2) White
Spring—day. An intermediate level course emphasizing the descriptive chemistry of the elements. Prerequisite: Chemistry 22, 151.

135–36 *Inorganic Chemistry: Preparations* (2–2) Perros
First half: fall—day, spring—evening. *Second half:* spring—evening. Application of the technique of inorganic chemistry to the preparation and purification of a list of selected substances. Prerequisite: Chemistry 152 and 134. Laboratory fee, $18 a semester.

151–52 *Organic Chemistry* (4–4) Wrenn, Sager
A year course: credit is not given for the first half until the second half is completed. *First half:* fall—lecture (3 hours), laboratory (3 hours), day and evening; summer 1962. *Second half:* spring—lecture (2 hours), laboratory (6 hours), day and evening; summer 1962. Chemistry of the compounds of carbon. Prerequisite*: Chemistry 21. Laboratory fee: Chemistry 151, $12; Chemistry 152, $20.

153 *Special Laboratory in Organic Chemistry* (1) Wrenn, Sager
Spring—day and evening. A course designed to give the chemistry major additional and broader training in the technique of organic chemistry than in Chemistry 151–52. Prerequisite: Chemistry 151. Prerequisite or concurrent registration: Chemistry 22 and 152. Laboratory fee, $12.

155 *Organic Chemistry: Preparations* (2 or 3) Wrenn
Spring—evening. Synthesis of organic compounds and application of the technique of organic chemistry to the preparation of pure compounds, using larger amounts and greater refinements than in Chemistry 151–52. Prerequisite: Chemistry 22 and 152. Laboratory fee, $10.50 a semester hour.

156 *Qualitative Organic Analysis* (3) Sentz
Fall: lecture (1 hour), laboratory (6 hours)—evening. Identification of pure organic compounds, separation of mixtures, and identification of their components. Required of all students planning thesis work in Organic Chemistry. Prerequisite: Chemistry 22 and 152. Laboratory fee, $18.

191 *History of Chemistry* (2) Perros
1963–64 and alternate years. Historical development of chemistry. Prerequisite: Chemistry 22 and 152.

193 *Chemical Literature* (1) Wrenn
Fall—evening. A general course in chemical literature with reference work and reports. Prerequisite: Chemistry 22 and 152. Prerequisite or concurrent registration: Chemistry 111–12 and 113–14.

THIRD GROUP†

203 *Chemical Kinetics* (2) Wood
1963–64 and alternate years. The rates of chemical reactions and the factors influencing them. Prerequisite: Chemistry 112.

211–12 *Physical Chemistry* (2–1) Wood
Academic year—day and evening. Same course as 111–12. Chemistry 211–12 may be taken for credit only by special permission. Credit will be assigned only upon the satisfactory completion of Chemistry 213.

* This prerequisite may be waived in the case of the student who has earned a grade of *C* or better in Chemistry 12 within the past two years or by a placement examination.
† The appropriate qualifying examination is prerequisite to all advanced courses.

213 *Chemical Thermodynamics* (3) Wood
Fall—evening. Application of thermodynamics to chemical problems. Thermochemistry, homogeneous and heterogeneous equilibria, statistical calculation of thermodynamic properties, electrochemistry. Prerequisite: grade of *A* or *B* in Chemistry 111–12, *Satisfactory* in 211–12, or qualifying grade in physical chemistry qualifying examination.

216 *Statistical Mechanics* (3) Sager
1962–63 and alternate years: fall—evening. An introduction to classical and quantum statistics designed to acquaint the student with the basic principles and application of the method. Prerequisite or concurrent registration: Chemistry 213 or permission of instructor.

217 *Chemical Bonding* (2) Sager
1962–63 and alternate years: spring—evening. A survey of modern developments in the theory of valence with emphasis on application to problems of stability and structure of complex molecules. Prerequisite: Chemistry 213 or permission of instructor.

221–22 *Advanced Analytical Chemistry* (2 or 3–2 or 3) Schmidt
Lecture (2 hours), laboratory (3 hours—optional). *First half:* fall—evening. *Second half:* not offered 1962–63. Theory and application of recent methods of analysis including electrical and optical instrumentation. Prerequisite: Chemistry 22 and 122. The lectures may be taken for 2 credits a semester without laboratory work, either half may be taken first. Laboratory fee, $11 a semester.

231–32 *Special Topics in Inorganic Chemistry* (2–2) White, Perros
Academic year—evening. A series of one-semester courses covering such topics as (1) chemistry of the less familiar elements, (2) organometallic, organosilicon, and carbonyl compounds, and (3) co-ordination chemistry. Prerequisite: Chemistry 235.

233–34 *Radiochemistry* (2–2)
1962–63 and alternate years: academic year—evening. The preparation, properties, and uses of radioactive isotopes, both natural and artificial. Prerequisite: Chemistry 235–36. Naeser

235–36 *Inorganic Chemistry* (3–2)
Academic year—evening. Application of modern chemical theories to inorganic substances and reactions, followed by a detailed study, developed from the periodic table, of the chemistry of the more common elements. Prerequisite: Chemistry 152. Prerequisite or concurrent registration: Chemistry 111–12 and 113–14. Sager

251–52 *Advanced Organic Chemistry* (3–3)
Academic year—evening. Syntheses, reactions, and properties of carbon compounds, fundamental theories of organic chemistry. Prerequisite: Chemistry 152. Prerequisite or concurrent registration: Chemistry 111–12, 113–14. Wrenn

253 *Advanced Synthetic Organic Chemistry* (3)
Spring—evening. Study of reactions employed in the synthesis of organic compounds. Prerequisite: Chemistry 251. Sager

257 *Theoretical Organic Chemistry* (3)
1963–64 and alternate years. Survey of modern theories of organic chemistry with emphasis on reaction mechanisms. Prerequisite: Chemistry 252. The Staff

291–92 *Seminars: Recent Developments in Chemistry* (1–1)
Academic year—day. The Staff

295–96 *Research* (arr.)
Academic year—as arranged; summer 1962. Research on problems approved by the Staff. Open to qualified students with advanced training. Laboratory fee, $7.50 a semester hour. The Staff

299–300 *Thesis* (3–3)
Academic year—as arranged; summer 1962. Laboratory fee, $18 a semester

CLASSICAL LANGUAGES AND LITERATURES*

Professor J. F. Latimer *(Chairman)*
Associate R. G. Crawford

LATIN AND GREEK

First Group

1–2 *First-year Latin* (3–3) The Staff

A year course: credit is not given for the first half until the second half is completed. 1962–63 and alternate years: academic year—day; 1963–64 and alternate years: academic year—evening. Functional presentation of the essentials of the language, with appropriate reading selections; development of English derivatives; introduction to Roman life and literature.

3–4 *Second-year Latin* (3–3) Crawford

A year course: credit is not given for the first half until the second half is completed. 1962–63 and alternate years: academic year—evening; 1963–64 and alternate years: academic year—day. A continuation of the first-year course, but with increased emphasis on Latin readings which illustrate Roman life and literature; continuation of vocabulary building in English. Prerequisite: Latin 1–2 or two years of high school Latin.

11–12 *First-year Greek* (3–3) The Staff

A year course: credit is not given for the first half until the second half is completed. 1962–63 and alternate years: academic year—evening; 1963–64 and alternate years: academic year—day. Essentials of grammar with appropriate reading selections.

13–14 *Second-year Greek* (3–3) The Staff

A year course: credit is not given for the first half until the second half is completed. Not offered 1962–63. 1963–64 and alternate years: academic year—evening; 1964–65 and alternate years: academic year—day. Review of grammar; rapid reading from selected Greek authors.

49–50 *Latin Grammar and Readings* (3–3) The Staff

1963–64 and alternate years: academic year—day. Primarily for graduate students preparing for reading examinations. Undergraduates admitted by permission of the instructor. No academic credit for graduate students. *First half:* essentials of Latin grammar with appropriate reading selections. *Second half:* continuation of grammar with selections from various Latin authors for rapid reading.

51–52 *Introduction to Latin Prose and Poetry* (3–3) The Staff

1962–63 and alternate years: academic year—day; 1963–64 and alternate years: academic year—evening. Selections from Cicero and Caesar, Virgil and Ovid. Prerequisite: Latin 3–4 or three years of high school Latin.

Second Group

101–2 *Roman Comedy* (3–3) The Staff

1963–64 and alternate years: academic year—day. Selected plays from Plautus and Terence. Prerequisite: Latin 51–52 or permission of the Instructor.

111–12 *Roman History and Philosophy* (3–3) The Staff

Not offered 1962–63. Selections from Cicero, Sallust, Lucretius, and Livy. Prerequisite: Latin 51–52 or permission of the Instructor.

121–22 *Roman Lyric Poetry and Satire* (3–3) The Staff

Not offered 1962–63. Selections from Catullus, Horace, Juvenal, and Martial. Prerequisite: Latin 101–2 or permission of the Instructor.

* The Staff of Instruction here listed is for the academic year 1961–62.

COURSES IN ENGLISH TRANSLATION

First Group

71–72 *Greek and Roman Backgrounds in Literature* (3–3) Latimer

First half: 1962–63 and alternate years: spring—day. *Second half:* 1963–64 and alternate years: fall—day. Selected Greek and Roman masterpieces and their literary influence. This course satisfies the literature requirement, see page 52.

Second Group

109–10 *Greek and Roman Drama* (3–3) The Staff

Not offered 1962–63. 1963–64 and alternate years: academic year—evening; 1964–65 and alternate years: academic year—day. Selected tragedies of Aeschylus, Sophocles, Euripides, and Seneca; selected comedies of Aristophanes and Menander, Plautus and Terence; historical development of classical drama.

CLASSICAL HEBREW

First Group

21–22 *First-year Classical Hebrew* (3–3) Seidman

A year course: credit is not given for the first half until the second half is completed. 1962–63 and alternate years: academic year—day; 1963–64 and alternate years: academic year—evening. Fundamental principles of the language with practice in reading simple narrative prose.

23–24 *Second-year Classical Hebrew* (3–3) Seidman

A year course: credit is not given for the first half until the second half is completed. Not offered 1962–63. 1963–64 and alternate years: academic year—day; 1964–65 and alternate years: academic year—evening. Review of grammar and exegesis of selected passages from the Hebrew text of the Old Testament.

ECONOMICS*

Professors A. E. Burns†, D. S. Watson, T. W. Holland, J. W. Kendrick, W. E. Schmidt
Professorial Lecturers Gerhard Colm, R. A. Young, Hans Heymann, Jr.
Associate Professors J. W. Skinner *(Chairman)*, Henry Solomon *(Research)*
Associate Professorial Lecturer R. L. Sammons
Instructors L. D. Bothwell, Ching-Yao Hsieh

First Group

1–2 *Principles of Economics*‡ (3–3) Skinner and Staff

Lecture (2 hours), recitation (1 hour). *First half:* fall—day and evening; spring—day and evening; summer 1962. *Second half:* fall—evening; spring—day and evening; summer 1962. Survey of the major economic principles, institutions, and problems in contemporary life. Economics 1 is prerequisite to Economics 2.

Second Group

101–2 *Economic Analysis* (3–3) The Staff

First half: fall—day and evening; spring—evening; summer 1962. *Second half:* spring—day and evening. Analysis of demand, supply, and commodity pricing; theory of

* The Staff of Instruction here listed is for the academic year 1961–62.
† On sabbatical leave spring semester 1961–62.
‡ Economics 1–2 is prerequisite to all other courses in Economics.

national income determination; pricing of productive services; welfare economics. Economics 101 is prerequisite to Economics 102.

104 *History of Economic Thought* (3) Burns
Spring—day. History of the major schools of economic thought; influence of changing problems on the development of economic theory.

105 *Business Cycles* (3) Kendrick
Fall—evening. Description and analysis of the facts of economic instability, survey of recent business cycle theory, forecasting, and consideration of counter-cyclical policies.

121 *Money and Banking* (3) ———
Fall—day and evening; spring—evening; summer 1962. Theory of money, credit, and banking; commercial banking and the Federal Reserve System; other financial institutions; international aspects of money; current financial problems.

123 *Monetary Theory and Policy* (3) ———
Fall—day. Principal contemporary theories, background of recent monetary policy.

133 *The Economy of the Soviet Union* (3)
Not offered 1962–63. Development and main features of the economic life of the Soviet Union (See History 145–46 and Geography 196).

141 *Unionism and Collective Bargaining* (3) Holland
Fall—evening. The development and characteristics of American unionism and collective bargaining as economic and social institutions, appraisal of economic and social aspects, public policies and controls.

142 *Labor Economics* (3) Holland
Spring—evening. Characteristics of the American labor force, operations of labor markets, wage theories and practices, impact of collective bargaining, causes and characteristics of unemployment, public policies and programs.

161–62 *Public Finance and Taxation* (3–3) ———
1962–63 and alternate years: academic year—evening; 1963–64 and alternate years: academic year—day. General survey of government expenditures; sources and methods of taxation; economic effects of expenditures, taxes, and of government debt policies.

165 *Government Control of Economic Activity* (3) Watson
Fall—day. Changing role of government in promoting and regulating economic activity, types and spheres of control.

181–82 *International Economics* (3–3) Schmidt
Academic year—day and evening; summer 1962—Economics 181 (3). Survey of world economics, theories of international trade, analysis of international economic problems and the international organizations.

185–86 *Economic History and Problems of Latin America* (3–3) ———
Academic year—evening. Evolution of the economies of Latin America with particular emphasis on present structures and problems, considered in the regional, country, and sub region contexts. Economics 185, special attention to Middle America; Economics 186, special attention to South America.

190 *Proseminar in Economics* (3) Skinner
Fall—as arranged; spring—as arranged. Comprehensive survey of economics. Prerequisite: Economics 101–2 and 121.

Third Group

201–2 *History and Literature of Economic Thought* (3–3) Burns
Academic year—evening. Critical analysis and interpretation of the development and the literature of economic thought, origins, and problems, of the major types of theory, and their relation to present problems and policies.

203–4 *Contemporary Economic Theory* (3–3) Watson
Academic year—evening. The contributions of Marshall, Chamberlin, Robinson, Hicks, and others.

205 *Theory of Employment and Income* (3) Kendrick
Fall—evening. Determinants of the level of employment and income. Keynesian and classical systems contrasted, and recent literature on the subject.

206 *Business Cycle Analysis* (3) Kendrick
Spring—evening. Empirical analysis of American business cycles; evaluation of the methodology and findings of the National Bureau of Economic Research. Statistical tests of theories of the business cycle.

208 *The National Income* (3) Kendrick
Spring—evening. The theory of economic aggregates; measurement and policy aspects of national income.

210 *Seminar in Economics* (3) Skinner
Academic year—evening. Methodology of economics, integration of economic theories, methods of research. Open only to students who have completed fifteen hours of graduate work in economics.

212 *Seminar in Price Theory* (3) Watson
Fall—evening. Advanced topics in the theory of relative prices. Prerequisite: Economics 203–4 or the equivalent.

213 *Economic Thought in the Twentieth Century* (3) Burns
Summer 1962. Continuation of Economics 201–2. The principal trends in economic thought during the present century.

215–16 *Mathematical Economics* (3–3) Solomon
Academic year—evening. Introduction to the uses of mathematics in economic theory.

217–18 *Survey of Economics* (3–3)
Academic year—evening. Survey of economic analysis and policy. Not open to graduate students in economics or economic policy. Watson

219 *Managerial Economics* (3)
Summer 1962. Analysis of price, production, and inventory policies of business firms.

221–22 *Monetary Theory* (3–3) Young
Academic year—evening. Contemporary monetary theories.

223–24 *Monetary Policy and Central Banking* (3–3) Solomon
Academic year—evening. The money system in its relation to national income; monetary policies of the Federal Reserve and other central banking systems.

231–32 *Quantitative Economics* (3–3)
Academic year—evening. Selected topics in quantitative economics.

241 *Unionism, Collective Bargaining, and Labor Economics* (3) Holland
Fall—evening. An accelerated introductory course in labor economics primarily for graduate students in Personnel Administration.

244 *Problems in Unionism, Collective Bargaining, and Labor Economics* (3) Holland
Spring—evening. Concentrated study of selected economic, social, and legal aspects of labor relations and labor economics.

246 *Foreign Labor Movements* (3)
Spring—evening. Labor in the economic, social, and political structures of selected foreign countries. Contrasts and comparisons with the United States.

251 *Theories of Economic Development* (3) Schmidt
Fall—evening; summer 1962. Growth and change in economic activity, capital accumulation, innovations in technology and business organization.

253 *Productivity Analysis* (3) Kendrick
Fall—evening. Concepts and measures of productivity; relations to economic growth and to structural changes in the American economy.

261–62 *Public Finance and Fiscal Policy* (3–3) Colm
Academic year—evening. Special problems in contemporary public finance and fiscal policy.

263–64 *Theory of Public Finance* (3–3)
Academic year—evening. Criteria for the allocation of government expenditures, principles of taxation, fiscal policy for stable growth.

265–66 *Theory of Economic Policy* (3–3) Watson
Academic year—evening. The nature, forms, methods, and objectives of economic policy; the relation of economic theory to economic policy.

267 *Economic Organization of the Communist Orbit* (3) Heymann
Fall—evening. Development of the Soviet-type economy; organization under the Soviets; policies and problems: monetary, fiscal, production, allocative, foreign trade, economic growth. (See also History 145–46, 247, and Geography 196.)

281–82 *International Economics* (3–3) Schmidt
Academic year—evening. The modern theories of international economics, the variables determining the balance of payments, techniques to obtain balance-of payments equilibrium.

284 *United States Foreign Economic Policy* (3) Schmidt
Not offered 1962–63. Analysis of foreign aid program; international, commercial, and monetary policy of the United States; United States and international economic organization.

285–86 *Economic Development of Latin America* (3–3) Sammons
Academic year—evening. Current policies and programs, capital formation, public and private; foreign loans and investment; social and technological preconditions of investment.

287–88 *Latin America: Trade and Commodity Policy* (3–3)
Not offered 1962–63. Tariffs and exchange control systems, bilateral and general commercial agreements, terms of trade.

290 *Seminar in International Economics* (3) Schmidt
Spring—evening. Advanced topics in international economics. Prerequisite: Economics 281–82 or the equivalent.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged; summer 1962.

EDUCATION*

Professors J. H. Fox, B. H. Jarman†, B. S. Root *(Chairman)*, A. C. LaBue, G. L. Angel, W. T. Carroll

Professorial Lecturers Madaline Remmlein, Florence Lumsden, H. O. Johnson, Anthony Marinaccio, Clayton Hutchins, J. B. Holden, B. D. Joy, J. P. Walsh, D. D. Darland, K. E. Brown

* The Staff of Instruction here listed is for the academic year 1961–62
† On leave of absence fall semester 1961–62.

Associate Professors Mary Coleman, W. A. McCauley, Carol St. Cyr, H. G. Detwiler
Associate Professorial Lecturers J. C. Lang, LuVerne Walker, R. R. Reed, Eugenia Nowlin, Beverly Crump, Mary Scott, H. M. Wilson, John Giancaspro, Hazel Wilson, Lucille Mitchell, J. L. Cameron, Samuel Kavruck
Assistant Professors R. E. Baker, R. W. Eller
Lecturers E. M. Logan, C. O. McDaniels, Ward Whipple, Harold Cushman, Marcella Bernstein, Edward Goldstein, Joanne Parker, W. B. Evans, Jr.

Field Studies

Director J. W. Charles, *Assistant Director* D. T. McNelis

Field Service Coordinators

Alexander Anderson, *Assistant Principal, Washington-Lee High School, Arlington, Va.;* Mary Maré, *Assistant Principal, Dean of Girls, Wakefield High School, Arlington, Va.;* C. M. Richmond, *Principal, Stratford Junior High School, Arlington, Va.*

A *Reading Clinic* Coleman and Staff
Diagnosis of reading difficulties; individual or group lessons without academic credit. Fee: for individual diagnosis, $35; for individual instruction, $5 a lesson; for semi-individual instruction, $4 a lesson; for instruction in small groups with common reading difficulties, $3.25.

Second Group

108 *Human Development, Learning, and Teaching* (3) Baker and Staff
(Formerly Education 109–10)
Lecture (2 hours), conference (1 hour), field work (2 hours)—as arranged. Fall—day and evening; spring—day and evening; summer 1962 (as Education 109-10 (3-3)). For the general student as well as the prospective teacher. Principles of effective teaching based on an understanding of human development and the nature of learning. Prerequisite: Psychology 22 or 121.

111 *Methods in Elementary Education* (12) Baker and Staff
Fall—Monday through Friday mornings. For seniors in the elementary school curriculum. Methods, materials, appraisal, and field experiences in elementary schools. Problems and procedures in teaching the language arts (including reading, literature for children, oral and written expression, spelling, and handwriting), arithmetic and science, social studies. Planning units of work, general classroom procedures, and evaluation of pupil progress. Observation and participation two mornings a week. Prerequisite: Education 108 and 123.

112 *Educational Measurement* (3) McCauley, Kavruck
Fall—day; spring—evening; summer 1962. Scope, needs, services to students, selection and construction of teacher made tests, interpretation of tests for evidence purposes. Prerequisite: Education 108 and 123.

113 *Elementary School Art* (3) Nowlin
Fall and spring: lecture and laboratory (3 hours)—evening, field work—as arranged; summer 1962 (Crump). For undergraduates in the elementary school curriculum. Materials and methods. Prerequisite: Psychology 1 and 22, or 121. Material fee, $4.50.

114 *Elementary School Music* (3) Reed
Fall and spring: lecture (2 hours)—evening, field work (2 hours)—as arranged; summer 1962. For undergraduates in the elementary school curriculum. Materials and methods. Prerequisite: Psychology 1 and 22, or 121.

115 *Teaching of Reading in the Elementary School** (3) Parker
Spring: lecture (2 hours)—evening, field work (2 hours)—as arranged; summer 1962. A basic course in methods, techniques, materials, and activities essential to a good elementary school reading program. Prerequisite: Education 108 and 123 or teaching experience.

116 *Elementary School Social Studies** (3) Evans
Fall: lecture (2 hours)—evening, field work (2 hours)—as arranged; summer 1962 (Cushman). For teachers. Content, methods, materials, and activities essential in the elementary school curriculum. Prerequisite: Education 108 and 123 or teaching experience.

117 *Elementary School Science** (3) St. Cyr
Spring: lecture (2 hours)—evening, field work (2 hours)—as arranged; summer 1962. For teachers. Content, methods, materials, and activities essential in the elementary school curriculum. Prerequisite: Education 108 and 123 or teaching experience.

120 *Elementary School Arithmetic** (3) Scott
Spring: lecture (2 hours)—evening, field work (2 hours)—as arranged; summer 1962 (Baker). For teachers. Content, methods, materials, and activities essential in the elementary school curriculum. Prerequisite: Education 108 and 123 or teaching experience.

123 *Society and the School* (3) St. Cyr and Staff
(Formerly Education 121–22)
Lecture (2 hours), conference (1 hour), field work (2 hours)—as arranged. Fall—day and evening; spring—day and evening; summer 1962 (as Education 121–22 (3–3)). For the general student as well as the prospective teacher. Historical and sociological development of education at the local, national, and international levels; cooperation of the school with other community agencies; organization and operation of schools; functions of school personnel.

128 *Children's Literature** (3) Walker
Spring: lecture (2 hours)—evening, field work (2 hours)—as arranged; summer 1962 (Wilson). For teachers. Exploring and evaluating the newer books for children and the children's classics, understanding the contribution of literature in child development, appreciating children's original expressions. Prerequisite: Psychology 1 and 22.

131 *Principles and Methods of Secondary School Teaching* (3) Detwiler, Myers, Stallings
Lecture (2 hours), field work (2 hours). Fall—day and evening; spring—day. For seniors in the secondary school curriculum. Course, unit, and lesson planning; practical techniques used in connection with motivation, the assignment, group procedures, directing study, individual differences, evaluation, clerical routines, disciplines, the homeroom, activity sponsorship, public relations. Prerequisite: Education 108 and 123.

134 *Student Teaching in Secondary Schools* (6 to 9) Detwiler and Staff
134A: fall—as arranged; spring—as arranged. 134B, 134C, 134D: spring—as arranged. For seniors in the secondary school curriculum. Sections A and B are for full-time academic majors (Detwiler). Section C is for academic majors in the intensive program (Detwiler). Section D is for physical education majors (Myers, Stallings). Education 134 student teaching fee, $50. Admission by permission of the instructor. Prerequisite: Education 108 and 123.

135 *Student Teaching in Elementary Schools* (9) Baker
135A and 135B: spring—as arranged. For seniors in the elementary school curriculum. Student-teaching fee, $50. Admission by permission of the instructor. Prerequisite: Education 108 and 123.

* This course may not be taken by students who have completed or who plan to enroll in Education 111.

Special Methods Courses*

To be elected in the senior year after substantial preparation in the teaching fields concerned by the students in the secondary school curriculum. Course requirements and hours of credit vary with license requirements. Practices of successful teachers are studied and actual teaching content as found in current texts and courses of study is reviewed.

136 *Teaching English* (2 to 4) Lumsden
Spring: lecture (2 hours)—evening, field work (2 hours)—as arranged. Prerequisite*: 18 semester hours in English.

137 *Teaching Speech* (2 to 4) Kosh
Spring: lecture (2 hours)—evening, field work (2 hours)—as arranged. Prerequisite*: 18 semester hours in Speech or the permission of the instructor.

138 *Teaching Social Studies* (2 to 4) Jarman
Spring: lecture (2 hours)—evening, field work (2 hours)—as arranged. Prerequisite*: 24 semester hours of social studies.

140 *Teaching Mathematics* (2 to 4) Brown
Spring—evening. Prerequisite*: Mathematics through calculus.

144 *Teaching Science* (2 to 4) Eller
Spring: lecture (2 hours)—evening, field work (2 hours)—as arranged. Prerequisite*: 24 to 40 semester hours of science.

146 *Teaching Foreign Languages* (2 to 4) McSpadden
Spring—day. Prerequisite*: 18 semester hours of one foreign language.

148 *Teaching Home Economics* (2 to 4) Towne
Spring—as arranged. Prerequisite*: 30 semester hours of Home Economics.

150 *Teaching Business Subjects* (2 to 4) Shott
Spring—as arranged. Prerequisite*: 30 semester hours of business education.

Third Group†

200 *Human Development, Learning, and Teaching* (3) Lang
(Formerly Education 201–2)
Lecture (2 hours), conference (1 hour), field work (2 hours)—as arranged. Fall—evening; spring—evening. For graduate students. Principles of effective teaching based on an understanding of human growth and development and the nature of learning. Prerequisite: Psychology 1 and 22, or 121.

203–4 *Comparative Education* (3–3) Jarman
Academic year—evening. Comparison of foreign educational systems with those of the United States, particularly those of Russia, West Germany, Denmark, Switzerland, France, the British Isles, Canada, and Australia.

205–6 *The Curriculum*‡ (3–3) St. Cyr
Academic year—Saturday morning. For experienced teachers. *First half:* curriculum foundations and issues; comparison of curriculum patterns. *Second half:* principles and procedures in curriculum development; group consideration of student problems.

207 *Curriculum Materials*‡ (3) St. Cyr
Summer 1962. For experienced teachers. Construction of courses of study, resource units, classroom teaching aids, and inexpensive materials; direct application to students' own situations.

---

* Prerequisite to all special methods courses: Education 108, 129, and 131. Additional prerequisites are stated under each course.
† A degree from an accredited institution is prerequisite to all third-group courses.
‡ Prerequisite: adequate professional preparation.

209 *Child Growth and Development* (3)

Fall—evening. An interdisciplinary approach to child development taking into account such factors as society and culture, socialization, and socializing agents with particular emphasis on the home and school.

210 *Adolescent Growth and Development* (3)

Spring—evening. A consideration of physical, intellectual, and cultural backgrounds of adolescence with particular emphasis on social development, adjustment to organized society, educational development and adjustment to school, and home relationships.

211 *Evaluation in Education** (3) LaBue

Fall—evening. Concept of evaluation, relationship between evaluation of ends and means, steps involved in the evaluation of learning outcomes. As the course progresses each student develops solutions for evaluation problems related to his work situation.

212 *Educational Measurement* (3)

Spring—evening. Basic measurement techniques; construction, selection, administration, and interpretation of objective and essay-type examinations; statistical analysis of test results; laboratory experiences in the use of test instruments.

213–14 *History of Education* (3–3) Jarman

Academic year—evening. *First half:* the European backgrounds of American education. *Second half:* the evolution of the American school system.

215 *Education of Exceptional Children** (3) Goldstein

Fall—evening. For classroom teachers. A survey of current problems in the education and guidance of exceptional pupils. Nature and needs of those physically, mentally, or emotionally handicapped; needs of the gifted. Resources for help in correction, diagnosis, therapy, education, and guidance.

216 *Education of Slow-learning Children** (3)

Not offered 1962–63. Identification, nature, and needs of slow-learning elementary and junior high school children. Emphasis on diagnosis and treatment of learning difficulties.

217–18 *Philosophy of Education** (3–3) Jarman

Academic year—evening; summer 1962—Education 218 (3). *First half:* designed to help students formulate a personal philosophy of education. *Second half:* social foundations of education—a study of the forces that shape the policies and offerings of the school.

219 *Elementary School Classroom Procedures** (3) Baker

Summer 1962. Current classroom practices with particular emphasis on ways of planning, unit teaching, techniques in discipline; individual and group evaluation techniques, resources for learning, providing for individual differences.

220–21 *Reading Problems** (3–3) Coleman

Academic year—evening. For experienced teachers. Study of reading difficulties on elementary and secondary school levels; classroom and clinical procedures in solving reading problems.

225 *Elementary School Reading* (3) Coleman

Summer 1962. For experienced teachers. Developmental and remedial approaches to reading problems. Demonstration of diagnostic and corrective techniques used by the classroom teacher and the reading specialist.

226 *Reading in Secondary Schools* (3) Coleman

Spring—evening. For experienced teachers. Consideration of special problems in the content areas; diagnostic and corrective techniques and materials for the classroom teacher; reading improvement programs.

227 *Basic Issues in Elementary Education* (3) Baker

Fall—Saturday morning. A consideration of basic issues in the purposes, organiza-

* Prerequisite: adequate professional preparation

tion, and conduct of elementary education. Emphasis on the philosophical and psychological roots of fundamental assumptions as they relate to classroom practices.

228 *Instructional Areas in Elementary Education* (3) Baker
Spring—Saturday morning. Critical appraisal of the objectives, organization, content, and teaching methods in the language arts, arithmetic, social studies, science, arts and crafts, health and physical education.

229 *Administration of Elementary Education* (3) Bernstein
Fall—evening; summer 1962 (Carroll). For experienced teachers and administrators. Administration as a means of achieving instructional objectives, organizing learning and teaching activities, handling supplies and equipment, maintaining the building, and integrating school and community life. Emphasis upon guide lines to action.

231 *Secondary School Classroom Procedures** (3) Giancaspro
Fall—evening; summer 1962 (Detwiler). Survey of current classroom practices with particular attention to selected topics such as teacher-pupil planning, group procedures, pupil security, initiatory and culminating activities, individual and group evaluation techniques, teaching aids, etc.; review of recent literature.

233 *Audio-visual Education** (3) Logan
Spring: lecture (2 hours), laboratory (1 hour)—evening; summer 1962. Role of audio-visual materials in learning; selection, evaluation, and use of materials; administrative problems in the care, operation, maintenance, and use of audio-visual materials and equipment. Material fee, $7.

241 *Education of the Gifted** (3)
Spring—evening; summer 1962. For classroom teachers. Nature and discovery of giftedness; provisions for the gifted in regular classes; experimental projects.

243 *Human Relations in the Classroom** (3) Marinaccio
Summer 1962. Principles and practices involved in interpersonal relationships between learner and teacher and among learners.

245 *School and Community** (3) Angel
Fall—evening; spring—evening; summer 1962. The school as an important member of a team of social agencies that builds the community.

247 *Vocational Education** (3) Walsh
Fall—evening. Development in the United States; current conceptions, agencies involved, problems, and trends.

251 *Guidance in Secondary Schools** (3) McDaniels
Fall—evening; summer 1962 (Detwiler). Scope; needs; organization of the program; services to students, the instructional staff, and the administration; personnel needed for the program.

252 *Organization and Administration of Guidance Services* (3)
Not offered 1962–63. Designed for guidance directors and supervisors and experienced school counselors who hope to qualify for such positions in the near future. Prerequisite: a minimum of 15 semester hours of approved graduate work in Measurement and Guidance. Root

254 *The Junior High School** (3)
Not offered 1962–63. Purposes, organization, core programs, guidance, developing course of study, extra-classroom activities. Root

255–56 *Secondary Education** (3–3)
Academic year—Saturday morning; summer 1962. *First half:* current proposals for the improvement of secondary education. *Second half:* current problems in each of the subject-matter fields. Johnson

259–60 *Secondary School Management** (3–3)
Academic year—Saturday morning. For experienced teachers and administrators

* Prerequisite: adequate professional preparation.

with two years of successful teaching in secondary schools. Management planning, execution, and control; criteria of good management; construction of the master schedule; leadership problems incident to the development of new policies and programs.

263–64 *Employee Training* (3–3) Root
Academic year—evening. *First half:* nature and purpose, review of major programs—orientation, supervisory, apprentice, clerical skills, communication. *Second half:* administrative problems and practices, training media, coordination with other management functions. Prerequisite: adequate professional preparation or two years of experience in employee training.

265–66 *Teaching Secondary School English* (3–3) Lumsden
Not offered 1962–63. A refresher course for teachers of English. Discussion of new approaches to high school content. Offered in cooperation with the departments of English and Speech. *First half:* communication skills—structural linguistics, composition, and speech. *Second half:* American and English literature.

267–68 *Teaching Secondary School Social Studies* (3–3) Whipple
Academic year—evening. A refresher course for teachers of the Social Studies. Discussion of new approaches to high school content. Offered in cooperation with the departments of History, Political Science, Geography, Economics, and Sociology and Anthropology.

271 *The Teacher and School Administration** (3) Fox
Fall—evening; summer 1962 (Carroll). A survey course for teachers and prospective administrators. Education and world affairs, national agencies, role of the state, local administration, school finance, legal controls, school plant, public support, democratic administrative procedures, improving teaching conditions.

272 *The Teacher and School Supervision** (3) Fox
Spring—evening; summer 1962. Nature, organization, human relationships, and techniques.

273–74 *Teacher Education** (3–3) LaBue
Not offered 1962–63. *First half:* aims, objectives, and basic issues; study of outstanding and experimental programs. *Second half:* recruitment and selection, general education, teaching-field preparation, professional sequences, laboratory experiences.

275 *School Finance** (3) Hutchins
Summer 1962. Educational financial theory, practice, and control, including methods of financing.

276 *Seminar: Public Relations in School Administration** (3) Joy
Not offered 1962–63. Purposes, gathering materials, disseminating agencies, publicity media, public participation in policy making.

277 *Administration of School Personnel** (3) Carroll
Summer 1962. Techniques and problems of administration related to more effective service of staff personnel.

278 *School Law** (3) Remmlein
Summer 1962. Sources and scope of school law; legal rights and responsibilities of teachers, pupils, and taxpayers. Other legal problems of major interest to the group.

279–80 *Adult Education** (3–3) Detwiler, Holden
Academic year—evening; summer 1962—Education 280 (3). *First half:* current concepts and objectives, agencies involved, programs on all levels—international through community. *Second half:* the adult as a learner, the teacher of adults, learning-teaching activities, administration of adult education programs.

283–84 *Higher Education** (3–3) Jarman
Academic year—evening. *First half:* development, present status, and outlook for American colleges; purposes of higher education, current and projected programs; trends in curriculum, instruction, administration, and evaluation of outcomes. *Second*

* Prerequisite: adequate professional preparation

half: principles in development of college programs; study of curricula in liberal arts and professional fields; relationship of institutional services and facilities to the instructional program.

285 *Extra-classroom Activities** (3)

Not offered 1962–63. Nature and purposes of selected activities—homeroom, clubs, assemblies, school publications, student council, interscholastic contest; particular attention to sponsorship, participation, finance, and evaluation.

287–88 *Clinical Study of Reading Problems** (3–3) Coleman

Academic year—evening. For advanced students. Diagnostic and corrective work under supervision of the Reading Clinic. Each student is expected to diagnose and treat pupils who are retarded in reading. Case studies are presented and criticized. Prerequisite: Education 223–24 or the equivalent. Material fee, $5 a semester.

289 *Supervisory Problems in Reading** (3) Coleman

Not offered 1962–63. For experienced teachers, principals, supervisors, and superintendents. Considers the problems involved in planning, reorganizing, and improving the total reading program, in promoting cooperative effort on the part of the staff toward increasing teaching efficiency.

291 *Planning the School Plant* (3) Cameron

Not offered 1962–63. Selection of sites; evaluation of existing buildings; utilization of present facilities; adaptation to curricular needs; building, operation, and maintenance problems.

293–94 *Research* (3–3) The Staff

Academic year—as arranged. Individual research under the guidance of a member of the staff. Program and conferences arranged with an instructor.

295 *Educational Research Methods and Procedures* (3) LaBue

Fall—day; spring—evening; summer 1962. Required of all candidates for graduate degrees in Education. To be taken early in the student's graduate program. Prerequisite: an elementary course in statistics.

296 *Seminar in Educational Research* (3) LaBue

Spring—evening. Designed to help students analyze scientific approaches to problems in education; evaluate the application of research techniques to typical problems; define, organize, and conduct research studies; and prepare proposals for sponsored research. Required of all candidates for the Doctor of Education degree and open, with permission, to candidates for other advanced degrees. Prerequisite: Education 295 or the equivalent.

297 *Reading in Education* The Staff

Academic year—late afternoon; summer 1962. To assist those preparing for the comprehensive examinations. No credit toward degree requirements. Tuition fee, $30.

299–300 *Thesis* (3–3) The Staff

Academic year—as arranged. Required of all Master of Arts candidates writing Master's theses.

ENGINEERING†

Professors C. H. Walther, M. A. Mason, R. A. Hechtman *(Chairman, Civil Engineering)*, P. A. Crafton, Louis delPian, N. T. Grisamore *(Chairman, Electrical Engineering)*, H. E. Smith, Ben Lindberg

Adjunct Professors L. A. Guildner, A. G. McNish, Gunther Sorger, Churchill Eisenhart, Theodore Young

* Prerequisite: adequate professional preparation.

† The Staff of Instruction here listed is for the academic year 1961–62.

Professorial Lecturers F. K. Harris, F. P. Hall, Laurence Heilprin, H. L. Stier, Ezra Glaser

Associate Professors John Kaye, G. M. Arkilic, A. C. Murdaugh, R. R. Fox, M. S. Ojalvo

Associate Professorial Lecturers K. W. Webb, M. J. Rosenbaum

Assistant Professors R. L. Dedrick, C. D. Ferris, E. H. Braun, R. E. Cronin, John Eftis

Lecturers George Abraham, W. W. Balwanz, P. H. Sawitz, L. S. Rotolo, J. A. Cunningham, Howard Eisner, Milton Gussow, D. C. Rohlfs, P. S. Morgan, Jr., Gershon Kulin

Instructors R. M. Moore, A. C. Meltzer, J. D. O'Neale, T. P. Carroll, D. K. Anand, Ronald Feit

Associate T. B. Wiggins

Civil Engineering

First Group

21 *Rigid Body Mechanics I* (3) The Staff

Fall—day and evening; spring—evening. An introduction to vector mechanics. Newton's Laws; equilibrium of a particle and systems of particles, rigid bodies, and systems of rigid bodies; kinematics. Prerequisite: Mathematics 31 or 24, Physics 14.

24 *Mechanics of Deformable Bodies I* (3) The Staff

Fall—evening; spring—day and evening. An introduction to elastic and inelastic behavior of solids acted upon by forces. Analysis of stress and strain at a point; stress-strain temperature relations; criteria for yielding; applications including tension, compression, torsion, bending, shear, and buckling. Prerequisite: Civil Engineering 21, Mathematics 31 or 24.

Second Group

112 *Surveying* (3) The Staff

Spring: lecture (2 hours), field work (2 hours)—Saturday. Plane surveying, including measurements, simple curves, and topographical surveying; space measurements; treatment of observational errors; earthwork computations; field astronomy. Prerequisite: Mathematics 31 or 24, Mechanical Engineering 10. Surveying fee, $13.

121 *Rigid Body Mechanics II* (3) The Staff

Fall—day and evening; spring—evening. Continuation of Civil Engineering 21. Kinematics and dynamics of a particle, systems of particles, and rigid bodies and their applications. Prerequisite: Civil Engineering 21, Mathematics 111.

125 *Engineering Materials* (4) Murdaugh and Staff

Fall: lecture and laboratory—day and evening. Mechanical and surface properties of engineering solids; relationships between the structure of a material and its mechanical and physical behavior; principles of the control of the properties of metals and nonmetallic solids. Prerequisite: Chemistry 12 or 14, Civil Engineering 24, Physics 16. Laboratory fee, $11.

126 *Soil Mechanics* (3)

1962–63 and alternate years: spring—day; 1963–64 and alternate years: spring—evening. Fox

Mechanical properties of soils; theory and applications of lateral earth pressure, bearing capacity, and settlement of foundations. Prerequisite: Civil Engineering 125, 137, 144.

132 *Fluid Mechanics* (3) Mason and Staff

Fall: lecture and laboratory—evening; spring: lecture and laboratory—day and evening. Development of the fundamental principles of flow of viscous and ideal compressible and incompressible fluids; dimensional analysis and model theory; laboratory work emphasizes principles, analysis of tests, and systematic observations of phenomena. Prerequisite: Civil Engineering 121, Mathematics 111, Mechanical Engineering 113. Laboratory fee, $11.

135 *Hydraulic Engineering* (3) The Staff
1962–63 and alternate years: spring—day; 1963–64 and alternate years: spring—evening. Applied theoretical fluid mechanics, pipe and open channel flow, hydroelectric development, drainage and irrigation, control of river flow and floods, water supply and sewerage. Prerequisite: Civil Engineering 137.

137 *Applied Earth Sciences* (3) Fox
1962–63 and alternate years: fall—day; 1963–64 and alternate years: fall—evening. Formation and properties of soils and rock, seismology, climatology, hydrology, ground water and river flow. Prerequisite: Civil Engineering 125, 132.

143–44 *Structural Theory I–II* (4–4) Hechtman, Walther
1962–63 and alternate years: academic year—day; 1963–64 and alternate years: academic year—evening. Theory and structural behavior of statically determinate and indeterminate plane and space structures by classical and modern methods; introduction to matrix model analysis, plastic collapse, numerical methods, and matrix algebra methods. Prerequisite or concurrent registration: Civil Engineering 125, Mathematics 111. Laboratory fee, $11 a semester.

145 *Metal Structures* (3) Fox, Hechtman
1962–63 and alternate years: spring—evening; 1963–64 and alternate years: spring—day. Application of structural theory and engineering materials to the analysis and design of metal structures under static and moving loads; plastic design, buckling. Prerequisite: Civil Engineering 144, 157.

146 *Reinforced Concrete* (3) Fox, Hechtman
1962–63 and alternate years: fall—evening; 1963–64 and alternate years: fall—day. Theory and design of plain and reinforced concrete structures including prestressed concrete and ultimate strength design. Prerequisite: Civil Engineering 144. Prerequisite or concurrent registration: Civil Engineering 157.

154 *Structural Dynamics* (3) Arkilic, Fox
1962–63 and alternate years: spring—day; 1963–64 and alternate years: spring—evening. Free, forced, steady state, and transient vibration of structural members and framed structures; earthquake, blast, and other dynamic loadings; methods of analysis including energy methods and applications of matrix algebra. Prerequisite: Civil Engineering 121, 144, Mathematics 111.

157 *Mechanics of Deformable Bodies II* (3) Fox, Walther
1962–63 and alternate years: fall—day; 1963–64 and alternate years: fall—evening. An introduction to the advanced mechanics of deformable bodies including the theory of two-dimensional linear elasticity in cartesian and polar coordinates and the theory of perfectly plastic solids. Prerequisite: Civil Engineering 125, Mathematics 112. Prerequisite or concurrent registration: Civil Engineering 144 or Mechanical Engineering 123.

165 *Engineering Analysis and Planning* (3) The Staff
1962–63 and alternate years: fall—evening; 1963–64 and alternate years: fall—day. Mathematical analysis, planning, and economics of engineering problems and projects including modern computational methods. Prerequisite: senior standing in Civil Engineering.

166 *Transportation Engineering* (3) The Staff
Time to be arranged. Planning and systems analysis of transportation networks. Prerequisite: Civil Engineering 165.

168 *Regional and Urban Planning* (3) Ellis
1962–63 and alternate years: spring—evening; 1963–64 and alternate years: spring—day. Regional and urban planning including engineering aspects in connection with transportation, water supply and sewerage, public safety, and convenience. Prerequisite: Civil Engineering 165.

195–96 *Problems in Civil Engineering* (arr.) The Staff
Academic year—as arranged. Special problems approved by the Staff. Prerequisite: senior standing.

THIRD GROUP

216 *Metal Structures* (3) Hechtman
Time to be arranged. Structural behavior and failure of metal structures; materials; residual stresses; analysis and design of connections and members; theory of plastic collapse of structures; plastic design.

217 *Ultimate Strength of Reinforced Concrete Structures* (3) Fox
Time to be arranged. Modes of failure of reinforced concrete structures; experimental data on failure; ultimate strength concepts for the analysis of beams, slabs, and columns.

218 *Prestressed Concrete Structures* (3) Hechtman
Time to be arranged. Structural behavior and failure of prestressed concrete structures; materials; theory, analysis, and design of prestressed concrete structures and members.

224 *Theory of Plates and Shells* (3) Arkilic
1962–63 and alternate years: spring—evening. Classical and modern theories of plates and shells, plates and cylindrical shells under different loadings and boundary conditions, equations for plates including shear, rotationally symmetric shells under small deformations and their applications.

226 *Plasticity of Solids* (3) Hechtman
1963–64 and alternate years: fall—evening. Plastic flow and fracture of solids; theory of elastic perfectly plastic solids, including basic concepts, limit analysis of beams, rigid frames, and plane stress problems; theory of fracture.

234 *Geotechnics in Soil Mechanics* (3) Fox
1962–63 and alternate years: fall—evening. Dynamic geology in the formation and properties of soils; Boussinesq and Westergaard equations for stresses and deformations in soil masses; analysis of settlement; flow of water in soils; solutions of Laplace-type equations for seepage involving foundations, earth dams, and wells; theory of frost action.

235 *Theoretical Soil Mechanics* (3) Fox
1962–63 and alternate years: spring—evening. Theories of soil strength and conditions for failure, bearing capacity of footings, pile foundations, theories of lateral earth pressure, stability of slopes, soil dynamics.

238 *Foundation Engineering* (3) Fox
Time to be arranged. Principles of soil mechanics and structural mechanics in the analysis and design of spread footings, mat and pile foundations, retaining walls, sheet piling and water front structures.

251 *Theory of Structures I* (3) Fox, Hechtman
Fall—evening. Classical and modern theories for plane statically indeterminate structures, matrix analysis of structures, special problems.

252 *Space Structures* (3) Hechtman
Spring—evening. Theory of structures in three dimensions; trusses, rigid frames, and thin-shell structures; matrix analysis and applications of computers.

253 *Theory of Structures II* (3) Hechtman
Time to be arranged. Statically indeterminate structural theory, including single and multi-span rigid frames and arches, deflection theory for arches and suspension bridges, thermal stress, and failure of structures.

254 *Theory of Structural Dynamics* (3) Arkilic
1963–64 and alternate years: spring—evening. Analysis of elastic structures under various dynamic loadings, both steady-state and transient, including vibrations of rigid frames, plates, and thin shells.

256 *Theory of Elastic Stability* (3) Hechtman
1962–63 and alternate years: fall—evening. Beam-column problems and methods of analysis (including numerical analysis); lateral buckling of beams; buckling of rigid frames, arches, plates, stiffened plates, and shells; inelastic buckling.

272 *Experimental Structural Analysis* (3) Hechtman
Time to be arranged. Experimental analysis of truss, rigid frame, plate, and shell structures; large- and small-deflection models; similitude.

275 *Concepts of Structural Design* (3) Hechtman
Time to be arranged. Mechanical behavior and failure of structures as determined by properties of materials, nature of structure, and type of loading; selection of type of structure; structural analysis, its applications and possible simplifications.

295–96 *Research* (arr.) The Staff
Academic year—as arranged. Research or directed study.

Electrical Engineering

First Group

11–12 *Fundamentals of Electrical Engineering* (3–3) The Staff
Academic year—day and evening. Electric and magnetic fields, d-c and a-c electrical circuits and networks, energy sources, electromechanical energy conversion, power, electronic devices, and circuits. *First half:* circuits and electronics. *Second half:* energy, power, and fields. Prerequisite to Electrical Engineering 11: Physics 15 and Mathematics 111 or concurrent registration. Prerequisite to Electrical Engineering 12: Electrical Engineering 11.

Second Group

102 *Engineering Electronics I* (3) Braun
Fall—day and evening. Vacuum tube and solid state devices as circuit elements, equivalent circuits, voltage and power amplifiers. Emphasis placed on design of electronic circuits. Prerequisite: Electrical Engineering 12, Mathematics 112.

103 *Electric and Magnetic Fields* (3) deFian
Fall—day and evening. Introduction to vector analysis and its application to static electric and magnetic fields; method of images, solid angle, particle motion in electric and magnetic fields. Prerequisite: Electrical Engineering 12, Mathematics 112.

104 *Field Analysis* (3) Ferris
Spring—day and evening. Vector potential, magnetic scalar potential, conformal mapping, solutions of Laplace's equation, field plotting, analogues. Introduction to Maxwell's equations and electromagnetic waves. Prerequisite: Electrical Engineering 103, Mathematics 112.

107 *Steady-state Network Analysis* (3) Ferris
Fall—day and evening. Four-terminal networks, network theorems, poles and zeros of network functions, resonance, filters, coupled circuits, transmission lines. Fourier series, matrices. Prerequisite: Electrical Engineering 11, Mathematics 112.

111 *Electrical Measurements* (3) Meltzer
Fall—day and evening. Systems of units; theory of errors; d-c indicating instruments and galvanometer dynamics; precision measurement of voltage, current, and resistance. Theory of a-c indicating instruments, a-c bridges, waveforms, frequency measurements, measurement of power and energy. Prerequisite: Electrical Engineering 12, Mathematics 112.

113 *Electrical Engineering Laboratory I* (2) Meltzer
Fall—day and evening. Experiments in d-c and a-c circuits, instruments, and machines. Prerequisite: Electrical Engineering 12, Mathematics 112. Laboratory fee, $11

118 *Electrical Energy Conversion* (3) Meltzer
Spring—day and evening. Analysis of physical systems involving electrical, mechanical, and thermal energy conversion; mathematical formulations using the Euler-Lagrange equation; transient and steady-state analysis of special machines including the generalized rotating energy converter. Prerequisite: Electrical Engineering 12, Mathematics 112. Prerequisite or concurrent registration: Electrical Engineering 104, 112.

122 *Electrical Engineering Laboratory II* (2) Meltzer, Rohlfs
Spring—day and evening. Continuation of Electrical Engineering 113. Measurement of electrical quantities, design and construction of laboratory circuits. Prerequisite: Electrical Engineering 102, 103, 107, 111, 113. Laboratory fee, $11.

123–24 *Electrical Engineering Laboratory III–IV* (2–2) Meltzer, Rohlfs
Academic year—day and evening. *First half:* theory and use of electronic devices and instruments. Experiments at radio- and microwave frequencies. Prerequisite to 123: Electrical Engineering 122 and senior status. *Second half:* Creative projects in electrical and electromechanical devices and systems carried out under individual supervision. Prerequisite to 124: Electrical Engineering 123. Laboratory fee, $11 a semester.

127 *General Network Analysis* (3) Ferris
Fall—day and evening. Solutions of linear integro-differential equations using transformation calculus. Laplace transforms, Fourier integral, poles and zeroes of network functions, correlation of time and frequency domains, elements of network synthesis. Prerequisite: Electrical Engineering 107, Mathematics 112.

133 *Engineering Analysis* (3) dePian
Fall—day. Application of fundamental principles of engineering, physics, and mathematics to problems in various fields of engineering. Emphasis is placed on problem solving using concepts previously studied. Prerequisite: Civil Engineering 121, Electrical Engineering 102, Mathematics 112, Physics 16.

134 *Engineering Electronics II* (3) Braun
Spring—day and evening. Continuation of Electrical Engineering 102. Feedback amplifiers, oscillators, relaxation circuits, computing circuits, modulation. Prerequisite: Electrical Engineering 102.

136 *Electromagnetic Waves* (3) Ferris
Spring—day and evening. Electromagnetic waves in bounded media, radiation from antennas, high-frequency transmission lines, cavity resonators, and microwave devices. Prerequisite: Electrical Engineering 104, Mathematics 112.

137 *Active Network Theory* (3) dePian
Fall—day and evening. Analysis of two-port networks; matrix representation of linear active networks; vacuum-tube and semiconductor circuit theory; concepts of feedback, stability, and oscillators. Nonlinear circuit analysis, modulation, detection, communication systems. Prerequisite: Electrical Engineering 102 or Physics 132, Electrical Engineering 107, Mathematics 112.

142 *Information Theory* (3) Grisamore
Spring—day and evening. Introduction to probability. Discrete and continuous information sources. Coding, transmission, channel capacity, correlation function. Noise in information systems. Prerequisites: Mathematics 112 and senior status.

171 *Digital Circuitry and Systems* (3) Grisamore, Rotolo
Fall—day. Introduction to basic concepts of modern digital programmed systems, mathematical foundations and techniques for logical design of digital circuits, electronic design of computer circuits. Prerequisite: Mathematics 111, Electrical Engineering 134 or Physics 132.

172 *Digital Techniques* (3) Rotolo
Spring—day. Continuation of Electrical Engineering 171. Automatic programming techniques, self-detecting and correcting codes, advanced logical circuit design, electronic design of digital transistor and magnetic-core circuits, memory systems, analog-to-digital techniques, wiring diagrams. Prerequisite: Electrical Engineering 171.

Wiggins

174 *Digital and Analog Computer Laboratory* (2)
Spring—day. Theory and use of digital and analog computers: programming, operating, logical circuitry, design, troubleshooting. Prerequisite: Electrical Engineering 134, 171. Laboratory fee, $11.

THIRD GROUP

Sawitz

201 *General Network Analysis* (3)
Spring—morning and evening. Solutions of linear integro-differential equations using transformation calculus. Laplace transforms, Fourier integral, poles and zeros of network functions, correlation of time and frequency domains, elements of network synthesis.

dePian

202 *Advanced Network Analysis* (3)
Fall—evening. Advanced theory of lumped and distributed linear networks, matrices, stability, activity.

dePian

203 *Network Synthesis* (3)
Spring—evening. Basic techniques in the synthesis of linear two- and three-terminal passive networks; positive real functions; Foster, Cauer, Brune, Bott-Duffin, Darlington procedures; elements of active network synthesis.

Braun

211 *Electromagnetic Waves* (3)
Fall—day and evening. Electromagnetic waves in bounded media, radiation from antennas, high-frequency transmission lines, cavity resonators, and microwave devices.

Ferris

212 *Field Analysis and Potential Theory* (3)
Spring—evening. Fields of force, divergence, Newtonian potentials at points of free space, solutions of Laplace's equation, harmonic functions, logarithmic potential

dePian

213 *Microwaves* (3)
Fall—evening. Transmission lines; waveguides; antennas; resonators; amplifiers and oscillators; klystrons, magnetrons, traveling wave tubes.

214 *Electrodynamics* (3)
Spring—evening. Presence of moving matter in electromagnetic fields, force and energy in moving systems, relativistic concepts, tensors.

215 *Antennas* (3)
Fall—evening. Maxwell's equations, radiation, impedance, directional characteristics, arrays, aperture antennas.

dePian

221 *Active Network Theory* (3)
Fall—day and evening. Analysis of two-port networks; matrix representation of linear active networks; vacuum-tube and semiconductor circuit theory; concepts of feedback, stability, and oscillators. Nonlinear circuit analysis, modulation, detection, communication systems.

Braun

222 *Physical Electronics* (3)
Spring—evening. Physical principles underlying operation of various electronic devices including vacuum tubes, electron lenses, transistors, and recent solid-state electronic devices.

223 *High-frequency Electronics* (3)
Fall—evening. High frequency operation of electron tubes and semiconductor devices, transit time, bunching, pulse techniques.

224 *Industrial Electronics* (3)
Spring—evening. Gaseous tubes and applications; rectifiers; timing circuits; induction and dielectric heating; regulation and control, magnetic amplifiers.

Ferris

225 *Electronic Measurements in Psychometrics and Medicine* (3)
Fall—evening. Theory of measurements in biological areas, field and circuit theory as a foundation for measurements, techniques for electronic measurements on biological specimens, problems in medicine and psychology with emphasis on measurements and measuring devices.

226 *Physical Basis for Medical Electronics* (3) Ferris
Spring—evening. Electrical and acoustical properties of biological material; structural components of biological material as they affect its dielectric and acoustical behavior, electrical relaxation phenomena in general and their application to biological material in particular, applications in diathermy and electrocardiography, impedance determination.

231 *Digital Circuitry and Systems* (3) Wiggins
Fall—day. Introduction to basic concepts of modern digital programmed systems, mathematical foundations and techniques for logical design of digital circuits, electronic design of computer circuits.

232 *Digital Techniques* (3) Rotolo
Spring—day. Automatic programming techniques, self-detecting and correcting codes, advanced logical circuit design, electronic design of digital transistor and magnetic-core circuits, memory systems, analog-to-digital techniques, wiring diagrams.

233 *Digital Systems* (3) Cunningham
Fall—evening. The programmed system; system design of digital computers, special-purpose digital computers, reliability, data-processing techniques, analog-to-digital and digital-to-analog techniques.

234 *Automata and Self-organizing Systems* (3) Grisamore
Spring—evening. Effectively computable functions and Turing machines, digital computational methods in Boolean algebra, combinational circuits and their analysis, recursion circuits and their analysis, reliability of automata, networks of automata, artificial intelligence.

241 *Analysis of Modulation and Noise* (3) Grisamore
Fall—evening. Analysis by Fourier series and integrals of signals and linear networks, modulation and spectra, noise analysis including probability method of determining power spectra.

242 *Information Theory* (3) Eisner
Spring—evening. Discrete and continuous systems; ergodic ensembles and random processes; correlations, filtering, prediction; redundancy.

243 *Electromagnetic Wave Propagation* (3) _____
Fall—evening. Ground waves; space-wave propagation, atmospheric effects, ionosphere; maximum usable frequency; bandwidth.

244 *Communication Systems* (3) _____
Spring—evening. Radar; television; ultra-high frequency; navigational aids.

251 *Power Transmission* (3) Meltzer
Fall—evening. Transmission lines, exact and approximate equivalent circuits, standing waves, filtering, protection, radio interference, high voltage, line configurations.

252 *Power Generation* (3) Meltzer
Spring—evening. Steam, hydroelectric and nuclear plants, fuel cells and magnetohydrodynamics, efficiency, reheat cycles, stability, load factors, generator swings.

253 *Power Systems* (3) Meltzer
Fall—evening. Substations, transformers, distribution, networks; short and open circuit analysis; symmetrical components; stability; network analysers.

Engineering Administration

The School of Engineering offers the following courses primarily for candidates for the degree of Master of Engineering Administration. Other courses listed in this program are offered by the departments of Accounting, Business and Public Administration, Psychology, and Statistics.

THIRD GROUP

201 *Engineering Administration I* (3) Cronin and Staff

Fall—evening; spring—evening. The application of scientific method to the (1) planning element and (2) organizing element of the administrative process. Characteristics of plans, establishing objectives and goals, determining policies and procedures, preparing plans to meet stated objectives and goals, organization for planning, testing of plans. Characteristics of organization, patterns of departmentation authority, responsibility, levels of specialization, coordination, decentralization, work division, staff, committees. Introduction to analysis for decision making.

202 *Engineering Administration II* (3) Cronin and Staff

Fall—evening; spring—day and evening. Sequential to Engineering Administration I. The application of scientific method to the (3) directing or managing element and (4) control element of the administrative process. Personnel management, organized labor, executive leadership, communication, implications of automation, systems analysis for effective administration. Methods of evaluation and control of operations, cost-financial analysis, budgeting, administrative audits.

204 *Administration of Engineering Contracts* (3)

Fall—evening. Study of types of contracts, proposal preparation, evaluating contracts, negotiating contracts, determining allowable costs, contract auditing, renegotiation, contract extension policies and procedures, appraisal of capabilities of contractors.

207 *Personnel Administration* (3) Lindberg, Cronin

Fall—evening; spring—evening. Study of personnel functions with emphasis on relationships within organizations which utilize the services of engineers and scientists: employment, health, safety, education and training, financial compensation, union relations, collateral benefits and services, human relations and personnel research practices in engineering and industry.

210 *Engineering Law* (3)

Spring—evening. Legal principles and procedures of interest to engineers, the American Legal System, contracts and specifications, liability of professional engineers, antitrust problems, agency relationships, negotiable instruments, patent and proprietary rights, special problems in research and development contracts.

253 *Management of Production Processes and Facilities* (3) Smith

Fall—evening; spring—evening. Planning, organizing, and control of production; forecasting techniques; material management; methods of loading and scheduling production processes; electronic methods in production control. Organization and administration of the plant engineering function with emphasis on maintenance control programs.

254 *Principles and Procedures of Automatic Data Processing Systems* (3)

Fall—evening; spring—evening. Logic of computers, arithmetic and control units, computers as systems analysis for data processing applications, systems design, systems economics, relation to scientific decision processes.

255 *Administration of Research and Development* (3) Lindberg

Fall—evening; spring—evening. Contemporary practices of administrators of scientific and engineering research and development for the purpose of finding uniformities, characteristics, and conceptual schemes; relation of such findings to accepted managerial concepts, and projection of their implications on contemporary managerial hierarchies and organizational structures.

261 *Economic Analysis in Engineering Planning* (3) Lindberg

Fall—evening; spring—evening. Important concepts and theories employed in economic analysis of engineering projects. Application of tools and techniques used in various analytic processes. Detailed practice in pursuit of solutions to, and adjustment of, persistent and current problems in this field

263 *Quantitative Techniques of Engineering Administration* (3) Glaser
Spring—evening. Application of the various quantitative techniques, mathematical, statistical, and other management sciences' techniques to the analysis of engineering administration and the solution of administrative problems by the use of models, theories, and measurements.

271 *Operations Research* (3) Kaye, Webb
Fall—evening; spring—evening. Background and application of operations research; history, characteristics, capabilities, administrative considerations, methods, and techniques, including construction of conceptual and mathematical models. Prerequisite: Mathematics 31 or 24, Statistics 107, or permission of the instructor.

272 *Problems in Operations Research* (3) Kaye
Spring—evening. Field experience in operations research on a team basis. Each small group locates an actual problem and formulates and solves it by operations research methods. Class evaluation of progress. Prerequisite: Engineering Administration 271.

275 *Linear Programming* (3) ———
Fall—evening; spring—evening. The basic computational, theoretical, and applied areas with emphasis on the general linear programming problem; simplex computational procedure; duality; transportation and assignment problems; production scheduling problem; zero-sum two-person games; and additional applications and recent developments. Prerequisite: Engineering Administration 271.

276 *Theory of Games* (3) ———
Fall—evening. Study of mathematical models with applications to the relationships among independent competitive entities (persons or organizations in environment of competition, bargaining, bidding), selection of optimum strategies, mixed strategies, minimax concept, connections with linear programming and decision functions, two-person and n-person zero and nonzero sum games. Prerequisite: Engineering Administration 271.

277 *Queuing Theory* (3) ———
Spring—evening. Study and analysis of operational systems with variables in arrivals and service, Monte Carlo analysis, optimization methods. Prerequisite: Engineering Administration 271.

285 *Seminar in Administrative Problems* (3) Smith
Fall—evening; spring—evening. Individual analysis of complex administrative problems, with group evaluation and discussion. Prerequisite: admission to candidacy and completion of at least 18 semester hours of graduate study.

295 *Applied Research in Engineering Administration* (arr.) Smith, Lindberg
Fall—as arranged. Application of established principles to new engineering administrative situations; the development of new knowledge of administration. Prerequisite: approval of the instructor.

296 *Research in Engineering Administration* (arr.) ———
Fall—as arranged; spring—as arranged. Creative thinking in engineering administration, initiation of new theories and principles, development of new hypotheses, experimentation, proof of theories and hypotheses. Prerequisite: approval of the instructor.

299-300 *Thesis* (3-3)
Academic year—as arranged.

Engineering Science

Second Group

The following courses serve as foundations for specialization, since they are concerned with a body of knowledge applicable in a variety of engineering fields.

130 *Introductory Astronomy* (3) Grisamore

Spring—evening. Coordinate systems and nomenclature used in astronomy, description of astronomical systems from solar system to metagalaxies, introduction to celestial mechanics, types of stars, stellar physics. Prerequisites: integral calculus and one year of college physics.

154 *Automatic Control** (4) Crafton, dePiro

Spring—day and evening. Theory of automatic control systems including electromechanical, pneumatic, and hydraulic systems. Transient analysis, transfer functions, stability criteria. Experimental study of automatic control systems. Lecture and laboratory. Prerequisite: Electrical Engineering 127 or Mechanical Engineering 125. Laboratory fee, $11.

THIRD GROUP

201 *Automatic Control* (3) Crafton

Fall—evening. Advanced theory of automatic control. Systems analysis, multiple-loop systems, nonlinear systems.

211 *Mathematical Methods in Engineering I* (3) Arkilic, Braun

Fall—day and evening; spring—evening. A course in such topics as functions of complex variables, infinite series, linear vector spaces and matrices, and partial differential equations. The required level of preparation is equivalent to Mathematics 111 and 112 as given at this University.

212 *Mathematical Methods in Engineering II* (3) Arkilic, Braun

Fall—evening; spring—evening. Continuation of Engineering Science 211. Mathematical topics include: introduction to tensor analysis, calculus of variations, finite differences, and integral equations.

216 *Advanced Dynamics* (3) Crafton

Time to be arranged. Dynamics of continuous mechanical systems; Lagrange's equations, Hamilton's principle, gyrodynamics; operational methods. Prerequisite: permission of the instructor.

217 *Analytical Mechanics* (3) Crafton

Fall—evening; spring—evening. Fundamental principles, generalized coordinates, variational principles and Lagrange's equations, nonholonomic systems, Hamilton's equations, theory of small oscillations.

218 *Mechanics of Orbits and Trajectories* (3) Crafton

1962–63 and alternate years: fall—evening. Celestial mechanics. Orbits and trajectories in force fields. Dynamics of space vehicles.

219 *Mechanics of Continua* (3) Arkilic

Time to be arranged. Mechanics of elastic, plastic, and viscous solids and of fluids; introduction to theory and formulation of basic equations.

220 *Nonlinear Mechanics* (3) Crafton

Spring—evening. Topological and analytical methods in nonlinear mechanics, nonlinear resonance, relaxation oscillations.

221 *Theory of Elasticity I* (3) Arkilic

Spring—evening. Introduction to mathematical theory of elasticity, analysis of strain and stress, generalized Hooke's law, equilibrium equations, Beltrami-Michell equations, strain energy functions, torsion, general flexure.

222 *Theory of Elasticity II* (3) Arkilic

1962–63 and alternate years: fall—evening. First and second boundary-value problems in plane elasticity, uniqueness of solutions, simply and multiply connected regions, three-dimensional problems, thermoelasticity, vibration of elastic solids, variational methods.

* An undergraduate course which may be taken for graduate credit with the approval of the Committee on Graduate Studies

223 *Celestial Mechanics* (3) Crafton
Time to be arranged. General equations of motion; Lagrange's planetary equations; disturbing function; Delaunay and Poincaré variables; secular inequalities; lunar theory; precession and nutation.

227 *Experimental Stress Analysis* (3) Walther
Time to be arranged. Applications of the theory of elasticity in the analysis of strain and stress; theory of gaging for static and dynamic strain and stress measurements.

230 *Dynamics of Compressible Fluids* (3) Ojalvo
Time to be arranged. Mathematical theory of compressible fluid flow and thermodynamics of compressible fluids. Prerequisite: permission of the instructor.

231 *Fluid Dynamics* (3) Ojalvo
Fall—evening. Theory of compressible and incompressible fluid motion including potential motion, circulation and vorticity, mathematical treatment of flow at sub-, trans-, and supersonic velocities, normal and oblique shock, and elements of heat transfer.

233 *Engineering Problems* (3) dePian
Spring—evening. Investigation of problems in engineering science, emphasizing imaginative and systematic application of fundamental principles in engineering, physics, and mathematics.

241 *Science of Engineering Materials* (3) Murdaugh
1963–64 and alternate years: fall—evening. Relation of the atomic and microscopic structure of engineering materials to their physical and mechanical properties and their mechanical behavior in engineering applications.

251 *Magnetohydrodynamics* (3) Grisamore
Time to be arranged. Study of the interaction of electromagnetic and fluid fields. Dynamics of conducting fluids in electromagnetic and magnetic fields.

299, 300 *Thesis* (3–3)
Academic year—as arranged.

Mechanical Engineering

First Group

9 *Introduction to Engineering** (3) The Staff
Fall—day and evening; spring—evening. Number systems, computation aids, scientific method, problem solving techniques, use of mathematical tables. Emphasis is placed on the development of sound reasoning and study methods.

10 *Graphical Communication* (2) The Staff
Fall—evening; spring—day and evening. Spatial visualization, engineering drawing, schematic diagrams, descriptive geometry. A laboratory course. Laboratory fee, $10.

Second Group

100 *Analytical Kinematics* (3) O'Neale
1962–63 and alternate years: spring—evening; 1963–64 and alternate years: spring—day. Theoretical study of the motion of constrained and unconstrained rigid bodies. Prerequisite or concurrent registration: Civil Engineering 121, Mathematics 112.

113 *Thermodynamics I* (3) Dedrick
Fall—day and evening. Theoretical study of fundamental concepts, equations of state, first and second laws of thermodynamics, entropy, single and two-phase mixtures. Prerequisite: Chemistry 12 or 14, Mathematics 111, Physics 16.

* This course should be completed before the beginning of the sophomore year.

114 *Thermodynamics II* (3) Ojalvo, Dedrick

Spring—day. Theoretical study of vapor cycles, combustion, gas dynamics, equilibrium, multiphase mixtures. Prerequisite: Mechanical Engineering 113. Prerequisite or concurrent registration: Civil Engineering 132, Mechanical Engineering 118.

118 *Heat Transfer* (3) Ojalvo, Dedrick

Spring—day and evening. Heat transfer theory, conduction, convection, radiation, field and potential theory applied to conduction. Prerequisite: Mathematics 112, Mechanical Engineering 113. Prerequisite or concurrent registration: Civil Engineering 132.

120 *Physical Metallurgy* (3) Murdaugh

1962–63 and alternate years: spring—day; 1963–64 and alternate years: spring—evening. Physics of metals, crystal and lattice structures, binary and ternary alloys, properties of alloys, nonequilibrium conditions, phase diagrams. Lecture and laboratory. Prerequisite: Civil Engineering 125, Mathematics 31 or 24. Laboratory fee, $10.

123 *Advanced Dynamics I* (3) Crafton

1962–63 and alternate years: fall—evening; 1963–64 and alternate years: fall—day. Shock and vibrations in linear mechanical systems, elctromechanical analogies, transient and steady-state analysis. Prerequisite: Mechanical Engineering 100. Prerequisite or concurrent registration: Civil Engineering 157.

124 *Advanced Dynamics II* (3) Crafton

1962–63 and alternate years: spring—evening; 1963–64 and alternate years: spring—day. Advanced study of dynamics of continuous mechanical systems. Lagrange's equations, Hamilton's principle, gyrodynamics. Prerequisite: Mechanical Engineering 123.

135–36 *Thermal Power* (3–3) Ojalvo

1962–63 and alternate years: academic year—evening; 1963–64 and alternate years: academic year—day. Analysis and design principles governing systems and components in heat-power, gas and vapor turbines, internal combustion engines, heat pumps, nuclear power systems. Lecture and laboratory. Prerequisite: Civil Engineering 132; Mechanical Engineering 114, 118; Physics 191. Prerequisite or concurrent registration: Mechanical Engineering 139. Laboratory fee, $15 a semester.

139 *Fluid Machinery* (3) Dedrick

1962–63 and alternate years: fall—evening; 1963–64 and alternate years: fall—day. General theory of dynamic machines; velocity diagrams and work transfer; radial, axial, and mixed-flow machines; torque converters and couplings; jet machines. Lecture and laboratory. Prerequisite: Civil Engineering 132, Mechanical Engineering 113. Prerequisite or concurrent registration: Mechanical Engineering 123. Laboratory fee, $10.

143 *Production Analysis* (3) Kaye

1962–63 and alternate years: fall—day; 1963–64 and alternate years: fall—evening. Principles of schematic models, mathematical programming, quality control, operations analysis. Prerequisite: Mathematics 112.

146 *Dynamics of Compressible Fluids* (3) Dedrick

1962–63 and alternate years: spring—evening; 1963–64 and alternate years: spring—day. Mathematical theory of compressible fluid flow, flow around immersed bodies, airfoil theory, shock wave theory, thermodynamics of compressible fluids. Lecture and laboratory. Prerequisite: Civil Engineering 132, Mechanical Engineering 118. Laboratory fee, $10.

195–96 *Special Topics in Mechanical Engineering* (arr.)

Academic year—as arranged. Special problems approved by the Staff. May be substituted for required senior courses. Prerequisite: senior status and approval of the instructor.

THIRD GROUP

211 *Thermodynamics* (3) Ojalvo

Fall—evening. Reversible and irreversible processes, equilibrium, ideal and van der

Waal's gases, dilute solutions, phase equilibria, electric and magnetic effects, radiation. Introduction to kinetic theory and statistical mechanics.

213 *Heat Transfer* (3) Ojalvo

Spring—evening. Physical and mathematical concepts of heat transfer phenomena under steady and unsteady conditions, including: Stefan-Boltzmann and Planck laws for radiation, Fourier heat equation for conduction, dimensional analysis, and boundary layer theory for convection.

215 *Gas Dynamics* (3) Ojalvo

Spring—evening. Theory of gas dynamics including: combustion, shock phenomena, dynamics of flow, and heat transfer for high temperature gases.

235 *Hypersonic Fluid Dynamics* (3)

Time to be arranged. Small disturbance theory; Newtonian theory; constant-density solutions; thin shock layers; viscous interactions; free molecule and rarefied gas flows.

255 *Combustion Processes* (3) Dedrick

Time to be arranged. Thermodynamics of combustion; chemical kinetics; flame propagation; combustion of liquids and solids; detonation processes.

256 *Reaction Kinetics* (3) Dedrick

Time to be arranged. Theoretical aspects of kinetics of homogeneous and heterogeneous reactions in gaseous and liquid systems.

Metrology*

First Group

4 *Introduction to Statistics for Metrology* (3) McNish

Measurement—qualitative and quantitative aspects. The role of corrections. Measurement as a production process. Errors, limiting mean, true value, precision, and accuracy. Classification of errors; statistical tools for the detection and diagnosis of errors. Quality control of measurement processes. Measurement of the precision and assessment of the accuracy of a measurement process. Expression of the uncertainties affecting a measured value. Prerequisite: Mathematics 31 or 24, and a laboratory course in physical science or engineering.

5–6 *Foundations of Metrology I–II* (5–4) (NBS) McNish

Origin and development of standards, relative and absolute measurements, systematic and random errors, comparison and dissemination of standards, effective design of experiments, translation of standards to manufacturing. Use of standard devices for measurement of length, time, speed, force, weight, mass, density, specific gravity; calibrations. Fluid flow and electrical measurements; measurements involving use of several instruments. Prerequisite: Mathematics 31 or 24, Physics 14.

Second Group

111–12 *Precise Electrical Measurements I–II* (3–3) (NBS) Harris

Electrical measurements from direct current through radio frequencies. Units and dimensional systems; techniques of substitution and comparison; transfer techniques; ratio techniques; detectors; bridges; measurement of current, voltage, power, resistance, capacitance, inductance, energy, phase angle, frequency, and time; dielectric and magnetic measurements; special topics in high-frequency measurements; field strength, signal-to-noise ratio, impedance, attenuation. Prerequisite: Electrical Engineering 102, 104, and Mathematics 111, or the equivalent.

113 *Introduction to Transducers and Instrumentation* (2) Moore

Theory and application of simple transducers; techniques in instrumentation of systems of one type (electrical, electronic, fluid, mechanical, optical, acoustical, nuclear); analysis and design of simple instrumentation systems, with emphasis on the precision and accuracy of measurement. Prerequisite: Electrical Engineering 102, Mathematics 111, Metrology 6, or the equivalent.

* NBS in parentheses indicates courses which will be taught at the National Bureau of Standards.

Moore

114 *Advanced Transducers and Instrumentation* (3)
Advanced study of practical transducers and instrumentation; theory and applications of advanced transducers in instrumentation problems involving measurements on systems containing multiple quantities of one type or mixture of types (such as electrical, electrical-electronic, fluid, fluid-mechanical-acoustical, etc.), with emphasis on optimal instrumentation for precision measurement. Prerequisite: Metrology 113 or graduate status.

Young

121 *Precise Mechanical Measurements* (4) (NBS)
Measurements of mass, time, weight; visual, mechanical, length, and interferometric methods; density, force, pressure, vibration, acceleration, flow, and viscosity measurements. Prerequisite: Metrology 4, 5, or the equivalent.

Guildner

131 *Precise Heat Measurements* (4) (NBS)
Temperature measurement, the thermodynamic and international temperature scales; resistance thermometry, thermocouples, and pyrometry. Vapor pressure thermometry and other techniques for low-temperature measurement. Heat transfer quantities and their measurement, conduction, convection, and radiation. Calorimetry; isothermal and adiabatic calorimeters, flow calorimeters; types of heat quantities measured by calorimetry. Prerequisite: Metrology 4, 5, 111, or the equivalent.

Third Group

McNish

201 *Advanced General Metrology* (3)

Eisenhart

203–4 *Probability and Statistics of Metrology I–II* (3–3)
Probability distributions, discrete and continuous distributions; sampling; combinational analysis; stochastic processes; conditional probability; correlation; analysis of variance; design and analysis of experiments, Latin Square experiments, factorial experiments, block and lattice designs. Prerequisite: Metrology 4 or the equivalent and graduate status.

Sorger

214 *Microwave Measurements* (3)
Measurement of power, frequency, impedance, wavelength, and attenuation at microwave frequencies. Characteristics and Q of resonant devices. Prerequisite: Electrical Engineering 104 or the equivalent and graduate status.

220 *Precise Optical Measurements* (3)
Optical constants of lens systems; aberration; resolving power; illumination in focal plane; image evaluations, magnification, index of refraction; color and color temperature.

ENGLISH*

Professors E. S. Shepard, F. S. Tupper, C. D. Linton, C. W. Cole *(Chairman)*, R. H. Moore, J. H. Coberly, P. H. Highfill, Jr.
Associate Professors W. L. Turner, Muriel McClanahan, J. G. Allee, Jr., J. P. Reesing, Jr., R. H. Walker, Jr.
Assistant Professors R. E. Gajdusek, Elizabeth Wright, Nancy Tischler, J. G. Sweeney, M. E. Lyon
Instructors Jane Bauman, R. C. Rutledge, E. N. Harbert

* The Staff of Instruction here listed is for the academic year 1961-62.

ENGLISH COMPOSITION*

First Group

A *English for Foreign Students* (3) Allee and Staff
Fall—day and evening; spring—day and evening; summer 1962. A course in reading and writing designed to assist the foreign student in overcoming deficiencies in the use of English. Special attention is given to spelling, syntax, grammar, idiom, and vocabulary.

B *English for Foreign Students* (3) Allee and Staff
Fall—evening; spring—day and evening. For second semester foreign students not yet ready for English 1. Writing of expository paragraphs and themes; outlining; reading for comprehension, vocabulary, and style.

1 *English Composition** (3) Moore and Staff
Fall—day and evening; spring—day and evening; summer 1962. Review of grammar, exercises in composition, readings.

1X *English Composition** (3) Moore and Staff
Fall—day and evening; spring—day and evening; summer 1962. An intensive course in English grammar and composition to which are assigned students whose placement tests show them inadequately prepared for the regular work of English 1. The course begins with detailed instruction, drill, and exercises in the basic structure of the English language and in the writing of paragraphs; it continues with the content of English 1. English 1X meets five hours a week and carries 3 semester hours of credit. The tuition fee is $115 (the regular fee of $30 a semester hour, plus an additional fee of $25).

2 *English Composition** (3) Moore and Staff
Fall—day and evening; spring—day and evening; summer 1962. For second-semester freshmen not following the Columbian College of Arts and Sciences sequence. Readings and practice in expository and argumentative techniques and in research procedure. Prerequisite: English 1 or 1X.

4 *English Composition** (3) Moore and Staff
Fall—day and evening; spring—day and evening; summer 1962. The second half of the six-hour English Composition course required of students in Columbian College. A course in critical analysis and practice in expository and argumentative techniques and in research procedure. Prerequisite: English 1 or 1X and both semesters of one of the introductory literature courses.

11 *The Writing of Reports* (3) Turner and Staff
Fall—day and evening; spring—day and evening; summer 1962. Theory and practice in the writing of technical reports. Prerequisite: English 1 or 1X, and 2 or 4.

Second Group

109 *Expository Writing* (3) McClanahan and Staff
Fall—evening. A study of types of expository writing with weekly exercises. Prerequisite: English 1 or 1X, and 2 or 4.

113 *Narrative Writing* (3) Gajdusek
Fall—evening. Study of the techniques of narrative writing and class criticism of student writing. Prerequisite: English 1 or 1X, and 2 or 4.

---

* Before students are registered in English 1 they are tested in the minimum essentials of vocabulary, spelling, grammar, standard usage, and writing skill. Those students who show marked superiority may, upon passing further tests, be exempted from one or both halves of the English Composition course; those who are inadequately prepared are assigned to English 1X.
All students enrolled in curricula leading to bachelor's degrees in Columbian College (who are required to take one year of English composition and one year of literature in English, Classical Languages, French, German, Slavic Languages, or Spanish) will follow the sequence of English 1 or 1X, English 2 or 4. Successful completion of one of the introductory literature courses and English 1 or 1X is prerequisite to all other courses in English. English 2 is the second half of the first-semester composition course requirement of students not required to follow the Columbian College of Arts and Sciences sequence.

114 *The Writing of Fiction—the Short Story* (3) Gajdusek
Spring—evening. Prerequisite: English 113; consent of instructor.

116 *Advanced Exposition* (3) Moore
Not offered 1962–63. Theory and practice in the writing of expository articles and essays. Prerequisite: English 109; consent of instructor.

117–18 *The Writing of Fiction—the Novel* (3–3) Gajdusek
Academic year—evening. Writing a novel. Prerequisite: English 114; consent of instructor.

ENGLISH LITERATURE

First Group

51–52 *Introduction to English Literature** (3–3) Tupper and Staff
Academic year—day and evening; summer 1962. A historical survey. Prerequisite: English 1 or 1X.

91–92 *Introduction to European Literature** (3–3) Shepard and Staff
Academic year—day and evening. Consideration of various types. Prerequisite: English 1 or 1X.

Second Group*

121–22 *English Literature from the Beginnings to 1500* (3–3) Allee
First half: not offered 1962–63. *Second half:* spring—evening; summer 1962. *First half:* English literature prior to Chaucer. *Second half:* Chaucer.

125 *Introduction to English Linguistics* (3) Allee
Fall—evening. The development of the English language in a historical treatment of English grammar.

129–30 *Elizabethan Nondramatic Literature* (3–3) Tupper
Academic year—day. Nondramatic literature from 1485 to 1601.

135–36 *Shakespeare* (3–3) Tupper
Academic year—day.

139–40 *The Seventeenth Century* (3–3) Linton, Reesing
Academic year—evening; summer 1962—English 139 (3). *First half:* poetry and prose from 1603 to 1660. *Second half:* Milton.

141–42 *The Neoclassical Movement* (3–3) Highhill
Academic year—day. Poetry and prose from 1660 through the mid-18th century.

151–52 *The Romantic Movement* (3–3) Reesing
Not offered 1962–63. From the mid-18th century through Shelley and Keats.

161–62 *Victorian Literature* (3–3) Shepard
Academic year—day. Poetry and prose from 1830 to 1900.

165–66 *The Twentieth Century* (3–3) Linton
Academic year—day; summer 1962—English 166 (3). British poetry, prose, and drama since 1900.

181–82 *The English Novel* (3–3) Reesing
Academic year—day. Major English novelists from the 18th century to the present day.

---

* All students enrolled in curricula leading to Bachelor's degrees in Columbian College who are required to take one year of English composition and one year of literature in English, Classical Languages, French, German, Slavic Languages, or Spanish) will follow the sequence of English 1 or 1X, both semesters of one of the introductory literature courses, and English 4.

English 51–52, 71–72, 91–92, Classical Languages 71–72, French 51–52, German 51–52, Slavic Languages 91–92, or Spanish 51–52 is prerequisite to all second-group courses except English 125.

183–84 *The English Drama* (3–3) Highfill
Academic year—evening. *First half:* concerned principally with the drama of Shakespeare's contemporaries. *Second half:* a historical survey from 1660 to the present day.

192 *Medieval Legend and Saga* (3) Allee
Not offered 1962–63. Celtic and Norse.

199–200 *Proseminar: Readings for the English Literature Major* (3–3) Tupper, Highfill
Academic year—day and evening. Conferences and group discussions.

THIRD GROUP

222 *The Age of Chaucer* (3)
Not offered 1962–63.

223–24 *Old English* (3–3) Allee
Academic year—evening. English language and literature before 1100. *First half:* Old English grammar and readings. *Second half:* Beowulf.

225 *Applied Linguistics* (3) Allee
Not offered 1962–63. Survey of the English language since 1850; introduction to analytical methods of structural linguistics and their application to modern American and British writing and to secondary school teaching of English.

235–36 *Studies in Shakespeare and His Contemporaries* (3–3) Tupper
Summer 1962—English 236 (3). Prerequisite: English 135–36.

239–40 *Studies in Seventeenth Century Literature* (3–3) Reesing
Not offered 1962–63. Open to qualified undergraduates. *First half:* chief figures exclusive of Milton. *Second half:* Milton.

241–42 *Studies in Neoclassical Literature* (3–3) Highfill
Not offered 1962–63. Prerequisite: English 141–42.

251–52 *Studies in the Romantic Movement* (3–3) Reesing
Not offered 1962–63. Prerequisite: English 151–52.

261–62 *Studies in Victorian Literature* (3–3) Shepard
Not offered 1962–63. Prerequisite: English 161–62.

265–66 *Studies in Twentieth Century Literature* (3–3) Linton
Not offered 1962–63. Eliot and his contemporaries.

295–96 *Studies in the History of English Literary Criticism* (3–3) Shepard
Academic year—evening. Open to undergraduates with the approval of the instructor.

299–300 *Thesis* (3–3) The Staff

AMERICAN LITERATURE

FIRST GROUP

71–72 *Introduction to American Literature** (3–3) Cole and Staff
Academic year—day and evening; summer 1962. A historical survey. *First half:* from the beginnings to the Civil War. *Second half:* from the Civil War to the present. Prerequisite: English 1 or 1X.

* All students enrolled in curricula leading to Bachelor's degrees in Columbian College (who are required to take one year of English composition and one year of literature in English, Classical Languages, French, German, Slavic Languages, or Spanish) will follow the sequence of English 1 or 1X, 2 or 2X, transfers of one of the introductory literature courses, and English 4.
Credit: transfers of one of the introductory literature courses, and English 4.
English 71–72, 71–72, 91–92, Classical Languages 51–52, French 51–52, German 51–52, Slavic Languages 51–52, or Spanish 51–52 is prerequisite to all second group courses except English 171–72.

Second Group*

170 *The American Short Story* (3) — Coberly
Fall—day. The historical development of the short story in America.

171–72 *Studies in American Literature* (3–3) — Lyon
1962–63 and alternate years: academic year—day; 1963–64 and alternate years: academic year—evening. Major factors in the national cultural tradition as shown by outstanding writers. Prerequisite: English 51–52 or 71–72.

173–74 *Major American Poets* (3–3) — Coberly
1962–63 and alternate years: academic year—day; 1963–64 and alternate years: academic year—evening; summer 1962—English 174 (3). Advanced critical study of significant writers and movements. *First half:* from beginnings through 19th century. *Second half:* the 20th century.

175–76 *American Drama* (3–3) — Cole
1962–63 and alternate years: academic year—evening; 1963–64 and alternate years: academic year—day; summer 1962—English 176 (3). Historical and critical study of significant plays and forms. *First half:* from beginnings through 19th century. *Second half:* the 20th century.

177–78 *American Fiction* (3–3) — Coberly
1962–63 and alternate years: academic year—evening; 1963–64 and alternate years: academic year—day. Historical and critical study of significant novels and short stories. *First half:* from beginnings through 19th century. *Second half:* the 20th century.

179–80 *Proseminar: Readings for American Thought and Civilization Majors* (3–3) — The Staff
Academic year—day and evening. Conferences and group discussions.

Third Group

271–72 *Seminar in American Thought* (3–3) — Walker
Not offered 1962–63. Intensive consideration of specific periods and themes, primarily literary, in the history of American civilization. Prerequisite: English 171–72 or the equivalent.

277–78 *Studies in American Fiction* (3–3) — Coberly
First half: fall—evening. *Second half:* not offered 1962–63. Prerequisite: English 177–78 or the equivalent. Open to the undergraduate with the approval of the instructor.

279–80 *Thesis* (3–3) — The Staff

Related Courses in Other Departments

Education 136, *Teaching English*
History 151–52, *English History*
Philosophy 111–12, *History of Philosophy*
Speech B, *American Speech for Foreign Students*
Speech 102, *Oral Interpretation of Literature*

---

* All students enrolled in curricula leading to Bachelor's degrees in Columbian College who are required to take one year of English composition, and one year of literature in English, General Languages, French, German, Slavic Languages, or Spanish, will follow the sequence of English 1–2, 11–12, both semesters of one of the introductory literature courses, and English 4.

English 51–52, 71–72, 91–92, Classical Languages 71–72, French 51–52, German 51–52, Slavic Languages 91–92, or Spanish 51–52 is prerequisite to all second group courses except English 171–72

GEOGRAPHY*

Professor R. D. Campbell *(Chairman)*
Associate Professor H. W. Westermann†
Associate Professorial Lecturer J. P. Pickard
Assistant Professor J. T. Davis
Associate Joan Barry

First Group

51 *Introduction to Geography* (3) — The Staff
Fall—day; spring—evening; summer 1962. A study of place attributes and characteristics, patterns and associations of physical and cultural earth features.

52 *World Regions* (3) — The Staff
Fall—evening; spring—day; summer 1962. The analysis of world regional divisions, description and interpretation of region complexes, evaluation of regional differences as they affect the distribution and activities of man.

Second Group

103–4 *Cartography* (3–3) — The Staff
A year course: credit is not given for the first half until the second half is completed. Academic year—Saturday morning. Principles of cartographic drafting; elementary map projections; map and graph planning design and construction; uses and interpretation of maps. Prerequisite: Geography 51 and 52. Laboratory fee, $11 a semester.

115–16 *Physical Geography* (3–3) — Davis
Academic year: lecture (2 hours), laboratory and field trip (2 hours)—day. Introduction to the earth sciences: form of the earth, grids and time, weather and climate, geomorphic processes and land-forms, soils, vegetation; weather forecasting, map reading.

124 *Land Capabilities* (3)
1963–64 and alternate years. Evaluation of land capabilities based on analysis of locational, physical, economic, and social land characteristics. Principles of site analysis and best use. Systems of measurement of area potential.

125 *Transportation Complexes* (3)
1963–64 and alternate years. A study of transportation networks and systems by which people, things, and ideas are given varying degrees of place utility. An analysis of the role of transportation in urban, national, and international relationships.

126 *World Economies* (3) — Davis
1962–63 and alternate years: fall—day. Description and comparison of differing regional economies—pastoral, agricultural, industrial; patterns of world distribution.

127 *World Population and Settlement* (3) — Westermann
1962–63 and alternate years: spring—day. Population composition, structures, and distribution; characteristic world settlement patterns in terms of population organization. Assessment of factors contributing to population pressures, explosions and migrations, urban and rural settlement patterns and trends.

133 *Regional Industrial Structures* (3) — Westermann
1962–63 and alternate years: fall—day. The nature of the industrial complex, types and distribution of industry, principles of industrial and economic development planning.

* The Staff of Instruction here listed is for the academic year 1961–62.
† On sabbatical leave fall semester 1961–62.

134 *Location of Industry* (3) Westermann
1962–63 and alternate years: spring—day. Structure and development of the major world industries, industrial location requirements, principles of industrial equilibrium.

137 *Industrial Planning for Underdeveloped Areas* (3)
Summer 1962. The appraisal of industrial development potentials in non-industrial areas; the preparation and implementation of industrial development plans; peculiar problems of industrial development in traditional societies; the role of industrial countries, with particular emphasis on United States responsibilities.

141–42 *Urban Settlement* (3–3)
1963–64 and alternate years. Location, functions, and forms of cities; urban-rural relationships; the urban hierarchy; urban problems and the history of their development; the city of the future.

145 *World Cultural Geography* (3) Campbell
Fall—day. A study of differences in national character structures; modal behavior patterns and personality traits typical of various cultures; difficulties these differences present in interpersonal relations and intercultural communications.

146 *World Political Geography* (3) Campbell
Spring—day. Types and distributions of political systems, the major political units and associations of the world, factors which affect relative political power, areas of conflict and arbitration.

173–74 *City Planning: Theory and Practice* (3–3)
Academic year—evening. Theories of city functions and structures; evaluation of urban activities, value systems; analysis of contemporary urban problems; optimum designs for future cities; theory and techniques of planning; action techniques; implementation of plans.

181 *United States** (3)
Not offered 1962–63.

183 *Western Europe** (3) Westermann
1962–63 and alternate years: fall—day.

184 *The Mediterranean** (3) Westermann
1962–63 and alternate years: spring—day.

185 *Africa** (3)
Offered 1963–64.

186 *The Middle East** (3)
Offered 1963–64.

191 *Latin America** (3)
1963–64 and alternate years. Davis

194 *Communist China** (3)
Spring—day.

195 *Eastern and Southeastern Asia** (3)
Not offered 1962–63.

196 *The Soviet Union** (3) Westermann
Fall—day.

197 *The Pacific** (3)
Not offered 1962–63.

198 *Australia** (3)
Not offered 1962–63.

* Regional survey. No prerequisites. For students particularly interested in the study of specific regions, regional courses in the departments of Economics, History, and Political Science are strongly recommended, for example: Economics 185–86, *Economic History and Problems of Latin America*; History 164, *South America since Independence;* and Political Science 177, *Recent Trends in Latin American Politics and Government.*

THIRD GROUP*

201–2 *Seminar: History and Philosophy of Geography* (3–3) Campbell, Westermann

A year course: credit is not given for the first half until the second half is completed. 1962–63 and alternate years: academic year—evening. A study of the development of geographic thought, from Herodotus to the present; a critical appraisal of the great works of the world's most famous geographers; an attempt to develop a useful, contemporary philosophy of geography.

205–6 *Area Data Collection and Analysis* (3–3)

A year course: credit is not given for the first half until the second half is completed. Lecture (1 hour), laboratory and field (3 hours). 1963–64 and alternate years. Sources of regional information; methods and systems of data collection; quantitative and qualitative methods of analysis; systems of syntnesis.

211–12 *Reading Course in Economic Geography* (3–3)

Not offered 1962–63. The development of economic geography as a systematic approach to regional analysis, the literature of economic geography, research methods.

233–34 *Seminar: Regional and Urban Planning* (3–3) Westermann, Campbell

A year course: credit is not given for the first half until the second half is completed. Academic year—evening. Analysis of the planning function, major problems confronting the planner, contemporary status of planning—its areas of success and failure.

241–42 *Seminar: Place and Culture* (3–3)

1963–64 and alternate years. A study of the culture traits which characterize various ethnic groups and differentiate people-place associations.

251–52 *Seminar: World Problem Areas* (3–3)

Summer 1962—Geography 251 (3). A study of those parts of the world which have become matters of international concern, whether because of their political or social instability, unsound economic development, or aggressive tendencies. An evaluation of the complex of factors which have created the "problems".

295–96 *Research* (3–3) The Staff

Academic year—as arranged.

299–300 *Thesis* (3–3) The Staff

GEOLOGY†

Professor Geza Teleki *(Chairman)*
Professorial Lecturers **G. L. Christ, Michael Fleischer, H. T. Evans, Jr., I. G. Sohn**
Associate Professor **G. V. Carroll**
Associate Professorial Lecturer **Nicholas Hotton**
Lecturer **Irving Friedman**

FIRST GROUP

1–2 *Introductory Geology* (3–3) The Staff

Academic year: lecture (2 hours), laboratory and field trip (2 hours)—day. A survey course covering the principles of geology. *First half:* physical geology—materials of the earth's crust, geologic processes. *Second half:* historical geology—geological periods, evolution of life on earth. Laboratory fee, $6 a semester.

* Senior major or graduate status is required in all third-group courses.
† The Staff of Instruction here listed is for the academic year 1961–62.

12 *Minerals and Rocks* (3) Carroll

Spring: lecture (2 hours), laboratory (3 hours)—day. Introduction to the common minerals and rocks and their environments; identification of minerals by determination of their physical properties and by the use of elementary chemical tests. Prerequisite: Geology 1. Laboratory fee, $8.

SECOND GROUP

101 *History of Geological Sciences* (2) Teleki

Not offered 1962–63. Lectures on the development of geological thought and the history of geological and related sciences.

107 *Dynamic Geology* (3) Teleki

Fall: lecture (3 hours), recitation (1 hour)—day. The interrelation of endogene and exogene forces in the processes of sedimentation and vulcanism; geochemical and geophysical aspects of epicontinental and geosynclinal areas. Prerequisite: Geology 1-2, 12; Physics 11, 12.

111–12 *Mineralogy* (3–3) Carroll

A year course: credit is not given for the first half until the second half has been completed (except for chemistry majors who may receive credit for the first half only). Academic year: lecture (2 hours), laboratory (3 hours)—evening. *First half:* morphological crystallography and elementary aspects of optical crystallography with their application to the identification of minerals. *Second half:* optical mineralogy; identification of nonopaque minerals by use of the polarizing microscope. Prerequisite: Geology 1 and 12; Physics 11, 12, or permission of the instructor. Laboratory fee, $10 a semester.

115 *Petrography* (4) Carroll

Fall: lecture (2 hours), laboratory (4 hours)—evening. Megascopic and microscopic identification and classification of common rocks. Prerequisite: Geology 111-12. Laboratory fee, $10.

117 *Introduction to Petrology* (3) Carroll

1963–64 and alternate years: lecture (2 hours), laboratory (3 hours). Lectures on petrogenic theory; laboratory work on the diagnosis of rock genesis by polarizing microscopic determination of mineralogical and textural characteristics. Prerequisite: Geology 115. Laboratory fee, $10.

122 *Structural Geology* (3) Carroll

Spring: lecture (2 hours), laboratory and field trips as arranged—day. Genetic interpretation of geologic formations on the basis of their structures, with emphasis on applications to geological field work. Prerequisite: Geology 1-2; Physics 11, 12.

123 *Advanced Structural Geology* (3) The Staff

1963–64 and alternate years: lecture (1 hour), laboratory (4 hours). Introduction to specialized techniques of structural analysis, and to tectonic theory. Prerequisite: Geology 122. Recommended: Mechanical Engineering 10.

128 *Geomorphology* (3) Teleki

Lecture (2 hours), laboratory and field trips as arranged. 1962–63 and alternate years: spring—day. Nature and evolution of earth forms, interpretation of maps and aerial photographs. Prerequisite: Geology 107 or Geography 115–16.

142 *Economic Geology* (3) Teleki

1963–64 and alternate years: lecture (2 hours), laboratory and field trips as arranged. Genesis, distribution, mode of occurrence, and utilization of mineral raw materials. Mining industry in relation to economic life. Prerequisite: Geology 1, 12, 107. Laboratory fee, $10.

151–52 *Invertebrate Paleontology* (3–3) Teleki

Academic year: lecture (2 hours), laboratory (3 hours), field trips as arranged—day. Taxonomy of fossil invertebrates, development of phyla, paleoecology of invertebrate organisms. Prerequisite: Geology 1-2, 12. Laboratory fee, $8 a semester.

154 *Vertebrate Paleontology* (3) Hotton
Lecture (2 hours), laboratory or field as arranged. 1962–63 and alternate years: spring—evening. General features of vertebrate morphology and evolution as illustrated by the fossil record; problems of paleoecology and adaptation, where appropriate.

157 *Methods in Paleontology* (3) Sohn
1963–64 and alternate years. An introduction to the principles and techniques of paleontological research, including the rules of zoological nomenclature. Prerequisite: Geology 151–52.

166 *Stratigraphy* (4) Teleki
1963–64 and alternate years. Sedimentation, facies, evaluation of stratigraphic boundaries, principles of correlation, applied stratigraphic geology. *Prerequisite:* Geology 107, 115, 122.

173 *Regional Geology* (3) Carroll and Staff
1962–63 and alternate years: fall—day. Lecture and map work on the regional distribution of geological formations and structures. This course may be reelected for credit. Prerequisite: Geology 107, 122; Geography 51, or permission of the instructor.

THIRD GROUP

205–6 *Seminar* (3–3) The Staff
Academic year—as arranged. Special topics. Does not repeat itself and may be elected in successive years.

211 *X-ray Crystallography* (3) Christ
1962–63 and alternate years: fall—evening. The structure of crystals as determined by the X-ray method.

212 *Crystal Chemistry** (3) Evans
1962–63 and alternate years: spring—evening. Chemistry of the solid state. Bonding and coordination and the role of crystalline structure in chemistry and mineralogy.

241 *Geochemistry** (3) Fleischer
1963–64 and alternate years. Principles and theories on the abundance, relationships, and the distribution in the various rock and mineral species.

244 *Isotope Geology** (3) Friedman
1963–64 and alternate years. Investigation of geological phenomena by means of stable and unstable isotopes of elements and of changes in their abundance.

251–52 *Micropaleontology* (4–4) Sohn
Lecture (2 hours), laboratory as arranged. Not offered 1962–63. Identification with the binocular microscope of Ostracoda and other fossil micro-organisms. Micropaleontological techniques, paleontological research methods, taxonomy, and paleoecology. Age determination and correlation of stratigraphic units. Laboratory fee, $12 a semester.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged.

GERMANIC LANGUAGES AND LITERATURES†

Professors W. K. Legner *(Chairman)*, Gretchen Rogers
Associate Professor J. C. King
Assistant Professor H. D. Osterle
Associate Anne Cordero

* Prerequisite, an adequate background in physics and chemistry, to be determined in conference with the staff of instruction.

† The staff of instruction here listed is for the academic year 1961–62

First Group

1–2 *First-year German* (3–3) The Staff
A year course: credit is not given for the first half until the second half is completed. *First half:* fall—day and evening; spring—day; summer 1962. *Second half:* fall—day; spring—day and evening; summer 1962. The essentials of German grammar; translation of easy prose. Aural training, oral practice in electronic language workshop. Workshop fee, $6 a semester.

3–4 *Second-year German* (3–3) The Staff
A year course; credit is not given for the first half until the second half is completed. *First half:* fall—day and evening; spring—day; summer 1962. *Second half:* fall—day; spring—day and evening; summer 1962. Selections from modern German prose; continuation and review of grammar. Aural training, oral practice in electronic language workshop. Workshop fee, $6 a semester. Prerequisite: German 1-2 or two years of high school German.

9–10 *German Conversation and Composition* (3–3) Osterle
Academic year—day. Aural training, oral practice in electronic language workshop. Workshop fee, $6 a semester.

47 *Beginning German for Reading Examination Candidates* (0) The Staff
Fall—evening; spring—evening; summer 1962. Specifically for graduate students with little or no German, who are preparing for reading examinations. No academic credit. Tuition fee, $90.

49 *German Readings for Nonmajor Students* (3) The Staff
Fall—evening; spring—evening; summer 1962. Primarily for graduate students preparing for reading examinations. Undergraduates admitted with permission of the instructor. No academic credit for graduate students. Prerequisite: German 4 or 4F or the equivalent.

51–52 *Introduction to German Literature* (3–3) Osterle
Academic year—evening. Prerequisite: German 4 or the equivalent.

Second Group

103–4 *Goethe's "Faust"—Parts I and II* (3–3) Legner
1962-63 and alternate years: academic year—evening.

131–32 *German Literature of the Eighteenth Century* (3–3) Rogers
1963–64 and alternate years. The age of Lessing, Goethe, and Schiller.

141–42 *German Literature of the Nineteenth Century* (3–3) King
1963–64 and alternate years. Romanticism, Biedermeier period, Young Germany, Realism.

151–52 *German Literature of the Twentieth Century* (3–3) Rogers
1962-63 and alternate years: academic year—evening.

179–80 *Advanced Composition for Undergraduate and Graduate Majors* (1–1) King, Legner
Academic year—as arranged.

Third Group

201–2 *Middle High German* (3–3) Legner
1963–64 and alternate years.

205–6 *Gothic* (3–3) Legner
1962-63 and alternate years: academic year—day. Introduction to the comparative study of Germanic languages.

209–10 *Old High German* (3–3) King
1962-63 and alternate years: academic year—day.

213–14 *Old Norse* (3–3)
1963–64 and alternate years. Allee

219 *Teaching German in College* (3) The Staff
Fall—as arranged. Methodology, observation, and apprenticeship in college classes and the language workshop.

221–22 *General Linguistics; Comparative and Historical Indo-European Linguistics* (3–3) King
1963–64 and alternate years. *First half:* introduction to linguistics as a science. *Second half:* introduction to comparative and historical linguistics, with special reference to the Indo-European family.

223–24 *Linguistic Analysis of Modern German* (3–3)
1963–64 and every third year. Treatment of phonetics, phonemics, morphology, and syntax.

225–26 *Seminar: Linguistics* (3–3) King, Allee
1962–63 and every third year: academic year—day. Bibliography, methodology, readings, and research problems.

229 *German Literature of the Fifteenth and Sixteenth Centuries* (3) Legner
1963–64 and alternate years. Transition from chivalric to bourgeois literature. The eras of Humanism and the Reformation as reflected in the principal literary works.

230 *German Literature of the Seventeenth Century* (3) Legner
1963–64 and alternate years. Imitation of foreign models. The literary societies. Preciosity. The beginnings of realism in the novel. Pietism.

231–32 *German Classicism* (3–3) Rogers
1962–63 and alternate years: academic year—day. An advanced study and critique of the literature of the Goethezeit. Prerequisite: German 131–32 or the equivalent.

241–42 *Seminar: German Romanticism* (3–3) King
1962–63 and alternate years: academic year—evening. Treatment of individual writers, groups, motifs, and tendencies.

251–52 *Seminar: Studies in Twentieth Century German Literature* (3–3) Rogers
1963–64 and alternate years. Special projects in fiction, drama, poetry, and criticism.

261–62 *German-English and German-American Literary Relations and Interactions* (3–3) Osterle
Not offered 1962–63. Comparative study of major genres. Appraisal of influences.

271–72 *Seminar: German Literature* (3–3) Osterle
1962–63 and alternate years: academic year—day. Bibliography, methodology, readings, and research problems.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged. Required of all candidates for the Master's degree in German.

HISTORY*

Professors E. L. Kayser, Wood Gray, H. M. Merriman, R. H. Davison *(Chairman)*
Associate Professors W. C. Davis, R. B. Thompson, R. C. Haskett
Assistant Professor C. J. Herber
Instructor P. P. Hill

* The Staff of Instruction here listed is for the academic year 1961–62

First Group

39–40 *The Development of European Civilization* (3–3) Kayser, Herber
Academic year—day and evening; summer 1962. Primarily for freshmen. *First half:* the political, social, economic, and cultural history of the Old World from ancient times to 1715. *Second half:* from 1715 to the present.

71–72 *The Development of the Civilization of the United States* (3–3) Haskett, Hill
Academic year—day and evening; summer 1962. Primarily for sophomores. *First half:* the political, social, economic, and cultural forces of the United States in their world setting from 1492 to 1865. *Second half:* from 1865 to the present.

Second Group*

109–10 *Ancient History* (3–3) Kayser
Academic year—day. The political, social, and intellectual aspects will be considered. *First half:* the ancient Near East and Greece. *Second half:* Rome.

111–12 *Medieval History* (3–3) Kayser
Not offered 1962–63. The political, social, and intellectual aspects will be considered. *First half:* from the 4th to the 12th century. *Second half:* from the 13th through the 16th century.

130 *Nationalism* (3) Kayser
Summer 1962. The historical evolution of modern nationalism.

131–32 *History of Germany* (3–3) Herber
Academic year—day. The political, social, and cultural development of the German people. *First half:* from the Reformation to 1871. *Second half:* from 1871 to the present.

141–42 *History of France* (3–3) Herber
Not offered 1962–63. A survey of the political, social, and cultural history of France. *First half:* from earliest times to 1815. *Second half:* from 1815 to the present.

143 *History of Old Russia* (3) Thompson
Not offered 1962–63. The Slavic and Eurasian roots of Russian society and politics over a thousand-year period, 800–1800.

145–46 *History of Modern Russia* (3–3) Thompson
Academic year—day. The rise and fall of the revolutionary cycle. *First half:* Tsarist Russia in the Golden Age, 1800–1917. *Second half:* Soviet Russia and the politics of empire, since 1917.

147 *Economic History of Europe* (3) Gray
Not offered 1962–63. A survey from ancient times to the present day.

148 *Oversea Expansion of Europe* (3)
Not offered 1962–63. International rivalries and the impact of European civilization in Africa and the Pacific basin since 1500, with emphasis on the 19th and 20th centuries.

149–50 *European Diplomatic History* (3–3) Davison
First half: 1963–64 and alternate years. *Second half:* spring—day and evening; summer 1962. Background of the European state system and of diplomatic practices and relations since the Congress of Vienna, with emphasis on the policies and actions of the great powers and their statesmen. *First half:* to 1878. *Second half:* since 1878.

151–52 *English History* (3–3) Kenny†
Academic year—day. A general survey of the development of political, social, and economic institutions of lasting significance in the English speaking world. *First half:* to 1689. *Second half:* since 1689.

---

* History 39–40 is prerequisite to courses 109 through 152 and 190 through 196; History 71–72, to courses 170 through 184; either History 39–40 or 71–72, to courses 161 through 166.
† Appointment effective September 1962.

161 *Ancient Americans* (3) Davis
1962–63 and alternate years: fall—day. A study of the Maya, Aztec, Inca, and other early civilizations of North and South America.

162 *Iberian Background of Latin America* (3) Davis
Alternate spring and summer terms: spring—day; summer 1962. History of Spain and Portugal, with emphasis on developments leading to the rise and decline of the Spanish and Portuguese empires.

163 *Colonial Latin America* (3) Davis
Fall—evening. Political, economic, social, and institutional developments in Spanish and Portuguese America from the conquest through the wars of independence.

164 *South America since Independence* (3) Davis
Alternate spring and and summer terms: spring—evening; summer 1962. Development of the independent South American states in the 19th and 20th centuries.

166 *Mexico and the Caribbean since Independence* (3) Davis
Alternate spring and summer terms: summer 1963; spring 1964. A survey of the republics of Mexico, Central America, and the Caribbean islands.

170 *American Colonial History* (3) Haskett
Spring—evening. The settlement of the British colonies, the development of provincial institutions, and the emergence of an American civilization in the 17th and 18th centuries.

171–72 *Social History of the United States* (3–3) Gray
Academic year—evening; summer 1962—History 172 (3). Daily life, institutions, intellectual and artistic achievements of the Agrarian Era, 1607–1861; and the Urban-Industrial Era, 1861 to the present time.

173 *Representative Americans* (3) Gray
Spring—day; summer 1962. A biographical approach to national history. Some fifty significant and pivotal personalities in the development of the United States in government, business, science, religion, journalism, the arts, and social reform.

174 *Economic History of the United States* (3) Gray
Fall—day. Main trends in the development of American agriculture, industry, and trade since 1607, with their Old World backgrounds and in their world setting.

175–76 *Political and Constitutional History of the United States* (3–3) Haskett
Academic year—day; summer 1962—History 175 (3). *First half:* to the eve of the Civil War. *Second half:* the Civil War to 1940.

177 *The South* (3) Gray
Not offered 1962–63. Rise of the plantation system and slavery; the intersectional conflict; and the problems and progress of the New South.

178 *The West* (3)
Not offered 1962–63. The role of the frontier in American history.

181–82 *Diplomatic History of the United States* (3–3) Merriman, Hill
Academic year—day and evening; summer 1962—History 181 (3). Tendencies toward isolation, expansion, and collectivism; disputes with foreign countries and their settlement; and the activities of the American secretaries of state and diplomatic agents. *First half:* to 1898. *Second half:* since 1898.

183 *Oversea Expansion of the United States* (3) Merriman
Spring—day. The political, economic, social, and cultural life of our outlying possessions.

184 *Canada and the United States* (3) Merriman
Fall—day. The historical background and main trends in the relationship of the two English-speaking peoples of North America.

190 *History of India* (3) Thompson
Not offered 1962–63. The civilization of India and her neighbors from the beginnings to independence.

191–92 *Current History* (1–1)
Academic year—day. Contemporary events in their world setting.

193 *History of the Near East* (3) Davison
1962–63 and alternate years: fall 1962—day. The Byzantine, Arab, Persian, and Islamic backgrounds of Near Eastern history; the rise and decline of the Ottoman Empire; the action of European powers in the area; and the Ottoman breakup into the Turkish Republic and other successor states.

195–96 *History of the Far East* (3–3) Thompson
First half: not offered 1962–63. *Second half:* spring—day. *First half:* the civilization of China and Japan from the beginnings to 1600. *Second half:* the modern Far East under the impact of the West since 1600.

197–98 *Proseminar in Latin American Civilization* (3–3) Davis, Robb, Sammons
Academic year—as arranged. Reading course for coordination and review. Open only to majors in Latin American Civilization.

199–200 *Proseminar: Readings for the History Major* (3–3) Thompson
Academic year—evening. Limited to majors in History. Readings and discussions on main trends in the history of Western civilization, including representative selections from the classics of historical literature.

THIRD GROUP*

211–12 *Reading Course in Medieval History* (3–3) Herber
Academic year—day. Primarily for graduate students.

241–42 *Seminar in Modern European History* (3–3) Davison
Academic year—evening.

243 *Reading Course in Modern European History* (3) Thompson
Fall—as arranged. Primarily for graduate students.

246 *Seminar in Eurasian History* (3) Thompson
Spring—evening.

247 *Reading Course in Russian History* (3) Davison
Fall—evening. Primarily for graduate students.

249 *Seminar in European Diplomatic History* (3) Kenny
Fall—day.

251–52 *Seminar in English History* (3–3) Davis
Academic year—afternoon.

261–62 *Seminar in Latin American History* (3–3) Gray
1963–64 and alternate years.

271–72 *Seminar in the Social History of the United States* (3–3) Gray
Academic year—evening.

273–74 *Reading Course in American Economic and Social History* (3–3) Haskett
Academic year—as arranged. Primarily for graduate students.

275–76 *Seminar in American Political and Constitutional History* (3–3)
Academic year—evening.

* Approval of the instructor is required for registration in each third-group course.

277–78 *Reading Course in American Political and Constitutional History* (3–3) Haskett
First half: 1962–63 and alternate years—fall as arranged. *Second half:* 1963–64 and alternate years—fall as arranged. Primarily for graduate students.

281–82 *Seminar in the Diplomatic History of the United States* (3–3) Merriman
Academic year—day.

285–86 *Reading Course in American Diplomatic History* (3–3) Merriman
Academic year—evening. Primarily for graduate students.

291–92 *Seminar* (3–3) The Staff
Academic year—as arranged; summer 1962—History 291 (3). Prerequisite: approval of the Department.

294 *Seminar in the History of the Modern Near East* (3) Davison
Spring—evening.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged; summer 1962. Required of all candidates for the Master's degree specializing in history.

HOME ECONOMICS*

Professor Kathryn Towne *(Chairman)*
Associate Professorial Lecturer Mary Osterndorf

First Group

1 *Food Selection and Preparation* (3)
Not offered 1962–63. Composition, selection, and preparation of food; analysis of recipes; standard products; planning, preparing, serving, and estimating the cost of meals. Material fee, $18.

22 *Clothing: Its Selection, Cost, and Care* (3) Towne
Not offered 1962–63. Clothing selections—the economic, aesthetic, and hygienic aspects; the application of the principles of color and design to individual selection; the care of clothing.

51 *Family Meals* (3) Osterndorf
Fall—day. The choice, purchase, preparation, and service of foods; dietary standards, food habits, and the nutritional needs of the family; problems of purchasing, care, and use of food by the consumer. Material fee, $11.

53 *Family Health and Household Sanitation* (3) Towne
Spring—day. Home hygiene and home care of the sick; the principles of household sanitation in relation to health and diseases.

62 *Clothing Construction* (3) Towne
Not offered 1962–63. Simplified techniques and unit method of construction suitable for cotton, wool, silk, and man-made fibers; the use of commercial patterns and their alteration; the proper selection of color, design, and fabric. Material fee, $8.

66 *Fabric Decoration* (3) Towne
Lecture (1 hour), laboratory (4 hours). Not offered 1962–63. Original pattern and color combinations; application to a variety of hand methods of decorating fabrics for use as clothing, draperies, and upholstering; use of stencils, block and screen printing, and other simple equipment.

* The Staff of Instruction here listed is for the academic year 1961–62.

71 *Costume Design and Fashion Economics* (3) Towne
Not offered 1962–63. Factors determining fashions and effect on cost of clothing, problems of the consumer of textiles and clothing, historic costume and its relation to modern dress. Material fee, $8.

72 *Household Textiles* (3) Towne
Not offered 1962–63. Properties, uses, and tests of the different textile fibers and fabrics, and development of judgment and knowledge of standard for the consumer of clothing and house-furnishing material. Material fee, $8.

77 *Marketing* (3)
Not offered 1962–63. Purchasing of foods as it relates to the home and to the institution.

SECOND GROUP

102 *Advanced Food Preparation* (3) Osterndorf
Spring—day. The application of the fundamental processes of food preparation to a wider range of food materials and various services for different occasions. Material fee, $18.

106 *Quantity Cookery* (3)
Not offered 1962–63.

123 *Household Finance and Problems of the Consumer* (3) Towne
Not offered 1962–63. Economic problems of the family in modern industrial society, family income, income apportionment and household expenditures, laws affecting the home, investments, consumer buying.

143 *Advanced Clothing Construction* (3) Towne
Not offered 1962–63. Problems of clothing construction and flat pattern designing. Material fee, $8.

148 *Food Problems and Demonstration Methods* (3)
Not offered 1962–63. Factors affecting the preparation of standard products from the experimental viewpoint, principles of demonstration. Material fee, $18.

152 *Nutrition* (3)
Not offered 1962–63. Lecture course on the principles of normal and abnormal human nutrition. Laboratory work on the calculation and preparation of dietaries. Laboratory fee, $8.

154 *Diet Therapy* (3)
Not offered 1962–63. Study of nutrition as applied to diet and disease. Material fee, $8.

164 *Child Nutrition* (3) Osterndorf
Fall—day. Basic principles and practices in nutrition at infant, pre-school, and adolescent ages. Demonstration of nutritional and special food requirements.

168 *Institutional Management* (3)
Not offered 1962–63. Study of the organization, equipment, and marketing problems of institutions.

171 *House Furnishing* (3) Towne
Fall—day. Home planning from the historic, artistic, economic, and sanitary viewpoints; home furnishings such as linens, dishes, floor covering, mattresses, etc. Material fee, $5.

172 *Problems in Home Furnishings* (3) Towne
Lecture (1 hour), laboratory (4 hours). Not offered 1962–63. Workshop-type course in home furnishings, including upholstering, slip covering, refinishing furniture, and making draperies.

181 *The Child in the Home* (3)
Not offered 1962–63. Care and development of children, parent-child relationships.

192 *The Home, Its Management and Equipment* (3) Towne
Fall—day. Economic management of the home; distribution of time and energy; problems in the selection, arrangement, and care of equipment.

193 *Supervision of Home Management* (3) The Staff
As arranged. Field work under supervision. Designed to meet requirements of those preparing to teach in federally aided schools.

195 *Special Problems* (3) The Staff
Spring—day. Individual investigation or study under the guidance of a member of the Staff. Topic for 1962–63: tailoring.

197–98 *Proseminar* (3–3) The Staff
Academic year—evening. The study of the most recent materials and problems in the various phases of home economics.

JOURNALISM*

Professor R. P. Schlabach, Jr. *(Chairman)*
Associate Professor R. C. Willson
Lecturers F. L. Dennis, J. V. Hinkel, Louis Robinson, T. R. Smith

First Group

71–72 *Journalism in American Society* (3–3) Willson
Academic year—day and evening. Evolution of newspapers and other media in relation to political, social, and economic life; the concept of press freedom; problems of contemporary journalism.

Second Group

111 *Reporting* (3) Schlabach
Fall—day; spring—evening; summer 1962. Instruction and classroom practice in gathering, evaluating, and writing news; emphasis on newspapers, other media considered.

115 *Editing and Make-up* (3) Schlabach
Fall—evening; summer 1962. Editing of news and other material for publication, typography and display; use of pictures and other graphic presentations.

121 *Advanced Reporting: Magazine Feature Articles* (3) Willson
Spring—day; summer 1962. Instruction and practice in writing magazine articles, material for which is obtained through independent investigation.

133 *Advanced Reporting: Community News* (3) Schlabach
Fall—day. Instruction and practice in coverage and writing of local news.

137 *Advanced Reporting: National Affairs* (3)
Not offered 1962–63. Instruction and practice in coverage and writing of federal government news from the point of view of the press association.

140 *Pictorial Journalism* (3) Smith
Spring—evening. Photographic techniques affecting publication, the illustration and the story angle, standards of judgment in selection and use of pictures, captions, editing technique, cropping for effective reproduction.

142 *Retail Newspaper Advertising* (3) Robinson
Spring—evening. Retail newspaper advertising management, coordination of newspaper advertising with retail sales patterns, advertising readership, copy preparation, production methods.

* The Staff of Instruction here listed is for the academic year 1961–62.

143 *Industrial Communications* (3) Willson
Fall—evening. An introduction to the field of corporate journalism. Writing and editing the employee magazine. Preparation of annual reports. Editing stockholder publications, and external house organs.

144 *Advanced Reporting: the Arts and Sciences* (3) Willson
Not offered 1962–63. Instruction and practice in writing articles for publication in such fields as the arts, business and economics, science, and technology.

145 *Principles and Problems of Public Relations* (3) Hinkel
Fall—Saturday morning. Principles, problems, and ethics of public relations for government agencies, commercial establishments, educational and other public institutions. Case histories of successful programs.

151 *Editorial Writing* (3) Schlabach
Spring—day. Instruction and practice in writing of editorials on public affairs.

196 *Seminar* (3) Schlabach
Spring—as arranged. For Journalism majors only. Research in areas relating journalism to secondary fields of study.

198 *Law of the Press* (3) Dennis
Fall—Saturday morning. Freedom of the press, censorship, legislative controls, publications as contempt of court, copyright, news gathering agencies, labor law and the newspaper business, law of libel, privileged matter, fair comment on public characters, right of privacy.

MATHEMATICS*

Professors F. E. Johnston, Florence Mears, N. D. Nelson *(Chairman)*, T. P. G. Liverman, N. A. Wiegmann
Professorial Lecturers W. H. Marlow, D. M. Dribin, Thomas Saaty
Associate Professorial Lecturers Joseph Blum, P. A. Devore, J. P. Fennell
Assistant Professors W. A. Smith, R. Z. Vause, Hewitt Kenyon
Lecturers Mabel Morris, A. J. Ziffer, Howard Banilower, Jerome Deutschberger, R. F. Snyder, R. A. Welker

First Group†

3 *College Algebra* (3) The Staff
Fall—day and evening; spring—day and evening; summer 1962. Exponents and logarithms; linear equations; complex numbers; quadratic equations; introduction to theory of equations; mathematical induction and the binomial theorem; permutations, combinations, and probability; determinants; progressions. Prerequisite: one year each of high school algebra and high school geometry.

6 *Plane Trigonometry* (3) The Staff
Fall—day and evening; spring—day and evening; summer 1962. Prerequisite: two years of high school algebra and one year of high school geometry, or Mathematics 3 (or concurrent registration therefor).

9 *General Mathematics I* (3) The Staff
Fall—day; spring—evening; summer 1962 (offered as Mathematics 2). For those students in the School of Education or others electing Mathematics 9 and 10 as a terminal sequence in mathematics. Propositional logic and truth values; the num-

* The Staff of Instruction here listed is for the academic year 1961–62.

† No first-group course in mathematics is available for college credit if the student's previous training in mathematics meets the prerequisite for a higher numbered course.

ber system, number bases, arithmetical computation; algebraic functions; topics from plane geometry. Prerequisite: two years of high school mathematics. Not open to students who have had former Mathematics 2.

10 *General Mathematics II* (3) The Staff

Spring—day. An introduction to matrices and vector spaces; non-Euclidean geometry; introduction to concepts of the calculus. Prerequisite: Mathematics 9 or former 2.

12 *Analytic Geometry* (3) The Staff

(This course will be offered for the last time summer 1962.)

Summer 1962. Prerequisite: Mathematics 3 and 6, or two years of high school algebra, one year of high school geometry, and one-half year of high school trigonometry.

21 *Calculus I* (3) The Staff

Fall—day and evening; spring—day and evening. Elementary concepts of analytic geometry. Differentiation and integration of algebraic and trigonometric functions with applications. Prerequisite: Mathematics 3 and 6; or two years of high school algebra, one year of high school geometry, and one-half year of high school trigonometry; or the equivalent.

22 *Calculus II* (3) The Staff

Spring—day and evening. Differentiation and integration of transcendental functions and applications; conics; parametric equations; techniques of integration. Prerequisite: Mathematics 21.

23 *Calculus III* (3) The Staff

Spring—evening. Vector concepts; improper integrals; solid geometry; partial differentiation and applications. Prerequisite: Mathematics 22.

24 *Calculus IV* (3) The Staff

Offered 1963–64. Multiple integration with application; infinite series; differential equations. Prerequisite: Mathematics 23.

27 *Calculus I and II* (6) The Staff

The equivalent of Mathematics 21 and 22.

Fall—day and evening; spring—day.

28 *Calculus III and IV* (6) The Staff

The equivalent of Mathematics 23 and 24.

Spring—day.

29 *Calculus I* (3) The Staff

(This course is being offered for the last time summer 1962.)

Summer 1962. Differentiation and integration of algebraic and trigonometric functions with applications. Prerequisite or concurrent registration: Mathematics 12.

30 *Calculus II* (3) The Staff

(This course is being offered for the last time fall semester 1962–63.)

Fall—day and evening; summer 1962. Differentiation and integration of transcendental functions with applications, methods of integration, vectors and parametric equations. Prerequisite: Mathematics 12 and 29.

31 *Calculus III* (3) The Staff

(This course is being offered for the last time spring semester 1962–63.)

Fall—day and evening; spring—day and evening; summer 1962. Infinite series, partial differentiation, multiple integrals, solid geometry, improper integrals, and differential equations. Prerequisite: Mathematics 30 (or concurrent registration therefor).

Second Group*

101 *Introduction to Mathematical Logic* (3) Nelson

Fall—evening. Development of propositional and predicate calculi, basic semantic

* Mathematics 31 or 24 is prerequisite to all second-group courses.

concepts, elementary intuitive set theory, Boolean algebra. Prerequisite: Mathematics 31 or 24 or Philosophy 121.

102 *Fundamental Concepts of Mathematics* (3) — Nelson
Spring—evening. Axiomatic set theory, cardinal and ordinal arithmetic, foundations of the real number system. Prerequisite: Mathematics 101 or permission of the instructor.

106 *Topology for Undergraduates* (3) — Kenyon
1963–64 and alternate years.

111 *Mathematics for Engineers and Physicists I* (3) — The Staff
Fall—day and evening; spring—day and evening; summer 1962. Differential equations, vector analysis, introduction to matrix algebra. Prerequisite: Mathematics 31 or 24.

112 *Mathematics for Engineers and Physicists II* (3) — The Staff
Fall—day and evening; spring—day and evening; summer 1962. Topics from advanced calculus, partial differential equations, and complex variables. Prerequisite: Mathematics 111 or 132.

120 *Introduction to Theory of Numbers* (3) — Vause
1963–64 and alternate years.

122 *Introduction to Abstract Algebra* (3) — The Staff
Fall—evening.

123 *Theory of Equations* (3)
Not offered 1962–63.

124 *Introduction to Matrix Theory* (3) — The Staff
Fall—day; spring—evening; summer 1962. Elementary theory of finite vector spaces, determinants, equivalence, matrices with polynomial elements, similarity of matrices.

125 *Advanced Algebra* (3)
Not offered 1962–63.

126 *Advanced Analytic Geometry* (3)
Not offered 1962–63.

132 *Differential Equations* (3)
Not offered 1962–63.

134 *Introduction to Boundary Value Problems* (3) — The Staff
Spring—evening. Prerequisite: Mathematics 111, 132, or 142.

135 *Projective Geometry* (3) — The Staff
Fall—evening.

139 *Advanced Calculus I* (3) — The Staff
Fall—evening; spring—day; summer 1962. Limits, continuity, real number system, mean value theorems, partial differentiation, implicit function theorems, transformations, and mappings.

140 *Advanced Calculus II* (3) — Mears
Spring—evening. Vector fields, multiple integrals, line and surface integrals, point set theory, theory of integration, improper integrals. Prerequisite: Mathematics 139.

141 *Introduction to Infinite Series* (3) — Mears
Fall—evening.

142 *Theory of Differential Equations* (3)
Fall—evening. Prerequisite: Mathematics 139.

167 *Fourier Series and Spherical Harmonics* (3)
Not offered 1962–63. Prerequisite: Mathematics 111 or 132.

171 *Vector Analysis* (3) — The Staff
Fall—day; spring—evening.

THIRD GROUP

201–2 *Mathematical Logic* (3–3) — Nelson
1963–64 and alternate years.

220 *Theory of Numbers* (3) — Vause
1963–64 and alternate years.

237–38 *Theory of Functions of a Complex Variable* (3–3) — Johnston
A year course: credit is not given for the first half until the second half is completed.
1963–64 and alternate years.

242 *Infinite Series* (3) — Mears
Spring—evening.

243–44 *Numerical Analysis* (3–3) — Marlow
1963–64 and alternate years. Prerequisite: Mathematics 111, 132, or 142.

249 *Ordinary Differential Equations* (3)
Fall—evening.

250 *Integral Equations* (3)
Not offered 1962–63.

251–52 *Theory of Functions of a Real Variable* (3–3) — Liverman
A year course: credit is not given for the first half until the second half is completed.
Academic year—evening.

255 *Differential Geometry* (3)
Not offered 1962–63.

257 *Theory of Groups* (3) — Johnston
Fall—evening.

261 *Generalized Functions and Operational Methods* (3) — Liverman
1963–64 and alternate years. Theory of generalized functions in one variable. Operational calculus of generalized functions. Applications to differential equations and Fourier analysis. Prerequisite: Mathematics 140.

262 *Advanced Operational Methods* (3) — Liverman
1963–64 and alternate years. Generalized functions on test spaces of analytic functions. Operational calculus in several variables. Applications to partial differential and convolution equations of applied mathematics. Prerequisite: Mathematics 261.

265–66 *Modern Algebra* (3–3) — Wiegmann
Academic year—evening. Fundamental concepts of theory of groups, rings, and fields. Theory of finite fields, extension fields, Galois groups, factorization theory in Gaussian domains, and groups with operators.

267 *Topics in Matrix Theory* (3) — Wiegmann
Not offered 1962–63. Theory of linear transformations (vector spaces over a division ring), advanced classical theory, matrix representation of groups and rings, special topics as time allows. Prerequisite: Mathematics 124 and an elementary knowledge of groups, rings, and fields.

268 *Calculus of Variations* (3)
Not offered 1962–63.

270 *Tensor Analysis* (3)
Not offered 1962–63.

272 *Hilbert Space* (3)
Spring—evening.

277 *Partial Differential Equations* (3)
Spring—evening.

281–82 *Introduction to Topology* (3–3) Kenyon
Academic year—evening.

295–96 *Reading and Research* (3–3) The Staff
Academic year—as arranged; summer 1962.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged; summer 1962.

MICROBIOLOGY*

Professors R. G. Beachley *(Emeritus)*, A. M. Griffin, Mary Robbins *(Acting Chairman)*, R. C. Parlett
Clinical Professor Murray Grant
Associate Professor Rudolph Hugh
Assistant Professor R. C. Wood
Clinical Instructor A. H. Traum
Associates W. D. Hann, G. B. Pelleu, Jr.

Special Lecturers L. S. Baron, R. C. Cook, C. W. Emmons, F. B. Gordon, Leon Jacobs, M. C. Leikind, J. D. MacLennan, H. J. Magnuson, W. J. Peeples, G. O. Pierce

112 *General Microbiology* (4) Hugh
Spring—Mon., Wed., and Fri., 9:10 to 12:00 A.M. For nonmedical students. A study of the fundamentals of bacteriology, including hygienic applications. Methods of cultivation and control of several groups of microorganisms are studied in the laboratory. Prerequisite: any biological laboratory science; Chemistry 11–12. Laboratory fee, $13.

209 *Medical Microbiology* (1 to 11) The Staff
Fall: lecture (4 hours), laboratory (10 hours)—as arranged. Bacteria, rickettsiae, viruses, yeasts, molds, protozoa, and metazoa which relate to the health and diseases of man—cultural study of most important forms; methods of diagnosis by microscopic, cultural, immunologic, and animal reactions; theory and methods of immunology; vaccines; serums; antibiotics. Open to suitably prepared graduate students; may be elected as a whole or in part by adding the appropriate letter to the course number, with credit allocated as follows: (a) *Bacteriology*, including rickettsiae and viruses—lecture (4), laboratory (3); (b) *Parasitology*, including medical mycology—lecture (2), laboratory (1); (c) *Immunology* (1). May be taken by a limited number of candidates for Master's degrees. Laboratory fee, $4.50 for each semester hour of laboratory work.

210 *Fundamentals of Epidemiology and Preventive Medicine* (2) Grant
Spring—Mon., 2:00 to 4:00 P.M. Sources, modes, and implications of infection and injury. Consideration also given the problem of accidents and industrial medicine. Open to liberal arts graduate students. Prerequisite: Microbiology 112 or 209.

219–20 *Advanced Microbiology* (arr.) Hugh and Staff
Academic year—as arranged. Special study of advanced methods and current problems in microbiology for suitably qualified students specializing in microbiology. Prerequisite: Microbiology 112 or 209; Chemistry 151–52 or the equivalent; permission of the instructor. Laboratory fee, $4.50 a semester hour.

* The Staff of Instruction here listed is for the academic year 1961–62.

225 *Bacterial Chemistry and Physiology* (2) **Wood**
1963–64 and alternate years: fall—as arranged. A lecture course in those areas of biochemistry peculiar to Class Schizomycetes, including discussion of the use of bacteria in the elucidation of biochemical problems. Prerequisite: Biochemistry 221–22 or the equivalent. A course in microbiology is recommended but is not essential.

232 *Immunological Methods* (3) **The Staff**
1962–63 and alternate years: spring—as arranged. Preparation and testing of serological materials. Demonstration of basic serological phenomena. For graduate students. Prerequisite: Microbiology 112 or 209 and permission of the instructor. Laboratory fee, $11.

234 *Virology* (6) **Robbins**
1963–64 and alternate years: spring—as arranged. Study of viruses and rickettsiae. Lectures and laboratory exercises. For graduate students. Prerequisite: Microbiology 112 or 209 and permission of the instructor. Laboratory fee, $16.

240 *Advanced Epidemiology* (3) **The Staff**
Spring—as arranged. Conferences, readings, and problems for graduate students dealing with specialized and advanced phases of the topics presented in Microbiology 210. Prerequisite: Microbiology 210.

249–50 *Introduction to Medical Research** (3–3) **The Staff**
Academic year—Wed., 1:00 to 6:00 P.M. Primarily for graduate students. A comprehensive introduction to the major medical research techniques—statistical, physical, chemical, electrical, and radioisotopic—as applied to biological materials in the medical sciences. Laboratory fee, $7.50 a semester.

293–94 *Staff Seminar* (1–1) **The Staff**
Academic year as arranged. For graduate students. Bi-weekly throughout the year.

295–96 *Research in Microbiology* (arr.) **The Staff**
Academic year—as arranged.

299–300 *Thesis* (3–3) **The Staff**

PATHOLOGY†

Professors T. M. Peery *(Chairman)*, W. R. Duryee *(Research)*
Clinical Professor D. L. Weiss
Associate Professors F. N. Miller, Jr., William Newman, W. L. Marsh
Assistant Professors Lois Platt *(Cytology)*, Alexander Breslow, John Culberson

SPECIAL STAFF FOR DEMONSTRATIONS

Associate Clinical Professors J. S. Howe, E. F. Geever, R. G. Gottschalk
Assistant Clinical Professors R. E. Palmer, W. F. Enos, Cornelia Hoch-Ligeti
Associates L. E. Zimmerman, L. W. Fix, C. B. Cook
Clinical Instructors D. R. Parkinson, I. D. Godwin

Special Lecturers E. B. Helwig, L. C. Johnson

115–16 *Introduction to Medical Science* (1–1) **Marsh and Staff**
Academic year—1 hour a week. For students in medical technology at the University Hospital. These lectures, based upon physiology, pathology, and medicine, provide a background for the interpretation of laboratory data.

* This is an interdepartmental course. The student should register in the department directing his research.
† The Staff of Instruction here listed is for the academic year 1961–62.

117–18 *Principles in Medical Technology* (4–4) Marsh and Staff
Academic year—4 hours a week. For students in medical technology at the University Hospital. Theories, principles, and sources of error, of the methods used in clinical chemistry, clinical bacteriology, serology, hematology, and clinical microscopy.

119–20 *Medical Technology Laboratory* (10–10) Marsh and Staff
30 hours a week for 50 weeks. Practice and experience by rotation through the various divisions of the Pathology laboratories of the University Hospital, as follows: hematology and urinalysis, 12 weeks; chemistry, 12 weeks; bacteriology and parasitology, 10 weeks; blood bank, 8 weeks; serology, 4 weeks; tissue pathology, 4 weeks.

281 *Problems in Experimental Cellular Pathology* (1) Duryee
Fall—1 hour a week as arranged. For nonmedical graduate students. Also for a limited number of specially qualified medical students on an elective basis. Cytological and biophysical aspects of cellular function in relation to normal and selected pathological conditions.

PHARMACOLOGY*

Professor H. G. Mandel *(Chairman)*
Clinical Professor R. G. Smith
Professorial Lecturer B. B. Brodie
Associate Professor Clarke Davison
Assistant Professors V. H. Cohn, Jr., T. M. Farber, Paul Mazel, Melvin Reich *(Research)*, J. F. Henderson *(Research)*, George Fiala *(Research)*, Elizabeth Tidball *(Research)*

249–50 *Introduction to Medical Research*† (3–3) The Staff
Academic year—Wed., 1:00 to 6:00 P.M. Primarily for graduate students. A comprehensive introduction to the major medical research techniques—statistical, physical, chemical, electrical, and radioisotopic—as applied to biological materials in the medical sciences. Laboratory fee, $7.50 a semester.

261 *Pharmacology* (5) The Staff
Fall—5 hours a week. Lectures and conferences concerning the interaction of drugs and biological systems as a basis for the rational therapy of disease. Open to qualified nonmedical students.

262 *Pharmacology* (1) The Staff
Spring—1 hour a week. Continuation of Pharmacology 261. Pharmacological uses of normal body constituents.

263 *Pharmacology Laboratory* (1) The Staff
Fall—3 hours a week. Laboratory instruction and demonstrations designed to complement Pharmacology 261. Open to qualified nonmedical students.

267–68 *Pharmacological Research* (arr.) The Staff
Academic year—as arranged. Primarily for those properly qualified graduate and medical students seeking careers in pharmacology.

269–70 *Pharmacology Seminar* (1–1) The Staff
Academic year—2 hours a week. Recent advances in pharmacology. For those interested in pharmacological research. Open to qualified nonmedical students.

279–80 *Mechanism of Drug Action* (1–1) The Staff
Academic year—as arranged. A course to familiarize the student with advances

* The Staff of Instruction here listed is for the academic year 1961–62.
† An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.

biochemical, microbiological, and physiological methods employed in pharmacological investigations. Open to qualified nonmedical students.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged. Required of Master of Arts and Master of Science candidates.

PHARMACY*

Professors C. W. Blivent, R. M. Leonard *(Acting Chairman)*
Associate Professors C. J. Kokoski, S. M. Schwartz, F. D. Cooper
Assistant Professor G. G. Koustenis

Special Lecturers W. S. Apple, G. F. Archambault, Karl Bambach, W. P. Briggs, C. J. Carr, E. G. Feldmann, D. L. Finucane, L. E. Kazin, Henry Miller, M. L. Yakowitz

Second Group

100 *Introductory Pharmacy* (1) The Staff
Fall: lecture and field trips—day. Introduction to pharmacy through the study of professional areas in which pharmacists are employed. Field trips include visits to representative retail and hospital pharmacies, wholesale drug houses, and museums.

101 *Inorganic Pharmaceutical Chemistry* (3) Schwartz
Fall: lecture (2 hours), laboratory (3 hours)—day. A study of the occurrence, methods of preparation, properties and uses of the important inorganic chemicals encountered in pharmacy and medicine. Prerequisite: Chemistry 21. Laboratory fee, $11.

102 *Dispensing Pharmacy* (4) Kokoski, Koustenis
Fall: lecture (2 hours), laboratory (6 hours)—day. Compounding of typical prescriptions and a study of incompatibilities. Prerequisite: Pharmacy 110, 111, 122. Laboratory fee, $18.

103 *Dispensing Pharmacy* (4) Kokoski, Koustenis
Spring: lecture (2 hours), laboratory (6 hours)—day. Continuation of Pharmacy 102. Laboratory fee, $18.

107 *Pharmacy Accounting* (3) Koustenis
Fall—day. The financial records required in the operation of a pharmacy.

109 *First Aid* (1)
Fall—day. Standard course in first aid methods and practice.

110 *Organic Pharmaceutical Chemistry* (3) Schwartz
Fall—day. A survey of important synthetic and naturally occurring medicinal agents in current use with emphasis on nomenclature, isolation or synthesis, properties, and structure-action relationship. Prerequisite: Chemistry 152.

111 *Organic Pharmaceutical Chemistry* (3) Schwartz
Spring—day. Continuation of Pharmacy 110. Prerequisite: Pharmacy 110.

112 *Physical Pharmacy* (4) Schwartz
Spring: lecture (3 hours), laboratory (3 hours)—day. Physicochemical principles and laws as they apply to pharmaceutical systems and preparations. Prerequisite: Pharmacy 101 and 110; concurrent registration: Pharmacy 111. Laboratory fee, $11.

* The Staff of Instruction here listed is for the academic year 1961–62.
† On leave of absence 1961–62.

113 *Organic Pharmaceutical Chemistry* (1) Schwartz
Laboratory (3 hours). Fall—day; spring—day. Preparation of selected official organic drugs. Prerequisite: Pharmacy 110. Prerequisite or concurrent registration: Pharmacy 111. Laboratory fee, $11.

115 *History of Pharmacy* (3) Bliven
Fall—day. Historical development of the profession, including the literature, from ancient times to the present.

121–22 *General Pharmacy* (4–4) Kokoski, Cooper, Schwartz
First half: fall—lecture (3 hours), laboratory (3 hours)—day. *Second half:* spring—lecture (2 hours), laboratory (6 hours)—day. Essential pharmaceutical processes; theory and manufacture of pharmacopeial and formulary galenical preparations; pharmaceutical usage of certain classes of substances and preparations. Laboratory fee: Pharmacy 121, $11; Pharmacy 122, $18.

125 *Pharmaceutical Calculations* (3) Kokoski
Fall—day. Systems of weights and measures and their application in the practice of pharmacy.

126 *Pharmacognosy* (3) Leonard
Fall: lecture (2 hours), laboratory (3 hours)—day. Practices and procedures for the production, preservation, protection, and evaluation of crude drugs; biosynthetic origin of drugs and pharmaceuticals, representative examples, and their value in pharmacy and medicine. Prerequisite: Biology 1–2*; Chemistry 151–52. Laboratory fee, $11.

127 *Pharmacognosy* (3) Leonard
Spring—day. Antibiotics, immunologic agents, allergens, hormones, vitamins, and pesticides. Prerequisite or concurrent registration: Microbiology 112; Physiology 137.

164 *Introduction to Pharmacology* (3) Leonard
(This course is being offered for the last time spring semester 1963.)
Spring—day. Limited to transfer students enrolled in the five-year program prior to the offering of Physiology 137, 160, and 170. Historical development, literature, and general principles of pharmacology; general anatomical, physiological, and pharmacological considerations of the autonomic, central, and somatic nervous systems; cardiovascular, gastrointestinal, and genitourinary systems; skin and mucous membranes. Prerequisite: Physiology 115; Biology 2†. Prerequisite or concurrent registration: Biochemistry 221–22.

165–66 *Pharmacology* (4–4) Leonard
First half: fall—lecture (4 hours), day. *Second half:* spring—lecture (3 hours), laboratory (4 hours), day. Drugs acting on the autonomic, central, and somatic nervous systems; cardiovascular, hematopoietic, genitourinary, endocrine, and digestive systems; histamine and antihistaminics; anti-infective agents; miscellaneous drugs; and their major clinical indications or therapeutic uses. Prerequisite: Biology 2†; Physiology 137 and 160 or 170; Microbiology 112; Biochemistry 221–22. Pharmacy 166: laboratory fee, $18.
For students in the four-year program who have completed Pharmacy 105 and 106 and those in the five-year program taking Pharmacy 164, Pharmacy 165 is a three-credit course. Pharmacy 166 is a three-credit course (lecture—2 hours, laboratory—4 hours). Biochemistry 221–22 is taken concurrently with Pharmacy 165–66.

167–68 *Pharmacology III* (3–3) Leonard
Not offered 1962–63. Laboratory work in pharmacological technique. Prerequisite or concurrent registration: Pharmacy 165. Laboratory fee, $18 a semester.

172 *Advanced Dispensing Pharmacy* (3) Kokoski
Spring—day. The study of special problems in dispensing pharmacy. Prerequisite: Pharmacy 103. Laboratory fee, $18.

* An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.
† Offered by the department of Zoology.

174 *Quantitative Pharmaceutical Analysis* (3) **Bliven, Schwartz**
Spring: lecture (1 hour), laboratory (6 hours)—day. Drug analysis. Prerequisite: Chemistry 22. Laboratory fee, $18.

176 *Pharmaceutical Law* (3) **Frailey**
Spring—day. Students in the four-year program receive 2 semester hours of credit.

178 *Pharmacy Management* (3) **Koustenis**
Spring—day. Policies and operations relating to the management of pharmacy. Students in the four-year program attend 4 hours of lecture and receive 4 semester hours of credit.

184 *Special Problems in Pharmacy* (arr.) **Kokoski, Schwartz**
Fall—as arranged; spring—as arranged. Directed laboratory and library research on special problems in pharmacy and pharmaceutical chemistry. For selected undergraduate students. Prerequisite: Pharmacy 102 and 110. Fees to be arranged.

188 *Survey* (1) **Leonard and Staff**
Spring—day. A symposium covering the various phases of pharmacy.

190 *Hospital Pharmacy* (1) **Cooper**
Spring—day. Organization and functions of hospitals; organization and operation of a hospital pharmacy; professional and sickroom supplies. Prerequisite: Pharmacy 102.

192 *Hospital Pharmacy: Prescription Practice* (1) **Cooper and Staff**
Fall—as arranged; spring—as arranged; summer 1962. Prescription practice in the University Hospital Pharmacy. Prerequisite: Pharmacy 102.

194 *Manufacturing Pharmacy* (3) **Cooper and Staff**
Lecture (1 hour), laboratory (6 hours). Fall—as arranged; spring—as arranged. The manufacture of bulk pharmaceuticals in the University Hospital Pharmacy. Elective for seniors.

PHILOSOPHY*

Professor C. E. Gauss *(Chairman)*
Associate Professor R. H. Schlagel
Lecturer C. H. Pfuntner

First Group

51–52 *Introduction to Philosophy* (3–3) **The Staff**
Academic year—day and evening; summer 1962—Philosophy 51 (3). A critical introduction to the problems of modern philosophy in relation to scientific and social developments since the Renaissance. This course is not merely intended as an introduction to those courses in philosophy which follow but is a unit complete in itself for those students in other departments interested in the problems of philosophy relevant to modern thought.

Second Group

101 *Philosophic Problems in Living Issues* (1) **Gauss**
Not offered 1962–63. Selected public issues used as the basis for demonstrating the methods and relevance of philosophical analysis. This course may be reelected for credit once only.

111–12 *History of Philosophy* (3–3) **Pfuntner**
Academic year—evening. The history of western philosophy from early Greece to Kant, seen as the development and modification of the Hellenic cultural pattern.

* The Staff of Instruction here listed is for the academic year 1961–62.

113 *History of Nineteenth and Twentieth Century Philosophy* (3) Pfuntner
Fall—evening. European philosophy from the time of Kant. "Isms" and ideologies at the root of contemporary thought.

121–22 *Logic and Scientific Method* (3–3) Gauss
Academic year—day. *First half:* the elementary principles of valid reasoning with emphasis on developing skill in using these principles, introductory consideration of symbolic logic, the nature of a formal system. *Second half:* general analysis of the methods of investigation and reasoning used in the natural and social sciences, procedures and requirements of definition, classification and sorting, analogical and inductive inference, causal determination, the nature and function of hypothesis, measurement, principles of the theory of probability.

131 *Ethics* (3) Schlagel
Fall—evening. A critical examination of traditional ethical theories from Plato to Ayer. Consideration of the theoretical problems of ethics: the meaning of "good", the nature of ethical judgment, the justification of ethical standards. The course aims at enabling the student to develop his own ethical view as a consequence of his greater understanding of moral phenomena.

142 *Philosophies Men Live by* (3) Schlagel
Spring—evening. Critique of the tenets, methodologies, and presuppositions of current, vital philosophical orientations: Existentialism, Positivism, Pragmatic Naturalism, Theism, Linguistic Analysis. A critique of reason and faith, and the nonrational aspects of man as guiding influences in life.

151 *The Philosophy of Science* (3) Schlagel
Fall—day. Brief history of modern science; problems of the meaning of causality, the justification of induction, theories of probability; the nature of scientific explanation and the status of inferred entities; the nature of a mathematical system. Consideration of the philosophic import of certain scientific theories such as Einstein's theory of relativity, Heisenberg's principle of indeterminacy, and Bohr's principle of complementarity.

152 *Epistemology* (3) Schlagel
Spring—day. The meaning and criteria of truth; the meaning and cognitive significance of common sense, scientific, and religious propositions or beliefs. Study of problems related to perception, verification, universals, *a priori* and *a posteriori* knowledge, the concept of mind.

162 *Aesthetics* (3) Gauss
Spring—day. The nature of aesthetic experience, problems of appreciation and judgment in the arts, and of the theories and process of artistic creation. Emphasis on contemporary arts and criticism.

172 *American Philosophy* (3) Pfuntner
Spring—evening; summer 1962. The philosophies of Peirce, Royce, James, Dewey, and Santayana as representative of American thought.

180 *Philosophy of History* (3) Gauss
Fall—day. Problems of historical knowledge and explanation. Critique of philosophies of history.

193 *Topics in Contemporary Philosophy* (3) Gauss
Summer 1962. Intensive study of one selected topic in contemporary philosophic literature.

199–200 *Proseminar: Readings for the Major* (3–3) Schlagel
Academic year—as arranged. Conferences and group discussions in preparation for field-of-study major examination.

THIRD GROUP

201–2 *Readings and Research* (3–3) The Staff
Academic year—as arranged. Advanced readings and reports. Investigation of special problems.

211 *Seminar in Plato* (3) Gauss
Spring—as arranged. Intensive study of Plato's later dialogues.

212 *Seminar in Aristotle* (3) Schlagel
Not offered 1962–63. Aristotle's logic, metaphysics, and philosophy of science.

216 *Seminar in Kant* (3) Schlagel
Not offered 1962–63. A study of one of Kant's Critiques.

262 *Seminar in Aesthetics* (3) Gauss
Not offered 1962–63. Intensive study in selected problems in the philosophy of art.

299–300 *Thesis* (3–3) The Staff

Related Courses in Other Departments

Classical Languages and Literatures 71–72, *Greek and Roman Backgrounds in Literature* (3–3)

Mathematics 101, *Introduction to Mathematical Logic* (3)

PHYSICAL EDUCATION FOR MEN*

Professors W. H. Myers, J. H. Krupa *(Chairman)*, R. G. Hanken, V. J. DeAngelis
Lecturers Pat Abernethy, W. D. Thompson

Associates W. J. Reinhart, J. V. Camp

First Group

1-2 *Freshman Physical Education* (1–1) The Staff
Academic year—as arranged. Two periods of supervised activity a week. Locker and towel fee,† $4.50 a semester.

11–12 *Sophomore Physical Education* (1–1) The Staff
Academic year—as arranged. Two periods of supervised activity a week. Locker and towel fee,† $4.50 a semester.

41 *Personal Health* (1) Krupa
Spring—day. Physical, mental, and social health of the individual—understanding, significance, and promotion. Emphasis on personal health knowledges for the future teacher.

43–44 *Techniques of Physical Education Motor Activities* (2–2) DeAngelis, Krupa
Academic year—day. Fundamental skills, rules, and organization. Locker and towel fee,† $4.50 a semester.

45–46 *Teaching Individual and Dual Sports in Secondary Schools* (2–2) Hanken, Krupa
Academic year—day. Tennis, golf, swimming, wrestling, badminton, bowling. Locker and towel fee,† $4.50 a semester.

* The University is not responsible for injuries received in intercollegiate or intramural games, or in any of the activities of the department of Physical Education, and the student assumes full responsibility therefor.
The staff of Instruction here listed is for the academic year 1961-62.
† The locker and towel fee is required for registration in one or more of the activity courses.

47 *Introduction to Physical Education* (2) Myers
Fall—day. An orientation course presenting the problems of physical education, vocational analysis, scientific foundations, and scope of field.

48 *Introduction to Recreation* (2) Hanken
Spring—day. The role of recreation in modern living; current practices in community recreation work; standards of training, experience, and salary; types of leadership.

49 *Human Anatomy* (3) Stallings
Fall—day. The structure of the human body. Basic course for physical education majors. Also open to both men and women not majoring in Physical Education. Prerequisite: Biology 1–2.†

50 *Kinesiology* (3) Lawrence
Spring—day. A study of the anatomical mechanism of movement, analysis of the action of muscles in physical education activities. Prerequisite: an approved course in anatomy.

58 *First Aid and Care of Athletic Injuries* (2) DeAngelis
Spring—day. Prevention and emergency care of injuries of all types, with special reference to first aid, civil defense, bandaging, and massage. Prerequisite: Biology 1–2.†

SECOND GROUP

101 *Physical Education in the Elementary School* (3) Burtner, Snodgrass
Fall—day; spring—evening. Physical growth and development of the child and adolescent. Survey of age characteristics and organization of physical education activities for the various age levels in elementary school, playground, and settlement house programs. Methods and materials of tumbling, games, dance, and self-testing activities.

103 *History and Principles of Physical Education* (3) Myers, Stallings
Fall—day. Survey of history as it relates to contemporary physical education. Study of aims, objectives, and philosophy of physical education.

105–6 *Adapted Physical Education and Physical Examinations* (3–3) Lawrence
Academic year—day. Cause and correction of faulty body mechanics, physical examination methods for the diagnosis of postural defects, prescription of exercises, and program adaptation. Prerequisite: Physical Education 49 and 50.

107 *Teaching Recreational Dance* (1 to 2) Burtner
Fall—day. Methods and materials for teaching the country and social dances of America and the folk dances of other countries to secondary school age and adult groups. Square-dance calling is included. Locker and towel fee,* $4.50.

109–10 *Leadership Organization in the Intramural Program* (2–2) DeAngelis
Academic year—day. Principles of administration, organization, and supervision of intramural activities in the physical education program of the junior high school, senior high school, and college.

113–14 *Practice in Teaching Physical Education Activities* (2 to 4–2 to 4) Hanken and Staff
Academic year—day. Principles and methods applied to learning and teaching physical education activities. Supervised laboratory. Locker and towel fee,* $4.50 a semester.

115–16 *Teaching Team Sports in Secondary Schools* (2 to 4–2 to 4) DeAngelis, Hanken
Academic year—day. Football, basketball, baseball, track and field. Locker and towel fee,* $4.50 a semester.

* The locker and towel fee is required for registration in one or more of the activity courses.
† An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.

117 *Teaching Modern Dance* (1 to 2) Burtner
1962–63 and alternate years: fall—day. Techniques for the teaching of movement as a medium of expression. Practical work in body technique, composition, and the analysis of accompaniment for dance including instrumental, voice, and percussion. Application is made to both secondary school and adult age levels. Locker and towel fee,* $4.50.

118 *Dance Production* (1 to 2) Burtner
1962–63 and alternate years: spring—day. Planning and staging of performances for demonstrations, dance concerts, and folk festivals. Lighting, costuming, sets, and make-up. Choreography for concerts, musicals, and plays for students taking course for two credits. Locker and towel fee,* $4.50.

121 *School and Community Health Programs* (3) Krupa
Fall—evening. Health services, healthful environment, health instruction, sources of material for general health knowledge. Prerequisite: Biology 1–2.†

122 *Methods and Materials for Health Education* (3) Stallings
Spring—evening. Methods and materials for teaching health at each age level. Prerequisite: Biology 1–2.†

131 *Tests and and Measurements in Physical Education* (3) Krupa
Fall—day. Critical survey of tests in physical activities, methods of test construction, elementary statistics.

132 *Camp Leadership* (1 to 2) Stallings
Spring—day. Philosophy and techniques of camp counseling; survey of organization and programs including outdoor education. Also open to both men and women not majoring in Physical Education.

136 *Survey of Dance History and Dance Forms* (3) Burtner
1963–64 and alternate years: spring—as arranged. The development of dance from primitive ritual to present day recreational and art forms of the dance. Includes ethnology, dance, practice and discussion of fundamental movement techniques, and composition.

138 *Organization and Administration of Physical Education* (3) Krupa
Spring—evening. Organization and administration of physical education programs in elementary and secondary schools and in colleges. Study of plants, fields, equipment, and programs.

151–52 *Recreational Leadership Activities* (1 to 3–1 to 3) Abernethy
1963–64 and alternate years: academic year—evening. Fall semester: basic skills for the preschool and school-age child. Laboratory practice in crafts, music, dramatics, physical and social activities. Spring semester: basic skills for the teen-age and adult. Arts and crafts, dramatics, physical and social activities.

161 *Community Organization for Recreation* (3) Thompson
1962–63 and alternate years: fall—evening. Resources, principles, and methods in organizing community recreation services.

162 *Administration of Community Recreation Programs* (3) Thompson
1963–64 and alternate years: spring—evening. Factors and problems in administering recreation including surveys, legislation, program, area, facilities, leadership, finance, and public relations.

* The locker and towel fee is required for registration in one or more of the activity courses.
† An interdepartmental course offered by the departments of Botany and Zoology. Students may receive credit in either department.

PHYSICAL EDUCATION FOR WOMEN*

Professors Helen Lawrence, Elizabeth Burtner
Associate Professor Loretta Stallings *(Chairman)*
Assistant Professors Lyndale George, Jeanne Snodgrass, Connie Vaughan, Anne Ingram
Lecturers Pat Abernethy, W. D. Thompson
Instructor Donna Abbey
Associate Mabel McEwan

First Group

1–2 *Freshman Physical Education* (1–1) The Staff

Academic year—day. One period of fundamentals of health and physical education and two periods a week chosen from the activities offered each semester.

Fundamentals of health and physical education: one semester on study of the factors involved in the general maintenance of health, efficient use of the body, and fundamentals of movement; one semester on fundamentals of dance.

Activities: badminton, basketball, body mechanics, field hockey, recreational dance, golf, fencing, modern dance, riding, skating, swimming, synchronized swimming, tennis, softball, lifesaving. Locker and towel fee,† $4.50 a semester.

11–12 *Sophomore Physical Education* (1–1) The Staff

Academic year—day. Two periods a week chosen from the activities offered each semester as listed under Physical Education 1–2. Locker and towel fee,* $4.50 a semester.

43–44 *Techniques of Physical Education Motor Activities* (2–2) The Staff

Academic year—as arranged. Fundamental skills, rules, and organization. Locker and towel, fee,† $4.50 a semester.

49 *Human Anatomy* (3) Stallings

Fall—day. The structure of the human body. Basic course for physical education majors. Also open to both men and women not majoring in Physical Education. Prerequisite: Biology 1–2‡

50 *Kinesiology* (3) Lawrence

Spring—day. A study of the anatomical mechanism of movement, analysis of the action of muscles in physical education activities. Prerequisite: an approved course in anatomy.

51–52 *Teaching Physical Education Activities* (2–2) The Staff

1963–64 and alternate years: academic year—day. Team sports: basketball, hockey, softball, soccer, speedball. Individual and dual sports: tennis, badminton, archery, swimming and diving, lifesaving and water safety. Gymnastics: tumbling apparatus and trampoline. Locker and towel fee,† $4.50 a semester.

58 *First Aid and Care of Athletic Injuries* (2) DeAngelis

Spring—day. Prevention and emergency care of injuries of all types, with special reference to first aid, civil defense, bandaging, and massage. Prerequisite: Biology 1–2‡

Second Group

101 *Physical Education in the Elementary School* (3) Burtner, Snodgrass

Fall—day; spring—evening. Physical growth and development of the child and adolescent. Survey of age characteristics and organization of physical education activ-

1963–64 and alternate years: spring—as arranged. The development of dance from primitive ritual to present day recreational and art forms of the dance. Includes ethnologic dance, practice and discussion of fundamental movement techniques, and composition.

138 *Organization and Administration of Physical Education* (3) Stallings
Spring—as arranged. Organization and administration of physical education programs in elementary and secondary schools and in colleges. Study of plants, fields, equipment, and programs.

151–52 *Recreational Leadership Activities* (3–3) Abernethy
1963–64 and alternate years: academic year—evening. Fall semester: basic skills for the preschool and school-age child. Laboratory practice in crafts, music, dramatics, physical and social activities. Spring semester: basic skills for the teen-age and adult. Arts and crafts, dramatics, physical and social activities.

161 *Community Organization for Recreation* (3) Thompson
1962–63 and alternate years: fall—evening. Resources, principles, and methods in organizing community recreation services.

162 *Administration of Community Recreation Programs* (3) Thompson
1962–63 and alternate years: spring—evening. Factors and problems in administering recreation including surveys, legislation, program, area, facilities, leadership, finance, and public relations.

PHYSICS*

Professors G. M. Kochl, Lewis Slack†, Herbert Jehle
Associate Professor H. H. Hobbs *(Chairman)*
Associate Professorial Lecturers H. R. Landon, Jr., Herbert Rabin
Assistant Professors S. S. Yeandle, Jr., Margaret Montzka, J. P. Hollinger, G. C. Murray *(Research)*
Lecturers J. N. Tevis, DeWitt Fisher, J. M. Harrison, K. F. Oerlein, W. J. Condell, Jr., J. E. Tompkins

First Group

For a one-year course offering an introduction to the methods and achievements of physical science, see Chemistry 3–4, page 33.

11 *Introductory Physics* (3) Kochl and Staff
Lecture (1 hour), recitation (1 hour), laboratory (2½ hours). Fall—day and evening; spring—day and evening; summer 1962. An introduction to the phenomena of light, heat, force, energy; introduction to vectors; and the properties of matter. This course may be taken as a terminal course by nonscience students who wish an introduction to the physical sciences. Prerequisite: high school algebra and plane geometry. Material fee, $11.

12 *Introductory Physics* (3) Kochl and Staff
Lecture (1 hour), recitation (1 hour), laboratory (2½ hours). Spring—day and evening; summer 1962. Mechanics, wave-motion, and sound. Prerequisite: Physics 11. Material fee, $11.

* The Staff of Instruction here listed is for the academic year 1961–62.
† On leave of absence spring semester 1961–62.

13 *Introductory Physics* (3) The Staff
Lecture (1 hour), recitation (1 hour), laboratory (2½ hours). Fall—day and evening; summer 1962. Elementary electricity and magnetism. Prerequisite: Physics 11. Material fee, $11.

14 *General Physics* (3) The Staff
Lecture (1 hour), recitation (1 hour), laboratory and conference (2¼ hours). Spring—day and evening. Mechanics, wave motion, and sound. Prerequisite: Physics 11, Mathematics 29 or 21. Material fee, $11.

15 *General Physics* (3) Hobbs and Staff
Lecture (1 hour), recitation (1 hour), laboratory and conference (2½ hours). Fall—day and evening. Electricity and magnetism. Prerequisite: Physics 14, Mathematics 30 or 22. Material fee, $11.

16 *General Physics* (3) Hobbs
Lecture (2 hours), conference (1 hour). Spring—day and evening. Modern physics, molecular structure of matter, structure of the atom. Prerequisite: Physics 13 or 15, Mathematics 30 or 22, and consent of the instructor.

SECOND GROUP

101 *Mechanics* (3) Jehle
1962–63 and alternate years: fall—evening; 1963–64 and alternate years: fall—day. Statics, elasticity, dynamics of solids and fluids, and gravitation. Prerequisite: Physics 12 or 14, Mathematics 31 or 24.

102 *Heat and Thermodynamics* (3) Yeandle
Fall—evening. Fundamental concepts, heat transfer, the laws of thermodynamics with applications to physical systems. Prerequisite: Physics 16, Mathematics 31 or 24.

105 *Principles of Electricity* (3) Hollinger
1962–63 and alternate years: fall—day; 1963–64 and alternate years: fall—evening. Elementary d-c and a-c circuit theory, electric and magnetic fields, dielectric and magnetic materials, motion of charged particles in electric and magnetic fields. Prerequisite: Physics 16, Mathematics 31 or 24.

106 *Optics* (3) Koehl
1962–63 and alternate years: spring—day; 1963–64 and alternate years: spring—evening. Geometrical optics; elementary theory of wave motions; interference, diffraction, polarization, and dispersion of light; laws of black-body radiation. Prereq uisite: Physics 16, Mathematics 31 or 24.

113 *Atomic Physics* (3) Hobbs
1962–63 and alternate years: fall—day; 1963–64 and alternate years: fall—evening. Properties of elementary particles, interactions with radiation, atomic structure, optical and X-ray spectra, introduction to wave mechanics. Prerequisite: Physics 16, 101 or 105, or the equivalent, Mathematics 31 or 24.

114 *Statistical Physics* (3) Jehle
Spring—evening. Classical and quantum statistics with emphasis on Maxwell Boltzmann statistics; applications to kinetic theory of gases, gaseous diffusion, specific heats of gases and solids. Prerequisite: Physics 16, Mathematics 31 or 24, permission of the instructor.

116 *Quantum and Solid State Physics* (3) Hobbs
Spring—day and evening. Primarily for engineers. Prerequisite: Physics 16, Mathematics 111.

118 *Introduction to Solid State Physics* (3) Rabin
1962–63 and alternate years: spring—evening; 1963–64 and alternate years: spring—day. Dielectric and magnetic properties of solids, electron theory of metals, semiconductors, dislocations, and plastic flow. Prerequisite: Physics 113.

123 *Nuclear Physics* (3) Slack
1962–63 and alternate years: spring—evening; 1963–64 and alternate years: spring—day. Structure and stability of atomic nuclei, nuclear transformations and reactions, radiations of nuclei, fission. Prerequisite: Physics 113.

128 *Sound* (3)
1963–64 and alternate years: spring—evening. Production, propagation, and detection of sound waves; vibrations of sounding bodies; acoustic instruments and acoustic measurements. Prerequisite: Physics 16, Mathematics 31 or 24.

132 *Electronics* (3) Hollinger
Lecture (2 hours), laboratory (3 hours). 1962–63 and alternate years: spring—day. 1963–64 and alternate years: spring—evening. The phenomena of electron emission from solids, the physical properties of electron tubes, and the principles underlying their basic applications. Prerequisite: Physics 16 and a course in d-c and a-c circuits in Physics or Engineering. Material fee, $11.

153 *Advanced Laboratory in Atomic Physics* (3) Murray
Spring: Saturday—as arranged. Prerequisite: Physics 16. Material fee, $11.

155 *Advanced Laboratory in Electricity and Magnetism* (3)
Not offered 1962–63. Prerequisite: Physics 105. Material fee, $11.

156 *Advanced Laboratory in Optics* (3) Hobbs
Not offered 1962–63. Prerequisite: Physics 106. Material fee, $11.

181 *Biophysics* (3) Yeandle
Spring—evening. Molecular basis of biophysics, biosynthesis, and reproduction. Molecular and genetic aspects of the effects of radiation. Physiochemical equilibria, steady states, and transients in biological systems; order, disorder, and information theory. Admission by permission of the instructor.

191 *Nuclear Reactors* (3) Landon
Fall—evening. Neutron physics: sources of neutrons, neutron reactions, slowing down and diffusion; introduction to transport theory; fission process; reactor types; basic theory of homogeneous and heterogeneous reactors, including specific numerical studies from recent publications. Prerequisite: Physics 16, Mathematics 31 or 24.

Third Group

201 *Classical Physical Theory* (3) Jehle
Fall—evening. Classical nonrelativistic and relativistic field theories. Prerequisite: Physics 101 and 105; Mathematics 132, 171. (Mathematics 171 may be taken concurrently.)

202 *Classical Physical Theory* (3) Jehle
Spring—evening. Dynamics of systems of particles and of rigid bodies, generalized coordinates. Prerequisite: Physics 101; Mathematics 112 or 132, 171.

203–4 *Principles of Modern Physics* (3–3)
Academic year—evening. A critical survey of fundamental topics of modern physics including the theory of relativity, thermal radiation and quantum theory, atomic structure and spectra, wave mechanics, interactions present in multielectron atoms, X ray, the nucleus, properties of matter in bulk. Hobbs

218 *Solid State Physics* (3)
Spring—evening. Tensor properties of crystals. Application of quantum mechanics to problems in solid state physics. Jehle

219–20 *Quantum Mechanics* (3–3)
Academic year—evening. Criticism of classical ideas of mechanics and a formulation of quantum mechanical equations; matrix mechanics and its relation to quantum mechanics; application to various problems of atomic, molecular, and nuclear physics. Prerequisite: Physics 113, 201, 202.

221 *Quantum Electrodynamics and Field Theories* (3) Jehle
1962–63 and alternate years: fall—evening. Variation principles. Relativistic wave equations, quantization of fields, interaction between fields. Scattering theory. S matrix and causality. Prerequisite: Physics 219–20.

222 *Elementary Particles* (3) Jehle
1962–63 and alternate years: spring—evening. Scalar, vector, spinor fields, and elementary particles. Symmetry properties and associated conservation laws. Space inversion and parity, time reflection, charge conjugation. Prerequisite: Physics 219–20.

227 *Irreversible Processes* (3) Yeandle
Spring—evening. Extension of thermodynamic concepts to irreversible processes. Discussion of thermodynamic forces and fluxes, and the Onsager reciprocal relations. Review of the statistical mechanical reasons for assuming the postulate of irreversible thermodynamics. Prerequisite: Physics 102, 114; Mathematics 132 or 112.

255–56 *Graduate Laboratory* (4–4) The Staff
First half: fall—day. *Second half:* not offered 1962–63. Individual work on special topics. One semester of this course is required of all Master's candidates in physics. Students electing this course may begin with Physics 255 or 256. Not open to undergraduates. Material fee, $11 a semester.

291–92 *Seminar: Recent Developments in Physics* (1–1) The Staff
Academic year: alternate weeks—Monday evening. Individual investigations of special problems. All students registered for a Master's degree in physics are expected to attend this seminar during residence for the degree, and to take part in its programs. Credit for participation in the seminar work is obtained by registering for this course during the last two semesters of residence; this credit, however, is based upon the seminar work during the entire period of residence.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged. Fees to be arranged.

PHYSIOLOGY*

Professors C. E. Leese, E. M. Renkin *(Chairman)*
Associate Professor F. P. J. Diecke
Assistant Professors Ruth Henderson, C. S. Tidball *(Research)*, Margret Westecker
Lecturers Eugene Braunwald, J. F. Hoffman, D. P. Rall, R. J. Podolsky
Associates Saul Winegrad, K. A. Hubel, P. C. Nelson, J. H. Mitchell, W. B. Wood, S. E. Downing, E. H. Sonnenblick, W. A. Hagins
Special Lecturers S. J. Sarnoff, J. H. U. Brown

115 *Introduction to Human Physiology* (3) Leese
1962–63 and alternate years: fall—Tues. and Thurs., 8:45 to 10:00 A.M.; 1963–64 and alternate years: fall—Tues. and Thurs., 5:10–6:25 P.M. Lectures on the fundamentals of physiology in its various subdivisions. Prerequisite: one year of general science or one semester of biological science.

190 *Psycho-Physiology* (2) Leese
Spring—Tues. and Thurs., 5:10 P.M. Lectures on the genesis and expression of personality, with emphasis on the physiological approach. Prerequisite: Physiology 115 or the equivalent and general psychology.

197 *Vertebrate Physiology* (4) Tidball and Staff
Fall—lecture, Mon., Wed., Fri., 11:10 to 12:00 A.M.; laboratory, Fri., 1:10 to 5:00

* The Staff of Instruction here listed is for the academic year 1961–62.

P.M. Fundamental principles of physiology as exemplified in the vertebrates. Prerequisite: Chemistry 11–12; Mathematics 3; and Physics 11, 12; or the equivalent. Laboratory fee, $18.

150 *Medical Physiology* — Renkin and Staff

Spring—lecture 7 hours a week, laboratory 9 hours a week. Lecture and laboratory work in all divisions of physiology. This course is designed for medical students.

170 *General Physiology* (3) — Westecker

Spring—Tues. 11:10 to 12:00 A.M., Thurs. 10:10 to 12:00 A.M. Lectures on basic topics in the physiology of cells and tissues. Prerequisite: Physiology 137 or 150, or Botany 135; and the consent of the instructor.

211–12 *Problems in Physiology* (arr.) — Renkin and Staff

Academic year—as arranged. Directed study under the supervision of a staff member. Prerequisite: Physiology 137, 150, or 232, and the consent of the instructor.

221–22 *Physiology Seminar* (1–1) — Henderson and Staff

Academic year—as arranged. Prerequisite: Physiology 137, 150, or 232, and a reading knowledge of French or German.

232 *Advanced Mammalian Physiology* (10) — Diecke and Staff

Lecture 7 hours a week, laboratory 9 hours a week. Spring—Mon., Wed., Fri., 1:00 to 5:00 P.M.; Tues. and Thurs., 1:00 to 3:00 P.M. Prerequisite: Chemistry 11–12; Mathematics 3; Physics 11, 12; or the equivalent. It is recommended that Biochemistry 221–22 be taken as a prerequisite or concurrently.

259 *Comparative Physiology* (2) — Diecke

1964–65 and every third year: fall—as arranged. Lectures and seminars on topics of current interest in comparative physiology, with emphasis on nonmammalian forms. Prerequisite: Physiology 137, 150, 170, or 232, or Zoology 162; and the consent of the instructor.

265 *Physiology of Cell Membranes* (2) — Renkin

1962–63 and every third year: fall—as arranged. Lectures and seminars on ionic and molecular transport through biological membranes. Prerequisite: Chemistry 111–12 or Physics 181; *and* Physiology 150, 170, or 232, or Botany 135–36; and the consent of the instructor.

281 *Biophysics* (2) — The Staff

1963–64 and every third year: fall—as arranged. Lectures and seminars on biological topics which require development along physical lines. Prerequisite: Chemistry 111–12 or Physics 181 and the consent of the instructor.

295–96 *Research* (arr.) — The Staff

Academic year—as arranged. Prerequisite: Physiology 137 and 170; 150 or 232; or the equivalent.

299–300 *Thesis* (3–3) — The Staff

POLITICAL SCIENCE*

Professors W. R. West *(Emeritus)*, J. W. Brewer *(Chairman)*, W. H. Kraus
Professorial Lecturer F. M. Riddick
Associate Professors H. L. LeBlanc, Benjamin Nimer, H. R. Ludden, C. R. Crowe
Associate Professorial Lecturers William Spencer, R. C. Bain, H. M. Bain
Lecturer C. H. Slayman, Jr.

* The Staff of Instruction here listed is for the academic year 1961–62.

First Group

1 *Introduction to Government** (3) **The Staff**
Fall—day; spring—evening; summer 1962. Basic principles and problems of political life: theories, forms, and processes of government in the United States and foreign countries. Attention is also given to international relations.

9–10 *Government of the United States** (3–3) **The Staff**
First half: fall—day and evening; spring—day; summer 1962. *Second half:* fall—day; spring—day and evening. *First half:* structure, powers, and operation of the Federal Government: Congress, the President, and the Supreme Court; elections, political parties, and pressure groups. *Second half:* state and local governments; civil rights; major functions of government at federal, state, and local levels.

Second Group*

104 *State and Local Governments* (3) **LeBlanc**
Spring—day. State, municipal, and other local governmental forms, operations, and problems, with attention to policy formulation and administration, and to the forces of practical politics.

105 *The Governmental Process of the District of Columbia* (3) **LeBlanc**
Not offered 1962–63. Legal structure and political problems of the District of Columbia including restrictions on home rule, Congressional relations, and group politics.

107 *Problems in Modern Political Thought* (3) **Kraus**
Summer 1962. Development of democratic political institutions and analysis of the main challenges to constitutional democracy in the 19th and 20th centuries.

111 *Introduction to Comparative Government and Politics* (3) **Kraus**
Fall—day; summer 1962. Government and politics of the principal constitutional democracies of Western Europe: Great Britain and France.

112 *Introduction to Comparative Government and Politics* (3) **Kraus**
Spring—day. Government and politics of the principal political systems of Central and Eastern Europe: Germany and the Soviet Union.

113 *Political Problems of the British Commonwealth of Nations* (3) **Kraus**
Not offered 1962–63. From Colonial Empire to modern Commonwealth: questions of equal partnership; governments and policies in the principal Commonwealth states; problems of new states in Asia and Africa.

117–18 *Political Theory: the Nature and Growth of Political Thought in the West* (3–3) **Kraus**
Academic year—evening. *First half:* from Classical Antiquity to the Middle Ages; the forging of the western political tradition. *Second half:* from the Renaissance and Reformation to recent times. Theoretical foundations of the modern state: morals and politics, sovereignty, absolutism, and resistance; liberalism, democracy, and conservatism.

120 *Foundations of American Democracy* (3) **Brewer**
1962–63 and alternate years; spring—day. Introduction to political thought in the United States from colonial times to the end of the Civil War period.

121–22 *The Constitution of the United States* (3–3) **West**
Academic year—evening. Judicial power of federal courts in constitutional interpretation. *First half:* emphasis on separation of powers, federal-state relationships, and taxation. *Second half:* emphasis on constitutional protection of civil rights.

125 *Legislative Organization* (3) **Riddick**
1962–63 and alternate years. A study of Congress: constitutional aspects, legal sources of make-up, and political organization. Political and parliamentary practices used in the preparation and enactment of legislation. Not open to students who have credit for former Political Science 124.

* Six hours of first-group Political Science courses are prerequisite to all second-group courses.

141 *The Development of Legal Institutions* (3) Brewer
1963–64 and alternate years. Introduction to historical jurisprudence: primary attention to the origins of the Roman Law of Continental Europe and of the Anglo-Saxon Common Law.

145 *Political Parties and Politics* (3) LeBlanc
Fall—evening; summer 1962. Organization and operations of political parties in the United States: major and minor parties, bosses and corruption, nominations and elections, influence on President and Congress.

146 *Political Pressures and Public Reactions* (3) Ludden
Spring—evening. Public opinion, special interest lobbies, and pressure groups as they operate on government to influence public policy.

151–52 *Public Administration* (3–3) LeBlanc
First half: fall—day; summer 1962. *Second half:* not offered 1962–63. Introductory survey of the theory and practice of governmental administration and its relation to politics, legislation, the courts, and nongovernmental organizations and interests.

157–58 *Current Problems in Domestic Politics* (1–1) Slayman
Academic year—evening. Analysis of outstanding contemporary issues in internal American politics with discussion of problems and policies.

166 *Field Work in Government* (3) LeBlanc
Fall—as arranged; spring—as arranged. Practical training in the operation of the Federal Government, based on experience through assignment to selected government offices. Students will have an opportunity to observe and participate in government in the Washington area. Open only to students in the Public Affairs curriculum, School of Government, Business, and International Affairs.

171 *International Politics* (3) Ludden, Nimer
Fall—day and evening; summer 1962. Basic forces underlying the conduct of international relations and the formation of foreign policy; power politics, imperialism, collective security, and international cooperation.

172 *International Organization: the United Nations* (3) Ludden
Spring—day and evening; summer 1962. Development and current operation of international organization within the system of sovereign states with emphasis on the United Nations.

177 *Recent Trends in Latin American Politics and Government* (3) Davis
Fall—day. Types of government, recent developments, and current political conditions in each of the twenty Latin American republics.

178 *International Politics in the Western Hemisphere* (3) Davis
Spring—day. Political relations of the American Republics in the 19th and 20th centuries, the development of Pan Americanism and the Organization of American States.

181–82 *International Law* (3–3) Brewer
Academic year—day and evening; summer 1962—Political Science 181 (3). Surveys of the public law of nations with emphasis on the law of peace. Neutrality and the so-called law of war receive attention in the second semester.

187–88 *Current Problems in International Politics* (1–1) Slayman
Academic year—evening. Analysis of outstanding contemporary international issues with discussion of problems and policies.

191 *Politics of the Middle East* (3) Nimer
Fall—day. Domestic and international politics of Turkey, Iran, Israel, and the Eastern Arab States and Principalities. Special attention to the specifically regional aspect of the foreign policies of these countries.

192 *Politics of North and Central Africa* (3) Nimer
Spring—day. Domestic and international politics of the Western Arab States, Ethi-

opia, Somalia, Liberia, and the newly independent states of former British, French, and Belgian Africa. Special attention to the specifically regional aspect of the foreign policies of these countries.

194 *Far Eastern Politics: Contemporary International Relations in the Pacific Area* (3) ———

Spring—evening. Background and development of the major states of East Asia with attention to the constitutional systems and the foreign politics of the region.

197 *Proseminar in International Affairs* (3) Nimer

Fall—evening; spring—day; summer 1962. Reading and discussion course for coordination and review. Primarily for seniors in the International Affairs major.

THIRD GROUP

205–6 *The Federal Executive* (3–3) R. C. Bain

Academic year—evening. *First half:* nomination and election of the U. S. President, his constitutional and political powers; the cabinet and the Executive Office of the President; the relation of the President to the executive and legislative branches of the government. *Second half:* the practical politics of the presidency, presidential policy leadership and control, the President as party head and as moulder of public opinion.

209–10 *Seminar: the Federal Government of the United States* (3–3) ———

1963–64 and alternate years. Advanced research emphasizing legislative problems of Congress and relations of Congress with the Administration.

212 *Seminar: Comparative Government and Politics* (3) Kraus

Spring—evening. Selected topics and problems on comparative political and administrative institutions and the politics of modern constitutional governments and dictatorships. Each semester is devoted to a selected country or significant institutional or policy problem. Attention will be directed to questions of method.

213 *Readings in Comparative Government and Politics* (3) Kraus

Fall—evening; summer 1962. Readings and group discussions on methodological questions, comparative political and administrative institutions with attention to legislatures, the changing role of the executive, political parties, constitutional and totalitarian approaches to public management and public service, the role of the military, etc.

217 *Seminar: Topics in Political Theory* (3) Kraus

Fall—evening. Research and discussion on problems of modern political and constitutional theory, theoretical aspects of representative government, democracy, socialism, and totalitarianism. Each semester is devoted to a separately announced topic, such as socialism and communism, theories of resistance and revolution, problems of democratic theory.

220 *Reading Course in Political Theory* (3) Kraus

Spring—evening. Readings and group discussions, principally on modern political and constitutional theory since the 17th and 18th centuries.

221–22 *Seminar: The Constitution of the United States* (3–3) West

1962–63 and alternate years: academic year—evening. Selected topics in the development of the law of the Constitution. Primary attention will be given to the development of "due process of law" in the courts.

245 *Metropolitan Problems* (3) H. M. Bain

Fall—evening. Growth of American cities and changing land use patterns in relation to internal transportation systems. The respective roles of the private automobile and of public transportation. The problems of financing and administering public transportation systems under public and private ownership.

245–46 *The American Political Process: Political Parties and Interest Groups* (3–3) LeBlanc
Academic year—evening. *First half:* readings and group discussions on the nature and functions of political parties and the role and techniques of political interest groups. *Second half:* seminar on selected topics of American politics requiring the use of basic research materials.

271–72 *Problems in International Politics and Organization* (3–3) Ludden
Academic year—day. A seminar to develop techniques of research in recent international affairs and to examine developments in international politics and organizations.

273 *Public Opinion and Foreign Policy* (3) Ludden
Fall—evening. Development, organization, and operation of international information programs by major world powers. Public opinion in the United States influences the formation and conduct of foreign policy.

274 *Methods and Objectives of Foreign Policy* (3)
Spring—evening. Examination of the objectives of foreign policies of the major powers, with attention to political, economic, and military methods used to pursue these objectives. Davis

277 *Seminar: Latin American Government* (3)
Fall—evening; summer 1962. Analysis of the political structures of selected Latin American republics. Two comparable governments studied each year. Davis

278 *Seminar: Latin American Political Philosophy* (3)
Spring—evening. Research in political personalities and philosophies of 19th and 20th century Latin America.

279 *Reading Course in International Affairs* (3)
Fall—evening; summer 1962. Reading and discussion of basic materials designed to stimulate investigation of problems in the nature and development of international law, politics, and organization. Brewer

281–82 *Seminar: International Law and Relations* (3–3) Research
First half: fall—evening; summer 1962. *Second half:* not offered 1962–63.
in the public law of nations, with special attention to problems of pacific settlement, sanctions, war, neutrality, and state jurisdiction, and to their political implications.

292 *International Politics and Government in the Middle East* (3) Nimer
Spring—evening. Research and analysis of the international relations and major political problems of the Arab world and adjacent areas.

293–94 *Seminar: International Politics and Government in the Pacific Area* (3–3)
Academic year—evening. Research and analysis of the major patterns of development in internal and international politics of the area, with advanced study of the governmental institutions of the Far East. The Staff

299–300 *Thesis* (3–3)
Academic year—as arranged; summer 1962.

PSYCHOLOGY*

Professors Mitchell Dreese†, Thelma Hunt *(Chairman)*, D. C. Faith
Professorial Lecturers H. F. Hubbard, Margaret Ives, G. H. Mowbray
Associate Professors C. E. Tuthill, W. E. Caldwell, J. N. Mosél, R. D. Walk, Eva Johnson, C. W. Hill, Virginia Kirkbride, L. E. Schlesinger *(Research)*
Associate Professorial Lecturer J. G. Colmen
Assistant Professors R. E. Nolan, Lila Ghent *(Research)*, Jacqueline Goodnow *(Research)*
Lecturer C. J. Lindley
Associate Janet Johnson

First Group

1 *General Psychology*‡ (3) The Staff
Fall—day and evening; spring—day and evening; summer 1962. The fundamental principles underlying human behavior.

4 *Psychology of Adjustment* (3) The Staff
Fall—day and evening; spring—day and evening; summer 1962. Processes involved in the total adjustment of the individual with emphasis on social environment; development in the individual of adjustment techniques.

22 *Introduction to Educational Psychology* (3) Dreese, Faith
Fall—evening; spring—day. Consideration of individual and group differences, adjustments, and the psychology of learning in relation to education and training.

29 *Child Psychology* (3) Johnson
Fall—day; spring—evening; summer 1962. A genetic approach to the study of the child. Special emphasis is placed on the socialization process, learning, and the child's view of the world.

98 *Abnormal Psychology* (3) Nolan, Hunt
Fall—day and evening; spring—day; summer 1962. The causes, diagnosis, treatment, and prevention of the various types of maladjustments and mental disorders. Prerequisite: 6 credits in psychology, or 3 credits in psychology and 6 credits in a biological science.

Second Group§

112 *Adolescent Psychology* (3) Johnson
Fall—day. Psychological characteristics and problems peculiar to adolescence, with emphasis on applications of psychology to solution of such problems.

115 *Psychology and Language and Communication* (3) Mosél
Fall—day. An introduction to psycholinguistics and verbal behavior. Information theory, the measurement of meaning, cultural and linguistic structures in the perception and learning of language.

118 *Physiological Psychology* (3) Hill
Fall—evening; spring—day; summer 1962. Structure, function, and phylogeny of receptors, nervous system, and effectors as mediators of behavior, including drives, learning, and emotions.

221 *Educational Psychology* (3)
Spring—evening. Advanced course in educational psychology. Designed for those with background in education and psychology.

---

*The Staff of Instruction here listed is for the academic year 1961-62.
†On leave of absence, 1961-62.
‡Prerequisite to all other courses in Psychology.
§Six credits in first-group courses are prerequisite to all second-group courses.

129 *Introduction to Counseling and Guidance* (3) Dreese
Fall—evening; summer 1962. A survey of the basic principles, techniques, and procedures as applied to vocational, educational, and personal counseling.

131 *Psychological Tests* (3) Hunt
Fall—evening; spring—day; summer 1962. A survey of psychological tests and their more common uses in business, industry, government, law, medicine, and education. Material fee, $7.

141 *Leadership, Group Behavior, and Student Life* (3) Faith
Fall—day. A survey of the foundations of leadership, of the factors which underlie effective participation in group activities, and of the interrelations between the student and his university.

144 *Personnel Psychology* (3) Hubbard, Mosél
Fall—evening; spring—evening. Psychological concepts and techniques in personnel management and supervision. Applications to government, industry, and military organizations.

146 *Interpersonal Relations* (3) Schlesinger
Fall—day. The psychosocial processes involved in social interaction. The perception of other persons, social communication, small group processes, group problem-solving and change.

148 *Psychology of Advertising and Consumer Behavior* (3) Mosél
1963–64 and alternate years. The motivational and social processes in economic behavior. Consideration of current techniques and findings in motivational research. Evaluation of the effectiveness of mass media, public relations programs, and strategies of persuasion.

151 *Social Psychology* (3) Tuthill
Fall—evening; spring—day; summer 1962. The social foundations of attitudes and behavior. Individual adjustment to group situations, such as the family, school, fraternity, and occupation. The psychological basis of race prejudice, nationalism, and war.

156 *Psychology of Propaganda and Public Opinion* (3) Tuthill
Spring—evening; summer 1962. The psychology of opinion formation, the measurement of opinion, the social determinants of attitudes, the psychological processes in propaganda, the bases of receptivity of propaganda, psychological warfare.

161 *Comparative Psychology* (3) Caldwell
Spring—day. A lecture course in animal psychology. Covers psychological processes in infrahuman organisms, evolution of behavior, the place of animal experimentation and research in psychology.

162 *Experimental Comparative Psychology* (3) Caldwell
Fall—as arranged; spring—as arranged. Opportunity for individual psychological experimentation using lower animals as subjects. Offered on independent study plan. Prerequisite: Psychology 161 and permission of the instructor.

191 *Experimental Psychology* (3) Hill, Walk
Fall—day and evening; spring—day and evening. The application of experimental methods to various psychological problems. Prerequisite: 6 credits in psychology and an elementary course in statistics. Material fee, $10.

192 *Problems in Experimental Psychology* (3) Hill, Walk
Fall—as arranged; spring—as arranged. Opportunity for work on individual experimental projects. Prerequisite: Psychology 191 and permission of the instructor.

193–94 *Readings in Psychology* (3–3) The Staff
Academic year—as arranged; summer 1962—Psychology 193 (3). Supervised readings on specific topics in psychology, with conferences, for undergraduate majors. Open only to seniors with 18 or more credits in psychology with a quality-point index of 3.00 or higher. Admission by special permission of the instructor.

196 *History and Systems of Psychology* (3) Caldwell
Fall—day; spring—evening; summer 1962. A survey of the contemporary schools of psychology. Prerequisite: 12 credits in psychology.

THIRD GROUP*

201 *Seminar: Advanced General Psychology* (3) Hill
Fall—day; spring—evening. General review of the field for graduate students with an intensive study of selected problems. Required in all graduate programs.

202 *Psychological Research Methods and Procedures* (3) Walk
Fall—evening; spring—day; summer 1962. Required in all graduate programs. Prerequisites: Experimental Psychology and an elementary course in statistics.

207–8 *Readings in Psychology for Graduate Students* (3–3) The Staff
Academic year—as arranged; summer 1962—Psychology 207 (3). Supervised readings with conferences on specified topics in psychology. Open only to students who have had course work in the field of the readings.

209 *Seminar: Psychology of Motivation* (3) Caldwell
Fall—evening. A consideration of various theoretical approaches to the psychology of motivation and systematic concepts and experimental findings deriving from each approach.

212 *Personality Evaluation by Projective Techniques* (3) Nolan, Ives
Fall—day; spring—evening. Primary emphasis upon administration and scoring of the Rorschach Test. Prerequisite: Psychology 233.

213 *Clinical Psychometrics* (3) Ives
Spring—evening. A study of the clinical applications of nonprojective tests. Prerequisite: Psychology 233.

215 *Advanced Study of Projective Techniques* (3) Nolan, Ives
Fall—evening; spring—day. Primary emphasis upon interpretation of the Rorschach Test. Prerequisite: Psychology 212.

217 *Seminar: Developmental Psychology* (3) Ghent
Spring—day.

218 *Seminar: Clinical Psychology—Psychopathology* (3) Nolan
Fall—evening; summer 1962. Covers basic etiological factors in behavioral and psychological deviations and disorders.

219 *Seminar: Clinical Psychology—Psychotherapy* (3) Nolan
Spring—day. Covers theoretical principles underlying psychotherapy, techniques and procedures, and problems of evaluation.

220 *Seminar: Abnormal Psychology* (3) Hunt
Fall—day; spring—evening. An intensive study of selected problems in the field of abnormal psychology.

223 *Seminar: Learning* (3) Walk
Fall—day. Covers research and theory in the psychology of learning.

225 *Seminar: Mental Hygiene* (3) Lindley
Fall—evening; spring—day. A study of mental health problems with special attention to needs of counselors.

226 *Seminar: Clinical Psychology of Childhood and Adolescence* (3) Johnson
Spring—evening. A survey of behavior and personality disorders.

* Open only to graduate students, except by special permission of Instructor and Chairman of the Department.

227 *Seminar: Counseling and Guidance* (3) Dress
Spring—evening. Recent developments and current problems in vocational, educational, and personal guidance in various types of agencies with particular reference to education. Prerequisite: educational or psychological measurements and Psychology 129 or the equivalent.

228 *Seminar: Techniques of Counseling* (3) Dress
Fall—evening; spring—evening; summer 1962. An intensive study of the educational and psychological processes involved in counseling interviews. Specific types of vocational, educational, and personal counseling problems will be discussed. Prerequisite: 12 semester hours in testing and guidance, including Psychology 229 and 236. In exceptional cases Psychology 229 or 236 may be taken concurrently with 228.

229 *Seminar: Occupational and Educational Information* (3) Faith
Fall—evening; spring—evening. Designed to acquaint vocational and educational counselors with the basic occupational and educational information necessary in counseling. Sources of data and techniques of collecting, analyzing, and disseminating for purposes of guidance.

231 *Test Construction* (3) Mosel
Fall—evening. The principles underlying test construction; statistical techniques in the construction, evaluation, and standardization of psychological, educational, and vocational tests. Prerequisite: a course in tests and measurements and an elementary course in statistics.

233 *Individual Psychological Testing* (3) Johnson
Fall—day; spring—day. Instruction and practice in giving of the Binet and Wechsler tests. Prerequisite: an elementary course in tests and measurements. Material fee, $7.

234 *Seminar: Test Theory* (3) Mosel
1962–63 and alternate years: fall—evening. Development of the axiomatic-deductive theory underlying the major notions in the construction, evaluation, and application of psychological tests.

235 *Seminar: Psychological Measurement* (3) Hunt
Spring—evening. Advanced instruction in the use and interpretation of psychological tests, with emphasis upon group tests; survey of recent research in psychological measurement. Prerequisite: a course in psychological or educational measurement.

236 *Seminar: Analysis of the Individual for Purposes of Counseling* (3) Faith, ———
Fall—evening; spring—evening; summer 1962. A detailed study of individual analysis techniques with practice in handling such methods. Prerequisite: an introductory course in educational or psychological measurements.

244 *Seminar: Job Analysis and Evaluation* (3) Mosel
Summer 1962.

245 *Seminar: Employee Motivation and Morale* (3) Mosel
Spring—evening. An analysis of organizational behavior, especially with regard to motivation and productivity. The implications of recent research on employee attitudes, the primary group, the effects of various patterns of supervisory leadership, the role of formal and informal organization, and job design.

246 *Seminar: Personnel Measurement Techniques* (3) Mosel
Fall—evening. Detailed consideration of the techniques of personnel selection and performance evaluation. The use of employment tests, personal data, assessment interviews, and performance ratings.

249 *Seminar: Human Engineering* (3) Mowbray
Fall—evening. Application of findings and methods of experimental psychology to design and operation of equipment and man-machine systems. Relation of capacities

of the operator to information display systems, control mechanisms, work environment, and work methods.

251 *Seminar: Advanced Social Psychology* (3) Tuthill
Fall—evening. Current research and theory in social psychology; group dynamics, ego-involvements, action research, and social interaction theory.

254 *Seminar: Group Dynamics* (3) Tuthill
1963–64 and alternate years. The experimental study of small groups; autocratic and democratic group climates; interaction process analysis; Lewin's field theoretical approach to individual and group processes.

255 *Seminar: Techniques of Opinion and Attitude Measurements* (3) Tuthill
1962–63 and alternate years: spring—evening. Methods of attitude measurement (interviews, questionnaires, scales, polls) as currently used by private and governmental investigators. The place of attitude studies in schools, industry, government, etc.

258 *Applied Social Psychology* (3) Mosél
Spring—evening. The development of personality, personality adjustment, nature of communication and interaction; structure and functioning of groups, group dynamics, opinion and attitude formation, and opinion and attitude measurement. Classroom activity supplemented by practical observations and projects. Open only to graduate students in hospital administration, engineering administration, and other graduate administrative programs.

261 *Seminar: International Communication* (3) Mosél
1963–64 and alternate years. The communication process, problems in mass communication, measuring and modifying opinions and attitudes, principles of persuasion, psychological warfare.

262 *Dynamics of Social Change* (3) Lippitt
Spring—evening. Current research and theory related to the process of social change. Basic principles of planned change will be explored in connection with individual, group, organization, community, and cultural change. Human factors in the change process will be emphasized.

264 *Sensitivity Training: Human Relations Laboratory Course* (3) Lippitt
Fall—evening; spring—evening. A sensitivity learning experience in human relations. The course is built around an unstructured group experience with opportunities for individual feedback, experimentation, and practice. The goal of the course is the development of self insight, situational sensitivity, and diagnostic skills in human relations. Prerequisite: 9 semester hours in psychology or sociology.

265 *Theory and Design in Human Relations Training* (3) Lippitt
Fall—day. Designed for those interested or involved in conducting human relations training. Theories of learning are reviewed. The laboratory approach to human relations training is explored in depth. Practice in designing, developing training skills, and evaluation of training are covered. Prerequisite: Psychology 264 or a human relations laboratory learning experience.

267 *Theories of Organization* (3) Schlesinger
Spring—day. Theory and research in formal organizations. Classical, human relations, and information processing theories of organizations. The effects of organizational design on communication processes, leadership, decision-making, intergroup relations, small group formation, status hierarchies, productivity, motivation, and morale. Open to graduate students in psychology and graduate administrative programs.

272 *Seminar: Theories of Personality* (3) Caldwell
Fall—evening. A survey of the various theories of personality, with emphasis upon theoretical problems and methodology in the field of personality study.

281 282 *Practicum in Counseling* (3–3) The Staff
Academic year—as arranged, summer 1963—Psychology 281 (3). Supervised practicum in agencies doing counseling. Prerequisite: graduate work in counseling. Admission by permission of the Chairman of the Department.

283–84 *Practicum in Clinical Psychology* (3–3) Nolan

21 *Business Correspondence* (3) Shott
240, 63 and alternate years: fall—day. 1963–64 and alternate years: fall—evening.

*The Staff of Instruction here listed is for the academic year 1961–62.

Development of the technique of effective communication with reference to business letters and forms. Survey and analysis of current business literature.

54 *Secretarial Practice* (3) Shott
Spring—day. A thorough study of secretarial problems and procedures. Practice in the use of secretarial equipment and supplies. The study of secretarial personality and office relationships.

SLAVIC LANGUAGES AND LITERATURES *

Associate Professor Helen Yakobson *(Chairman)*
Lecturers Kiril Jaszenko, George Olkhovsky, Vadim Medish, Natalie Kalikin, Irene Bodrov, M. I. Filipovitch

First Group

1–2 *First-year Russian* (3–3) Yakobson and Staff
A year course: credit is not given for the first half until the second half is completed. *First half:* fall—day and evening; spring—evening; summer 1962. *Second half:* fall—evening; spring—day and evening; summer 1962. A beginners' course in fundamentals of grammar and pronunciation with graded reading, oral drill, and written practice. Listening comprehension and oral practice in electronic language workshop. Workshop fee, $6 a semester.

3–4 *Second-year Russian* (3–3) Yakobson and Staff
A year course: credit is not given for the first half until the second half is completed. *First half:* fall—day and evening; spring—evening. *Second half:* fall—evening; spring—day and evening. Systematic review of grammar. Study of special problems of Russian morphology and syntax. Oral and written reports on assigned topics. Workshop fee, $6 a semester.

9–10 *Russian Conversation* (3–3) Olkhovsky
Academic year—evening; summer 1962. Listening comprehension and oral practice. Prerequisite: Russian 3–4 or permission of the instructor. Workshop fee, $6 a semester.

91–92 *Introduction to Slavic Literature* (3–3) Medish, Filipovitch
Academic year—day and evening. Lecture, recitation, and discussion. *First half:* a survey of Russian literature in translation from early periods through the literary masterpieces of the 19th century. *Second half:* a survey of other Slavic literatures, 18th century to the present, with emphasis on the contemporary scene.

Second Group

101–2 *Readings in Modern Russian* (3–3) Medish
1963–64 and alternate years. Representative Russian readings in the social sciences and periodical literature.

103–4 *Scientific Russian* (3–3) Medish
1963–64 and alternate years. Readings in the major fields of Russian contemporary scientific literature.

109–10 *Advanced Russian Conversation and Composition* (3–3) Yakobson
Academic year—evening. Developing proficiency in oral and written expression. Prerequisite: Russian 10.

* The Staff of Instruction here listed is for the academic year 1961–62.

141–42 *Russian Literature of the 19th Century* (3–3) Yakobson
1962–63 and alternate years: academic year—day and evening. Lectures, special reports, class analysis of selected works of 19th century Russian literature—in Russian. Prerequisite: Russian 1–2, 3–4.

151–52 *Russian Literature of the 20th Century* (3–3) Yakobson
1963–64 and alternate years. Lectures, special reports, class analysis of selected works of 20th century Russian literature—in Russian. Prerequisite: Russian 1–2, 3–4.

179–80 *Advanced Grammar and Composition for Russian Majors* (1–1) Yakobson
Academic year—as arranged.

SOCIOLOGY AND ANTHROPOLOGY*

Professor H. L. Geiserf
Associate Professor R. W. Stephens *(Acting Chairman)*
Assistant Professors J. M. Campbell, Samuel Baum, P. F. Gallagher
Lecturers Jane Wickey, J. A. Bartolini

First Group

1–2 *Man in Modern Society*† (3–3) The Staff
First half: fall—day and evening; spring—day; summer 1962. *Second half:* fall—day; spring—day and evening. Development of culture and personality, the impact of groups and institutions on man's social behavior. Factors producing social problems; individual, community, national, and international disorganization.

51 *Introduction to Anthropology*† (3) The Staff
Fall—day and evening; spring—day and evening; summer 1962. Physical development of fossil and living man, races of mankind, the origin and growth of civilization; the structure and development of human relationships.

Second Group

115 *Cultural Anthropology* (3) Campbell
Fall—day. Development of social life and customs in preliterate societies, universals, and aspects of culture; theories relating to culture, society, and personality.

116 *Native Peoples of the New World* (3) Campbell
Spring—day. A survey of representative Indian groups of the Americas from primitive bands to high civilizations, stressing the patterned nature of diverse cultural responses to universal problems of human existence.

123 *Fields of Social Work* (3)
1963–64 and alternate years. Introduction to the nature and scope of social work; the development of social work programs; functions of social case work, social group work, and social action.

124 *Medical Sociology* (3) Wickey
Spring—day. Sociological factors and processes which relate to physical and mental health and disease; analysis of patterned social relationships in the field of health and medicine; the hospital as a social system.

126 *Urban Sociology* (3) Baum
1962–63 and alternate years: spring—day. The place of the city in the larger society.

* The Staff of Instruction here listed is for the academic year 1961–62.
† Sociology and Anthropology 1 or 51 is prerequisite to all other courses in Sociology and Anthropology.

ciety: growth of the city, problems of urban living, group life, personality, urban housing, and city planning. Includes consideration of suburban development.

127 *Community Organization* (3)
1963–64 and alternate years. Principles common to communities throughout the world: social interaction and social disorganization, population growth and community structure, spatial organization, community change.

131 *Social Institutions* (3)
1963–64 and alternate years. Functional analysis of basic social institutions: family, education, religion, economy, and state in the structure of American society.

Stephens
132 *Courtship and Marriage* (3)
1963–64 and alternate years. Dating and courtship as social processes, reasons for marriage, marriage laws, mate selection, factors in marital adjustment; prediction and counseling.

Baum
133 *The Family in Modern Society* (3)
1963–64 and alternate years. Historical development of the family as a social institution, parent-child relations, family problems, disorganization and divorce, and family reorganization.

Stephens
134 *Sociology of Child Development* (3)
1963–64 and alternate years. Socialization of the child through the home and other social institutions; the changing status of childhood, dependent and handicapped children.

Wickey
135 *Juvenile Delinquency* (3)
1962–63 and alternate years: fall—day. Factors producing delinquency, juvenile detention, the juvenile court, training schools, treatment of offenders.

136 *Criminology* (3)
1963–64 and alternate years. Nature and distribution of crime, police and court systems, prisons and reformatories; treatment and prevention of crime.

Baum
141 *Population Problems* (3)
1962–63 and alternate years: fall—day. Composition of populations, trends in population growth and population pressure, factors producing population movements, effects of migration, population policies: eugenics and birth control.

Gallagher
142 *Race and Culture Configurations* (3)
Spring—day. The biological background; the origin and races of mankind, and the social and cultural effects of concepts of race.

Gallagher
143 *Language and Culture* (3)
Summer 1962. The nature and significance of human communication, the distribution and dynamics of languages, linguistic changes, the role of language in culture.

Baum
144 *Mass Communications* (3)
1963–64 and alternate years. The communications process; barriers to communication; structure and function of communication in society; content, control, support, and effects of mass communication.

Stephens
151 *Human Relations in Industry* (3)
1963–64 and alternate years. Sociological analysis of work situations, occupational mobility, development of the labor movement, industrial leadership and morale.

Campbell
152 *Dynamics of Culture* (3)
1962–63 and alternate years: spring—evening. Factors and processes making for stability and change in cultures; "the nature and characteristics of cultural growth invention, diffusion, and acculturation"; the integration and disintegration of cultures.

Gallagher
153 *Culture and Personality* (3)
Fall—evening. Influences of group membership and cultural conditions on personality; socio-cultural factors in mental health; the relationship of personality to class, caste, and occupation.

155 *Applied Anthropology* (3) Gallagher
1962–63 and alternate years: fall—day. The application of anthropological methods and techniques in the modern world. The use of applied anthropology in specific fields, including government, business, law, and medicine.

161 *Social Stratification: Class and Status* (3) Stephens
1962–63 and alternate years: fall—day. Nature of class structure patterns of status, prestige relations in American society, differential class behavior, analysis of comparative social structure and social mobility.

162 *Social Movements* (3) Stephens
1962–63 and alternate years: spring—day; summer 1962. Major contemporary movements examined as aspects of social change and collective behavior. Designed to disclose competing ideologies and show the way social movements develop.

164 *Social Control* (3)
1963–64 and alternate years. Informal and formal phases of human control, analysis of methods of control used in modern society and the situations in which they occur, policies and techniques of control.

172 *Contemporary Social Theory* (3) Stephens
Spring—evening. Systematic study of the important schools of contemporary sociology, including recent European as well as American developments; an evaluation of the scientific contributions of each school.

181 *Methods of Social Research* (3) Stephens
Fall—evening. Analysis of social research techniques and the scientific method; application to social data of the case study, social survey, statistical, sociometric, and experimental methods.

THIRD GROUP

221 *Seminar: Current Trends in Sociology* (3) Geisert
1962–63 and alternate years: fall—evening. Analysis and evaluation of recent developments in sociology and an appraisal of the role of systematic theory in sociology.

222 *Seminar: Anthropological Theory* (3) Gallagher
1962–63 and alternate years: spring—evening. Analysis of the theoretical postulates and assumptions underlying the development of modern cultural and social anthropology.

223 *Cultural Origins of the Western Hemisphere* (3)
1963–64 and alternate years. An examination of the problems of the nature and time of Early Man's entry to the Americas; the development of Paleo Indian societies, stressing their varied cultural adjustments to diverse environments.

224 *Anthropological Methods* (3)
1963–64 and alternate years. Traditional approaches to library and field research in linguistics, archeology, and ethnography; conceptual bases and bias in the delineation of problems, in the selection, analysis and organization of data, and in the preparation of the final report.

225 *Seminar: Small Groups* (3)
1963–64 and alternate years. General characteristics of small groups and their measurement; sociography of groups, evaluation of small group theory and sociometry; other techniques of small group research.

226 *Problems of Underdeveloped Areas* (3)
1963–64 and alternate years. Characteristics and problems of underdeveloped areas; the interrelationship of demographic, economic, social, and cultural factors; measures and techniques to introduce cultural changes.

227 *Religious Beliefs of Preliterate Peoples* (3) Campbell
1962–63 and alternate years: fall—evening. Conceptions of the supernatural in nonliterate societies. An examination of religious beliefs and practices; the interrelatedness of religion, magic, and philosophy.

228 *Criminal Behavior: Research and Theory* (3) Geisert
1962–63 and alternate years: spring—evening. A re-evaluation of theories of criminal and deviant behavior based on recent research findings; implications for the correction and prevention of criminal behavior.

295–96 *Research* (arr.) The Staff
Academic year—as arranged; summer 1962.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged: summer 1962.

SPEECH*

Professors L. P. Leggette *(Chairman)*, C. W. Pettit *(Director of Speech Clinic)*, G. F. Henigan, Jr., E. L. Stevens
Professorial Lecturer Zelda Fichandler
Associate Professor Lee Bielski
Associate Professorial Lecturers F. C. Strickland, Zelda Kosh
Lecturers Edith Surrey, A. A. Nilles, S. L. Berlinsky, Isabel Burger, R. E. Shutts, H. C. Krebs, L. W. Shollenberger
Associates Joan Regnell, Lois Richards, Marjorie Prussing

First Group

A *Speech Clinic* Pettit, Bielski
Academic year—as arranged; summer 1962. Individual or group lessons, without academic credit, for such speech difficulties as lisping, cleft palate, articulatory problems, and stuttering. Fee: for individual lesson, $7; for group lesson, $4.

B *American Speech for Foreign Students* (3) Bielski
Fall—day and evening; spring—day and evening; summer 1962. Class limited to foreign-born students. Instruction in the formation of the sounds of spoken English, with emphasis on rhythm and inflection. The International Phonetic Alphabet is used. Recording fee, $5.

1 *Effective Speaking* (3) Leggette and Staff
Fall—day and evening; spring—day and evening; summer 1962. Preparation and delivery of extempore speeches, developing confidence and poise, body and voice control; selecting and organizing material. Recording fee, $2.

2 *Persuasive Speaking* (3) Henigan and Staff
Fall—day; spring—day and evening. A continuation of Speech 1, which is prerequisite, with emphasis on speech composition and elementary principles of persuasion.

11 *Voice and Diction* (3) The Staff
Fall—day and evening; spring—day and evening; summer 1962. Developing ease, naturalness, and clarity in the speaking voice. Analysis of individual voices through recordings. Phonetic approach to the study of the sounds of English, the standards of speech. Class instruction in the problems of rate, volume, pitch, and quality. Recording fee, $4.

32 *Oral Reading* (3) Leggette and Staff
Fall—day; spring—day and evening; summer 1962. Reading to others, theory and practice in the problems of interpreting the printed page. Prerequisite: Speech 11. Recording fee, $2.

* The Staff of Instruction here listed is for the academic year 1961–62.

SECOND GROUP

101 *Voice and Phonetics* (3) — Bielski
Fall—day. The International Phonetic Alphabet and its applications to the student's own speech improvement; also its application to such fields as theater, public speaking, speech correction, radio, television, and foreign languages. Prerequisite: Speech 11. Recording fee, $4.

102 *Oral Interpretation of Literature* (3) — Leggette
Spring—day. Theory and practice in the problems of communicating meaning and emotion. Selections for study include poetry and prose. Prerequisite: Speech 32. Recording fee, $2.

111 *Effective Speech Communication* (3) — Bielski
Not offered 1962–63. The tools and principles of effective speech communication, including practice in the organization, delivery, and the evaluation of presentations commonly encountered by professional personnel. Not open to speech majors.

121 *Group Discussion and Conference Leadership* (3) — Stevens
Fall—day; spring—evening; summer 1962. The process of thinking and problem solving in committees and small groups, and the methods of leading discussions and conferences. Prerequisite: 6 hours of speech or the permission of the instructor.

126 *Public Discussion and Debate* (3) — Henigan
Spring—day. Principles and types of public discussion and debate; practice in argumentative speaking on questions of current interest. Prerequisite: 6 hours of speech or the permission of the instructor.

127–28 *Advanced Debate Practice* (1–1) — Henigan
Academic year—as arranged. Admission by permission of the instructor, after one semester of satisfactory participation in the intercollegiate debate program. This course may be repeated for a total of 4 semester hours.

133–34 *Radio and TV Broadcasting* (3–3) — Shollenberger
Academic year—evening. A study of the development of the radio and TV industries, station organization and management, equipment, production techniques; practice in the preparation and performance of radio programs. Recording fee, $5 a semester.

141 *Public Speaking: Advanced Forms* (3) — Henigan
Spring—day. The preparation and presentation of speeches for formal occasions with emphasis on the psychology of the audience. Prerequisite: 6 semester hours of speech.

145 *Speech Criticism* (3) — Henigan
Not offered 1962–63. A study of rhetorical theory with application to the criticism of representative American and British oratory. Admission by permission of the instructor.

153 *Acting* (3) — Strickland
Fall—evening. Study and practice in the fundamentals of acting technique. Prerequisite: Speech 32. Laboratory fee, $5.

154 *Play Production* (3) — Strickland
Spring—evening. Fundamentals of play production. Under the supervision of the instructor, students prepare one-act plays for presentation. Laboratory fee, $5.

155–56 *Play Production Practice* (1–1) — The Staff
Academic year—as arranged. Practical work in theater.

166 *History of the Theater* (3) — Nilles
Spring—evening. A general survey of the rise of the theater, the Classical, Medieval, Renaissance, later English and Continental, and the Modern theater.

169 *Creative Dramatics* (3) — Prussing
Fall—evening. A study of creative dramatics and its use as a learning tool.

170 *Children's Theater* (3) Burger
Spring—evening. Theory and practice in creating and producing plays for children.

171 *Introduction to Speech Correction* (3) Pettit
Fall—evening. A survey of the disorders of speech, including symptomatology, testing, causation, and therapy.

173–74 *Speech Therapy* (3–3) Bielski
Academic year—day. Clinical techniques and procedures involved in the correction of the disorders of speech. Prerequisite: Speech 101 and 171.

176 *Speech Correction* (3) Pettit
Spring—evening. Advanced study of the disorders of speech. Prerequisite: Speech 171 and 173.

177–78 *Clinical Practice in Speech Therapy* (1–1) The Staff
Academic year—as arranged; summer 1962—Speech 177 (1). Supervised case work in remedial speech—the University Speech Clinic, Children's Hospital, District of Columbia Crippled Children's Society, and Public School system. Weekly meetings to discuse therapeutic techniques for the common speech problems. This course may be repeated for a total of 4 semester hours. Prerequisite: Speech 101, 171, 173, and permission of the instructor.

182 *Hearing Problems and the Testing of Hearing* (3) Shutts
Fall—evening. A study of the field of audiology with emphasis on the testing of hearing.

183–84 *Clinical Practice in Hearing Therapy* (1–1) The Staff
Academic year—as arranged; summer 1962—Speech 183 (1). Supervised case work with persons handicapped with hearing losses—the University Speech Clinic, the Washington Hearing Society, and Children's Hospital. This course may be repeated for a total of 3 semester hours. Prerequisite: Speech 182 and permission of the instructor.

THIRD GROUP

251 *Rehearsal and Performance* (3) Arena Stage Staff
Fall—as arranged; spring—as arranged. A course putting into practice the principles and techniques of acting through participation in play rehearsals and performances at the Arena Stage. Admission by audition or interview.

254 *Directing Problems* (3) Arena Stage Staff
Fall—as arranged; spring—as arranged. Observation and participation in solving the problems involved in directing plays. Admission by interview.

255 *Techniques of Staging* (3) Arena Stage Staff
Fall—as arranged; spring—as arranged. Application of theory and principles of scene design, costuming, lighting, make-up, and related stage techniques. Admission by interview.

263 *Theater Management* (3) Arena Stage Staff
Fall—as arranged; spring—as arranged. Theory and practice in the psychology of handling the public: promotion, box office and house management. Admission by interview.

264 *Producing Problems* (3) Arena Stage Staff
Fall—as arranged; spring—as arranged. Problems involved in producing community and professional theater. Admission by interview.

279 *Speech Science* (3) Berlinsky
Fall—evening. The anatomy, physiology, physics, and psychology of speech production, with a survey of experimental work.

280 *Speech Pathology* (3) Pettit
Summer 1962. An advanced study of the causes and symptoms of the major physiogenic and psychogenic disorders. Prerequisite: Speech 171 and 176.

284 *Speech Reading and Auditory Training* (3) Shutts
Spring—evening. Theory and practice in speech reading and auditory training with an analysis of methods used for the instruction of hearing handicapped children and adults. Prerequisite: Speech 182.

286 *Seminar in Speech Pathology* (3) Pettit
Spring—evening.

294 *Research in Dramatic Art* (arr.) The Staff
Spring—as arranged.

295–96 *Research in Speech and Hearing* (arr.) The Staff
Summer 1962—Speech 295 (arr).

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged; summer 1962.

Related Courses in Other Departments

English 125, *Introduction to English Linguistics* (3)
English 135–36, *Shakespeare* (3–3)
English 175–76, *American Drama* (3–3)
English 183–84, *The English Drama* (3–3)
English 235–36, *Studies in Shakespeare and His Contemporaries* (3–3)
Education 134, *Student Teaching in Secondary Schools* (6 to 9)
Education 152, *Teaching Speech* (2 to 4)

STATISTICS*

Professors F. M. Weida *(Emeritus)*, E. H. Johnson, H. F. Bright *(Chairman)*
Professorial Lecturers Solomon Kullback, Samuel Greenhouse
Associate Professorial Lecturers Seymour Geisser, Morton Kupperman, Arnold Heyl
Assistant Professor R. E. Thomas
Lecturers S. J. Armore, Fred Frishman, H. F. Sieber, Jr., W. M. Wolman

First Group†

51 *Introduction to Business and Economic Statistics* (3) The Staff
Lecture (2 hours), laboratory (2 hours). Fall—day and evening; spring—day and evening; summer 1962. Survey of elementary principles and procedures for presenting, analyzing, and interpreting statistical data; consideration of characteristic values; measures of variability, sampling processes, index numbers, time series analysis, and simple correlation. Prerequisite: one entrance unit in algebra. Laboratory fee, $9.

52 *Mathematics of Finance* (3) The Staff
Lecture (3 hours). Fall—day and evening; spring—day and evening. Interest and discount, annuities, valuation of stocks and bonds, sinking funds, amortization, valuation of depletable assets, depreciation. Prerequisite: one entrance unit in algebra.

* The Staff of Instruction here listed is for the academic year 1961–62.
† Of first-group courses, Statistics 51, 53, and 91 are related in their subject matter, and credit hours for only one of the three may be applied toward a degree. Statistics 52 lies outside of this group, and may be taken for degree credit in combination with any one of the other three.

53 *Introduction to Statistics in Psychology and Education* (3) The Staff
Lecture (2 hours), laboratory (2 hours). Fall—day and evening; spring—day and evening. Sources of data, tabulation, charts and graphs, averages, dispersion, quartiles and percentiles, raw scores and derived scores, frequency distributions, reliability and validity of tests, normal curve, correlation, elementary sampling, and an introduction to estimation and tests of hypotheses. Prerequisite: one entrance unit in algebra. Laboratory fee, $9.

91 *Principles of Statistical Methods** (3) Thomas
Lecture (2 hours), laboratory (2 hours). Fall—evening; spring—day. Variates and attributes, averages and dispersion, frequency distributions and their characteristics, regression and correlation, statistical decision processes. Prerequisite: one entrance unit in algebra. Laboratory fee, $9.

SECOND GROUP

104 *Statistics in Psychology and Education I* (3) Bright
Lecture (2 hours), laboratory (2 hours). Fall—Saturday morning; summer 1962. Introductory study of statistical techniques necessary for application of statistics in research problems in psychology and education. Laboratory fee, $9.

105 *Statistics in Psychology and Education II* (3) Bright
Lecture (2 hours), laboratory (2 hours). Spring—Saturday morning. Advanced study of statistical techniques necessary for an application of statistics in research problems. Analysis of variance, correlation techniques, chi-square applications, and sampling theory. Prerequisite: Statistics 53 or 104. Laboratory fee, $9.

106 *Factor Analysis* (3)
Summer 1962. Matrix theory as applied to factor analysis, introduction to the concepts of factor analysis and their utility in various phases of research. Prerequisite: Statistics 53 or the equivalent. Laboratory fee, $9.

107 *Statistics for Engineers* (3) The Staff
Fall—evening; spring—evening; summer 1962. Simple probability models, discrete and continuous distributions, sampling, hypothesis testing and estimation, nonparametric tests. Emphasis on engineering applications. Prerequisite: differential and integral calculus.

109 *Managerial Statistics* (3)
Not offered 1962–63. Role of statistics and the contribution of statistical procedures in various phases of business management with emphasis on the need for and usefulness of the statistical method rather than the mechanics of analysis. Subject matter comprises sources and methods for collecting data, effective forms of presentation, techniques for summarizing and analyzing quantitative and qualitative information, interpretation of and inferences from available data. Admission by permission of the instructor or following Statistics 51.

110 *Quality Control Techniques* (3)
Not offered 1962–63. Applications of probability and distribution theory to industrial control problems; use of quality control charts; acceptance sampling plans; estimation of lot and process characteristics. Prerequisite: Statistics 51 or permission of instructor. Johnson

111 *Business and Economic Statistics I* (3)
Fall—day and evening. Statistical processes as related to the problems of business and economic research with emphasis on decision making under conditions of uncertainty. Topics include averages, dispersion, analysis of variance, correlation, quality control, and index numbers. Prerequisite: Statistics 51 or permission of instructor. Johnson

112 *Business and Economic Statistics II* (3)
Spring—day and evening. Specific problems of business and economics with statistics as a tool of analysis. Introduction to principles and use of linear programming.

* Statistics 91 is for Statistics majors, for students in engineering and in the biological and physical sciences.

game theory and queueing theory techniques. Study of various economic relationships, including demand, supply, cost and price functions. Prerequisite: Statistics 111 or equivalent.

117 *Analysis of Variance I* (3) Thomas
Lecture (2 hours), laboratory (2 hours). Fall—evening. The analysis of variance to segregate factors producing significant variation; a method to estimate experimental error, multiple classifications, Latin Square, Greco-Latin Square, factorials; an introduction to model theory. Prerequisite: Statistics 91. Laboratory fee, $9.

118 *Correlation and the Chi-square Test I* (3) Thomas
Lecture (2 hours), laboratory (2 hours). Spring—evening; summer 1962. Regression and correlation theory: simple, partial, and multiple; nonparametric methods; analysis of covariance; contingency table analysis; tests of goodness of fit. Prerequisite: Statistics 91. Laboratory fee, $9.

121 *Index Numbers* (3)
Not offered 1962–63. Definition and theory of index numbers, methods of construction, their interpretation, use, and limitations. Prerequisite: Statistics 51 or the equivalent.

122 *Forecasting Principles and Techniques* (3) Johnson
Spring—day. Survey and appraisal of techniques for measuring the state of business conditions and an examination of current indicators. Study of procedures for estimating future values: budget requirements, price levels, or level of general business activity. Prerequisite: Statistics 51 or the equivalent.

123 *Introduction to Econometrics* (3) Johnson
Fall—day. A basic quantitative approach to fundamental problems in economic theory involving the use of statistical processes, simple model construction, and probability considerations. Prerequisite: elementary course in Economics and Statistics.

155 *Introduction to Mathematical Probability* (3) The Staff
Fall—day; spring—evening; summer 1962. Probability distributions, Bayes' theorem and postulate, Bernoulli's theorem and its experimental verification, mathematical expectation, laws of large numbers. Prerequisite: permission of instructor.

157–58 *Mathematical Statistics* (3–3) Kupperman
Academic year—day and evening. Distribution theory, sampling theory, estimation, hypothesis testing, confidence methods, regression analysis, experimental design. Prerequisite: differential and integral calculus.

189–90 *Mathematical Probability and Applications* (3–3) Geisser
Academic year—evening. Combinatorial analysis, conditional probability and stochastic independence, probability distributions, laws of large numbers, recurrent events, random walks, Markov chains, simple time-dependent stochastic processes. Prerequisite: Statistics 155 or permission of instructor.

191 *Statistical Mathematics I** (3) Bright
Fall—evening. Problems in statistics with the development of processes from modern algebra necessary for their solution. Prerequisite: differential and integral calculus or permission of instructor.

192 *Statistical Mathematics II* (3)
Lecture (2 hours), laboratory (2 hours). Not offered 1962–63. Linear computations as applied to least squares, multiple correlation, regression, and analysis of variance problems. Prerequisite: Statistics 191 or the equivalent. Laboratory fee, $9.

193 *Statistical Mathematics III** (3) The Staff
Spring—evening. Problems in statistics with the development of real variable theory necessary for their solution. Prerequisite: differential and integral calculus.

194 *Statistical Mathematics IV** (3) The Staff
Fall—evening. Problems in statistics with the development of complex variable theory necessary for their solution. Prerequisite: differential and integral calculus.

195–96 *Reading and Research in Statistics* (arr.) The Staff
Academic year—as arranged.

199–200 *Proseminar: Theoretical and Applied Statistics* (3–3) The Staff
Not offered 1962–63. In addition to the study of recent advances in statistical methods, this course is designed to coordinate the content of the baccalaureate major. Admission by permission of the instructor.

THIRD GROUP*

201 *Design of Experiments* (3)
Not offered 1962–63. Relative merits of random, repeated, stratified, and double sampling; Fisher-Pitman method of randomization; randomized blocks; Latin squares; factorial design; confounding, partial confounding.

203–4 *The Theory of Econometrics* (3–3)
A year course: credit is not given for the first half until the second half is completed. Not offered 1962–63. Statistical methods applied to analysis of production, supply, and demand; utility and disutility; interest and taxation; exchange. Emphasis on interpretation of results in terms of probability, correlation, and regression of time series. Admission by permission of the instructor.

205–6 *Advanced Business and Economic Statistics* (3–3)
Not offered 1962–63. Application of statistical methods to specific problems utilizing case method when possible. Emphasis on source materials, role of statistical methods, techniques of analysis, interpretation and presentation of results. Original work is required of each student. Prerequisite: Statistics 112 or the equivalent.

207 *Operations Analysis* (3) Bright
Fall—evening. Basic concepts and techniques of operations analysis as applied to problems in business management and economic research. An introduction to the processes of linear programming, game theory, and queueing theory. Admission by permission of the instructor.

211 *Theory of Sampling* (3) Bright
Spring—evening. Problems of sampling and sample design. Admission by permission of the instructor.

212 *Nonparametric Statistical Inference* (3)
Not offered 1962–63. Spring—1964. Statistical inference when the form of the underlying distribution is unknown; sign tests; rank order statistics; theory of runs; nonparametric discriminant analysis.

217 *Analysis of Variance II* (3)
Not offered 1962–63. Advanced theory of the applications of the linear hypothesis to research problems. Distributions of the analysis of variance. Extensions to multiple classifications with unequal cell frequencies. Studies of multiple contrasts and their importance. Normal versus non-normal problems.

218 *Correlation and the Chi-square Test II* (3)
Not offered 1962–63. Spring 1965. Theoretical analysis of simple, partial, and multiple regression. Examination of various distributions encountered. Rank correlation techniques and their distributions. Distribution of the chi-square statistic.

257–58 *Advanced Mathematical Statistics* (3–3) Kupperman
Academic year—evening. Random variables and probability distributions, distribution functions and their properties, convergence theorems, regression and correlation, multivariate normal distribution, asymptotic and exact sampling distributions, estimation, hypothesis testing.

259–60 *Advanced Mathematical Probability* (3–3)
A year course, credit is not given for the first half until the second half is completed. Not offered 1962–63. Modern theories and asymptotic laws; elementary theory of definite integration; limit theorems in probability.

* Statistics 191, 193, and 194 or the equivalent are prerequisite to all third-group courses.

261–62 *Information Theory for Engineers* (3–3) **Kullback**
Academic year—evening. The elements of information theory and its statistical and probabilistic background from an elementary point of view (nonmeasure-theoretic). Measures of information, entropy, and their properties. Discrete stochastic sources, message ensembles. The transmission of information, channels, channel capacity. Encoding and decoding including error detection and correction. The fundamental theorems of information theory.

263–64 *Statistical Inference* (3–3) **Greenhouse**
A year course, credit is not given for the first half until the second half is completed. Academic year—evening. Sample space; methods for estimating population parameters; fiducial inference and its application to testing hypotheses; valid, efficient, and exact estimation; Student's distribution; variance distribution; sampling statistics. Prerequisite or concurrent registration: Statistics 257–58 or the equivalent.

265–66 *Multivariate Analysis* (3–3)
A year course, credit is not given for the first half until the second half is completed. Not offered 1962–63. Tests of significance, generalized variance and covariance, tests of independence, canonical and vector correlations, multivariate, normal distribution, generalized Student's ratio, problems of estimation, applications to factor analysis.

267–68 *Characteristic Functions* (3–3)
A year course, credit is not given for the first half until the second half is completed. Not offered 1962–63. Fourier integrals, set functions, inversion formulas, limit theorems, applications to the distribution problem in statistics.

269 *Sequential Testing* (3)
Not offered 1962–63.

270 *Statistical Decision Theory* (3)
Not offered 1962–63.

271–72 *Statistical Information Theory* (3–3)
A year course, credit is not given for the first half until the second half is completed. Not offered 1962–63. Basic concepts, definitions, and formulas of information theory; their significance and general properties. Shanon's coding theorem, channel capacity, and transmission of information; inequalities of information theory and sufficiency; applications to statistical problems of discrimination and hypothesis testing. Asymptotic distribution theory of information; analysis of contingency tables; loss of information due to grouping and sequential analysis; comparison or experiments.

273–74 *Stochastic Processes* (3–3) **Kullback**
A year course, credit is not given for the first half until the second half is completed. Academic year—evening. Fundamental notions of stochastic processes; random walks; Markov processes; differential processes; Gaussian processes; applications.

295–96 *Reading and Research* (3–3) **The Staff**
Academic year—as arranged. Admission by permission of the instructor.

299–300 *Thesis* (3–3) **The Staff**

ZOOLOGY*

Professors I. B. Hansen *(Chairman)*, P. W. Bowman, Edith Mortensen, S. C. Munson
Professorial Lecturer K. C. Kates
Associate Professor A. H. Desmond
Lecturer J. R. Buchheit

* The Staff of Instruction here listed is for the academic year 1961–62.

BIOLOGY*

First Group

1–2 *Introductory Biology† (4–4)** The Staff

An interdepartmental course. Lecture (2 hours), laboratory (4 hours).
Biology 1—Plant Sciences (4): fall—day and evening; spring—day and evening.
Biology 2—Animal Sciences (4): fall—day and evening; spring—day and evening.
This course is designed to provide the nonscience student with an understanding of the life sciences and to serve as a basis for those who may wish to continue in some aspect of biology. It is the introductory course leading to all second- and third-group courses in botany and zoology, and is taught jointly by the staff members of the two departments. Designed to be taken in either sequence; students may be registered for either 1 or 2 at the beginning of the academic year, depending on laboratory space available. Material fee, $10 a semester.

ZOOLOGY

Second Group*

101–2 *Invertebrate Zoology* (3–3) Mortensen

Lecture (1 hour), laboratory (4 hours). 1962–63 and alternate years: academic year—evening; 1963–64 and alternate years: academic year—day. A systematic study of invertebrate forms, including the morphology, classifications, life histories, and phylogenetic relationships. Material fee, $8 a semester.

103–4 *Comparative Vertebrate Anatomy* (3–3) Desmond

Lecture (1 hour), laboratory (4 hours). 1962–63 and alternate years: academic year—day and evening; 1963–64 and alternate years: academic year—day. Lectures on the organ systems of the vertebrates, laboratory dissections of types. Material fee, $11 a semester.

107–8 *Organic Evolution*† (3–3) Bowman

1962–63 and alternate years: academic year—day; 1963–64 and alternate years: academic year—evening. A study of the theories of organic evolution and present ideas on the principle lines of development in the plant and animal kingdoms; a review of the contributions to an understanding of the mechanisms involved in this process from the fields of genetics and cytology.

115–16 *Cytology*† (3–3) Bowman

Lecture and laboratory. 1962–63 and alternate years: academic year—evening; 1963–64 and alternate years: academic year—day; summer 1962—Zoology 115 (3) (as Biology 115). Plant and animal cells and their components, including the chromosomes and their role in heredity, with training in the preparation of materials for study. Material fee, $8 a semester.

127 *Genetics*† (3)

Fall—evening. A lecture course in which the general principles are illustrated with specific examples of inheritance in plants and animals, including man. Shropshire

140 *Cell Physiology*† (3)

Spring—evening. The fundamental physiology of protoplasm. Prerequisite: Chemistry 12. Hansen

145 *Introduction to Vertebrate Embryology* (3)

Lecture (1 hour), laboratory (4 hours). 1962–63 and alternate years: fall—day; 1963–64 and alternate years: fall—day and evening; summer 1962. Origin and early de-

---

* Biology 1–2 is prerequisite to all second-group courses in Zoology, except by permission of the instructor.

Beginning with the academic year 1962–63, Biology 1–2 *Introductory Biology* (4–4) replaces Botany 1–2 *General Botany* (3–3) and Zoology 1–2 *Introduction to Zoology* (4–4). Botany 1–2 and Zoology 1–2 will be offered for the last time in the summer of 1962.

† An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.

velopment of the individual, formation of organ systems. Emphasis on the frog, chick, and pig, with reference to the human embryo. Material fee, $11.

148 *Histology* (3) — Desmond
Lecture (1 hour), laboratory (4 hours). 1962–63 and alternate years: spring—day; 1963–64 and alternate years: spring—evening. An introduction to the microscopical anatomy of normal tissues and organs. Material fee, $11.

152 *Protozoa* (3) — Mortensen
Lecture (1 hour), laboratory (4 hours). 1963–64 and alternate years. Introduction to the protozoa: classification, life histories, and physiology, with special emphasis on free-living types. Material fee, $8.

155 *Parasitology* (3) — Kates
Lecture (1 hour), laboratory (4 hours). 1963–64 and alternate years. An introduction to the study of animal parasitology, with a survey of parasitic types from the protozoa through arthropods. Material fee, $11.

161 *Entomology* (3) — Munson
Lecture (1 hour), laboratory (4 hours). 1963–64 and alternate years. A study of the elementary morphology, physiology, and ecology of insects, with an introduction to the taxonomy of the more important groups. Material fee, $8.

162 *Insect Physiology* (3) — Munson
1963–64 and alternate years. Lectures and laboratory work on the physiology of insects. Admission by permission of the instructor. Material fee, $11.

171–72 *Special Problems* (3–3) — The Staff
Academic year—as arranged. Written approval of the instructor is required. Material fee, $11 a semester.

199–200 *Proseminar* (3–3) — The Staff
Academic year—day and evening. Designed to correlate and supplement the work of Zoology majors.

Third Group

201–2 *Seminar: Cytology** (3–3) — Bowman
Academic year—evening.

204 *Seminar in Invertebrate Zoology* (3) — Mortensen
1962–63 and alternate years: spring—evening. A study of original publications on hormones of invertebrate animals.

214 *Advanced Invertebrate Zoology* (3) — Mortensen
Not offered 1962–63. Lectures and laboratory work on problems in invertebrate physiology. Prerequisite: Zoology 101–2 or the equivalent. Material fee, $8.

247–48 *Morphogenesis* (3–3) — Hansen
1962–63 and alternate years: academic year—evening. Lectures and class reports on experimental morphology. Prerequisite: Zoology 103–4 or the equivalent.

251 *Seminar in Vertebrate Zoology* (3) — Desmond
1963–64 and alternate years. A study of current publications in the field of histophysiology.

295–96 *Research* (arr.) — The Staff
Academic year—as arranged; summer 1962—Zoology 295 (3). Investigation of special problems.

299–300 *Thesis* (3–3) — The Staff
Academic year—as arranged; summer 1962—Zoology 299 (3).

* An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.

THE GEORGE WASHINGTON UNIVERSITY

Washington 6, D. C.

Academic programs leading to degrees are offered in the following colleges and schools:

Columbian College of Arts and Sciences: Associate in Arts (A.A.), Associate in Science (A.S.), Bachelor of Arts (A.B.), Bachelor of Science (B.S.), Bachelor of Science in Medical Technology (B.S. in Med. Tech.), Master of Arts (A.M.), Master of Fine Arts (M.F.A.), and Master of Science (M.S.)

Graduate Council: Doctor of Philosophy (Ph.D.)

School of Medicine: Doctor of Medicine (M.D.)

National Law Center:

Law School: Bachelor of Laws (LL.B.)

Graduate School of Public Law: Master of Laws (LL.M.), Master of Comparative Law (M.Comp.L.), Master of Comparative Law (American Practice) (M.Comp.L. (Am.Prac.)), and Doctor of Juridical Science (S.J.D.)

School of Engineering: Engineering Technologist Certificate (Eng. Tech. Cert.), Bachelor of Civil Engineering (B.C.E.), Bachelor of Electrical Engineering (B.E.E.), Bachelor of Mechanical Engineering (B.M.E.), Bachelor of Science in Engineering (B.S. in Eng.), Master of Science in Engineering (M.S. in Eng.), Master of Engineering Administration (M.E.A.), and Doctor of Science (D.Sc.)

School of Pharmacy: Bachelor of Science in Pharmacy (B.S. in Phar.)

School of Education: **Bachelor of Arts in Education (A.B. in Ed.)**, Bachelor of Science in Home Economics (B.S. in H.E.), Bachelor of Science in Physical Education (B.S. in P.E.), Master of Arts in Education (A.M. in Ed.), Advanced Professional Certificate (Adv. Prof. Cert.), and Doctor of Education (Ed.D.)

School of Government, Business, and International Affairs: **Bachelor of Arts in Government (A.B. in Govt.), Bachelor of Business Administration (B.B.A.)**, Master of Arts in Government (A.M. in Govt.), Master of Business Administration (M.B.A.), and Doctor of Business Administration (D.B.A.)

College of General Studies: **Associate in Arts (A.A.), Associate in Science (A.S.)**, Associate in Secretarial Administration (A.Sec.Adm.), Bachelor of Arts (A.B.), Bachelor of Science in Cartography (B.S. in Cart.), Master of Arts (A.M.), Master of Arts in International Affairs (A.M. in I.A.), and Master of Business Administration (M.B.A.)

ANNUAL ISSUES OF THE UNIVERSITY BULLETIN

Requests for the following publications should be addressed as indicated.

College of General Studies	Dean of the College of General Studies
Columbian College of Arts and Sciences	Director of Admissions
Division of University Students	Director of Admissions
Fellowships, Scholarships, Prizes, Financial Aid	Chairman, Committee on Scholarships
General Catalogue of the University	Director of Admissions
Graduate Council	Dean of the Graduate Council
Law School	Director of Admissions
School of Education	Director of Admissions
School of Engineering	Dean of the School of Engineering
School of Government, Business, and International Affairs	Director of Admissions
School of Medicine	Director of Admissions
Summer Sessions	Dean of the Summer Sessions
Schedule of Classes: Fall and Spring Semesters	Registrar
Schedule of Classes: Summer Sessions	Dean of the Summer Sessions

CORRESPONDENCE DIRECTORY

Detailed information may be obtained by addressing inquiries as indicated below. For any information not included here, please write to the Director of Admissions, The George Washington University, Washington 6, D. C.

Information concerning courses of instruction and the programs of the several colleges and schools will be found in separate issues of the University Bulletin, which are listed on the inside back cover.

Admission	Director of Admissions, Building C
Air Science (ROTC)	Director of Air Science, Chapin Hall
Alumni Association	Alumni Office, Bacon Hall
Foreign Students	Adviser to Foreign Students, Building T
Graduate Study	
In Arts and Sciences	
Master's degrees	Dean of Columbian College of Arts and Sciences
Doctor of Philosophy	Dean of The Graduate Council
In Education	Dean of The School of Education
In Engineering	Committee on Graduate Studies, School of Engineering
In Law	Dean of The Graduate School of Public Law
In Accounting, Business Administration, Business and Economic Statistics, Economic Policy, Hospital Administration, International Affairs, Personnel Administration, Public Administration, Public Affairs	Dean of The School of Government, Business, and International Affairs
Housing	
Men	Director of Men's Activities, Building Q
Women	Director of Women's Activities, Woodhull House
Scholarships	Chairman, Committee on Scholarships, Building T
Student Employment	Student Placement Office, 2114 G Street NW.
Summer Sessions	Dean of the Summer Sessions, Building T
Transcripts of Records	Registrar, Building C
Veterans Education	Director of Veterans Education, Building Q

THE CALENDAR 1962–63

Fall Semester:	
Advising: freshmen, sophomores, all new students	Sept. 10–19 ..... Mon.–Wed.
Orientation Assembly: all new students	Sept. 14 ..... Fri.
Curriculum assemblies: new students attend one	Sept. 14 and 17 ..... Fri. and Mon.
Placement tests	Sept. 18 ..... Tues.
Qualifying examinations	Sept. 18 ..... Tues.
Registration	Sept. 20–22* ..... Thurs.–Sat.
Classes begin	Sept. 24 ..... Mon.
Subjects of Master's theses of Feb. candidates due in Dean's Office	Oct. 5 ..... Fri.
Application for Feb. graduation due in Registrar's Office	Oct. 31 ..... Wed.
Veterans Day. Holiday	Nov. 12 ..... Mon.
Thanksgiving recess	Nov. 22–24 ..... Thurs.–Sat.
Graduate Record Examination	Dec. 8 ..... Sat.
Christmas recess	Dec. 22–Jan. 2 ..... Sat.–Wed.
Classes resume	Jan. 3 ..... Thurs.
Master's theses of Feb. candidates due in Dean's Office	Jan. 3 ..... Thurs.
Last day of fall-semester classes	Jan. 16 ..... Wed.
Examination period	Jan. 21–26 ..... Mon.–Sat.
Spring Semester:	
Placement tests	Jan. 30 ..... Wed.
Qualifying examinations	Jan. 30 ..... Wed.
Registration	Jan. 31–Feb. 2† ..... Thurs.–Sat.
Spring-semester classes begin	Feb. 4 ..... Mon.
Subjects of Master's theses of June candidates due in Dean's Office	Feb. 8 ..... Fri.
Winter Convocation. Holiday	Feb. 22 ..... Fri.
Application for June graduation due in Registrar's Office	Feb. 28 ..... Thurs.
Application for 1963–64 fellowships due	March 1 ..... Fri.
Application for 1963–64 scholarships due	April 1 ..... Mon.
Graduate Record Examination	April 6 ..... Sat.
Easter recess	April 12–17 ..... Fri.–Wed.
Master's theses of June candidates due in Dean's Office	May 1 ..... Wed.
Last day of spring-semester classes	May 15 ..... Wed.
Examination period	May 20–25 ..... Mon.–Sat.
Memorial Day. Holiday	May 30 ..... Thurs.
Baccalaureate Service	June 2 ..... Sun.
Commencement	June 5 ..... Wed.
Summer Sessions:	
Registration for eight-week term	June 17 ..... Mon.
Classes begin	June 18 ..... Tues.
Independence Day. Holiday	July 4 ..... Thurs.
Eight-week term ends	Aug. 9 ..... Fri.
Registration for Fall Semester 1963–64	Sept. 19–21 ..... Thurs.–Sat.

* September 20 and 21, from 12:00 to 8:00 P.M.; September 22, from 10:00 A.M. to 1:00 P.M.

† January 31 and February 1, from 12:00 to 8:00 P.M.; February 2, from 10:00 A.M. to 1:00 P.M.

THE BOARD OF TRUSTEES

The Board of Trustees of the University is composed of the President of the University ex officio and the following persons by election:

Newell Windom Ellison, A.B., LL.B., LL.D., *Chairman*
Edward Karrick Morris, LL.D., *Secretary*
Godfrey Leon Munter, A.B., LL.B., LL.D., *Assistant Secretary*

Walter Maximillian Bastian, LL.B., LL.D.
*Daniel LeRay Borden, A.M., M.D., Sc.D.
Wiley Thomas Buchanan, Jr.

Edward Martin Wall, A.B., LL.B., *Director of Air Science*
John Francis Latimer, Ph.D., *Associate Dean of Faculties; University Marshal*

COLUMBIAN COLLEGE OF ARTS AND SCIENCES

Calvin Darlington Linton, Ph.D., *Dean of Columbian College of Arts and Sciences*
George Martin Koehl, A.M., *Associate Dean of Columbian College of Arts and Sciences*
Richard Walton Stephens, Ph.D., *Assistant Dean of Columbian College of Arts and Sciences*
William Lewis Turner, Ph.D., *Assistant Dean in Columbian College of Arts and Sciences*
James Cecil King, Ph.D., *Assistant Dean in Columbian College of Arts and Sciences*

* For the academic year 1961–62.

THE UNIVERSITY

HISTORY AND ORGANIZATION

The idea of a university in the Capital of the Nation was sponsored by George Washington.

The purpose of The George Washington University expressed in the words of the Bill of Incorporation, introduced and subsequently enacted by Congress in 1821, was to realize "the aspirations of Washington, Jefferson, and Madison, for the erection of a university at the seat of the Federal Government." This central idea of a university functioning in the Capital of the Nation, nonsectarian, free of sectional limitations, conscious of its wide American relationships, and open to the ever-increasing international influences which bear upon it, has been continuous through nearly a century and a half.

The purpose of this University, therefore, has been to develop the university ideal in the place of greatest national significance, flexible before the changing needs of its growing national constituency and loyal to the traditional principles of learning and research, in providing through disciplined reason, wisdom for the individual and his society.

The University as it is now organized consists of Columbian College of Arts and Sciences; the Graduate Council, which offers work leading to the degree of Doctor of Philosophy; the professional schools of Medicine; Law; Engineering; Pharmacy; Education; and Government, Business, and International Affairs; the College of General Studies; the Division of University Students; the Division of Special Students; the Division of Air Science; and the Summer Sessions.

The government and educational management of the University are vested in a self-perpetuating Board of Trustees, with the President of the University serving as an ex officio member of the Board.

ACADEMIC STATUS

The George Washington University is accredited by its regional accrediting agency, the Middle States Association of Colleges and Secondary Schools. This is important to students who wish to transfer credits from one institution to another. The University is on the approved list of the American Association of University Women and is a member of the College Entrance Examination Board.

LOCATION

The University is in downtown Washington four blocks west of the White House and east of the Potomac River with its extensive parkway. Readily accessible are many of the departments of the Government, including the Department of State, the Department of the Treasury, the Department of Justice, the Department of the Army, the Department of the Navy, the Department of the Interior, the Department of Agriculture, the Department of Commerce, and the Department of Labor, as well as the National Archives, the Capitol, the Library of Congress, the National Academy of Sciences, the Pan American Union, the National Gallery of Art, and the Corcoran Gallery of Art.

EDUCATIONAL FACILITIES

BUILDINGS

Buildings, grounds, and equipment are valued at approximately $27,000,000.

Bacon Hall, 2000 H Street. Offices of the deans of the Graduate Council and the Graduate School of Public Law, the Dean for Sponsored Research, the Assistant to the President, the Development Division, the Management Research Group, the Educational Counselor; offices and lounge for the Law Faculty; Alumni Office; Alumni Reception Room.

Binney Hall, 2018 Eye Street. The Reading Clinic.

Chapin Hall, 2128 H Street (rear). The Air Force ROTC.

Corcoran Hall, 725 Twenty first Street. Offices of the Treasurer, the Cashier, the departments of Chemistry and Physics; Chemistry Research Project; chemistry and physics laboratories; classrooms.

Faculty Club House, 714 Twenty-first Street.

Gymnasium, 2010–12 H Street.

Hall of Government, 710 Twenty-first Street. Offices of the Dean of the School of Government, Business, and International Affairs; the departments of Accounting, Business and Public Administration, Economics, History, Political Science, Statistics; offices of the Air Force Advanced Management Program and Navy Graduate Financial Management Program; classrooms.

Hospital and Outpatient Department, Washington Circle.

International House, 2110 G Street. Office of the Adviser to Students from Foreign Countries; club rooms.

Lisner Auditorium, 730 Twenty-first Street. The Auditorium, Lisner Lounge, offices and classrooms of the Department of Speech, the Speech Clinic; the housing officer, Athletic Ticket Office.

James Monroe Hall, 2115 G Street. Offices of the deans of Columbian College of Arts and Sciences, the School of Education, the Division of University Students; the departments of Education, English (English and American Literature), Germanic Languages, Journalism, Mathematics, Psychology, Secretarial Studies; classrooms.

Office of the President, 2003 G Street. Offices of the President, the Provost and Dean of Faculties, Associate Dean of Faculties, Administrative Secretary.

Placement Office, 2114 G Street.

Residence Halls:

John Quincy Adams Hall, 730 Nineteenth Street. Residence hall for men.

John C. Calhoun Hall, 2100 Eye Street. Residence hall for men.

William H. Crawford Hall, 2119 H Street. Residence hall for women.

Dolly Madison Hall, 736 Twenty-second Street. Residence hall for women.

Hattie M. Strong Hall, 620 Twenty-first Street. Residence hall for women.

Welling Hall, 814 Twenty-second Street. Residence hall for men.

Samson Hall, 2036 H Street. Comptroller's Office; departments of Chemistry, Geology, Physics.

School of Medicine, 1335–39 H Street.

Sorority Halls:

2112 G Street. Apartments of Kappa Alpha Theta and Kappa Delta sororities.

2129 G Street. Apartments of Pi Beta Phi, Chi Omega, Sigma Kappa, Alpha Delta Pi, Delta Zeta, Zeta Tau Alpha, and Kappa Kappa Gamma sororities.

2131 G Street. Apartment of Delta Gamma Sorority.

2137 F Street. Apartment of Alpha Epsilon Phi Sorority.

802 Twenty-first Street. Apartment of Phi Sigma Sigma Sorority.

Stockton Hall, 720 Twentieth Street. The Law School.

Student Union, 2125 G Street. Offices of student organizations, cafeteria and snack bar, reading room, lounge, game and music room, "Lost and Found" Office.

Tompkins Hall of Engineering, 725 Twenty-third Street. The School of Engineering.

University Book Store, 2120 H Street.

University Library, 2023 G Street. The library, rooms of the Board of Trustees, Faculty Conference Room, classrooms, Office of the Dean of the National Law Center.

LIBRARY FACILITIES

The Library collections of the University are housed in the University Library and in the departmental libraries of law and medicine.

These collections contain approximately 361,100 volumes—278,600 in the University Library, 58,000 in the Law Library, and 24,500 in the Medical Library. Approximately 10,000 volumes a year are added to the Library's resources. Endowments, supplementing the University appropriation, provide books in the fields of American civilization, American literature, foreign service, history, public finance, and the social sciences; and gifts from many sources have enriched the collections. The Libraries currently receive 2,100 periodicals.

Information concerning the use of the Libraries may be obtained at the Library service desks. A classified list on cards of selected recent acquisitions is available at frequent intervals, in addition to the complete information in the card catalogue. Monthly art exhibits are held on the first and second floors of the University Library during the academic year.

The hours of the University Library and the Law Library are Monday through Friday, 9:00 A.M. to 10:00 P.M.; Saturday, 9:00 A.M. to 5:00 P.M.; Sunday, 2:00 to 6:00 P.M. The Medical Library is open Monday through Friday, 9:00 A.M. to 10:00 P.M.; Saturday, 9:00 A.M. to 5:00 P.M.

The student has access to the Library of Congress, the Public Library of the District of Columbia and its branches, the library of the Pan American Unions, the Library of the Bureau of Railway Economics, the Library of the United States Department of Agriculture, the Library of the United States Office of Education, the National Library of Medicine, the Library of the Smithsonian Institution, and many of the other great special collections of the government departments.

COLUMBIAN COLLEGE OF ARTS AND SCIENCES

FACULTY AND STAFF OF INSTRUCTION

EMERITUS FACULTY

ANTONIO ALONSO, A.M., *Professor Emeritus of Spanish*
ROBERT WHITNEY BOLWELL, Ph.D., Litt.D., *Professor Emeritus of American Literature*
THOMAS BENJAMIN BROWN, Ph.D., *Professor Emeritus of Physics*
ELBRIDGE COLBY, Ph.D., *Professor Emeritus of Journalism*
IRENE CORNWELL, Ph.D., *Professor Emeritus of French*
NORRIS INGERSOLL CRANDALL, M.Arch., *Professor Emeritus of Art*
ALAN THOMAS DEIBERT, A.M., *Professor Emeritus of Romance Languages*
WILLIAM WEBSTER DIEHL, Ph.D., *Professor Emeritus of Mycology*
HENRY GRATTAN DOYLE, A.M., LL.D., Litt.D., *Professor Emeritus of Romance Languages*
ROBERT FISKE GRIGGS, Ph.D., *Professor Emeritus of Botany*
AVERETT HOWARD, A.M., *Professor Emeritus of English Composition*
MERLE IRVING PROTZMAN, Ph.D., *Professor Emeritus of Romance Languages*
EDWARD HENRY SEHRT, Ph.D., *Professor Emeritus of German*
JAMES HENRY TAYLOR, Ph.D., *Professor Emeritus of Mathematics*
FRANK MARK WEIDA, Ph.D., *Professor Emeritus of Statistics*
WARREN REED WEST, Ph.D., *Professor Emeritus of Political Science*
LAWSON EDWIN YOCUM, Ph.D., *Professor Emeritus of Botany*
DONNELL BROOKS YOUNG, Ph.D., *Professor Emeritus of Zoology*

ACTIVE FACULTY AND STAFF OF INSTRUCTION *

CAROLINE LANDER ADAMS, Ph.D., *Associate Professorial Lecturer in Botany*
FRANK DUANE ALLAN, Ph.D., *Associate Professor of Anatomy*
JOHN GAGE ALLEE, Jr., Ph.D., *Associate Professor of English Philology*
EDMUND MINOR ARCHER, *Studio Lecturer in Art (Drawing and Painting)*
JOHN MARTYN BAILEY, Ph.D., *Assistant Professor of Biochemistry*
ROBERT EDWARD BAKER, A.M., A.M. in Ed., *Assistant Professor of Education*
SAMUEL BAUM, A.B., *Assistant Professor of Sociology and Anthropology*
JANE ANNETTE BAUMAN, A.B., *Instructor in English Composition*
LEE SHEWARD BIELSKI, A.M., *Associate Professor of Speech*
JOSEPH BLUM, Ph.D., *Associate Professorial Lecturer in Mathematics*
LYMAN DUTTON BOTHWELL, A.M., *Instructor in Economics*
PAUL WILLIAM BOWMAN, Ph.D., *Professor of Biology*
JOHN WITHROW BREWER, Ph.D., *Professor of International Law*
HAROLD FREDERICK BRIGHT, Ph.D., *Professor of Statistics*
JOHN ROBERT BUCHHEIT, M.S., *Lecturer in Zoology*
†ARTHUR EDWARD BURNS, Ph.D., *Professor of Economics*
ELIZABETH BURTNER, A.M., *Professor of Physical Education for Women*

* The President of the University; the Dean of Faculties; the Dean, Associate Dean, and Assistant Deans of the College; the Registrar of the University, the Director of Admissions of the University; the Professors; Associate Professors; Assistant Professors; and Instructors constitute the Faculty. This listing of Faculty and Staff of Instruction is for the academic year 1961–62.

† On sabbatical leave spring semester 1961–62.

WILLARD EDMUND CALDWELL, Ph.D., *Associate Professor of Psychology*
JOHN MARTIN CAMPBELL, A.B., *Assistant Professor of Sociology and Anthropology*
ROBERT DALE CAMPBELL, Ph.D., *Professor of Geography*
GERALD VINCENT CARROLL, Ph.D., *Associate Professor of Geology*
HENRY MARCELLUS CATHEY, Ph.D., *Associate Professorial Lecturer on Plant Physiology*
JOHN CLAYTON, Ph.D., *Associate Professor of Business Administration*
WILLIAM GRAHAM CLUBB, Ph.D., *Associate Professor of French*
JAMES HAROLD COBERLY, Ph.D., *Professor of American Literature*
CHARLES WILLIAM COLE, Ph.D., *Professor of American Literature*
GERHARD COLM, Dr. rer. pol., *Professorial Lecturer in Economics*
JOSEPH GEOFFREY COLMEN, Ph.D., *Associate Professorial Lecturer in Psychology*
WILLIAM JOHN CONDELL, Jr., Ph.D., *Lecturer in Physics*
JOHN TAIT DAVIS, Ph.D., *Assistant Professor of Geography*
WILLIAM COLUMBUS DAVIS, Ph.D., *Associate Professor of Latin American History*
RODERIC HOLLETT DAVISON, Ph.D., *Professor of European History*
VINCENT JAMES DEANGELIS, B.S. in P.E., A.M. in Ed., *Professor of Physical Education for Men*
FRANK LANDT DENNIS, A.B., LL.B., *Lecturer in Journalism*
ALTON HAROLD DESMOND, Ph.D., *Associate Professor of Zoology*
*MITCHELL DREESE, Ph.D., *Professor of Educational Psychology*
DANIEL MACCABAEUS DRIBIN, Ph.D., *Professorial Lecturer in Mathematics*
MARGARET CLARA ETHIER, M.S., *Assistant Professor of Chemistry*
DON CARLOS FAITH, Ph.D., *Professor of Educational Psychology*
DEWITT FISHER, M.E., A.M., *Lecturer in Physics*
MICHAEL FLEISCHER, Ph.D., *Professorial Lecturer in Geology*
CHARLES EUGENE FORSYTHE, M.F.A., *Studio Lecturer in Art (Design)*
JOHN ANDREW FREY, Ph.D., *Assistant Professor of Romance Languages*
ROBERT ELEMER GAJDUSEK, A.M., *Assistant Professor of English*
PATRICK FRANCIS GALLAGHER, A.B., *Assistant Professor of Sociology and Anthropology*
CHARLES EDWARD GAUSS, Mus.B., Ph.D., *Elton Professor of Philosophy*
HAROLD LORAN GEISERT, Ph.D., *Professor of Sociology and Anthropology*
LYNDALE HARPSTER GEORGE, B.S. in P.E., A.M. in Ed., *Assistant Professor of Physical Education for Women*
LILA GHENT, Ph.D., *Assistant Research Professor of Psychology*
JACQUELINE JARRETT GOODNOW, Ph.D., *Assistant Research Professor of Psychology*
WOOD GRAY, Ph.D., *Professor of American History*
SAMUEL GREENHOUSE, Ph.D., *Professorial Lecturer in Statistics*
ANGUS MACIVOR GRIFFIN, Ph.D., *Professor of Microbiology*
EDWARD HACSKALO, Ph.D., *Associate Professorial Lecturer on Plant Physiology*
RAYMOND GEORGE HANKEN, B.S. in P.E., A.M. in Ed., *Professor of Physical Education for Men*
IRA BOWERS HANSEN, Ph.D., *Professor of Zoology*
EARL HARBERT, A.M., *Instructor in English*
JAMES WILLARD HARKNESS, B.S., Ed.M., *Associate Professor of Chemistry*
JOHN MAY HARRISON, M.S., *Lecturer in Physics*
RICHARD CATLIN HASKETT, Ph.D., *Associate Professor of American History*
GEORGE FRANCIS HENIGAN, Jr., Ph.M., *Professor of Speech*
CHARLES HERBER, A.M., *Assistant Professor of European History*

* On leave of absence 1961–62.

Hans Heymann, Jr., M.I.A., *Professorial Lecturer in Economics*
Philip Henry Highfill, Jr., Ph.D., *Professor of English Literature*
Charles Wadsworh Hill, Ph.D., *Associate Professor of Psychology*
Peter Proal Hill, A.M., *Instructor in History*
John Vincent Hinkel, M.S., *Lecturer in Journalism*
Herman Hedberg Hobbs, Ph.D., *Associate Professor of Physics*
Thomas Willard Holland, LL.B., Ph.D., *Professor of Labor Economics*
James Pippert Hollinger, Ph.D., *Assistant Professor of Physics*
Chiang-Yao Hsieh, A.M., *Instructor in Economics*
Henry Furness Hubbard, Ph.D., *Professorial Lecturer in Psychology*
Rudolph Hugh, Ph.D., *Associate Professor of Microbiology*
Thelma Hunt, Ph.D., M.D., *Professor of Psychology*
Gérard Paul Huvé, *Instructor in French*
Maragaret Ives, Ph.D., *Professorial Lecturer in Psychology*
Kiril Jaszenko, M.Comp.L. (Am.Prac.), *Lecturer in Russian*
Herbert Jehle, Dr.Ing., *Professor of Physics*
Eva Mayne Johnson, Ph.D., *Associate Professor of Psychology*
Everett Herschel Johnson, Ph.D., *Professor of Statistics*
Janet Wildman Johnson, A.M., *Associate in Psychology*
Francis Edgar Johnston, Ph.D., *Professor of Mathematics*
Robert Gean Jones, B.D., Ph.D., *Associate Professor of Religion*
Jacobus Martinus Kaper, Ph.D., *Associate Research Professor of Botany*
Kenneth Casper Kates, Ph.D., *Professorial Lecturer in Zoology*
Elmer Louis Kayser, Ph.D., LL.D., *Professor of European History*
Charles Duell Kean, A.B., S.T.B., D.D., *Associate Professorial Lecturer in Religion*
John Whitefield Kendrick, Ph.D., *Professor of Economics*
Ralph Dale Kennedy, Ph.D., *Professor of Accounting*
Hewitt Kenyon, Ph.D., *Assistant Professor of Mathematics*
James Cecil King, Ph.D., *Associate Professor of German*
Virginia Randolph Kirkbride, A.M., Ed.D., *Associate Professor of Educational Psychology*
Donald Chenoweth Kline, B.Arch., M.F.A., *Professor of Art*
George Martin Koehl, A.M., *Professor of Physics*
Wolfgang Herbert Kraus, Dr.Jur., S.J.D., *Professor of Political Science*
Henry Charles Krebs, A.B., *Lecturer in Speech*
Joseph Henry Krupa, M.S., Ed.D., *Professor of Physical Education for Men*
Solomon Kullback, Ph.D., *Professorial Lecturer in Statistics*
Morton Kupperman, Ph.D., *Associate Professorial Lecturer in Statistics*
Richard Lahey, *Studio Lecturer in Art (Drawing and Painting)*
Gerald Saul Landau, B.S., *Associate in Chemistry*
Harry Hill Landon, Jr., Ph.D., *Associate Professorial Lecturer in Physics*
John Francis Latimer, Ph.D., *Professor of Classical Languages and Literatures*
Helen Bennett Lawrence, A.M., *Professor of Physical Education for Women*
Esther Lawton, A.M., *Lecturer in French*
Hugh Linus LeBlanc, Ph.D., *Associate Professor of Political Science*
Chester Elwood Leese, Ph.D., *Fry Professor of Physiology*
Lubin Poe Leggette, A.M., Ed.D., *Depew Professor of Speech*
Wolfram Karl Legner, Ph.D., *Professor of German*
Laurence Pereira Leite, A.M., *Associate Professor of Art*
Robert Meyer Leonard, Ph.D., *Professor of Pharmacology and Pharmacognosy*

CLYDE JOE LINDLEY, A.M., *Lecturer in Psychology*
CALVIN DARLINGTON LINTON, Ph.D., *Professor of English Literature*
GORDON LESLIE LIPPITT, B.D., Ph.D., *Professor of Behavioral Sciences*
THOMAS PHILLIP GEORGE LIVERMAN, Ph.D., *Professor of Mathematics*
EULOGIA LLANSA, Lic. en Der. Dipl., LL.D., Ph.D., *Instructor in Spanish*
CARLOS LOZANO, A.B., *Assistant Professor of Romance Languages*
HOWARD ROWLAND LUDDEN, A.M., *Associate Professor of Political Science*
MELVIN ERNEST LYON, Ph.D., *Assistant Professor of American Literature*
WILLIAM ALLAN MACDONALD, Ph.D., *Professor of Art and Archaeology*
HAROLD GEORGE MANDEL, Ph.D., *Professor of Pharmacology*
WILLIAM HENRY MARLOW, Ph.D., *Professorial Lecturer in Mathematics*
WILLIAM LAVERNE MARSH, B.S., M.D., *Associate Professor of Pathology*
GUIDO ETTORE MAZZEO, Ph.D., *Associate Professor of Romance Languages*
MURIEL HOPE MCCLANAHAN, Ph.D., *Associate Professor of English Composition*
GEORGE ELBERT MCSPADDEN, Ph.D., *Professor of Romance Languages*
CLAUDE YVES MEADE, Ph.D., *Associate Professor of Romance Languages*
FLORENCE MARIE MEARS, Ph.D., *Professor of Mathematics*
HOWARD MAXWELL MERRIMAN, Ph.D., *Professor of American Diplomatic History*
JOSEPH LOUIS METIVIER, JR., A.M., *Assistant Professor of Romance Languages*
MARGARET WHEELER MONTZKA, A.M., *Assistant Professor of Physics*
ROBERT HAMILTON MOORE, Ph.D., *Professor of English Composition*
MABEL ELIZABETH MORRIS, A.M., *Lecturer in Mathematics*
EDITH ELIZABETH MORTENSEN, Ph.D., *Professor of Zoology*
JAMES NORMAN MOSÉL, A.M., *Associate Professor of Psychology*
SAM CLARK MUNSON, Ph.D., *Professor of Biology*
GEORGE CLOYD MURRAY, B.S., *Assistant Research Professor of Physics*
WILLIAM HENRY MYERS, A.M., *Professor of Physical Education for Men*
CHARLES RUDOLPH NAESER, Ph.D., *Professor of Chemistry*
NELS DAVID NELSON, Ph.D., *Professor of Mathematics*
ELIZABETH SUTHERLAND NEYMAN, A.M., *Instructor in Spanish.*
ANDREW ANTHONY NILLES, A.B., LL.B., *Lecturer in Speech*
BENJAMIN NIMER, Ph.D., *Associate Professor of Political Science*
RICHARD EDWARD NOLAN, Ph.D., *Assistant Professor of Psychology*
KARL FERDINAND OERLEIN, Ph.D., *Lecturer in Physics*
CLIFTON EARL OLMSTEAD, A.B., Th.D., *Professor of Religion*
HEINZ DIETER OSTERLE, Studienreferendar, *Assistant Professor of German*
KITTIE FENLEY PARKER, Ph.D., *Associate Professorial Lecturer on Plant Taxonomy*
ROBERT CARLETON PARLETT, Ph.D., M.D., *Professor of Microbiology*
THOMAS MARTIN PEERY, A.B., M.D., *Professor of Pathology*
THEODORE PETER PERROS, Ph.D., *Professor of Chemistry*
CALVIN WEIR PETTIT, Ph.D., *Professor of Speech*
CARL HERMAN PFUNTNER, A.M., *Lecturer in Philosophy*
JEROME PERCIVAL PICKARD, Ph.D., *Associate Professorial Lecturer in Geography*
HERBERT RABIN, Ph.D., *Lecturer in Physics*
BARBARA RASKIN, A.M., *Instructor in English*
JOHN PALMER REESING, JR., Ph.D., *Associate Professor of English Literature*
EUGENE MARSHALL RENKIN, Ph.D., *Associate Professor of Physiology*
FLOYD MILLARD RIDDICK, Ph.D., *Professorial Lecturer in Political Science*
JAMES WILLIS ROBB, Ph.D., *Associate Professor of Romance Languages*
MARY LOUISE ROBBINS, Ph.D., *Professor of Microbiology*

GRETCHEN LOUISA ROGERS, Ph.D., *Professor of German*
ROBERT CLINTON RUTLEDGE, A.M., *Instructor in English*
WILLIAM FREDERICK SAGER, Ph.D., *Professor of Chemistry*
CAROL RUTH ST. CYR, Ph.D., *Associate Professor of Education*
ROSS PELTON SCHLABACH, JR., M.S., *Professor of Journalism*
RICHARD HAROLD SCHLAGEL, Ph.D., *Associate Professor of Philosophy*
LAWRENCE ERWIN SCHLESINGER, Ph.D., *Associate Research Professor of Psychology*
WILLIAM EDWARD SCHMIDT, Ph.D., *Associate Professor of Chemistry*
WILSON EMERSON SCHMIDT, Ph.D., *Professor of Economics*
AARON BEAR SEIDMAN, A.M., Rabbi, *Lecturer in Religion*
ROBERT CLAIR SENTZ, Ph.D., *Assistant Professor of Chemistry*
ERNEST SEWALL SHEPARD, A.M., *Professor of English Literature*
MILDRED HOLLANDER SHOTT, A.M., *Associate Professor of Secretarial Studies*
JESSALEE SICKMAN, A.B., *Studio Lecturer in Art (Drawing and Painting)*
ROBERT SUMNER SIGAFOOS, Ph.D., *Associate Professorial Lecturer on Plant Ecology*
JOSEPH RICHARD SIZOO, A.M., D.D., Litt.D., LL.D., L.H.D., S.T.D., *Milbank Professor of Religion*
JOHN WILLIAM SKINNER, Ph.D., *Associate Professor of Economics*
*LEWIS SLACK, Ph.D., *Professor of Physics*
CHARLES HENRY SLAYMAN, JR., LL.B., *Lecturer in Political Science*
BENJAMIN WILLIAMS SMITH, Ph.D., *Associate Professor of Biochemistry*
LYMAN BRADFORD SMITH, Ph.D., *Professorial Lecturer on Plant Taxonomy*
WILLIAM ARTHUR SMITH, A.M., *Assistant Professor of Mathematics*
JEANNE ELLEN SNODGRASS, A.B., M.S. in P.E., *Assistant Professor of Physical Education for Women*
ISRAEL GREGORY SOHN, A.M., *Professorial Lecturer on Paleontology*
HENRY SOLOMON, Ph.D., *Associate Research Professor of Economics*
WILLIAM SPENCER, A.M., *Associate Professorial Lecturer in Political Science*
LORETTA MAY STALLINGS, A.M., *Associate Professor of Physical Education for Women*
GEORGE STEINER, B.S., Mus.M., *Assistant Professor of Music*
RICHARD WALTON STEPHENS, Ph.D., *Associate Professor of Sociology and Anthropology*
EDWIN LOCKWOOD STEVENS, A.M., *Professor of Speech*
RUSSELL BRADFORD STEVENS, Ph.D., *Professor of Botany*
RAFAEL SUPERVÍA, Doctor en derechio, *Associate Professor of Spanish*
EDITH SHORE SURREY, A.M., *Lecturer in Speech*
JAMES GERARD SWEENEY, Ph.D., *Assistant Professor of English*
GEZA TELEKI, Ph.D., *Professor of Geology*
IRA ROCKWOOD TELFORD, Ph.D., *Professor of Anatomy*
JOHN NEWELL TEVIS, A.M., *Lecturer in Physics*
RAYMOND EDWARD THOMAS, A.M., *Assistant Professor of Statistics*
RONALD BETTES THOMPSON, Ph.D., *Associate Professor of European History*
NANCY MARIE TISCHLER, Ph.D., *Assistant Professor of English*
JOHN ETTINGER TOMPKINS, A.M., *Lecturer in Physics*
KATHRYN MILDRED TOWNE, A.M., *Professor of Home Economics*
CARLETON RAYMOND TREADWELL, Ph.D., *Professor of Biochemistry*
FRED SALISBURY TUPPER, Ph.D., *Professor of English Literature*
WILLIAM LEWIS TURNER, Ph.D., *Associate Professor of English*
CURTIS EDWARD TUTHILL, Ph.D., *Associate Professor of Psychology*

* On leave of absence spring semester 1961–62.

GEORGE VARTKES VAHOUNY, Ph.D., *Assistant Professor of Biochemistry*
BENJAMIN DOUGLAS VAN EVERA, Ph.D., Sc.D., *Professor of Chemistry*
CONNIE SMITH VAUGHAN, B.S., *Assistant Professor of Physical Education for Women*
ROBERT ZENO VAUSE, Ph.D., *Assistant Professor of Mathematics*
ROBERT CORBIN VINCENT, Ph.D., *Professor of Chemistry*
RICHARD DAVID WALK, Ph.D., *Associate Professor of Psychology*
ROBERT HARRIS WALKER, JR., Ph.D., *Associate Professor of American Literature*
HEINZ WARNEKE, *Studio Lecturer in Art (Sculpture)*
DONALD STEVENSON WATSON, Ph.D., *Professor of Economics*
*HAROLD WALTER WESTERMANN, Ph.D., *Associate Professor of Geography*
DAVID GOVER WHITE, B.Chem.Eng., Ph.D., *Associate Professor of Chemistry*
JANE MURRAY WICKEY, A.B., M.S.W., *Lecturer in Sociology*
NORMAN ARTHUR WIEGMANN, Ph.D., *Professor of Mathematics*
ROBERT CRUMPTON WILLSON, A.B., *Associate Professor of Journalism*
REUBEN ESSELSTYN WOOD, Ph.D., *Professor of Chemistry*
SAMUEL NATHANIEL WRENN, Ph.D., *Professor of Chemistry*
ELIZABETH TRUMAN WRIGHT, A.M., *Assistant Professor of English Composition*
HELEN BATES YAKOBSON, B.S., *Associate Professor of Russian*
STEPHEN SAFFORD YEANDLE, JR., Ph.D., *Assistant Professor of Physics*
RALPH AUBREY YOUNG, Ph.D., *Professorial Lecturer in Economics*

UPPER AND GRADUATE DIVISIONS

THE DEAN'S COUNCIL‡

1962: A. H. Desmond, R. C. Vincent; 1963: Gretchen Rogers, W. F. Sager; 1964: R. C. Haskett, C. E. Tuthill

COMMITTEE ON ADMISSION AND ADVANCED STANDING

R. W. Stephens *(Chairman)*, Edith Mortensen *(Secretary)*, C. W. Cole, J. W. Kendrick, W. F. Sager

* On sabbatical leave fall semester 1961–62.
† The Dean of Columbian College of Arts and Sciences is a member ex officio of all committees.
‡ Elected by the Faculty.

COMMITTEE ON THE USE OF CORRECT ENGLISH

R. H. Moore *(Chairman)*, J. G. Allee, Jr., G. F. Henigan, Jr., Muriel McClanahan, R. C. Willson

COMMITTEE ON SCHOLARSHIP

Florence Mears *(Chairman)*, W. G. Clubb, H. M. Merriman, J. P. Reesing, Jr., S. N. Wrenn

COMMITTEE ON STUDIES

C. D. Linton *(Chairman)*, A. H. Desmond, H. L. LeBlanc, William Schmidt, F. S. Tupper

INTRODUCTORY

Columbian College was founded in 1821. James Monroe, then President of the United States, aided in obtaining the charter from Congress which established "The Columbian College in the District of Columbia" for the "sole and exclusive purpose of educating youth in the English, learned and foreign languages, the liberal arts, sciences and literature." Columbian College became Columbian University in 1873. When Congress authorized changing the name to The George Washington University, the name "Columbian College" was given to the college of liberal arts and sciences. In 1961 the name was changed to Columbian College of Arts and Sciences.

Incoming liberal arts and science freshmen and all transfer students of less than junior class standing are registered in the lower division of Columbian College. The lower division also provides the first two years of the prelegal and premedical programs, the preprofessional work required for admission to the schools of Pharmacy; Education; and Government, Business, and International Affairs; and two-year terminal curricula in Accounting, Home Economics, Physical Sciences, and Secretarial Studies. The lower division is primarily concerned with providing (1) the personal and academic guidance needed by beginning college students and (2) the broad cultural foundations in language and literature, science, and social studies on which major field specialization in the upper division is built.

The upper division of Columbian College offers programs leading to Bachelor's degrees in the liberal arts and sciences; the graduate division offers programs leading to the Master's degrees.

Students beginning the first year of graduate study who plan to work toward the degree of Doctor of Philosophy may be given provisional status in the Graduate Council. However, if the student prefers and if the Dean of the Graduate Council so advises, he may register for a Master's degree in Columbian College of Arts and Sciences during the first year and apply for transfer to the Council upon completion of the Master's work.

THE COLUMBIAN COLLEGE PROGRAM

The Columbian College program is a contemporary application of the historic liberal arts tradition. Its purpose is to enable the student to develop harmoniously both his particular abilities and his general awareness as a human being. It de-

mands of the student a thorough acquaintance with one major area of learning and at the same time an understanding of how that field of specialization fits into the larger context of the scientific, social, and moral problems which confront modern man. It stresses not merely expertness but that broadly enlightened expertness which encourages its graduates to grow through the years in ability and wisdom.

ADMISSION

Columbian College accepts both men and women. Students are admitted at the beginning of each semester and summer session.

The right is reserved to refuse admission to any student with an academic record which creates doubt of his ability to succeed in college or who, for any other reason, would not be an acceptable student.

APPLICATION FOR ADMISSION AND READMISSION

Forms for application for admission or readmission are available at the Office of the Director of Admissions, 2029 G Street NW., Washington 6, D.C.; telephone: FE 3-0250, extension 344. The application for admission*, with a $10 application fee and a recent, signed photograph, should be returned to the Office of the Director of Admissions.

Application for admission or readmission for degree candidacy, together with all required credentials, should be received by July 1 for the fall semester, January 1 for the spring semester, and May 1 for the Summer Sessions to insure consideration. Late applications will be considered only if the application form and all required credentials are received in the Admissions Office no later than two weeks prior to the first day of registration for the semester or session for which application is made. Exceptions may be made under extraordinary circumstances, at the discretion of the Director of Admissions.

Application for admission* to *nondegree status* in the Division of University Students must be received, with a $5 application fee and necessary credentials, no later than the Saturday preceding the first day of registration, as stated in the University calendar.

An applicant from a secondary school must send the high school record form provided by the University to his high school principal, with the request that the completed form be mailed directly *to the Office of the Director of Admissions.*

An applicant who has attended one or more institutions of higher learning must request each registrar to mail directly *to the Office of the Director of Admissions* a transcript of his record, *even though credits were not earned.* If high school units are not shown on the college transcript, the applicant should request his high school to submit a transcript to the Office of the Director of Admissions.

The appropriate report of the Graduate Record Examination, when available, should accompany application for admission to Master's candidacy.

* An application for readmission does not require a fee unless it involves transfer to a college, school, or division of the University other than the one in which the applicant was last registered. In this case, a $5 transfer fee is required.

ADVANCED STANDING

Credit for Advanced Placement Examinations

Up to 30 semester hours of credit may be granted for college-level courses in an approved secondary school, if substantiated by satisfactory performance in the Advanced Placement Examination. Arrangement for the examination is the responsibility of the applicant and should be made with the College Board Advanced Placement Examinations, Educational Testing Service, 20 Nassau Street, Princeton, N. J.

The applicant must request the examining service to submit the test papers and scores to the Office of Admissions. Consideration is given to both the quality of performance on the examination and the quality and content of the courses of study completed by the applicant.

Credit from Higher Institutions

Advanced standing may be granted for work successfully completed at accredited institutions of higher learning. Credit will be granted for transferred work only when it meets the requirements for the degree sought at this University. It may be allowed provisionally, and it may be withdrawn for subsequent poor work.

The student must be in good standing as to scholarship and conduct. He must be eligible to return to the last previously attended institution in the semester for which he seeks admission to this University.

READMISSION

A student previously registered in the University who was not registered on-campus during the immediately preceding semester (summer session excluded), must apply for readmission in the Office of the Director of Admissions. (See closing dates for application for admission, page 13.) If he applies as a degree candidate and was previously registered as a nondegree student, or if he has attended one or more higher institutions during his absence from the University, he must have complete, official transcripts sent to the Office of the Director of Admissions from each institution attended. Applications for readmission are considered on the basis of regulations currently effective.

ENTRANCE REQUIREMENTS *

Good character and an academic background appropriate for the program of studies contemplated are required.

LOWER DIVISION

Requirements for admission to the freshman class are as follows:

1. An acceptable certificate of graduation from an accredited secondary school, showing at least fifteen "units"†. The program of study *recommended* for students entering in September 1962 and *required* of students entering in February 1963 and thereafter is as follows: four years of English; at least two years of one foreign lan-

* Entrance requirements are established by the faculties of the several colleges, schools, and divisions. The Director of Admissions, as agent for the faculties, administers regulations governing admission, readmission, and transfer.

† A unit represents a year's study in a secondary school subject, including in the aggregate not less than 120 sixty-minute periods, or the equivalent, of prepared classroom work.

guage; two years of science, preferably with laboratory instruction; two years of social study, one of which must be American history; and two years of college preparatory mathematics. It is to be noted that one unit of algebra, or the equivalent, is prerequisite to courses in chemistry, mathematics, physics, and statistics, and that in addition one unit of plane geometry, or the equivalent, is prerequisite to courses in mathematics and physics.

2. The principal's statement that the applicant is prepared to undertake college work.

3. College Entrance Examination Board scores must be submitted on the Scholastic Aptitude Test.

Beginning February 1963 scores must also be submitted on the English Composition Achievement Test. Applicants are urged to submit scores on two additional achievement tests in subjects reflecting their major interests.

It is recommended that the examinations be taken in December or January. Scores on tests taken in the Junior year may be submitted. Arrangement for tests should be made with the College Entrance Examination Board, 20 Nassau Street, Princeton, N. J., not less than one month before the date of the test. In applying for the test, the student should specify that the scores be sent to the Director of Admissions, The George Washington University, Washington 6, D. C.

The Committee on Admission and Advanced Standing will consider the adequacy of the qualifications of an applicant who, because of unusual circumstances, does not present all the formal requirements stated above. The Committee may prescribe appropriate tests.

UPPER DIVISION

Bachelor of Arts.—Sixty-four hours of academic work based on the *Arts and Letters* curriculum in the lower division, or the equivalent (see page 32).

Bachelor of Science.—Sixty-four hours of academic work based on the *Science* curriculum in the lower division, or the equivalent (see page 32).

Bachelor of Science in Medical Technology.—Sixty-four hours of academic work including Biology 1–2*, Chemistry 11–12, and Microbiology 112, or the equivalent (see page 33).

GRADUATE DIVISION

An approved Bachelor's degree from an accredited higher institution; an appropriate distribution of courses; and a superior quality of work in the major field are required. A student from an unaccredited institution may be admitted at the discretion of the Committee on Admission and Advanced Standing, but he may be required to take extra work.

Applications for admission must be approved by the department and by the Dean.

Master of Arts.—A Bachelor of Arts degree at this University with a major in the chosen field, or the equivalent.

Master of Science.—A Bachelor of Science degree at this University with a major in the chosen field, or the equivalent.

Master of Fine Arts (1) *in the field of Painting or Sculpture.*—A Bachelor of Arts degree at this University with a major in drawing and painting, sculpture, or commercial art, or the equivalent. (2) *In the field of Dramatic Art.*—A Bachelor's degree from an accredited college or university. Desirable undergraduate background

* An interdepartmental course offered by the departments of Botany and Zoology.

includes courses in literature, drama, and the theater. Applicants with academic deficiencies may be enrolled in the program subject to the satisfactory completion of prescribed courses.

REGISTRATION

A student cannot register for classes until he has received a letter of admission to the University, issued by the Office of the Director of Admissions.

A student previously registered in the University who was not registered on-campus during the immediately preceding semester (summer session excluded), must apply for readmission in the Office of Admissions.

No registration is accepted for less than a semester or one summer session.

A student may not register concurrently in this University and another institution without the prior permission of the dean of the college, school, or division in which he is registered in this University. Registration in more than one college, school, or division of the University requires the written permission of the deans concerned, *prior to registration.* Allowance of credit for work done concurrently will be at the discretion of the appropriate Committee on Admission and Advanced Standing.

In Residence Registration

A student who is absent from the University for one semester or more is required to satisfy the curriculum requirements existing at the time of his return unless during his absence he maintains "in residence" status by paying the appropriate fee, see page 17. For the purpose of this regulation the summer term will be disregarded.

The student who has completed his tuition requirements, but whose graduation is deferred for any reason, must maintain "in residence" status by paying the residence fee for the semester immediately preceding the graduation at which he expects to receive his degree.

Time and Place of Registration

Registration is conducted in Building C, 2029 G Street NW., during the following periods: *fall semester,* September 20 and 21, 12:00 to 8:00 P.M.; September 22, 10:00 A.M. to 1:00 P.M. *Spring semester,* January 31 and February 1, 12:00 to 8:00 P.M., February 2, 10:00 A.M. to 1:00 P.M.

FEES AND FINANCIAL REGULATIONS

By authorization of the Board of Trustees, the following fees have been adopted, effective September 1, 1961:

Tuition Fees	
Full-time program (15 hours or more): for each semester*	$450.00
Part-time program: for each semester hour*	30.00

* Payment of tuition for a Master's thesis entitles the candidate, during the academic year of registration, to the advice and direction of the member of the faculty under whom the thesis is to be written. In case a thesis is unfinished, an additional successive academic year may be granted without further tuition payment. The student must, however, be registered "in residence" during this period. If the preparation of the thesis extends beyond the second academic year, it must be registered for again, and tuition paid on the same basis as for a repeated course.

Additional Course Fees

In certain courses additional fees, such as laboratory and material fees, are charged as indicated in the course descriptions. These fees are charged by the semester and, unless otherwise indicated, may be defrayed in three payments when the tuition is paid in this manner. Breakage of apparatus is charged against the individual student. When breakage is in excess of the normal amount provided for in the laboratory fee the individual student will be required to pay such additional charges as are determined by the department concerned.

Graduation Fees

Wherein the degree of Associate in Arts or Associate in Science is granted	10.00
Wherein a Bachelor's or Master's degree is granted	25.00

Special Fees

Application fee, charged each applicant for admission as a degree candidate, nonrefundable	10.00
Application for Transfer fee, charged* each applicant for transfer within the University from one college, school, or division to another, except in cases of normal progression, nonrefundable	5.00
Admission tests (when required)	6.00–12.00
Graduate Record Examination fee (to cover two examinations), charged each candidate for a Bachelor's degree at the time of registration for the final semester of study (excluding summer sessions)	10.00
Late-registration fee, charged each student who fails to register within the designated period	5.00
Change fee, charged each student for each change in program: dropping or adding a course, changing from one section to another within a course, change of status (from auditor to credit status or vice versa), and change in credit hours for a course	2.00
Withdrawal fee, charged in special cases	5.00
Service fee, charged each student for late payment of tuition (see "Payment of Fees")	2.00
Reinstatement fee, charged each student who is reinstated after suspension for delinquency in fees	5.00
Residence fee, charged each student wishing to maintain "in residence" status during any semester of absence from the University or after completion of tuition requirements (see page 16). Due and payable on the official days of registration	30.00
For special physical examination	2.00
For each examination to qualify for advanced standing and for each special examination	5.00
Laboratory checkout fee, charged each student in chemistry and pharmacy courses who fails to check out of the laboratory by the time set by the instructor	3.00
Transcript fee, charged for each transcript of record after the first	1.00

Registration in the University entitles each student to the following University privileges: (1) the issuance of one certified transcript of record, if and when desired; (2) the services of the Placement Office; (3) the use of University library; (4) gymnasium privileges; (5) admission to all athletic contests, unless otherwise specified; (6) subscription to the *University Hatchet*, the student newspaper; (7) admission to University debates; (8) medical attention and hospital services as described under Health Administration. These privileges, with the exception of the issuance of transcripts, terminate, and a student is no longer in residence, when he withdraws or is dismissed from the University.

* Payable at the time of application for transfer or readmission.

PAYMENT OF FEES

All fees are payable at the Office of the Cashier, 725 Twenty-first Street NW. No student is permitted to complete registration or to attend classes until all fees are paid. Fees for each semester are due and payable in advance at the time of registration.

With the approval of the Treasurer, the student may sign a contract for semester charges, except for fees payable in advance, permitting payments as follows:

Fall Semester.—One-third at the time of registration; one-third on the first working day* in November; one-third on the first working day* in December.

Spring Semester.—One-third at the time of registration; one-third on the first working day* in March; one-third on the first working day* in April.

Arrangements for the above may be made with the Office of the Cashier at the time of registration. Installment-due notices are mailed. However, nonreceipt of notice is no excuse for failure to meet obligations when due.

A student who fails to meet payments when due, but pays his fees within the following two weeks of the date on which payment is due, is charged a $2 service fee. A student who fails to meet payments within these two weeks after payment is due is automatically suspended and may not attend classes until he has been officially reinstated and has paid all accrued fees and a reinstatement fee of $5.

A student suspended for failure to meet payments when due may not be reinstated for the semester after two weeks from the date of suspension. Applications for reinstatement are to be made to the Office of the Cashier.

An auditor pays all fees chargeable to the student registered for credit except the late-registration fee.

WITHDRAWALS AND REFUNDS

Applications for withdrawal from the University or for change in class schedule must be made in person or in writing to the dean of the college, school, or division in which the student is registered. Notification to an instructor is not an acceptable notice (see "Withdrawal", pages 26 and 27).

In authorized withdrawals and changes in schedule, financial adjustments will be made as follows:

Fall Semester

Full-time program.—Complete withdrawal from the University dated on or before the last working day* in October or November, cancellation of two-thirds or one-third, respectively, of the full-time program charges.

Partial withdrawal dated on or before the last working day* in October or November, cancellation of two-thirds or one-third, respectively, of the difference between the charges for the full-time program and the hourly charges of the part-time program continuing in effect.

Part-time program.—Withdrawal dated on or before the last working day* in October or November, cancellation of two-thirds or one-third, respectively, of tuition charges.

Spring Semester

Full-time program.—Complete withdrawal from the University dated on or before the last working day* in February or March, cancellation of two-thirds or one-third, respectively, of the full-time program charges.

* The University work week is Monday through Friday, inclusive.

Partial withdrawal dated on or before the last working day* in February or March, cancellation of two-thirds or one-third, respectively, of the difference between the charges for the full-time program and the hourly charges of the part-time program continuing in effect.

Part-time program.—Withdrawal dated on or before the last working day* in February or March, cancellation of two-thirds or one-third, respectively, of tuition charges.

No refund or reduction will be allowed on any withdrawal dated after the last working day* in November (fall semester) or March (spring semester).

A student enrolled in a full-time program, who drops or adds a course and continues to be in a full-time program, will have no financial adjustments of tuition made other than those involving course fees.

In no case will a refund be made of the first third of the total tuition charges. In no case will tuition be reduced or refunded because of nonattendance upon classes.

Payment applies only to the semester for which a registration charge is incurred and in no case will this payment be credited to another semester.

A student in chemistry who fails to check out of the laboratory on or before the date set by the instructor, unless excused by the instructor, will be charged a $3 checkout fee. A student who drops a course before the end of the semester must check out of the laboratory at the next regular laboratory period.

Students enrolled in the ROTC who fail to turn in uniforms, equipment, and textbooks, on separation from the Corps, are charged the value of the missing items.

Authorization to withdraw and certification for work done will not be given a student who has not a clear financial record.

Students are encouraged to provide their own cash funds until they can make banking arrangements in the community.

FELLOWSHIPS, SCHOLARSHIPS, PRIZES, FINANCIAL AID

FELLOWSHIPS, GRADUATE SCHOLARSHIPS, AND ASSISTANTSHIPS

Unless otherwise specified, applications should be submitted not later than March 1 preceding the period for which the award is to be made. They should be directed to the chairman of the department or the dean of the school concerned and addressed to The George Washington University, Washington 6, D. C.

University Teaching Fellowships.—Assigned for the academic year to the various departments of instruction. The applicant is expected to be a prospective candidate for a Doctoral degree in the general field of his future doctoral study. Each teaching fellow receives an annual stipend (on a nine-month basis) of up to $2,000 plus full tuition and laboratory fees for whatever schedule of study or research his fellowship duties permit him to carry. Stipends vary with the work load of the individual teaching fellow. Normally a University teaching fellow renders half-time service in classroom or laboratory assignments to the department of instruction di-

* The University work week is Monday through Friday, inclusive.

recting his doctoral study. Application should be made to the chairman of the department of instruction concerned.

Graduate Teaching Assistantships.—Open in various departments of instruction to candidates for the Master's degrees. Each graduate teaching assistant renders a designated unit of service to his major department of instruction, and receives, depending upon his teaching or laboratory assignment, up to $2,000 on a nine-month basis plus tuition and laboratory fees for the program of studies which the duties of his assistantship permit him to carry. Application should be made to the chairman of the department of instruction concerned.

Isabella Osborn King Research Fellowships.—Fellowships varying in amount from $750 to $3,000, established in 1927 by bequest of Isabella Osborn King, are offered in the biological sciences and are intended to foster research for which the libraries and scientific establishments in Washington provide special facilities.

National Defense Graduate Fellowships.—Under the National Defense Education Act, fellowships are available at this University in Germanic Languages and Literatures and in Romance Languages and Literatures at $2,000 (with an increase of $200 each for the second and third years) plus $400 a year for each dependent; tuition is waived. Application should be made to the Graduate Council.

National Science Foundation Cooperative Graduate Fellowships.—These fellowships at $2,200 for twelve months or $1,600 for nine months, with tuition waived, are available in the mathematical, physical, medical, biological, and engineering sciences and in certain other fields regarded as employing scientific methods.

Thomas Bradford Sanders Fellowships.—Fellowships in departments of science, varying in amount from $900 to $1,500 plus tuition, established in 1928 by bequest of Addie Sanders in memory of her brother.

SCHOLARSHIPS AND PRIZES

The following scholarships and prizes are limited to students in Columbian College of Arts and Sciences. The University offers many others which are open to Columbian College students. A special bulletin containing a complete list and full information may be obtained from the Chairman of the Committee on Scholarships, The George Washington University, Washington 6, D. C.

Scholarships are awarded for the academic year unless otherwise specified and are credited in equal parts for each semester. Each holder must carry a full schedule of academic work during the period for which the scholarship is awarded.

Scholarship application should be made in writing on or before April first for the following academic year and, unless otherwise specified, should be addressed to the Chairman of the Committee on Scholarships, The George Washington University, Washington 6, D. C. Awards are made during the month of April. All scholarships begin with the fall semester.

Alpha Zeta Omega Scholarship.—A $500 scholarship established in 1950 by Pi Chapter of Alpha Zeta Omega Pharmaceutical Fraternity. Awarded annually to a member of the graduating class of one of the public high schools of the District of Columbia, nearby Maryland, or Virginia who intends to enroll in the pharmacy curriculum and complete the requirements for the degree of Bachelor of Science in Pharmacy. Application should be made to the Dean of the School of Pharmacy.

Alumni Scholarships.—Five scholarships are available each year in Columbian College of Arts and Sciences, upon recommendation of alumni or regional alumni

clubs, to outstanding graduates from accredited high schools outside the Metropolitan area of Washington, D. C. These scholarships cover tuition for four academic years (exclusive of the Summer Sessions), beginning with the fall semester. Special fees such as laboratory, room, board, or other expenses are not covered. To retain the scholarship, the student must maintain a *B* average.

Byron Andrews Scholarship.—Established in 1920 by Belle Fisk Andrews in memory of her husband. Available "for ambitious and needy students, who desire to pursue courses in English, Latin, journalism, history, literature, or political science".

Crown Photo Scholarship.—A $500 scholarship established in 1958 by the Crown Photo Service of Washington, D. C. Awarded annually to a member of the graduating class of one of the public high schools of the District of Columbia, nearby Maryland, or Virginia, who intends to enroll in the pharmacy curriculum and complete the requirements for the degree of Bachelor of Science in Pharmacy. Application should be made to the Dean of the School of Pharmacy.

District of Columbia Pharmaceutical Association Scholarship.—A $500 scholarship, established in 1954. Awarded annually to a member of the graduating class of one of the public or parochial high schools of the District of Columbia, nearby Maryland, or Virginia who intends to enroll in the pharmacy curriculum and complete the requirements for the degree of Bachelor of Science in Pharmacy. Application should be made to the Dean of the School of Pharmacy.

Robert Farnham Scholarship.—Established in 1871 by Mrs. Robert Farnham. Available to a student in Columbian College of Arts and Sciences.

Georgetown Business and Professional Women's Club Scholarship.—Established in 1958 by the Georgetown Business and Professional Women's Club. Available to a woman student in the field of science.

Anna Spicker Hampel Scholarship.—Established in 1949 by Evelyn Hampel Young in memory of her mother. Available for scholarship aid to young married women students in the School of Education or Columbian College of Arts and Sciences.

Elma Lewis Harvey Scholarship.—Established in 1921 by Emma Elizabeth Harvey in memory of her daughter. Awarded every four years, or as often as vacant, to a young woman in Columbian College of Arts and Sciences of the Protestant faith and the Caucasian race who shall be selected for scholarship and moral qualifications.

High School Scholarships.—The Board of Trustees offers thirty-four scholarships to graduates of public, private, and parochial high schools in the following Washington Metropolitan Areas: District of Columbia; Fairfax-Falls Church; Alexandria City; Montgomery, Prince Georges, and Arlington counties. One of these scholarships, designated as the *Amos Kendall Scholarship*, was established in 1869 by the Honorable Amos Kendall.

These scholarships are awarded to students who intend to enter the lower division of Columbian College of Arts and Sciences and complete a Bachelor's program at this University. The student must carry a full academic program; in no case is he permitted to carry less than 15 semester hours.

The awards cover full tuition for four academic years (exclusive of the Summer Sessions and special fees). To retain the scholarship, the student must maintain an average of *B* and meet all other standards of the University.

Nominations are made by principals and counselors of participating high schools. Inquiries should be addressed to the high school counselor.

High School Discussion Conference Scholarships.—Three scholarships are available

each year in Columbian College of Arts and Sciences to high school seniors who participate in The George Washington University High School Discussion Program. These scholarships cover tuition for one academic year but do not include special fees. Nominations are made by principals of participating high schools.

Inquiries should be directed to the Department of Speech, The George Washington University.

Kappa Alpha Theta Scholarship.—A $500 scholarship established in 1950 by the Washington alumnae of Kappa Alpha Theta. Available for the training of a clinician in speech correction.

Kappa Kappa Gamma Scholarship.—A $500 scholarship established in 1959 by the Washington, D. C., alumnae of Kappa Kappa Gamma. Awarded annually to a student planning to follow the profession of speech correction.

Newspaper Scholarships.—One scholarship is available each year to a candidate recommended by each of the following newspapers: *The Washington Daily News, The Washington Post,* and *The Evening Star.* The holder of the scholarship must be an employee of the newspaper. These scholarships are valid for four academic years, provided the holder continues in the employ and is recommended by the newspaper, and maintains a satisfactory academic record and a high standard of deportment. They cover tuition but do not include laboratory fees, graduation fees, or other special fees.

Mary Lowell Stone Scholarship.—A memorial scholarship established in 1893. Available to a woman student of science in Columbian College of Arts and Sciences.

Charles Clinton Swisher Scholarships.—Scholarships of $500 and $300, respectively, established in 1941 by bequest of Professor Charles Clinton Swisher. Available, under certain conditions, to students of medieval history.

University Hospital Scholarships in Medical Technology.—Ten scholarships are available, each to cover the cost of 24 semester hours of the 30 in the last year of the curriculum leading to the degree of Bachelor of Science in Medical Technology. Inquiries should be directed to the Department of Pathology, The George Washington University Hospital.

Barbara C. Wendt Scholarship.—A scholarship established in 1961 by the Presidential Chapter of the National Secretaries Association (International) of Washington, D. C., in memory of a former member. Awarded annually to a student in secretarial studies on the basis of academic merit and financial need.

Ellen Woodhull Scholarship.—Established in 1919 by bequest of Ellen M. E. Woodhull. Available to a student in Columbian College of Arts and Sciences.

American Institute of Chemists Prize.—The District of Columbia Chapter of the American Institute of Chemists offers annually a medal and a one-year subscription to *The Chemist* to the graduating student, majoring in chemistry, who excels in scholarship, integrity, and leadership.

Byrne Thurtell Burns Memorial Prize.—Awarded to the senior majoring in chemistry who shows the greatest proficiency in organic chemistry, as evidenced by a comprehensive examination, and who possesses such qualifications of mind, character, and personality as to give promise of future achievement.

Chi Omega Prize.—Offered annually by Phi Alpha Chapter of Chi Omega Fraternity. Awarded to the woman in the graduating class with the highest record in the following social sciences: economics, sociology, political science, and history; combined with general excellence.

FINANCIAL AID

Student Employment

Graduate and undergraduate student assistantships are available in several departments of the University. Application should be made to the chairman of the department of instruction concerned.

The Placement Office maintains a registry of positions available in many fields of work and refers qualified applicants for consideration.

Loan Funds

The following loan funds are available. Inquiries should be directed to the Office of the Treasurer.

University Loan Fund.—The Trustees of The George Washington University have made available a fund for short-term loans to students to provide for partial payment of tuition. Applications for these loans shall be made three days prior to the dates on which tuition installments are due.

National Defense Student Loan Fund.—This fund is available to full-time undergraduate and graduate students who are in need of financial assistance. Priority is given those applicants who express a desire to teach in elementary or secondary schools, and whose academic background indicates a superior capacity or preparation in science, mathematics, engineering, or a modern foreign language. After application for admission to the University has been completed, application on forms prescribed for this loan fund must be filed in the Office of the Treasurer no later than July first for the fall semester, December first for the spring semester, and May first for the Summer Sessions.

REGULATIONS

A student who withdraws or is suspended, or is otherwise absent from the University for one semester or more, may re-enter and continue his work only under the rules and regulations in force at the time of his return. (See "In Residence Registration", page 16.)

If a student knowingly makes a false statement or conceals material information on an application for admission, registration card, or any other University document, his registration may be canceled and he will be ineligible (except by special action of the Faculty) for subsequent registration in any unit of the University.

AMOUNT OF WORK

A full-time student who is not on probation may take ordinarily not more than 17 semester hours. A student employed more than 24 hours a week, who is not on probation, may take not more than 10 hours.

A full-time student whose quality-point index is 3.50 or higher may take not more than 19 hours. An employed student who meets the same standard may take not more than 12 hours.

A student who accepts employment after registration or at any time during a semester must report that fact immediately to the Dean so that his program may be adjusted, if necessary.

ATTENDANCE

The student is held responsible for all the work of the course in which he is registered, and all absences must be excused by the instructor in charge before provision is made for the student to make up work missed. Excessive absence in any course will lead to loss of credit in that course, even though other requirements, such as tests, term papers, and examinations, are met.

A student whose absences from any class, whether excused or unexcused, are in excess of one-fourth of the total number of class periods will receive the grade of *F* for the course, except by special ruling of the Dean on recommendation of the instructor.

SCHOLARSHIP

A student who fails to maintain the scholarship requirements of Columbian College of Arts and Sciences may be dismissed from the University.

Grades

Grades are mailed to the student through the Office of the Registrar at the close of each semester. They are not given out by instructors.

Undergraduate.—The following grading system is used: *A*, excellent; *B*, good; *C*, average; *D*, passing; *F*, failing. Whenever a grade has not been assigned the symbol *I* (incomplete) or the symbol *W* (authorized withdrawal) will be recorded. The symbol *I* indicates that a satisfactory explanation has been given the instructor for the student's failure to complete the required work of the course. An "incomplete" cannot be made up after the lapse of one calendar year except by written permission of the dean's council of the college, school, or division concerned. Courses from which a student has withdrawn by proper authorization will be indicated by the symbol *W*. A student may not repeat for grade a course in which he has received a grade of *D* or above, unless required to do so by the department concerned. A written statement to this effect must be submitted to the Registrar by the appropriate departmental chairman.

Graduate.—For graduate work, grades are indicated as *E* (excellent), *S* (satisfactory), *U* (unsatisfactory), *I* (incomplete).

The Quality-Point Index

Undergraduate scholarship is computed in terms of the quality-point index, obtained by dividing the number of quality points by the number of semester hours for which the student has registered, both based on the complete record in this University.

Quality points are computed from grades as follows: *A*, four points; *B*, three points; *C*, two points; *D*, one point; *F*, no points, for each semester hour for which the student has registered. Courses marked *W* or *I* are not considered in determining the index, except that courses marked *I* will be considered when a formal grade is recorded, or at the close of a calendar year, whichever occurs first. If an "incomplete" is not superseded by a proper grade within the allotted time, it is computed as zero quality points. Grades in courses taken at another institution are not considered in computing the quality-point index.

Examinations

Examinations are scheduled at the end of each semester or at the completion of the course.

Use of Correct English

The use of correct English, oral and written, is required in all courses. Any student whose English in any course whatever is deemed unsatisfactory may be reported by the instructor to the Dean and to the Committee on the Use of Correct English. The Chairman of the Committee may assign supplementary work, without academic credit, varying in amount with the needs of the student. If the work prescribed is equivalent to a course, the regular tuition fee is charged. The granting of a degree may be delayed by failure to make up any such deficiency in English to the satisfaction of the Committee and the Dean.

Academic Dishonesty

Evidence of dishonesty on the part of any student will result in his suspension by the Dean upon recommendation of the Dean's Council.

A student found guilty of dishonesty will be suspended for a stated period and will be deprived of credit for all courses in which he is enrolled during the semester in which the dishonest act occurs. A disciplinary grade of "Failure—Academic Dishonesty" will be recorded for each such course, and this grade will be employed in the computation of the quality-point index.

If a student suspended because of academic dishonesty should be readmitted, he may be required to repeat for grade all courses for which a disciplinary grade has been recorded, and both the grade earned on repetition and the disciplinary "Failure—Academic Dishonesty" grade will be employed in computation of the quality-point index.

Honors

Lower Division Honor Roll.—The name of every lower division student who has a quality-point index of 3.50 or higher on the basis of his complete record at this University is placed on the honor roll and published. To be eligible, the student must have completed no less than 15 semester hours. (A place on the honor roll does not necessarily mean that the student will receive honors upon graduation.)

Dean's List.—The name of every student who makes a quality-point index of 3.50 or higher on a minimum of 15 semester hours of work taken in any one semester is placed on the Dean's List for that semester.

With distinction.—A Bachelor's degree may be conferred "with distinction", at the discretion of the Faculty, if a student attains a quality-point index of 3.50 or higher on all work taken at this institution. To be eligible for this honor a student must have completed at this institution at least one-half of the work required for the degree.

Special honors.—Special honors may be awarded by the Faculty to the recipient of a Bachelor's degree for outstanding achievement in the major field of work on recommendation of the major department, under the following regulations:

1. The student must have his candidacy for special honors approved by the faculty member representing the major department or field not later than the beginning of the senior year.
2. The student must meet such other conditions as may be set at the time his candidacy is approved.
3. No student will be awarded special honors unless he has a quality-point index of at least 3.00 on all work taken at this institution.
4. To be eligible for honors a student must have completed at this institution at least one-half of the work required for the degree.

Military honors.—An Air Force ROTC cadet may be designated a "Distinguished Air Force ROTC Cadet" if he (1) has completed Air Science 101 and 102 with an academic standing among the upper third of the students enrolled therein; (2) has an accumulative academic average of *B* or better; (3) possesses high moral character and definite aptitude for service in the Air Force; (4) has distinguished himself by demonstrated leadership through participation in recognized extracurricular activities and while in attendance at an Air Force ROTC Summer Training Unit. A "Distinguished Air Force ROTC Cadet" is authorized to wear a "Distinguished Cadet" badge above the right breast pocket of the uniform. He may submit an application for a regular commission in the United States Air Force, which is given final consideration upon his designation as a "Distinguished Air Force ROTC Graduate."

An Air Force ROTC cadet may be designated a "Distinguished Air Force ROTC Graduate" if he has (1) been designated a "Distinguished Air Force ROTC Cadet" and maintained the standards required of a "Distinguished Air Force ROTC Cadet" during the period between designation and graduation; (2) completed the Air Force ROTC Advanced Course; and (3) completed the requirements for a Bachelor's degree. A "Distinguished Air Force ROTC Graduate" will be presented with a certificate signed by the Commandant, Air Force ROTC, and, if he made application, will be considered for a regular commission in the United States Air Force.

Probation

A student must maintain a quality-point index of at least 2.00, or be placed on probation. He remains on probation as long as his index is below 2.00 or until his probation is removed by the Committee on Scholarship. The student whose average is 2.00 or below for work undertaken during this probationary period is suspended. The student whose over-all quality-point index is still below 2.00 but whose average for work undertaken during the probationary period is above 2.00 may be continued on probation by the Committee on Scholarship.

Suspension

A student whose index falls below 1.50 or who is placed on probation for a third semester, whether successive or after an interval, is suspended.

A student suspended for poor scholarship may apply for readmission after an interval of one calendar year. He must then submit evidence to the Committee on Admission and Advanced Standing that during his absence from the University he has so conducted himself as to indicate that he will profit by readmission. A student suspended twice for poor scholarship will not be readmitted.

Mid-semester Warning.—At the end of the seventh week of each semester, instructors file in the Office of the Dean the names of freshman and sophomore students who are doing work of *D* grade or lower. A notice of Warning is sent to the student and a copy filed with the appropriate adviser. A "warning" constitutes notice to the student that he must consult his instructor and adviser at the earliest opportunity.

The foregoing scholarship rules are applied to a student with a limited schedule only when he has undertaken a minimum of 15 semester hours.

WITHDRAWAL

Withdrawal from a course or from the University, *without academic or financial penalty*, requires the permission of the Dean. Permission to withdraw from the Uni-

registry will not be granted a student who does not have a clear financial record. (See "Fees and Financial Regulations", pages 16–19.)

Withdrawal between the last working day* in October and the end of the fall semester and between the last working day* in February and the end of the spring semester is permitted only in exceptional cases.

All charges for courses dropped without the approval of the Dean must be met by the student. Reporting the dropping of a course to an instructor does not effect its discontinuance.

A student may not withdraw from either the basic course or the advanced course of the Air Force ROTC without the approval of the President of the University.

CHANGES IN PROGRAM OF STUDIES

Changes within a College, School, or Division.—A student may not change or drop courses (see "withdrawals", above) or change his status to that of auditor except with the approval of the Dean.

Change from one section to another of the same course may be made with the approval of the Dean and the department concerned.

Change from one major subject to another within the same college or school may be made with the approval of the Dean. All requirements of the course of study to which the change is made must be met.

Transfer within the University.—Transfer from one college, school, or division to another may be made only with the approval of the deans concerned. Except in cases of normal progression from the lower division of Columbian College in a regular baccalaureate program, application for transfer must be made to the Director of Admissions on the form provided by his office.

Students wishing to transfer from the Division of University Students to a degree-granting college or school of the University should note that a maximum of 45 semester hours will be accepted in transfer.

Students transferring within the University should note that in all undergraduate divisions, except the College of General Studies, 30 semester hours, including *at least 12 semester hours* in the major field, must be completed *in residence* in the school or college from which the degree is sought. Upon transfer the student should consult the dean concerned and understand clearly the requirements he must fulfill. (For residence requirements for the Associate's degrees in the lower division of Columbian College, see page 30.)

CREDIT

Credit is given only after registration for a course and satisfactory completion of the required work, or upon the assignment of advanced standing.

On request the Registrar will issue to undergraduate degree candidates a balance sheet showing the amount of work completed and the requirements, both quantitative and qualitative, remaining to be met for the degree.

In special instances, a person who has been admitted to the University may be registered, with the permission of the instructor, as an "auditor" in a class (no academic credit). An auditor is not required to take active part in the exercises or to take examinations.

Transcripts of Record

Official transcripts of student records will be issued on request of the student or former student. No charge is made for the first copy; a fee of one dollar is charged

* The University work week is Monday through Friday, inclusive.

for each one thereafter. No certificate of work done will be issued for a person who does not have a clear financial record.

Summer School Credit

A student who plans to attend summer school sessions at another institution with the intention of having credits so obtained apply toward graduation from this University must first secure the written approval of the dean of his college or school. In no event will such credits be recognized to an amount in excess of that which might be earned in a similar period in this institution.

Correspondence and Home-study Courses

No credit is given for work done by correspondence or in home-study courses.

GRADUATION REQUIREMENTS

To be recommended by the Faculty for graduation a student must have met the admission requirements, completed satisfactorily the scholarship, curriculum, residence, and other requirements for the degree for which he is registered, and be free from all indebtedness to the University.

A student who is absent from the University for one semester or more is required to satisfy the curriculum requirements existing at the time of his return, unless during his absence he maintains "in residence" status by paying the residence fee, see page 16.

The student who has completed tuition requirements, but whose graduation is deferred for any reason must maintain "in residence" status by paying the residence fee for the semester immediately preceding the graduation at which he expects to receive his degree.

Application for Graduation.—Application should be filed in the Office of the Registrar at the time of registration for the last semester of the senior or final year. No applications will be accepted after the date stated in the calendar.

Graduate Record Examination.—All candidates for Bachelor's degrees are required to take two parts of the Graduate Record Examination (see page 30).

Attendance and Conduct.—The University reserves the right to refuse to confer a degree upon a candidate whose attendance or conduct has been unsatisfactory.

Presence at Graduation.—Presence at the graduation exercises is required of the candidate, unless the work for the degree was completed during the summer term or written application for graduation *in absentia* has been approved by the Dean.

THE LIBRARY

A student registered in the University is entitled to the reference use of the University Library. The Student Identification Card, issued upon the payment of fees, must be presented as identification.

The loan period for most books available for home circulation is two weeks, with an additional two-week renewal. A fine of five cents will be charged for each day a book is overdue. Any book which does circulate is subject to recall by the Librarian at any time. Reserve books for collateral reading must be used in the reading rooms when the Library is open. With special permission they may be drawn for overnight use when the Library closes. A fine of twenty-five cents will be charged for the first hour or fraction of an hour and five cents for each hour or fraction thereafter that a reserve book is overdue. Grades of a student will be withheld until his library record is clear.

RIGHT TO DISMISS STUDENTS

The right is reserved by the University to dismiss or exclude any student from the University, or from any class or classes, whenever, in the interest of the student or the University, the University Administration deems it advisable to do so.

RIGHT TO CHANGE RULES

The University and its various colleges, schools, and divisions reserve the right to modify or change requirements, rules, and fees. Such regulations shall go into force whenever the proper authorities may determine.

PROPERTY RESPONSIBILITY

The University is not responsible for the loss of personal property in any University building. A "Lost and Found" Office is maintained in the Student Union.

CLASSIFICATION OF STUDENTS

A *freshman* is a student who is in the process of completing 32 semester hours, including 18 hours of his curriculum requirements.

A *sophomore* is a student who has completed between 32 and 64 hours, including 18 hours of his curriculum requirements.

A *junior* is a student who has completed between 64 and 94 hours and filed the declaration of his major, approved by his adviser, in the Office of the Dean.

A *senior* is a student who has completed between 94 and 124 hours, including at least 6 hours of second-group work in his major.

A *master in course* is a student who has satisfactorily completed the work for the bachelor's degree and filed his approved program of study in the Office of the Dean.

THE LOWER DIVISION

Advisory System

Members of the Faculty, selected for their knowledge of freshman-sophomore requirements and student programs, advise students in making up their programs of study for each semester. A separate staff of experienced advisers under the chairmanship of the Dean assists those students who find it difficult to make adjustments to college life because of scholastic or other reasons. Students who are "warned" or who are on probation may be required to consult these advisers at regular intervals. Students are encouraged to consult any member of the Advisory Staff or their instructors about college problems at any time.

Copies of notices of "warning" or probation are sent to the parents or guardians of students on request, and the Dean and members of the Advisory Staff or available for consultation with parents or guardians concerning student problems.

Preprofessional Students.—Preprofessional students who intend to transfer after the sophomore year to the School of Education; the School of Pharmacy; or the School of Government, Business, and International Affairs are registered in the lower division to complete the curriculum requirements specified by each professional school. Such students are assigned special advisers to assist them in planning their programs.

Scholastic-Aptitude Tests

Students admitted to the lower division of Columbian College may be required to take the scholastic-aptitude tests of the University.

Required Placement Examinations

English.—Special placement examinations, required of all entering freshmen, are conducted by the English Department. Before students are registered in English 1, they are tested in the minimum essentials of vocabulary, spelling, grammar, standard usage, and writing skill. Those who show marked superiority may, upon passing further tests, be exempted from one or both halves of the English Composition course; those who are inadequately prepared are assigned to English 1X.

Foreign Languages.—A standardized placement examination is required of all entering students who wish to continue in college the language begun in high school (French, German, Russian, or Spanish). Upon completion of the examination, assignment is made to the appropriate course.

First- and Second-Group Courses

A freshman or sophomore may not take second-group courses (courses numbered 101–200) without the written permission of the Instructor and of the Dean*. A student is not permitted to postpone a required first-group course in order to take a second-group course for elective credit. The principle that first-group courses must be taken in the freshman and sophomore years, and advanced courses in the junior and senior years in Columbian College and the professional schools, is rigidly adhered to in approving student programs. No freshman or sophomore on probation may take second-group courses without the written permission of the Committee on Scholarship.

THE DEGREES

REQUIREMENTS FOR THE DEGREES

Residence

The residence requirement for an Associate's degree is 15 hours.

Scholarship

A quality-point index of 2.00 is required.

Curriculum

The satisfactory completion of 64 semester hours is required, as outlined in one of the curricula described below.

Except for students intending to apply for the combined degrees of Bachelor of Arts and Doctor of Medicine or the degree of Bachelor of Science in Medical Technology, not more than 12 hours of professional courses may be included in the 124 hours required for the Bachelor's degrees in Columbian College. Lower-division students electing professional courses under this rule must obtain the approval of the Dean before registration.

Physical Education.—Freshmen and sophomores are required to take Physical

* Students enrolled in the two-year terminal curriculum in Accounting, the Medical Technologist curriculum, and the pre-Pharmacy curriculum may take those second-group courses which are specified as part of their freshman-sophomore curricula without first obtaining the written permission of the Instructor or the Dean.

Education 1–2 and 11–12 unless they are registered for less than 9 semester hours or unless regular employment during the day makes it necessary to take all classes during the evening hours. Air Force ROTC cadets and a limited number of freshman and sophomore women may substitute Air Science 1–2 and 11–12 for the physical education requirement.

Any other exemptions will be granted only upon written petition which has been recommended by the physical education department concerned and approved by the Dean.

Students exempt from the physical education requirement will be required to substitute four hours of elective.

A student entering the University with advanced standing is not exempt from the physical education requirement unless he has satisfactorily met the requirement elsewhere.

The required medical and physical examinations, as specified by the departments of physical education, will be arranged at the time of registration.

Foreign Language.—In curricula requiring foreign languages a student must complete satisfactorily the equivalent of two years of college work in a single foreign language.

A student offering for admission four acceptable high school units of a single foreign language, or the equivalent, is not required to take any foreign language.

A student who offers less than four units and wishes to meet the requirement by continuing in the same language must take the language placement test (see page 30).

In general, one year of high school language is considered equivalent to one semester of college language.

In some instances foreign languages are required or recommended as preparation for advanced work in Columbian College and the professional schools. The student should consult his adviser as to these requirements, so that appropriate foreign languages may be included, when necessary, in his lower division program.

English.—Entering students registered in the liberal arts and sciences curricula must follow the sequence of English 1 or 1X, both halves of one of the introductory literature courses, and English 4. This does not apply to students transferring to these curricula or students registering in the preprofessional or vocational curricula.

Examinations for Waiving Curriculum Requirements*

A required course may be waived and admission to an advanced course granted by the satisfactory passing of a waiver examination prescribed by the department concerned. Passing this examination does not entitle the student to any hours of credit toward the degree. Written request to take the examination should be made to the Dean and the required fee paid at the Office of the Cashier before the date specified in the University calendar.

I. CURRICULA IN PREPARATION FOR THE UPPER DIVISION OF COLUMBIAN COLLEGE AND THE PROFESSIONAL SCHOOLS

Each of the following curricula comprises the first two years of a standard four-year college course and prepares the student for upper division work.

All curricula in this group lead to the degree of Associate in Arts.

*This provision does not apply to the premedical student, all of whose required premedical work must be taken in a recognized college of arts and sciences.

A. UPPER DIVISION OF COLUMBIAN COLLEGE:

1. ARTS AND LETTERS

The following curriculum constitutes the first two years of the Bachelor of Arts curriculum:

		Semester hours
English Composition and Literature	English 1 or 1X, 51–52, 71–72, 91–92, Classical Languages 71–72, French 51–52, German 51–52, Slavic Languages 91–92, or Spanish 51–52; English 4	12 12
Foreign Language	See page 31 for foreign language requirement	4
Physical Education	See pages 30–31 for statement of requirement	
Science	Biology 1–2*; Chemistry 3–4, 11–12; Geology 1–2; or Physics 11–12	6–8
Social Studies	Economics 1–2; Geography 51, 52; History 39–40, 71–72; Political Science 1 and 9, 1 and 10, or 9–10; or Sociology and Anthropology 1–2	6 3–4
Elective†		64
	Total	

2. SCIENCE

The following curriculum constitutes the first two years of the Bachelor of Science and the Bachelor of Science in Medical Technology curricula. Medical Technology students must include Biology 1–2*, Chemistry 11–12, and Microbiology 112:

English Composition and Literature	English 1 or 1X; 51–52, 71–72, 91–92, Classical Languages 71–72, French 51–52, German 51–52, Slavic Languages 91–92, or Spanish 51–52; English 4	12 12
Foreign Language	French, German, Russian, or nonscience elective NOTE.—A reading knowledge of French, German, or Russian is required. This may be satisfied by French 4, German 4, or Russian 4 or by special examination.	6
Mathematics	Mathematics 3, 6, or electives NOTE.—The Mathematics 3 requirement may be satisfied by offering two years of high school algebra, acceptable for admission; the Mathematics 6 requirement may be satisfied by offering one-half year of high school trigonometry acceptable for admission.	4 8
Physical Education	See pages 30–31 for statement of requirement	
Science	Biology 1–2* Chemistry 11–12, Geology 1–2, Physics 11 and 12 or 11 and 14	12–14
Social Studies	Economics 1–2; Geography 51, 52; History 39–40, 71–72; Political Science 1 and 9, 1 and 10, or 9–10; or Sociology and Anthropology 1–2	6 2–4
Elective†		64
	Total	

* An interdepartmental course offered by the departments of Botany and Zoology.

† It is suggested that electives include one of the following courses: Art 31–32, 71–72; Philosophy 51–52; Religion 9–10, 59–60.

Students enrolled in the Medical Technology program should elect Microbiology 112.

The student should obtain the advice of his major department as to proper prerequisite and collateral courses for the intended major.

Credit is not given for courses elected in Secretarial Studies; credit may be given for a limited number of courses elected in Physical Education, with the approval of the Dean.

3. PREMEDICAL.

Premedical students may follow either the Arts and Letters or the Science curriculum above in fulfilling the first 60 semester hours of the premedical requirement. Each premedical program must be approved by the premedical adviser.

Well-qualified candidates are eligible for admission to the School of Medicine after completing 90 semester hours, or the equivalent, applicable toward a degree in an approved college. However, they are better prepared for the study of medicine after four years of college work. The Medical College Admission Test, sponsored by the Association of American Medical Colleges, must be taken in advance of the year for which application is made. Specific required courses are:

Chemistry:

Inorganic (including 4 hours of laboratory) Qualitative analysis may be counted as part of this requirement.	8
Organic (including laboratory) The equivalent of a one-year college course	6–8
Biology (including 4 hours of laboratory) A course in either general biology or zoology	8
Physics (including at least 2 hours of laboratory)	8
English Composition and Literature	6

Except for these requirements applicants are urged to follow personal interest in developing their premedical courses of study. A well-balanced program, rather than a specific field, is the criterion by which an applicant is judged. It is not advisable to take courses that appear to cover subject matter in the medical program.

4. MEDICAL TECHNOLOGY

The degree of Bachelor of Science in Medical Technology is offered by Columbian College in collaboration with the Department of Pathology and the University Hospital. Candidates should follow the Science curriculum in the lower division, including specifically Biology 1–2*, Chemistry 11–12, and Microbiology 112. See pages 41 and 42 for a description of the course and a statement of further requirements. Specific degree requirements are stated under the Department of Pathology following the listing of the Staff of Instruction.

B. SCHOOL OF PHARMACY:

The following curriculum constitutes the first two years of the five-year Bachelor of Science in Pharmacy curriculum of the School of Pharmacy.

		Semester hours
English Composition and Literature	English 1 or 1X; 51–52, 71–72, 91–92, Classical Languages 71–72, French 51–52, German 51–52, Slavic Languages 91–92, or Spanish 51–52; English 4	12
Physical Education	See pages 30–31 for statement of requirement	4
Science	Chemistry 11–12, 151–52; Physics 11, 12; Biology 1–2*	30
Social Studies	Economics 1	3
Mathematics	Mathematics 3 or elective	3
Electives†		12
	Total	64

* An interdepartmental course offered by the departments of Botany and Zoology.
† Credit is not given for courses elected in Physical Education or Secretarial Studies.

C. SCHOOL OF EDUCATION:

1. EDUCATION

The following curriculum constitutes the first two years of the Bachelor of Arts in Education curriculum of the School of Education:

English	English 1 or 1X, 2	6
	English 51–52, 71–72, or 91–92	6
Foreign Language	(French, German, Latin, Russian, or Spanish.) See page 31 for foreign language requirement	12
Physical Education	See pages 30–31 for statement of requirement	4
Science	Three semesters (two in biological science and one in physical science or vice versa) to supplement senior high school courses in those fields and chosen from Biology 1–2*; Chemistry 3–4, 11–12; Geology 1–2; Physics 11, 12. (A student offering for admission two or more acceptable senior high school units in the above areas of science may be exempted from one semester of this requirement.)	10–12
Mathematics	One semester to supplement senior high school courses, chosen from Mathematics 3, 6, 9, 21	3
Social Studies	History 71–72; Political Science 1 and 9, 1 and 10, or 9–10	6
	Economics 1–2; Geography 51–52; History 39–40, 71–72; Political Science 1 and 9, 1 and 10, 9–10; Religion 59–60; Sociology and Anthropology 1–2. (A student offering for admission two or more acceptable senior high school units in social studies may be exempted from this requirement.)	6
		3
		6
Speech	Speech 1 (or 11, if the Department so advises)	0–2
Psychology	Psychology 1, 22	6
Elective		6
	Total	64

2. HOME ECONOMICS†

The following curriculum constitutes the first two years of the Bachelor of Science in Home Economics curriculum of the School of Education:

English	English 1 or 1X, 2	6
	English 51–52, 71–72; Speech 1–2, or 1 and 11	6
Physical Education	See pages 30–31 for statement of requirement	4
Psychology	Psychology 1, 29	6
Science	Biology 1–2*, Chemistry 11–12, Physics 11, 12	6–8
Social Studies‡	Economics, History, Political Science, or Sociology and Anthropology	12
Major Prerequisites	Home Economics 1, 22 (Freshman year)	6
	Home Economics 51, 62 (Sophomore year)	9
Academic Electives	(Freshman year)	3
	(Sophomore year)	6
	Total	64

3. PHYSICAL EDUCATION FOR MEN

The following curriculum constitutes the first two years of the Bachelor of Science in Physical Education curriculum of the School of Education:

English	English 1 or 1X, 2	6
Science	Biology 1–2* (Freshman year)	8
	Chemistry 3–4 (Sophomore year)	8

* An interdepartmental course offered by the departments of Botany and Zoology.
† Open only to students enrolled in this curriculum as of September 1961 or earlier.
‡ Courses are to be selected with the approval of the adviser in the Department of Home Economics.

Social Studies	History 71–72; Political Science 1 and 9, 1 and 10, or 9–10	6
	Sociology and Anthropology 1–2	6
Major Prerequisites	Physical Education 41, 43–44, 47; Speech 1 or 11 (Freshman year)	10
	Physical Education 45–46, 49, 50, 58; Psychology 1, 22 (Sophomore year)	18
Elective		2–4
	Total	64

4. PHYSICAL EDUCATION FOR WOMEN

The following curriculum constitutes the first two years of the Bachelor of Science in Physical Education curriculum of the School of Education:

English	English 1 or 1X, 2	6
	English 51–52, 71–72, or 91–92	6
Physical Education	1–2, 11–12	4
Science	Biology 1–2* (Freshman year)	8
	Chemistry 3–4 (Sophomore year)	8
Social Studies	History 39–40, 71–72; Political Science 1 and 9, 1 and 10, or 9–10; or Sociology and Anthropology 1–2	6
Major Prerequisites	Physical Education 43–44 (Freshman year)	4
	Physical Education 49, 50, 51–52; Psychology 1, 22 (Sophomore year)	16
Academic Electives		6
	Total	64

D. SCHOOL OF GOVERNMENT, BUSINESS, AND INTERNATIONAL AFFAIRS:

1. ACCOUNTING AND BUSINESS ADMINISTRATION

The following curriculum constitutes the first two years of the Bachelor of Business Administration curricula in Accounting and in Business Administration of the School of Government, Business, and International Affairs:

Accounting	Accounting 1–2	6
English	English 1 or 1X, 2, 11	9
Foreign Language	See page 31 for foreign language requirement	12
Physical Education	See pages 30–31 for statement of requirement	4
Social Studies	Economics 1–2; Political Science 1 and 9, 1 and 10, or 9–10	12
Speech	Speech 1	3
Statistics	Statistics 51, 52	6
Electivet	(Students interested in Foreign Commerce include Geography 51)	12
	Total	64

2. INTERNATIONAL AFFAIRS AND PUBLIC AFFAIRS

The following curriculum constitutes the first two years of the Bachelor of Arts in Government curricula in International Affairs and Public Affairs of the School of Government, Business, and International Affairs:

English	English 1 or 1X, 2	6
Foreign Language	See page 31 for foreign language requirement	12
Mathematics, Science	Biology 1–2*, Chemistry, Geology, Mathematics, Physics, or Statistics	6 to 8

* An interdepartmental course offered by the departments of Botany and Zoology.
† Credit is not given for courses elected in Physical Education or Secretarial Studies.

Physical Education	See pages 30–31 for statement of requirement	4
Social Studies	Economics 1–2; History 39–40, 71–72; Political Science 1 and 9, 1 and 10, or 9–10	24
Elective*	(To satisfy minimum required credits. Students interested in Foreign Service include Geography 51)	10 to 12
	Total	64

3. BUSINESS AND ECONOMIC STATISTICS

The following curriculum constitutes the first two years of the Bachelor of Business Administration curriculum in the field of Business and Economic Statistics of the School of Government, Business, and International Affairs:

Accounting	Accounting 1–2	6
Economics	Economics 1–2	6
English	English 1 or 1X, 2	6
Foreign Language	See page 31 for foreign language requirement	12
Mathematics	Mathematics 21, 22, 23	9
Physical Education	See pages 30–31 for statement of requirement	4
Political Science	Political Science 9–10	6
or Philosophy	Philosophy 51–52	6
Statistics	Statistics 51 or 91, 52	9
Elective*		6
	Total	64

II. VOCATIONAL CURRICULA

In addition to the above curricula, the lower division offers the following two-year terminal courses.

The curricula in Accounting and Secretarial Studies lead to the degree of Associate in Arts. The curricula in Home Economics and Physical Sciences lead to the degree of Associate in Science.

1. ACCOUNTING

The required work may be completed in two calendar years on a full-time basis or in three calendar years on a part-time basis, with the approval of the adviser.

Accounting	Accounting 1–2, 101, 111, 121–22, 161, 171, 181, 191, 193	33
Business Administration	Business Administration 131, 161, 162	9
Economics	Economics 1–2	6
English	English 1 or 1X, 2	6
Physical Education	See pages 30–31 for statement of requirement	4
Elective	To be selected with the approval of the adviser	6
	Total	64

2. HOME ECONOMICS†

English	English 1 or 1X, 2	6
	English 51–52, 71–72, 91–92, Russian 91–92; Speech 2 (1, 11)	6
	English 11 or Secretarial Studies 51	3
Home Economics	Home Economics 1, 22, 51, 62	12
Physical Education	See pages 30–31 for statement of requirement	4
Psychology	Psychology 1	3
Secretarial Studies	Secretarial Studies 1, 2	6
Home Economics Elective‡		6–12
Elective*		6–12
	Total	64

* Credit is not given for courses elected in Physical Education or Secretarial Studies.
† Open only to students enrolled in this curriculum as of September 1961 or earlier.
‡ Courses are to be selected with the approval of the adviser in the Department of Home Economics.

3. PHYSICAL SCIENCES

This curriculum is designed for part-time students who do not wish to extend their collegiate education beyond 64 semester hours of work. All other students interested in the study of physical science should follow the Columbian College Science curriculum.

Chemistry	Chemistry 11, 12, 21	12
English	English 1 or 1X, 2, 11	9
Mathematics	Mathematics 3, 6, 21, 22, 23, 24	12–18
Mechanical Engineering	Mechanical Engineering 10	2
Physical Education	See pages 30–31 for statement of requirement	4
Physics	Physics 11, 12, 13, 16, 55	15
Elective	(Speech 1, Economics 1–2 suggested)	4–10
	Total	64

5. SECRETARIAL STUDIES

English	English 1 or 1X, 2	6
	English 51–52, 71–72, 91–92, Russian 91–92	6
Physical Education	See pages 30–31 for statement of requirement	4
Secretarial Studies*	Secretarial Studies 1, 2, 11, 12, 15, 16, 51, 54	24
Social Studies	Economics 1–2, Geography 51, 52, History 39–40, 71–72, Political Science 1 and 9, 1 and 10, or 9–10, or Sociology and Anthropology 1–2	6
Accounting	Accounting 1	3
Speech	Speech 11	3
Elective	To be selected with the approval of the adviser	12
	Total	64

UPPER DIVISION

A student with 64 or more acceptable semester hours, whether earned in this University or transferred from another institution, is registered in the upper division of Columbian College. It is assumed that he has met the requirements of the lower division *Arts and Letters* or *Science* curriculum. If he has not, he must begin to make up his deficiencies immediately upon admission and continue to carry courses to this end until all requirements are met.

THE BACHELOR'S DEGREES

Columbian College through its upper division offers programs leading to the degrees of Bachelor of Arts, Bachelor of Science, and Bachelor of Science in Medical Technology.

In cooperation with the School of Medicine a seven-year curriculum leading to the combined degrees of Bachelor of Arts and Doctor of Medicine is offered.

REQUIREMENTS FOR THE DEGREES

A minimum of 30 semester hours, including at least 12 hours in the major field, must be completed in residence in the upper division of Columbian College. This requirement applies to students transferring within the University as well as to students transferring from other institutions.

* Qualified students, upon the approval of the adviser or the satisfactory completion of a placement test, may waive Secretarial Studies 1, 11, and 12. Other courses approved by the adviser will be substituted.

dents transferring from other institutions. Summer work may be counted in residence, but in no case may the period of residence aggregate less than thirty weeks. Unless special permission is granted by the Dean to pursue work elsewhere, the work of the senior or final year must be completed in residence.

For the regulation governing students who are absent from the University for one semester or more, see page 16.

Curriculum Requirements

The curriculum requirements for the Bachelor's degrees include at least 60 semester hours beyond those of the appropriate lower division curriculum and the satisfactory completion of the major. Each program must be approved by the major adviser and by the Dean.

At least 24 of the last 60 hours counted toward the Bachelor's degree must be taken in subjects* not included in the major field or department. The student should consult his major adviser at each registration concerning his choice of electives.

Except for premedical and medical technology students, not more than 12 hours of professional courses may be included in the undergraduate program. The election of professional courses must be approved by the Dean's Council prior to registration. Ordinarily courses in Physical Education, Secretarial Studies, and technical courses in Education will not be approved toward a degree.

A change in degree candidacy (e.g., from Bachelor of Arts to Bachelor of Science) requires the permission of the Dean. The degree requirements effective at the time the change is approved must be met.

Each student must select and file with the Dean a choice of major upon entering the upper division. He may change the major only with the consent of the Dean and of the department or committee concerned, and must meet the requirements for the new major which are in effect at the time the change is approved.

First-group courses may be required as prerequisites to the major, but because of their introductory character they may not be counted as part of such programs. (See "Explanation of Course Numbers.")

Students transferring from other institutions or from other schools, colleges, or divisions in this University with major requirements wholly or substantially met must complete satisfactorily at least 12 semester hours of approved work in the major field in the upper division of Columbian College. This work will count as part of the minimum residence requirement.

Examination for Waiving Curriculum Requirements.—A required course may be waived and admission to an advanced course granted by the satisfactory passing of a waiver examination prescribed by the department concerned. Passing this examination does not entitle the student to any hours of credit toward the degree. Written request to take the examination should be made to the Dean and the required fee paid at the Office of the Cashier before the date specified in the University calendar.

Independent Study Plan

A junior or senior of demonstrated capacity, with special interest in the subject matter of a course, may be permitted to undertake independent study under the personal direction of an instructor, in accordance with the rules of the department or

* Art, Biology, Botany, Chemistry, Classical Languages and Literatures, Economics, English, Geography, Geology, Germanic Languages and Literatures, History, Journalism, Mathematics, Philosophy, Physics, Political Science, Psychology, Religion, Romance Languages and Literatures, Slavic Languages and Literatures, Sociology and Anthropology, Speech, Statistics, Zoology

departments concerned. Credit under this plan is limited to the specific course-credits as designated in the list of courses of instruction.

Graduate Record Examinations

During the final semester of the senior year students in Columbian College are required to take the following Graduate Record Examinations: the Aptitude Test, which provides a measure of general scholastic ability at the graduate level; and Area Tests (achievement), which measure breadth of knowledge and understanding in three broad areas of the liberal arts: Natural Science, Social Science, and the Humanities.

The examinations are conducted by the University twice a year: the Fall Testing Session for seniors graduating in February, and the Spring Session for those graduating in June. Dates of the examinations are announced in the *Schedule of Classes*.

Each senior must register for the Graduate Record Examination when he registers for his final regular semester of study (excluding summer sessions). A $10 examination fee is payable at the time of registration.

Students will receive individual reports of test scores and may avail themselves of the regular transcript services of the Educational Testing Service. By special permission seniors who expect to graduate in June may take the Graduate Record Examination at the previous Fall Testing Session, so as to have transcripts available early in the year when applying for admission to graduate schools.

BACHELOR OF ARTS

The work of the junior and senior years, including a major in one of the following fields must be approved by the major adviser and by the Dean.

Major Fields.—American Thought and Civilization; Art (1) Art History and Theory, (2) Drawing and Painting, (3) Sculpture, and (4) Commercial Art; Biology; Botany; Chemistry; Economics; English Literature; French Language and Literature; Geography; Geology; Germanic Languages and Literatures; History; Journalism; Latin; Latin American Civilization; Mathematical Statistics; Mathematics; Philosophy; Physics; Political Science; Psychology; Religion; Russian; Sociology and Anthropology; Spanish American Literature; Spanish Language and Literature; Speech (Speech or Dramatic Art); Zoology.

Combined Degrees of Bachelor of Arts and Doctor of Medicine.—A candidate for the combined degrees of Bachelor of Arts and Doctor of Medicine must: (1) complete the Medical School entrance requirements; (2) fulfill the Arts and Letters curriculum of the lower division requirements (see page 32); (3) accumulate 94 semester hours in the liberal arts, including a minimum of 30 in the upper division of Columbian College; (4) obtain the approval of the Dean of Columbian College at the time of entering the School of Medicine; (5) obtain the recommendation of the Dean of the School of Medicine at the completion of all prescribed courses in the first year of the School of Medicine, at which time the degree of Bachelor of Arts will be conferred (professional work taken at another institution will not satisfy the major requirement for the combined degrees); (6) maintain throughout the entire course the scholarship level required for graduation.

BACHELOR OF SCIENCE

The work of the junior and senior years, including a major in one of the following sciences, must be approved by the major department or division and by the Dean.

Biological Sciences: Biology, Botany, Zoology. *Physical Sciences:* Chemistry, Geology, Mathematical Statistics, Mathematics, Physics.

THE UNDERGRADUATE MAJOR

There are two types of undergraduate majors: the field-of-study major and the departmental major.

The Field-of-Study Major

Each Field-of-Study Major covers a carefully worked out field of coordinated study and is under the supervision of the appropriate department and the Columbian College Committee on Studies.

The *Field-of-Study Major* requires no specific number of semester hours, no specific program of courses, and no specific quality-point index for the major, although the student is required to meet the over-all general requirements for the degree (at least 124 semester hours with a quality-point index of at least 2.00). Ability to pass the Major Examination is assumed to be a convincing demonstration that the student possesses the breadth, depth, and quality of knowledge of his major usually defined in terms of semester hours, courses, grades, and a better-than-average quality-point index. A pamphlet on each field is obtainable either from the appropriate adviser or from the Office of the Dean. The prospective student should place himself under the direction of the appropriate adviser immediately upon completing lower division work and beginning his junior year.

The Field-of-Study Major places special emphasis on the intellectual development of the individual student. Programs in the same major may vary, depending upon the individual student's background, previous study, reading habits, and aptitudes. The student is expected to consult his adviser frequently, and the special proseminar offered in the field gives him further opportunity for individual advice and direction in pursuing a program especially adapted to his needs and abilities. A close student-adviser relationship is essential for the student's success under the Field-of-Study Major plan.

The following Field-of-Study Majors are offered: American Thought and Civilization, English Literature, French Language and Literature, History, Latin American Civilization, Mathematical Statistics, Philosophy, Spanish American Literature, Spanish Language and Literature, Zoology.

The major in American Thought and Civilization and in Latin American Civilization involve studies in two areas, those of Languages and Literatures and of Social Sciences. The other Field-of-Study Majors, with the exception of the major in Spanish American Literature, replace departmental majors in their respective fields. A candidate for a Bachelor's degree with a major in English Literature, French Language and Literature, History, Mathematical Statistics, Philosophy, Spanish American Literature, Spanish Language and Literature, or Zoology must elect a Field-of-Study Major.

Proseminar in the Major

A proseminar is offered in each field to help the student in his reading, study, and laboratory exercises acquire a coordinated knowledge of his field. It is a presentation of the content and methods of the major field as a whole through the organization and coordination of the knowledge obtained in the various formal courses in the major subject and of material not usually included in such courses. This course is not required. Six semester hours, but no qualitative grade, may be assigned. When registered in this course, the student has the privilege of visiting, subject to the ap-

proval of the instructor, any other appropriate course offered in the College. (Regular attendance in a course, either for credit or as an auditor, requires registration and payment of tuition.) Proseminars are open only to the student who has been accepted as a candidate under that specific major.

The Major Examination

The Major Examination will normally be taken at the close of the senior year: a student on a limited schedule may take it no earlier than one calendar year before graduation. A student who fails to pass a Major Examination may, at the discretion of the Committee on Studies, be reexamined at a later regular major-examination period. The Committee on Studies has general supervision of the preparation, reading, and grading of Major Examinations. Major Examinations are held each semester on dates fixed by the department or departments concerned, but in no case later than January 15 for the fall semester, May 15 for the spring semester, and August 7 for the summer session.

Departmental Majors

Departmental Majors, unlike Field-of-Study Majors, are defined in terms of credit hours, required courses, and the attainment of a quality-point index of at least 2.50 in all second-group courses taken in the major field. The minimum specific requirements for Departmental Majors are listed below the staff of instruction of the department concerned. The Chairman of the Department, or designated departmental adviser, should be consulted at registration concerning the student's program of courses; and the entire program, including electives, must be approved by the Department. The student is also expected to consult the Chairman or adviser in all matters affecting his program of studies, such as changes, substitutions, or withdrawals, and especially concerning his progress in his courses. As far as possible the close student-adviser relationship developed in the Field-of-Study Major will be cultivated also in Departmental Majors.

Departmental Majors are offered in the following: Art (1) Art History and Theory, (2) Drawing and Painting, (3) Sculpture, and (4) Commercial Art; Biology; Botany; Chemistry; Economics; Geography; Geology; Germanic Languages and Literatures; Journalism; Latin; Mathematics; Physics; Political Science; Psychology; Religion; Russian; Sociology and Anthropology; Speech (Speech or Dramatic Art).

BACHELOR OF SCIENCE IN MEDICAL TECHNOLOGY

In cooperation with the University Hospital and the Department of Pathology of the School of Medicine, Columbian College offers work leading to the degree of Bachelor of Science in Medical Technology.

A candidate for this degree must complete the Science curriculum in the lower division, including Biology 1–2*, Chemistry 11–12, 21, and 22; and Microbiology 112; fulfill the Columbian College requirements for degrees, including the residence requirement of at least 30 semester hours; complete the 12-month Medical Technology Course in the University Hospital (see the Department of Pathology), which constitutes the major and prepares students for the national certifying examination given by the Registry of Medical Technologists; and maintains throughout the entire course the scholarship level required for graduation.

A limited number of scholarships are provided by the University Hospital for students enrolled in the fourth year of the degree program. (See page 22.) All stu-

* An interdepartmental course offered by the departments of Botany and Zoology

dents in this fourth year must provide themselves with uniforms; laundry of uniforms is provided by the University Hospital. A cash allowance of $65 a month is granted during the last 6 months of the fourth year in training.

Admission to the Columbian College degree program does not assure acceptance in the Hospital program.

For information concerning the Medical Technology Course for students not interested in degree candidacy, see the special bulletin.

THE GRADUATE DIVISION

The graduate division offers programs leading to the degrees of Master of Arts, Master of Science, and Master of Fine Arts.

Definition of the Master's Work

The study leading to a Master's degree is a comprehensive survey of an area of knowledge, usually in the student's undergraduate field, with emphasis on scholarly method.

The student must satisfy certain minimum requirements as to preparation, residence, ability to read an approved modern foreign (European) language, and courses taken; but these requirements, while essential, are regarded primarily as qualifying measures. The student's knowledge of his field, as demonstrated by his thesis and by the results of his Master's Examination (together with such other examination involving special skills or techniques as the department or the Committee on Studies may require), is the basis upon which the Master's degree is conferred.

Master of Arts

Graduate work leading to the degree of Master of Arts is offered in the following fields:

American Literary and Cultural History, Art History and Criticism, Biochemistry, Biology, Botany, Chemistry, Economics, English and American Literature, English Literature, French Language and Literature, Geography, Geology, Germanic Languages and Literatures, History, Latin American Civilization, Mathematical Statistics, Mathematics, Microbiology, Pharmacology, Philosophy, Physics, Physiology, Political Science, Psychology, Religion, Religious Education, Sociology and Anthropology, Spanish American Literature, Spanish Language and Literature, Speech Correction, Zoology.

Special programs involving coordinated work in two or more departments may be arranged with the approval of the departments concerned and the Columbian College Committee on Studies.

Master of Science

Graduate work leading to the degree of Master of Science is offered in the following fields:

Anatomy, Biochemistry, Biology, Botany, Chemistry, Geology, Mathematical Statistics, Mathematics, Microbiology, Pharmacology, Physics, Physiology, Psychology, Zoology.

Special programs involving coordinated work in two or more departments may be

arranged with the approval of the departments concerned and the Columbian College Committee on Studies.

Master of Fine Arts

Graduate work is offered leading to the degree of Master of Fine Arts in the fields of painting and sculpture (see the Department of Art) and in the field of Dramatic Art (see the Department of Speech).

REQUIREMENTS FOR THE DEGREES

Residence

Normally, an academic year of residence in the graduate division of Columbian College is required, i.e., completion of a minimum of 30 semester hours of work including the thesis, which is counted as the equivalent of 6 semester hours of course work. Summer work may be counted in residence, but in no case may the period of residence aggregate less than twenty-seven weeks. Not more than 12 semester hours (which must be approved in advance by the Dean) may be taken in another school or division of this University, and such work may not be counted toward both a degree in that school or division and the Master's degree in Columbian College. *No part of the minimum requirement may be taken elsewhere.* All work for the degree of Master of Arts, Master of Science, or Master of Fine Arts must be completed within a maximum of three years, unless the Dean's Council considers the circumstances so unusual as to justify an extension of time.

Scholarship

Grades are indicated as *E* (excellent), *S* (satisfactory), *U* (unsatisfactory), *I* (incomplete).

The grade of *E* must be attained in at least 6 semester hours of the course requirements for the degree.

A student whose scholarship is unsatisfactory may be suspended by the Dean upon recommendation of the department under which the student is working. A Master's candidate who accumulates 9 hours of more of *U* (including grades of *C* or lower in prerequisite courses) will be automatically suspended.

Program of Studies

The student's program of studies must be outlined in detail at the beginning of his work, in triplicate, on forms available at the Office of the Dean. Each program is subject to the approval of the department and the appropriate member of the Committee on Studies. The program may be revised, but any change necessitates a repetition of the procedures just described.

The candidate for the Master's degree ordinarily may specialize exclusively in the field of his choice. Any student, however, whose undergraduate training does not include at least one full year of work in each of the following areas of study: (1) mathematics or science (with or without laboratory), (2) social science, and (3) the humanities (literature, philosophy, art, music, or religion), must make up this deficiency in his general education before being admitted to candidacy for the Master of Arts degree. This last provision does not apply to candidates for the Master of Science degree.

Courses numbered from 1 to 100 may not be credited toward the Master's degrees, but may in certain instances be required as a basis for advanced work. At least 6

semester hours of the course work required for the degree must be taken in courses numbered over 200. Courses numbered between 100 and 200 may be credited toward the degree, if completion of additional work has been certified by the appropriate officer of instruction. (See "Explanation of Course Numbers".)

A student who expects to continue his studies for the degree of Doctor of Philosophy after receiving the Master's degree is strongly advised to plan his program from the beginning so that work for the lower degree will constitute the initial stage of the doctoral discipline and, upon completion, will admit him to full status in the Graduate Council.

Foreign Language Requirement

Before being admitted to candidacy the student must show that he has a reading knowledge (certified by the appropriate foreign-language department) of at least one foreign language, selected by the department or committee under which he is studying. A student whose field is a modern foreign language or literature may not offer that language in satisfaction of the reading-knowledge requirement. Any candidate who chooses to meet the language requirement in French, German, or Spanish and has not passed the language examination by the end of 15 attempted semester hours must register for French 49, German 49, or Spanish 49 as part of his next registration. The Master's reading examination is given at the first and last class meeting of each of these courses and on the last Saturday of the summer term. No student will be permitted to take the examination after three unsuccessful attempts. Those enrolled in French 49, German 49, or Spanish 49 who pass the first examination are excused from the course and will receive a refund of tuition. Students who expect to take a reading examination in any approved language other than French, Spanish, or German should notify the Dean at the time of registration.

Students are reminded of the necessity for early satisfaction of this requirement, normally not later than the end of the first semester of registration for the degree.

Admission to Candidacy

A student must be admitted to candidacy before he begins the last half of his work for the Master's degree, i.e., not later than the completion of 15 semester hours of degree courses. Application for admission to candidacy is made on a form obtained at the Office of the Dean, and must be approved by the appropriate representative of the department or committee and by the Dean. If a prospective candidate, in his previous academic work, has not substantially satisfied the prerequisites for the Master's degree, including the undergraduate major as defined by the appropriate department or committee, he will not be admitted to candidacy until such deficiency has been made up. He may make up his deficiencies by electing appropriate courses in addition to those counted toward his degree.

The Thesis

The thesis may be of a research, expository, critical, or creative type. The main purpose of a Master's thesis is to demonstrate the student's ability to make independent use of the information and training acquired through his other disciplines, and to furnish objective evidence of his constructive powers in his chosen field. Registration for the thesis must be no later than the beginning of the final year of preparation, unless the professor in charge of the thesis permits registration at the

beginning of the final semester. The choice of the thesis subject must be approved by the professor in charge of the student's field and filed in the Office of the Dean by the date announced in the University calendar. Registration for the thesis is ordinarily made on the basis of 3 hours for each of two successive semesters. In exceptional cases, and with the approval of the professor in charge of the thesis, the student may register for the entire 6 hours during a single semester. The thesis in its final form must be presented to the Dean, no later than the date announced in the University calendar. Printed copies of detailed regulations regarding the form and reproduction of the thesis are available in the Office of the Dean.

Payment of tuition for the thesis entitles the candidate, during the academic year of registration, to the advice and direction of the member of the faculty under whom the thesis is to be written. In case a thesis is unfinished an additional successive academic year may be granted without further tuition payment. The student must, however, be registered in residence during this period. If the preparation of the thesis extends beyond the two-year period the student must register for it again, and pay tuition on the same basis as for a repeated course.

The Master's Examination

In addition to such other examinations as may be required, the candidate must pass a general written examination on the major subject. Examinations are held on dates fixed by the department or committee, but in no case later than January 15 for the fall semester, May 15 for the spring semester, and August 7 for the summer session. A candidate who fails to pass the Master's Examination may, in exceptional circumstances and with the specific approval of the Committee on Studies, repeat the examination, but only after the lapse of one semester. If he fails a second time, no further opportunity to take the examination will be permitted.

VETERANS EDUCATION

The George Washington University is approved to provide training for those who are eligible under the provisions of Public Laws 634, 190, 550, 16 and 894. The Office of Veterans Education, Building Q, 2029 H Street, NW., operates as a service bureau for such persons interested in studying at the University and acts in a liaison capacity between the University and the Veterans Administration.

Eligible persons are advised to consult this Office concerning the procedure for securing educational benefits before applying to the Veterans Administration for certification.

AIR FORCE RESERVE OFFICERS' TRAINING CORPS

The mission of the Air Force ROTC is to develop in selected students through classroom instruction and leadership training, the qualities essential for advancement to responsible positions as commissioned officers in the United States Air Force.

Course of Study

The program is divided into the basic course covering the first two years and the advanced course covering the junior year, summer training unit, and senior year.

Since many of the academic subjects in which college students are enrolled have a direct relationship to military as well as to civilian careers, some of the liberal arts courses of the University have been substituted for academic courses included in standard Air Force ROTC curricula. Courses have been carefully selected to avoid duplication in instruction and to provide practical training in organization, leadership, and discipline, which will be of value in industrial or professional careers. The duties and responsibilities of commissioned officers, oral or written expression, and the techniques of problem solving are emphasized throughout the course, both in theory and practice. In addition, orientation flights and field trips to Air Force bases are available to cadets on a voluntary basis.

Twelve semester hours of elective credit* are granted Air Science students as follows:

Freshman year: fall semester, 1 hour; spring semester, 3 hours
Sophomore year: fall semester, 3 hours; spring semester, 1 hour
Junior and senior years: each semester, 1 hour

In the four-year program 16 semester hours of credit for courses offered by other colleges and schools of the University may be substituted for Air Science courses. For a description of Air Science courses, see pages 145–46.

Cadets in the advanced course receive subsistence allowances from the Government totaling approximately $500, which is exempt from income tax. During the period of summer training, cadets receive $75 a month, food, lodging, and travel expense. Uniforms, textbooks, and training materials are provided for all Air Science courses at no expense to the cadet.

Eligibility Requirements

Enrollment in the Division of Air Science basic course is open to all men students who are at least 14 years of age, physically fit, of good character, and candidates for Bachelor's degrees. Men enrolling in the basic course are required to complete successfully the two-year course as a prerequisite to graduation from the University. Upon successful completion of the basic course, a cadet may apply for enrollment in the advanced course.

Women students may enroll in the Basic Leadership Laboratory course, which satisfies the physical education requirement. They may also enroll in the academic portion of the basic course for elective credit, with the approval of the Director of Air Science and the Dean.

A cadet enrolled in the advanced course must successfully complete the junior- and senior-year Air Science curricula and summer training unit as a prerequisite to graduation. Upon graduation he is obligated to accept a commission in the United States Air Force, if tendered. Any cadet who for academic, physical, or other rea-

* The amount of elective credit applicable toward a degree varies with the curriculum concerned

ions becomes disqualified for a commission is relieved of this obligation. Cadets preparing for pilot training may be required to take 35 hours of flying instruction. This instruction is provided by a Civil Aeronautics Administration approved school at government expense, and leads to qualification for a private pilot's certificate.

Both men and women may enroll in Advanced Air Science courses with the approval of the Director of Air Science and the Dean.

Military Service Delay

Deferment from induction under the Selective Service Act of 1951 may be granted to selected cadets within authorized quotas.

HEALTH ADMINISTRATION

The University maintains a health service that is primarily diagnostic in its intent. For medical emergencies and health consultations there is, on the Campus, a Student Health Clinic open from 9:00 A.M. to 5:00 P.M. with physician and nurse in attendance. There is also a rest room for women, with a graduate nurse in charge.

Medical privileges include: (1) physical examination of every student entering from secondary school;* (2) three visits by the University physician or surgeon, office or residence (District of Columbia), in any one illness, exclusive of a specialist, surgical operation, laboratory, or X-ray examination; (3) hospitalization, including board and nursing, in the University Hospital for not more than one week during any twelve-month period—the necessity to be determined by the Director of Health Administration.† All additional hospital charges for operating room, laboratory, anesthetics, X-ray, medications, or any other special service must be paid by the student. The duration of hospitalization period (maximum, one week) is also to be determined by the Director of Health Administration.

This medical benefit applies only to illness or disability incurred while currently enrolled in the University. It does not apply to illness or disability incurred between the last day of examinations for a semester or summer sessions and completion of registration for the next semester or summer session.

The student is allowed, if he so desires, to engage physicians and nurses of his own choice, but when he does so he will be responsible for the fees charged.

Rules: (1) The Director of Health Administration is empowered to limit or deny the medical benefits where, in his discretion, a student has, by his misconduct or breach of the rules of the University, made himself ineligible; (2) the Director of Health Administration has authority to determine the necessity and length of hospitalization; (3) a student not currently enrolled or one who has severed his connection with the University is ineligible for medical benefits; (4) a student intending to train for an athletic team is required to pass a thorough examination at the beginning of each semester; (5) hospitalization is not available to those students availing themselves of other hospitalization coverage for the same illness.

The University is not responsible for injuries received in intercollegiate or intramural games, or in any of the activities of the physical education departments.

---

* A charge for a special physical examination is made by the University if a student fails to appear for a physical examination during the period set for this purpose.

† See Rule (5) for exception.

THE READING CLINIC

The Reading Clinic, 2018 I Street NW., offers individual diagnostic and corrective services for all levels: primary, elementary, secondary, and adult. In addition special reading improvement classes are conducted on the high school and adult level.

A complete diagnosis includes psychological tests; vision, hearing, and dominance tests; and the various reading and spelling tests. Results are interpreted and a written report is presented in conference with the parents or the individual.

The special reading classes for high school students and adults are offered throughout the year at stated intervals. Emphasis is placed on improvement of vocabulary, speed, comprehension, and study skills. Machines such as the tachistoscope, rate accelerator, and controlled reader are also used for increasing speed of comprehension.

Fees.—The fee for individual diagnosis is $35; for individual instruction, $5 a lesson; for semi-individual instruction, $4 a lesson; for instruction in small groups with common reading difficulties, $3.25 a lesson. All fees are payable in advance at the Office of the Cashier.

THE TESTING AND COUNSELING CENTER

The Testing and Counseling Center, 718 Twenty-first Street NW., offers services which are available to students enrolled in the University, to high school students, and to adults of the community.

The services are designed to assist individuals in the evaluation of their educational and vocational potentialities and objectives, diagnose academic difficulties, provide educational and vocational literature and information, and refer individuals to qualified agencies for assistance with problems not handled by the Center.

The Center provides special testing services including: diagnostic tests prescribed by the School of Engineering, admissions tests for the University and for other educational institutions, and tests for business and industry.

Fees.—Except for specialized testing, the fee covers testing and counseling based on the results of the tests. For students who are currently registered as degree candidates in the University, the fee is $7.50; for students currently enrolled in the University but not as degree candidates, the fee is $30; for graduates of the University, $30; for community clients, $45. Fees for specialized testing are dependent upon the services involved. All fees are payable at the Office of the Center.

STUDENT LIFE

LIVING ACCOMMODATIONS

The University maintains six residence halls. Meals are served at the Student Union.

Admission to the University does not include a room reservation. A separate application for a room should be made well in advance (for the fall semester by May first, for the spring semester by January first). Rooms are leased for the academic year, and a deposit of $50, which is credited toward the fall semester room charge, is required. If notice of withdrawal or cancellation of room reservation is received prior to June 30, $25 of the deposit will be refunded. Room rentals are payable in advance by the semester.

Forms for applications, together with detailed information, may be obtained from the Director of Activities for Women, Woodhull House, 2033 G Street NW. or the Director of Activities for Men, Building Q, 2029 H Street NW.

Information concerning private rooming and boarding facilities near the University may be obtained at the Housing Office, Lisner Auditorium. The reservation of rooms in private houses must be made by students.

All girls (except freshmen) under the age of twenty-one, who are enrolled for twelve or more semester hours of academic work at the University and who are not living with their parents or relatives, may live outside the residence halls only with the permission and approval of the Director of Activities for Women, and upon receipt of written requests from parents. In no case will permission be granted for such girls to live outside the residence halls except with persons approved by the Director of Activities for Women.

Freshman girls may live outside the residence halls only with their parents or with immediate relatives with the written approval of their parents.

John Quincy Adams Residence Hall for men provides triple rooms with bath. Rooms rent at $345 a person for the academic year.

John C. Calhoun Residence Hall for men provides double rooms at $380 a person for the academic year.

William H. Crawford Residence Hall for women provides double rooms at $405 a person for the academic year.

Dolly Madison Residence Hall for women provides double rooms at $405 a person for the academic year.

Hattie M. Strong Residence Hall for women provides single rooms at $470 and double rooms at $405 a person for the academic year.

Welling Residence Hall for men provides double rooms at $300 a person for the academic year.

STUDENT UNION

The Student Union, 2125 G Street NW., is the center for student life. From the cafeteria on the first floor to the reading room on the fourth floor, it is well planned to meet the students' need for meals, study, recreation, and activities. In addition to the recreation lounge and social lounge the Student Union provides office space for the Student Council and for the other major student organizations.

The Student Activities Office, also in the Student Union, has available information concerning the student organizations and campus events.

RELIGIOUS LIFE

The University recognizes the contribution that religion makes to the life of its students and encourages them to participate in the various religious organizations of their own choice. Catholic, Jewish, and Protestant bodies sponsor these groups and form a link between the University and the religious community. The advisers of the religious organizations are available for counseling.

University Chapel

The University Chapel is maintained as a nonsectarian service of worship for the University community. The service is held Wednesday of each week from 12:10 to 12:30 o'clock at 1906 H Street NW. Among the guest speakers are representative clergymen of Washington. The Director of Chapel is available for counseling and conference.

THE PLACEMENT OFFICE

The Placement Office, 2114 G Street NW., provides assistance to students and alumni seeking full-time, part-time, temporary, or permanent employment. The Office maintains a registry of positions available in many fields, both locally and nationally, and refers qualified applicants for consideration. The Office administers the On-Campus Industrial and Government Recruitment Interview Program for seniors and graduate students, in which well over 150 private companies, as well as certain government agencies, participate. This program offers outstanding employment opportunities to persons seeking careers.

Students and alumni interested in placement are asked to register in person at the Office and to select from written descriptions of current openings positions for which they wish referral. Those interested in planning careers are invited to study the information on career fields and the brochures of business and industrial organizations, government agencies, etc., which are on display in advance of campus visits by recruiting offices. The services of the Counseling Center are available to students and alumni wishing career guidance.

The Placement Office is open from 9:00 A.M. to 5:00 P.M., Monday through Friday.

INTERNATIONAL HOUSE

International House, 2110 G Street NW., is the social center for students from foreign countries. A series of teas, dances, and other forms of entertainment, and the use of club rooms and lounge enable students to become acquainted and feel at home in the University.

The International Students' Society welcomes as members students from other lands as well as North American students.

The Adviser to Students from Foreign Countries, whose office is in International House, is available for advice and guidance.

STUDENT ACTIVITIES

Directors of Student Activities

The University maintains the offices of the Director of Activities for Men and the Director of Activities for Women, for the guidance of students in all nonacademic phases of student life, such as student activities, social life, and housing. The directors are available for individual counseling concerning personal adjustment to university life.

Student Government

Student Council

The University believes in encouraging the development of a sense of civic responsibility in its students by delegating to them such authority in student activities as is consistent with established policy and regulations. To this end, the organization of the University includes the Student Council, which, under the guidance of the Directors of Student Activities, is responsible for the conduct of all student activities. The Student Council is elected annually by the student body.

Committee on Student Life

The Committee on Student Life has the power to review the acts of all student organizations, including the Student Council, and set aside acts that are contrary to established policy and regulations of the University or the Committee. This Com-

mittee is given authority to approve or disapprove the establishment of any proposed organization on campus.

Eligibility for Student Activities

Any student registered in the University is eligible to participate in nonathletic student activities of the University; however, a student having a scholastic average of less than 2.00 is not eligible to be:

1. A member of the Band, Dance Production groups, Enosinian Debate Society, Glee Club, Cheerleaders, Student Council, Religious Council, Panhellenic Council, Interfraternity Council, Engineers' Council, Student Life Committee, Adams Hall Council, Calhoun Hall Council, Crawford Hall Council, Madison Hall Council, Strong Hall Council, Welling Hall Council, or any publications staff.
2. An officer, permanent committee chairman, or member of the executive board of any activity.

The rules and policies of the Southern Conference govern participation in intercollegiate athletics.

The control and administration of all student activities are outlined in a separate bulletin called "Rules and Regulations Governing Student Activities."

Sports

The University is a member of the Southern Conference and the National Collegiate Athletic Association. Its teams participate in intercollegiate contests in football, basketball, baseball, tennis, golf, rifle, sailing, and crew.

The University maintains a complete program of intramural sports for both men and women. The men's program is conducted by the Intramural Council. The Women's Athletic Association and Intersorority Athletic Board cooperate with the department of Physical Education in conducting the women's intramural and interextra-mural sports program in tennis, hockey, basketball, rifle, swimming, golf, bowling, and badminton.

Other sports activities are included in the Sailing Association and the Rowing Club.

Arts

Students may participate in dance, drama, forensics, and music through the following organizations: Dance Production Groups I, II, III (Modern Dance) and Folk Dance; Enosinian Debate Society; University Players; University Glee Club; and University Orchestra. Each of these groups presents programs during the academic year.

With the cooperation of the Curator of Art, an annual student art exhibit is presented.

Annual Events

Colonial Program.—The Student Council sponsors a series of ten cultural programs to which all students are invited.

Recreation Program.—The Student Council and the Dance Production Groups arrange dances—square, folk, and social—at frequent intervals for all students.

Homecoming.—Scheduled about the middle of the fall semester, Homecoming is

the primary festive period of the school year. It includes the annual Pep Rally and Variety Show, the homecoming football game, and the homecoming dance.

Religion in Life Week.—Observed during the week of Thanksgiving. Religion in Life Week includes special lectures, classroom lectures, and fraternity and sorority discussion groups. Religion in Life Week is sponsored by the University Chapel in cooperation with the Committee on Religious Life and the religious organizations.

Holiday Season.—The University traditionally greets the holiday season with appropriate ceremonies including the lighting of the Christmas tree, the singing of Handel's Messiah, and the observance of a special Christmas service at the University Chapel.

Career Conference.—Under the sponsorship of the Student Council, guest speakers from many professions explore annually with students the potentialities of vocations available on graduation.

May Day.—This is the traditional time for the award of honors in student activities. Mortar Board and Omicron Delta Kappa announce and present their new members.

The Colonial Cruise.—An afternoon and evening cruise on the Potomac in the late spring. Students, alumni, and faculty picnic, dance, and engage in games and athletic contests.

STUDENT ORGANIZATIONS

Honor Societies

Phi Beta Kappa.—A national honor society recognizing "outstanding intellectual capacity well employed" in the field of liberal arts and sciences. Senior and junior students who are candidates for the degree of Bachelor of Arts or Bachelor of Science in Columbian College and who have shown broad cultural interests, distinguished scholarly achievement, high character, general promise, and scholarly ideals may, to a number not exceeding 15 per cent of a class, be elected to membership by the Faculty members of the Alpha Chapter of the District of Columbia.

Sigma Xi.—A national scientific honor society, the purpose of which is to encourage original investigation in science pure and applied. Outstanding graduate students in the sciences are eligible for full membership, and undergraduates who have shown marked ability in research may be elected to associate membership.

Aesculapian Society.—An honorary premedical fraternity.

Alpha Kappa Delta.—A national sociology society.

Alpha Lambda Delta.—A national fraternity established to encourage and reward high scholarship and attainment, membership in which is limited to those freshman women who attain a scholastic average of at least 3.50.

Arnold Air Society.—A national Air Force ROTC society for advanced cadets.

Delphi.—An intersorority society.

Delta Sigma Rho.—A national forensic society.

Gate and Key.—An intrafraternity society.

Iota Sigma Pi.—A national chemical society for women.

Mortar Board.—A national society for senior college women, stressing leadership, scholarship, and service.

Omicron Delta Kappa.—A national fraternity emphasizing leadership in extracurricular activities.

Order of Scarlet.—A service honorary society for sophomore and junior men.

Pershing Rifles.—A national Air Force ROTC society for basic cadets.

Phi Epsilon Phi.—A national botany fraternity.
Phi Eta Sigma.—A national fraternity, established to encourage and reward high scholarship and attainment, membership in which is limited to those freshman men who attain a scholastic average of at least 3.50.
Phi Sigma Tau.—A national philosophy honor society.
Pi Delta Epsilon.—A national collegiate journalism fraternity.
Pi Epsilon Delta.—A national drama honorary fraternity.
Pi Gamma Mu.—A national social-science society.
Psi Chi.—A national psychology fraternity.
Sigma Alpha Eta.—A national speech and hearing fraternity.
Sigma Pi Sigma.—A national physics fraternity.
Tassels.—A service honorary society for sophomore women.

Professional Organizations and Departmental Clubs

Alpha Chi Sigma (chemistry), Alpha Kappa Psi (commerce and economics), Chemistry Club, El Club Español, Enosinian Debating Society, Le Cercle Français, Lester F. Ward Sociological Society, Phi Delta Gamma (graduate), Phi Sigma Tau (philosophy), Russian Club, Sigma Delta Pi (Spanish).

Social Fraternities

Sigma Chi, Kappa Sigma, Phi Sigma Kappa, Sigma Alpha Epsilon, Sigma Phi Epsilon, Phi Sigma Delta, Sigma Nu, Tau Kappa Epsilon, Pi Kappa Alpha, Tau Epsilon Phi, Alpha Epsilon Pi, Delta Tau Delta.

Social Sororities

Pi Beta Phi, Chi Omega, Sigma Kappa, Alpha Delta Pi, Delta Zeta, Kappa Delta, Phi Sigma Sigma, Zeta Tau Alpha, Kappa Kappa Gamma, Delta Gamma, Kappa Alpha Theta, Alpha Epsilon Phi, Sigma Delta Tau.

Religious Organizations

Baptist Student Union, B'nai B'rith Hillel Foundation, Canterbury Association, Christian Science Organization, Eastern Orthodox Club, Lutheran Student Association, Newman Club, Religious Council, Student Christian Fellowship, Unitarian Club, United Christian Fellowship, Wesley Foundation.

Student Publications

The Cherry Tree (the annual), *The University Hatchet* (weekly newspaper), *The Potomac* (literary magazine), *The Student Handbook*.

Other Organizations

Adams Hall Council, Alpha Theta Nu (scholarship winners), Big Sisters, Calhoun Hall Council, Cheerleaders, Colonial Boosters, Democratic Club, Flying Sponsors, Foggy Bottom Sports Car Club, Interfraternity Council, Interlaw Fraternity Council, International Relations Club, International Students' Society, Inter-sorority Athletic Board, Junior Panhellenic Association, Madison Hall Council, Old Men, Republican Club, Senior Panhellenic Association, Strong Hall Council, Student Council, Students for Better Government (Political Party), Student Legal Aid Society, Station WRGW, University Pep Band, Wandering Greeks, Welling Hall Council, Writers' Club.

COURSES OF INSTRUCTION

On the following pages of this CATALOGUE, under the alphabetically arranged names of the departments of instruction, are listed the courses of instruction offered by the University in the liberal arts and sciences in the summer of 1962 and in the academic year 1962–63. The courses as here listed are subject to some slight change. The University reserves the right to withdraw any course announced.

HOURS OF INSTRUCTION

Classes are scheduled in the morning, afternoon, and evening. Evening and daytime sections of the same course are identical, are taught by the same staff of instructors, and carry the same amount of credit.

EXPLANATION OF COURSE NUMBERS

First-group courses.—Courses numbered from 1 to 100 are planned for students in the freshman and sophomore years. With the approval of the adviser and the Dean, they may also be taken by juniors and seniors. In certain instances, they may be taken by graduate students to make up undergraduate deficiencies or as prerequisite to advanced courses, but they may not be credited toward a higher degree.

Second-group courses.—Courses numbered from 101 to 200 are planned for students in the junior and senior years. They may be credited toward higher degrees only when registration for graduate credit has been approved at the beginning of the course by the dean responsible for the graduate work and by the instructor, and when the completion of additional work has been certified by the instructor.

Third-group courses.—Courses numbered from 201 to 300 are planned primarily for graduate students. They are open, with the approval of the instructor to qualified seniors; they are not open to other undergraduates.

INDICATION OF THE AMOUNT OF CREDIT

The number of semester hours of credit given for the satisfactory completion of a course is indicated in parentheses after the name of the course. Thus, a year course giving 3 hours of credit each semester is marked (3–3), and a semester course giving 3 hours of credit is marked (3). A semester hour usually consists of the completion of one fifty-minute period of class work or of one laboratory period a week for one semester.

ANATOMY*

Professors I. R. Telford *(Chairman)*, Paul Calabrisi
Professorial Lecturer T. D. Stewart
Associate Professors F. D. Allan, T. N. Johnson
Assistant Professors J. B. Christensen, J. C. Bartone
Clinical Instructors R. N. Brown, L. E. Church, L. C. Dearden

Special Lecturer B. S. Blumberg

Master of Science in the field of Anatomy.—Prerequisite: a Bachelor of Arts or Bachelor of Science degree from this University, or the equivalent, with a major in Biology.

* The Staff of Instruction here listed is for the academic year 1961–62.

Chemistry, or Zoology. The undergraduate program must include the following courses, or the equivalent: Biology 1–2*, Chemistry 11–12, 21, 151–52; Physics 11, 12; Zoology 103–4 (formerly 41–42). **Biochemistry 221–22 is recommended as an elective.**

Required: the general requirements, pages 43–45, including Anatomy 203, 204, 205, 221–22, 295–96, 299–300, and graduate courses in biochemistry, physiology, or related fields selected with the approval of the Department. It is not always possible to arrange courses and research so that the student can be assured of completing all the required work in one academic year.

Doctor of Philosophy (Graduate Council).—See the pamphlet on the Graduate Council.

201–2 *Gross Anatomy* (8–2) **Calabrisi and Staff**

Academic year—as arranged. For qualified nonmedical graduate students. Same as Anatomy 101–2. Anatomy 201—laboratory fee, $21; Anatomy 202—laboratory fee, $16.

203 *Human Embryology* (2) **Allan and Staff**

Spring—as arranged. For qualified nonmedical graduate students. Same as Anatomy 103. Laboratory fee, $8.

204 *Neuroanatomy* (3) **Johnson and Staff**

Fall—as arranged. For qualified nonmedical graduate students. Same as Anatomy 104. Laboratory fee, $13.

205 *Microscopic Anatomy* (4) **Telford and Staff**

Fall—as arranged. For qualified nonmedical graduate students. Same as Anatomy 105. Laboratory fee, $13.

221–22 *Seminar* (1–1) **Telford and Staff**

Academic year: 1 hour a week—as arranged. Research reports and discussions of special topics by the Staff and graduate students. For graduate students. Medical students are encouraged to attend.

249–50 *Introduction to Medical Research*† (3–3) **The Staff**

Academic year—Wed., 1:00 to 6:00 P.M. Primarily for graduate students. A comprehensive introduction to the major medical research techniques—statistical, physical, chemical, electrical, and radioisotopic—as applied to biological materials in the medical sciences. Laboratory fee, $7.50 a semester.

295–96 *Research* (arr.) **The Staff**

Academic year—as arranged. Fee to be arranged.

299–300 *Thesis* (3–3) **The Staff**

ART‡

Professors D. C. Kline *(Chairman)*, W. A. MacDonald
Associate Professor L. P. Leite
Associate Professorial Lecturer Grace Evans
Assistant Professor George Steiner
Studio Lecturers on the Staff of the Corcoran School of Art Edmund Archer, Richard Lahey, Jessalee Sickman, Heinz Warneke, C. E. Forsythe, Kenneth Hine, Harry Gates, Jack Perlmutter, Alexander Russo

Bachelor of Arts with a major in (1) *Art History and Theory*, (2) *Drawing and Painting*, (3) *Sculpture*, or (4) *Commercial Art (Departmental)*:

* An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.
† Also an interdepartmental course. The student should register in the department directing his research.
‡ The Staff of Instruction here listed is for the academic year 1961–62.

The major in Art History and Theory.—Prerequisite: the Arts and Letters curriculum, page 32, or the equivalent, including Art 31–32 and 71–72.

Required: in addition to the general requirements, pages 37–42, eighteen semester hours, as follows: Art 101 or 102, 103, 104 or 105, 110, 112, 113 or 114; and twelve semester hours selected from second-group courses, or from third-group courses open to undergraduates with the approval of the instructor. Students intending to major in this field are urged to acquire a reading knowledge of a foreign language, preferably French or German, at the earliest possible convenience.

The major in Drawing and Painting, Sculpture, or *Commercial Art.*—Prerequisite: the Arts and Letters curriculum, page 32, or the equivalent, including Art 21–22, 41–42, and 31–32 or 71–72.

Required: in addition to the general requirements, pages 37–42, twenty-four semester hours of studio practice; six semester hours of art history selected from second-group courses or from third-group courses open to undergraduates with the approval of the instructor.

Classes in the practice of art are held at the Corcoran School of Art.

Bachelor of Arts in Education with a teaching field in Art (School of Education).—Prerequisite: the Education curriculum, page 34.

Required: the Art option and professional courses listed in the School of Education Catalogue.

Master of Arts in the field of Art History and Criticism with concentrations in Classical Art and Archeology, Art of the Americas, Renaissance and Baroque Art, and Contemporary Art.—Prerequisite: the degree of Bachelor of Arts with a major in Art History and Theory at this University, or the equivalent.

Required: the general requirements, pages 43–45. As much as possible of the twenty-four semester hours in course work should be in third-group courses. A general written examination on the problems in the field of Art History and Criticism; a written thesis embodying the results of research on some specific topic in the history and criticism of art.

Master of Fine Arts in the field of Painting or *of Sculpture.*—Prerequisite: the degree of Bachelor of Arts with a major in Drawing and Painting, Sculpture, or Commercial Art at this University, or the equivalent.

Required: the general requirements, pages 43–45. As much as possible of the twenty-four semester hours in course work should be in third-group courses. A creative thesis in painting or sculpture; a paper discussing some technical phase of the problem illustrated by the thesis.

ART HISTORY AND THEORY

First Group

1 *Art Appreciation* (3) MacDonald

Fall—day; spring—day; summer 1962. A study of the language and function of art in its various media, the development of styles, aesthetic principles, theories, and the ideas in art through the ages. (Primarily for nonmajors.)

31–32 *Survey of Western Art* (3–3) Leite

Academic year—day. A survey of the arts in the Western World from prehistoric to modern times. A foundation for further study in the history of art.

71–72 *Introduction to the Arts in America* (3–3) Kline

Academic year—evening; summer 1962—Art 71 (3). Painting, sculpture, and architecture of America, with selected references to the crafts and popular arts. *First half:* from Colonial beginnings to the Republican Age. *Second half:* from early 19th centruy to the present.

101 *Greek and Roman Architecture* (3) MacDonald

Fall—day.

102 *Greek and Roman Sculpture* (3) MacDonald

Spring—day.

103 *Medieval Art* (3) (Formerly Art 102) Evans

Fall—day. A study of architecture, sculpture, and painting from the formative states of Christian Art in the Byzantine Age through the Romanesque and Gothic periods.

104 *Renaissance Art in Italy I* (3) Leite
Fall—day. The early developments from the 13th to the 15th century.

105 *Renaissance Art in Italy II* (3) Leite
Spring—day. The High Renaissance and Mannerism.

106 *Renaissance Art in the North* (3) Leite
Summer 1962. A study of the painting in the Netherlands, Germany, France, Spain, and Portugal.

107 *Eighteenth Century Art in Europe* (3) Evans
Spring—day. The development of painting, sculpture, and architecture in 18th century Europe.

109 *Nineteenth Century Art in Europe* (3) Leite
Fall—day. Painting and sculpture from Academism to Symbolism.

110 *Contemporary Art* (3) Leite
Spring—day; summer 1962. Painting and sculpture in 20th century Europe.

111 *Classical Archeology* (3) MacDonald
Not offered 1962–63. A study of archeological monuments of classical civilizations, with intensive study of one or more areas selected from architecture, sculpture, painting, or minor arts.

112 *Art of Egypt and the Ancient Orient* (3) MacDonald
Spring—day. A study of the art of Mesopotamia, Anatolia, Egypt, and Persia.

113 *Baroque Art in Italy* (3) Leite
Fall—day. The development of painting, sculpture, and architecture in the 16th and 17th centuries in Italy.

114 *Baroque Art in the North* (3)
Not offered 1962–63. The development of painting, sculpture, and architecture in the 16th and 17 centuries in Holland, Flanders, Spain, France, Germany, and England.

115 *Christian Iconography* (3) (Formerly Art 210) Leite
Not offered 1962–63. The origins and development of Christian symbols and themes from Early Christian to modern times.

116 *Classical Iconography* (3) (Formerly Art 211) MacDonald
Not offered 1962–63. The origin and development of myths in classical art.

120 *Art of China and Japan* (3) (Formerly Art 204) Kline
Fall—day. The architecture, painting, and sculpture of China, Korea, and Japan.

141 *Interior Decoration* (3) Kline
Fall—day. A study of the principles of decoration dealing with furniture designs and ensemble layout, draperies, color, accessories, and lighting.

142 *House Planning* (3) Kline
Spring—day. Study of the contemporary house for family living, including site problems, the case plan, materials of building, and climate conditioning.

143 *Folk Arts in America* (3) Kline
Not offered 1962–63. Ceramics, woodcarving, ironwork, decorative painting, weaving, and other crafts; selected references to American folk music.

Third Group

505 *Primitive Art** (3) Kline
Summer 1962. The arts of prehistoric and primitive man in Europe in the pre-Columbian Americas, Oceania, and Africa.

* May be taken for undergraduate credit with the approval of the instructor

207 *Modern Architecture* (3) Kline
Spring—day. The development of modern architecture and building technology in Europe and America from the late 19th century to the present.

243 *Seminar in American Art* (3) Kline
Not offered 1962–63.

244 *Seminar in Naturalism and Realism* (3) Leite
Not offered 1962–63. A reading knowledge of French is desirable.

245 *Seminar in Romanticism* (3) Leite
Not offered 1962–63. A reading knowledge of French and German is desirable.

246 *Seminar in Classical Art* (3) MacDonald
Fall—day.

247 *Seminar in Symbolism* (3) Leite
1962–63 and every third year: spring—day.

248 *Studies in Classical Art* (3) MacDonald
Summer 1962.

261–62 *Theory and Criticism* (3–3) (Formerly Art 161–62) MacDonald
Academic year—evening. The history of theory and criticism in Classical, Medieval, Renaissance, and Modern times.

271–72 *Museum Techniques** (arr.) MacDonald
Academic year—as arranged. Assignments in intern training in museum work. Students may take this course three days a week from 9:00 A.M. to 5:00 P.M. throughout the academic year and earn 3 credits a semester; or they may take it intensively, 5 days a week from 9:00 A.M. to 5:00 P.M., and earn 6 credits in one semester.

289–90 *Thesis* (3–3) The Staff
Academic year—as arranged; summer 1962.

DRAWING AND PAINTING, SCULPTURE, AND COMMERCIAL ART

First Group

21–22 *Basic Composition and Techniques†* (3–3) Forsythe
Academic year—day and evening; summer 1962—Art 21 (3). Study of the fundamentals of two- and three-dimensional composition; an investigation of materials and their application.

41–42 *Drawing and Perspective* (3–3) Russo
Academic year—day and evening; summer 1962—Art 41 (3). An introductory course in object and figure drawing and mechanical perspective.

65–66 *Drawing and Painting I—Life, Still Life, and Portrait* (3–3) The Staff
Academic year—day; summer 1962—Art 65 (3).

81–82 *Sculpture I* (3–3) Warneke
Academic year—day and evening.

Second Group

125–26 *Drawing and Painting II—Life, Still Life, and Portrait* (6–6) Sickman
Academic year—day.

* Primarily for candidates for the degree of Master of Arts in the field of Museology and students in the Special Program in Museum Training.
† Art 21–22 is prerequisite to all other studio courses.

127–28 *Drawing and Painting II—Life and Portrait* (6–6) Archer
Academic year—day and evening.

135 *Commercial Design* (3) Hine
Summer 1962. Studies of the principles and applications of graphic design.

157–58 *Print Making* (6–6) Perlmutter
Academic year—day. Relief printing and wood block, with special reference to western and eastern techniques.

159–60 *Anatomy and Techniques* (6–6) Russo
Academic year—day. Special problems in anatomy and drawing and painting of the life model in action.

165–66 *Drawing and Painting II—Life and Portrait* (6–6) Lahey
Academic year—day and evening; summer 1962—Art 165 (3)*.

175–76 *Advanced Composition* (6–6) Forsythe
Academic year—day and evening; summer 1962—Art 175 (3)*. Advanced problems in creative design and composition; development of representational skills.

179–80 *Sculpture II* (6–6) Warneke
Academic year—day and evening. Portrait-life modeling and composition in clay, plaster and wood carving.

183–84 *Commercial Art* (6–6) Hine
Academic year—day and evening. Instruction in fundamental principles: to analyze, visualize, and skillfully express ideas.

185–86 *Advanced Commercial Art* (6–6) Hine
Academic year—day and evening. Practice in the development of professional techniques for thumb-nail and comprehensive layouts; preparation of professional portfolio.

189–90 *Advanced Sculpture* (6–6) Warneke
Academic year—day and evening. Advanced problems in modeling and direct carving. (Restricted to students who have completed 18 hours of sculpture).

Third Group

265–66 *Painting III* (6–6) The Staff
Academic year—day and evening; summer 1962—Art 265 (3)*.

275 *Painting IV* (6) The Staff
Fall—as arranged; spring—as arranged; summer 1962—Art 275 (3)*.

279–80 *Sculpture III* (6–6) Warneke
Academic year—as arranged.

281 *Sculpture IV* (6) Warneke
Fall—as arranged; spring—as arranged.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged; summer 1962.

MUSIC

First Group

3–4 *Music Appreciation* (3–3) Steiner
Academic year—day and evening; summer 1962—Music 3 (3). An introduction to the historical sequences of musical style, the elements of music principle and musical

* May be taken for 6 semester hours with the approval of the instructor.

forms, the works of the chief composers, and the study of instruments and other media of musical presentation.

5–6 *Fundamentals of Music* (3–3) Steiner
Academic year—evening. Elements of music—basic concepts of pitch, rhythm, scales, intervals and chords, notation and terms.

51–52 *Orchestra* (1–1) Steiner
Academic year—evening. Preparation and performance of orchestral literature. Prerequisite: audition before Director.

SECOND GROUP

103–4 *History of Music* (3–3)
Academic year—day; summer 1962—Art 103 (3). The development of music in the Western World from the Early Christian era to the 20th century.

131–32 *Harmony* (3–3)
Academic year—evening. Chord structure, inversions, modulations, figured and unfigured bass. Practice in elementary harmonic writing.

RELATED COURSE IN ANOTHER DEPARTMENT

Classical Languages and Literatures 71–72 *Greek and Roman Backgrounds in Literature* (3–3)

BIOCHEMISTRY*

Professors J. H. Roe *(Emeritus)*, C. R. Treadwell *(Chairman)*
Professorial Lecturers W. R. Carroll, Irving Gray, Arthur Weissbach
Associate Professor B. W. Smith
Associate Professorial Lecturer Leon Swell
Assistant Professors G. V. Vahouny, J. M. Bailey

Master of Arts or *Master of Science in the field of Biochemistry.*—Prerequisite: a Bachelor of Arts or a Bachelor of Science degree. The undergraduate program must have included the following courses, or the equivalent: Biology 1–2†; Chemistry 11–12, 21, 22, 151–52; Physics 11 and 12.

Required: the general requirements, pages 43–45, including Biochemistry 221–22, 225–26, 227–28, 299–300. The remaining courses are to be selected from Biochemistry 224, 232, 241, 251, 261, 295–96, or, with the approval of the adviser, from graduate courses in Microbiology, Chemistry, Physiology, or Pharmacology. It is usually not possible to arrange courses and research so that the student can be assured of completing all of the required work in one academic year.

Doctor of Philosophy (Graduate Council).—See the pamphlet on the Graduate Council.

221–22 *Biochemistry* (4–4) Vahouny
Academic year—Tues. and Thurs., 8:00 to 12:00 A.M. A lecture and laboratory course for nonmedical students. Prerequisite: Chemistry 22 and 152. Material fee, $15 a semester.

224 *Biochemistry of the Enzymes* (1) Weissbach
Spring—Mon., 5:00 P.M. Lecture course dealing with the biochemistry of the enzymes and enzyme reactions. Prerequisite: Biochemistry 113 or 221.

* The Staff of Instruction here listed is for the academic year 1961–62.

† An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.

225-26 *Biochemical Procedures* (3–3) Smith and Staff
Academic year—as arranged. A laboratory course. Material fee, $16 a semester.

227-28 *Biochemistry Seminar* (1–1) The Staff
Academic year—Fri., 4:00 P.M. The current literature in the field of biochemistry, mainly for graduate students, but open to a limited number of specially qualified medical students.

232 *Proteins and Amino Acids* (1) Carroll
Spring—Wed., 5:00 P.M. A lecture course. Prerequisite: Biochemistry 113 or 221.

241 *Isotopes* (2) Gray
Fall—Sat., 8:00 A.M. Theoretical characterization of isotopes and their applications in biology. Attention will be given to counting, health physics and radiation safety, autoradiography and chromotography.

249-50 *Introduction to Medical Research** (3–3) Bailey
Academic year—Wed., 1:00 to 6:00 P.M. Primarily for graduate students. A comprehensive introduction to the major medical research techniques—statistical, physical, chemical, electrical, and radioisotopic—as applied to biological materials in the medical sciences. Laboratory fee, $7.50 a semester.

251 *Carbohydrate Metabolism* (1) Roe
1962–63 and alternate years: fall—Sat., 9:00 A.M. A lecture course. Prerequisite: Biochemistry 114 or 222.

261 *Biochemistry of the Lipids* (1) Swell, Treadwell
Fall—Sat., 12:00 A.M. A lecture course. Prerequisite: Biochemistry 114 or 222.

295-96 *Research in Biochemistry* (arr.) The Staff
Academic year—as arranged.

299-300 *Thesis* (3–3) The Staff

BIOLOGY

Beginning with the academic year 1962–63 the work toward Bachelor's and Master's degrees in Biology will be offered jointly by the departments of Botany and Zoology.

In the summer of 1962 the following courses will be offered by the Department of Biology.

1-2 *Survey in Biology* (3–3)
Summer 1962. Systematic study of the plant and animal kingdoms, with emphasis upon the interdependence of living things and their relations with their environments. Introduction to organic evolution, heredity, public health, and conservation. Material fee, $7 for each half. Biology 1 is not prerequisite to Biology 2.

115 *Cytology* (3)
Summer 1962. Plant and animal cells and their components, including the chromosomes and their role in heredity, with training in the preparation of materials for study. Prerequisite: one year of college work in biology, botany, or zoology. Material fee, $8.

211-12 *Research in Cytology* (arr.)
Summer 1962. Individual problems for advanced students interested in this field.

299-300 *Thesis* (3–3)
Summer 1962.

*This is an interdepartmental course. The student should register in the department directing his research.

BOTANY*

Professor R. B. Stevens *(Chairman)*
Professorial Lecturer L. B. Smith
Associate Research Professor J. M. Kaper
Associate Professorial Lecturers Kittie Parker, Caroline Adams, R. S. Sigafoos, Edward Hacskaylo, H. M. Cathey
Lecturers G. A. Livingston, W. A. Shropshire, Jr.

Bachelor of Arts or *Bachelor of Science with a major in Botany (Departmental).*—Prerequisite: the Arts and Letters or the Science curriculum, respectively, page 32, including Biology 1–2†, or the equivalent.

Required: in addition to the general requirements, pages 37–42, a minimum of twenty-four semester hours of second-group courses in Botany or in a combination of Botany and related sciences as approved by the Chairman.

Bachelor of Arts or *Bachelor of Science with a major in Biology (Departmental).*—This interdepartmental major may be arranged in conjunction with the Department of Zoology. Prerequisite: the Arts and Letters or the Science curriculum, respectively, page 32, including Biology 1–2†, or the equivalent.

Required: in addition to the general requirements, pages 37–42, a minimum of twenty-four semester hours of second-group courses in Botany and Zoology, as approved by the Chairman of either Department.

Master of Arts or *Master of Science in the field of Botany.*—Prerequisite: the equivalent of a Bachelor of Arts or Bachelor of Science degree, respectively, from this University with a major in Botany or Biology.

Required: the general requirements, pages 43–45.

Master of Arts or *Master of Science in the field of Biology.*—This interdepartmental field may be arranged in conjunction with the Department of Zoology. Prerequisite: the equivalent of a Bachelor of Arts or Bachelor of Science degree, respectively, from this University with a major in Botany, Zoology, or Biology.

Required: the general requirements, pages 43–45.

Doctor of Philosophy (Graduate Council).—See the pamphlet on the Graduate Council.

BIOLOGY‡

First Group

The Staff

1–2 *Introductory Biology*‡ (4–4)

An interdepartmental course. Lecture (2 hours), laboratory (4 hours).

Biology 1—Plant Sciences (4): fall—day and evening; spring—day and evening.

Biology 2—Animal Sciences (4): fall—day and evening; spring—day and evening.

This course is designed to provide the nonscience student with an understanding of the life sciences and to serve as a basis for those who may wish to continue in some aspect of biology. It is the introductory course leading to all second- and third-group courses in botany and zoology, and is taught jointly by the staff members of the two departments. Designed to be taken in either sequence; students may be registered for either 1 or 2 at the beginning of the academic year, depending on laboratory space available. Material fee, $10 a semester.

BOTANY

Second Group‡

Parker

105 *Field Botany* (3)

Lecture (1 hour), laboratory and field (4 hours). 1963 and alternate summers. A course, primarily for nonspecialists, emphasizing local flora.

---

* The Staff of Instruction here listed is for the academic year 1961–62.

† An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.

‡ Biology 1–2 is prerequisite to all second-group courses, except by permission of the instructor. Beginning with the academic year 1962–63, Biology 1–2 *Introductory Biology* (4–4) replaces Botany 1–2 *General Botany* (3–3) and Zoology 1–2 *Introduction to Zoology* (4–4). Botany 1–2 and Zoology 1–2 will be offered for the last time in the summer of 1962.

106 *Plant Growth* (3) — Hacskaylo, Shropshire
Lecture (2 hours), laboratory (2 hours). Summer 1962 (as Botany 116). 1962 and alternate summers. A course, primarily for nonspecialists, emphasizing practical problems of growing and caring for plants. Material fee, $8.

107–8 *Organic Evolution** (3–3) — Bowman
1962–63 and alternate years: academic year—day; 1963–64 and alternate years: academic year—evening. A study of the theories of organic evolution and present ideas on the principal lines of development in the plant and animal kingdoms; a review of the contributions to an understanding of the mechanisms involved in this process from the fields of genetics and cytology.

109–10 *Plant Morphology* (3–3) — Adams
1963–64 and alternate years. *First half:* seed plants—lecture (2 hours), laboratory (2 hours); material fee, $8. *Second half:* lower groups—lecture (1 hour), laboratory and field (4 hours).

115–16 *Cytology** (3–3) — Bowman
Lecture and laboratory. 1962–63 and alternate years: academic year—evening; 1963–64 and alternate years: academic year—day; summer 1962—Botany 115 (3) (as Biology 115). Plant and animal cells and their components, including the chromosomes and their role in heredity, with training in the preparation of materials for study. Material fee, $8 a semester.

125–26 *Plant Taxonomy* (3–3) — Parker
Lecture (1 hour), laboratory and field (4 hours). 1963–64 and alternate years.

127 *Genetics** (3) —
Fall—evening. A lecture course in which the general principles are illustrated with specific examples of inheritance in plants and animals, including man.

131–32 *Mycology* (3–3) — Stevens, Hacskaylo
Lecture (2 hours), laboratory (2 hours). 1962–63 and alternate years: academic year—evening. Material fee, $8 a semester.

133–34 *Plant Pathology* (3–3) — Stevens
Lecture (2 hours), laboratory (2 hours). 1963–64 and alternate years. Material fee, $8 a semester.

135–36 *Plant Physiology* (3–3) — Cathey
Lecture (2 hours), laboratory (2 hours). 1962–63 and alternate years: academic year—evening. Prerequisite: Chemistry 11–12 or permission of the instructor. Material fee, $8 a semester.

140 *Cell Physiology** (3) — Shropshire
Spring—evening. The fundamental physiology of protoplasm. Prerequisite: Chemistry 12.

141–42 *Plant Ecology* (3–3) — Sigafoos
Lecture (1 hour), laboratory and field (4 hours). 1962–63 and alternate years: academic year—evening.

Third Group

201–2 *Seminar: Cytology** (3–3) — Bowman
Academic year—evening.

221–22 *Seminar: Taxonomy* (3–3) — Smith
1962–63 and every fourth year: academic year—as arranged.

231–32 *Seminar: Mycology and Plant Pathology* (3–3) — Stevens
1964–65 and every fourth year.

*An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.

235–36 *Seminar: Plant Physiology* (3–3) Cathey, Hacskaylo
1963–64 and every fourth year.

241–42 *Seminar: Plant Ecology* (3–3) Sigafoos
1965–66 and every fourth year.

295–96 *Research* (arr.) The Staff
Academic year—as arranged; summer 1962—Botany 295 (arr.) Fee to be arranged.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged; summer 1962.

CHEMISTRY*

Professors B. D. Van Evera, S. N. Wrenn, C. R. Naeser *(Chairman)*, R. C. Vincent, W. F. Sager, R. E. Wood, T. P. Perros
Associate Professors J. W. Harkness, W. E. Schmidt, D. G. White
Associate Professorial Lecturer Margaret McPherson
Assistant Professors R. C. Sentz, Margaret Ethier

Registration.—Before completing registration each student must obtain from the representative of the Department an assignment to lecture, recitation, and laboratory sections.

Bachelor of Arts or *Bachelor of Science with a major in Chemistry (Departmental).*—Prerequisite: the Arts and Letters or the Science curriculum, respectively, page 32, including Chemistry 11–12, 21, and 22, Mathematics 29 and 30 or 22 and 23, Physics 11, 12, 13, 16; or 11, 14, 15, and 16.

Required: the general requirements, pages 37–42, including Chemistry 111–12, 113–14, 122, 134 (or 235–36), 151–52, and 135 or 155 (two semester hours), and a grade of "pass" on the chemistry major examination at the end of the senior year. The correlated knowledge upon which the student will be examined includes the following fields: (1) analytical chemistry, (2) inorganic chemistry, (3) organic chemistry, (4) physical chemistry. The work of the junior and senior years must be approved by the Department. Chemistry 153 and the German language are required of all majors who wish to be certified to the American Chemical Society. Others may omit Chemistry 153 and may elect French or Russian. Two foreign languages are recommended for students planning to do graduate work.

Master of Arts or *Master of Science in the field of Chemistry.*—Prerequisite: the degree of Bachelor of Arts or Bachelor of Science, respectively, with a major in Chemistry from this University, or the equivalent.

Required: the general requirements, pages 43–45. All prospective Master's candidates must take qualifying examinations in the fields of analytical, inorganic, organic, and physical chemistry. These examinations will be given during the first week of classes each semester, and are a part of the prerequisites for all advanced courses. At least two of these examinations must be taken at the beginning of the first year of registration and the remaining one(s) must be taken at the beginning of the second year. Deficiencies, if any, shall be eliminated by assignment to appropriate courses in the 100 group for which a limited amount of graduate credit may, upon petition, be assigned for courses normally taken by seniors. The thirty hours of required work must include Chemistry 213 and at least one three semester hour course in the 200 group in two of the three fields of analytical, inorganic, and organic chemistry. In addition, the thirty hours must include at least four semester hours of laboratory work, Chemistry 193 and 299–300. Chemistry 156 is prerequisite to thesis work in the field of organic chemistry. A reading knowledge examination in French or German (German preferred) must be passed before the second half of the work is started.

Doctor of Philosophy (Graduate Council).—See the pamphlet on the Graduate Council.

Bachelor of Science in Engineering with an option in Chemistry (School of Engineering).—See the School of Engineering Catalogue. The Chemistry courses required for this

* The Staff of Instruction here listed is for the academic year 1961–62.

egree are the same as those required for the Bachelor of Science degree with the major e Chemistry as itemized above.

Bachelor of Arts in Education with a teaching field in Chemistry (School of Education). Prerequisite: the Education curriculum, page 34.

Required: the Chemistry option and the professional courses listed in the School of Education Catalogue.

First Group

1-4 *Fundamentals of Physical Science* (4–4) — Schmidt, Ethier

A year course: credit is not given for the first half until the second half is completed. Lecture (3 hours), laboratory (3 hours). Academic year—day. Introduction to methods and achievements of physical science, covering selected topics in chemistry, physics, astronomy, and geology. For nonscience majors. Laboratory fee, $11 a semester.

11-12 *General Chemistry* (4–4) — The Staff

A year course: credit is not given for the first half until the second half is completed. Lecture (2 hours), laboratory (4 hours), recitation (1 hour). *First half:* fall—day and evening; spring—day and evening; summer 1962. *Second half:* fall—day and evening; spring—day and evening; summer 1962. Elementary course in general chemistry. Prerequisite: one year of high school algebra. Laboratory fee, $18 a semester.

13-14 *General Chemistry* (4–4) — White

A year course: credit is not given for the first half until the second half is completed. Lecture (2 hours), laboratory (4 hours), recitation (1 hour). Academic year—day and evening. A terminal course in general chemistry for students in the School of Engineering except those selecting the curriculum leading to the degree of Bachelor of Science in Engineering with a chemistry option. Those students should register for Chemistry 11–12 in their first year. Prerequisite: Physics 11 and Mathematics 21 or 29. Laboratory fee, $18 a semester.

21 *Qualitative Inorganic Analysis* (4) — Vincent

Lecture (2 hours), laboratory (6 hours). Fall—day and evening; spring—day and evening; summer 1962. Theoretical and practical study of methods of separating and identifying the more common cations and anions using semi-micro techniques. Prerequisite: Chemistry 12 or a placement examination which may be waived at the discretion of the instructor. Laboratory fee, $18.

22 *Quantitative Inorganic Analysis I* (4) — Schmidt

Lecture (2 hours), laboratory (6 hours). Spring—day and evening; summer 1962. Theory and practice of quantitative analysis by typical volumetric and gravimetric procedures. Prerequisite: Chemistry 21. Laboratory fee, $18.

Second Group

111-12 *Physical Chemistry Lectures* (3–3) — Wood

A year course: credit is not given for the first half until the second half is completed. Academic year—day and evening. Introduction to physical chemistry. Students registering for Chemistry 111–12 must register concurrently for Chemistry 113–14 unless they already have adequate credit for physical chemistry laboratory. Prerequisite: (1) Chemistry 22 and 152, Mathematics 22 or 30, Physics 13 or 15, or (2) Chemistry 21, Mathematics 22 or 30, Physics 14.

113-14 *Physical Chemistry Laboratory* (2–2) — Wood

A year course: credit is not given for the first half until the second half is completed. Academic year—day (also Saturday). Laboratory to accompany Chemistry 111–12. Students registering for Chemistry 113–14 must register concurrently for Chemistry 111–12 unless they already have credit for lectures in physical chemistry. Laboratory fee, $18 a semester.

122 *Quantitative Inorganic Analysis II* (4) — Schmidt

Lecture (2 hours), laboratory (6 hours). Fall—day and evening. Continuation of Chemistry 22 including theory and practice of separations, organic reagents, electrochemistry, and colorimetry in analysis. Prerequisite: Chemistry 22. Laboratory fee, $18.

134 *Descriptive Inorganic Chemistry* (2) White
Spring—day. An intermediate level course emphasizing the descriptive chemistry of the elements. Prerequisite: Chemistry 22, 151.

135–36 *Inorganic Chemistry: Preparations* (2–2) Perros
First half: fall—day, spring—evening. *Second half:* spring—evening. Application of the technique of inorganic chemistry to the preparation and purification of a list of selected substances. Prerequisite: Chemistry 152 and 134. Laboratory fee, $18 a semester.

151–52 *Organic Chemistry* (4–4) Wrenn, Sager
A year course: credit is not given for the first half until the second half is completed. *First half:* fall—lecture (3 hours), laboratory (3 hours), day and evening; summer 1962. *Second half:* spring—lecture (2 hours), laboratory (6 hours), day and evening; summer 1962. Chemistry of the compounds of carbon. Prerequisite*: Chemistry 21. Laboratory fee: Chemistry 151, $12; Chemistry 152, $20.

153 *Special Laboratory in Organic Chemistry* (1) Wrenn, Sager
Spring—day and evening. A course designed to give the chemistry major additional and broader training in the technique of organic chemistry than in Chemistry 151–52. Prerequisite: Chemistry 151. Prerequisite or concurrent registration: Chemistry 22 and 152. Laboratory fee, $12.

155 *Organic Chemistry: Preparations* (2 or 3) Wrenn
Spring—evening. Synthesis of organic compounds and application of the technique of organic chemistry to the preparation of pure compounds, using larger amounts and greater refinements than in Chemistry 151–52. Prerequisite: Chemistry 22 and 152. Laboratory fee, $10.50 a semester hour.

156 *Qualitative Organic Analysis* (3) Sentz
Fall: lecture (1 hour), laboratory (6 hours)—evening. Identification of pure organic compounds, separation of mixtures, and identification of their components. Required of all students planning thesis work in Organic Chemistry. Prerequisite: Chemistry 22 and 152. Laboratory fee, $18.

191 *History of Chemistry* (2) Perros
1963–64 and alternate years. Historical development of chemistry. Prerequisite: Chemistry 22 and 152.

193 *Chemical Literature* (1) Wrenn
Fall—evening. A general course in chemical literature with reference work and reports. Prerequisite: Chemistry 22 and 152. Prerequisite or concurrent registration: Chemistry 111–12 and 113–14.

THIRD GROUP†

203 *Chemical Kinetics* (2) Wood
1963–64 and alternate years. The rates of chemical reactions and the factors influencing them. Prerequisite: Chemistry 112.

211–12 *Physical Chemistry* (2–1) Wood
Academic year—day and evening. Same course as 111–12. Chemistry 211–12 may be taken for credit only by special permission. Credit will be assigned only upon the satisfactory completion of Chemistry 213.

213 *Chemical Thermodynamics* (3) Wood
Fall—evening. Application of thermodynamics to chemical problems. Thermochemistry, homogeneous and heterogeneous equilibria, statistical calculation of thermo-

* This prerequisite may be waived in the case of the student who has earned a grade of *C* or better in Chemistry 12 within the past two years or by a placement examination.
† The appropriate qualifying examination is prerequisite to all advanced courses.

dynamic properties, electrochemistry. Prerequisite: grade of *A* or *B* in Chemistry 111–12, *Satisfactory* in 211–12, or qualifying grade in physical chemistry qualifying examination.

216 *Statistical Mechanics* (3) Sager
1962–63 and alternate years: fall—evening. An introduction to classical and quantum statistics designed to acquaint the student with the basic principles and application of the method. Prerequisite or concurrent registration: Chemistry 213 or permission of instructor.

217 *Chemical Bonding* (2) Sager
1962–63 and alternate years: spring—evening. A survey of modern developments in the theory of valence with emphasis on application to problems of stability and structure of complex molecules. Prerequisite: Chemistry 213 or permission of instructor.

221–22 *Advanced Analytical Chemistry* (2 or 3–2 or 3) Schmidt
Lecture (2 hours), laboratory (3 hours—optional). *First half:* fall—evening. *Second half:* not offered 1962–63. Theory and application of recent methods of analysis including electrical and optical instrumentation. Prerequisite: Chemistry 22 and 122. The lectures may be taken for 2 credits a semester without laboratory work, either half may be taken first. Laboratory fee, $11 a semester.

231–32 *Special Topics in Inorganic Chemistry* (2–2) White, Perros
Academic year—evening. A series of one-semester courses covering such topics as (1) chemistry of the less familiar elements, (2) organometallic, organosilicon, and carbonyl compounds, and (3) co-ordination chemistry. Prerequisite: Chemistry 235.

241–42 *Radiochemistry* (2–2)
1962–63 and alternate years: academic year—evening. The preparation, properties, and uses of radioactive isotopes, both natural and artificial. Prerequisite: Chemistry 235–36.

235–36 *Inorganic Chemistry* (3–2) Nacser
Academic year—evening. Application of modern chemical theories to inorganic substances and reactions, followed by a detailed study, developed from the periodic table, of the chemistry of the more common elements. Prerequisite: Chemistry 152. Prerequisite or concurrent registration: Chemistry 111–12 and 113–14.

251–52 *Advanced Organic Chemistry* (3–3) Sager
Academic year—evening. Syntheses, reactions, and properties of carbon compounds, fundamental theories of organic chemistry. Prerequisite: Chemistry 152. Prerequisite or concurrent registration: Chemistry 111–12, 113–14.

253 *Advanced Synthetic Organic Chemistry* (3) Wrenn
Spring—evening. Study of reactions employed in the synthesis of organic compounds. Prerequisite: Chemistry 251.

257 *Theoretical Organic Chemistry* (3) Sager
1962–64 and alternate years. Survey of modern theories of organic chemistry with emphasis on reaction mechanisms. Prerequisite: Chemistry 252.

291–92 *Seminars: Recent Developments in Chemistry* (1–1) The Staff
Academic year—day.

295–96 *Research* (arr.) The Staff
Academic year—as arranged; summer 1962. Research on problems approved by the Staff. Open to qualified students with advanced training. Laboratory fee, $7.50 a semester hour.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged; summer 1962. Laboratory fee, $18 a semester.

CLASSICAL LANGUAGES AND LITERATURES

Professor J. F. Latimer *(Chairman)*
Associate R. G. Crawford

Bachelor of Arts with a major in Latin.—Prerequisite: the Arts and Letters curriculum, page 32, including Latin 51–52 and History 39–40.

Required: in addition to the general requirements, pages 37–42, eighteen semester hours in Latin beyond first-group courses, Art 111, Philosophy 111. A reading knowledge of French or German, preferably both, is strongly recommended.

Latin 1–2 and 3–4, or Greek 11–12 and 13–14 satisfies the foreign language requirement, see page 31.

LATIN AND GREEK

First Group

1–2 *First-year Latin* (3–3) The Staff

A year course: credit is not given for the first half until the second half is completed. 1962–63 and alternate years: academic year—day; 1963–64 and alternate years: academic year—evening. Functional presentation of the essentials of the language, with appropriate reading selections; development of English derivatives; introduction to Roman life and literature.

3–4 *Second-year Latin* (3–3) Crawford

A year course: credit is not given for the first half until the second half is completed. 1962–63 and alternate years: academic year—evening; 1963–64 and alternate years: academic year—day. A continuation of the first-year course, but with increased emphasis on Latin readings which illustrate Roman life and literature; continuation of vocabulary building in English. Prerequisite: Latin 1–2 or two years of high school Latin.

11–12 *First-year Greek* (3–3) The Staff

A year course: credit is not given for the first half until the second half is completed. 1962–63 and alternate years: academic year—evening; 1963–64 and alternate years: academic year—day. Essentials of grammar with appropriate reading selections.

13–14 *Second-year Greek* (3–3) The Staff

A year course: credit is not given for the first half until the second half is completed. Not offered 1962–63. 1963–64 and alternate years: academic year—evening; 1964–65 and alternate years: academic year—day. Review of grammar; rapid reading from selected Greek authors.

49–50 *Latin Grammar and Readings* (3–3) The Staff

1963–64 and alternate years: academic year—day. Primarily for graduate students preparing for reading examinations. Undergraduates admitted by permission of the instructor. No academic credit for graduate students. *First half*: essentials of Latin grammar with appropriate reading selections. *Second half*: continuation of grammar with selections from various Latin authors for rapid reading.

51–52 *Introduction to Latin Prose and Poetry* (3–3) The Staff

1962–63 and alternate years: academic year—day; 1963–64 and alternate years: academic year—evening. Selections from Cicero and Caesar, Virgil and Ovid. Prerequisite: Latin 3–4 or three years of high school Latin.

Second Group

101–2 *Roman Comedy* (3–3) The Staff

1963–64 and alternate years: academic year—day. Selected plays from Plautus and Terence. Prerequisite: Latin 51–52 or permission of the Instructor.

111–12 *Roman History and Philosophy* (3–3) The Staff
Not offered 1962–63. Selections from Cicero, Sallust, Lucretius, and Livy. Prerequisite: Latin 51–52 or permission of the Instructor.

121–22 *Roman Lyric Poetry and Satire* (3–3) The Staff
Not offered 1962–63. Selections from Catullus, Horace, Juvenal, and Martial. Prerequisite: Latin 101–2 or permission of the Instructor.

COURSES IN ENGLISH TRANSLATION

First Group

71–72 *Greek and Roman Backgrounds in Literature* (3–3) Latimer
First half: 1962–63 and alternate years: spring—day. *Second half:* 1963–64 and alternate years: fall—day. Selected Greek and Roman masterpieces and their literary influence. This course satisfies the literature requirement, see page 31.

Second Group

109–10 *Greek and Roman Drama* (3–3) The Staff
Not offered 1962–63. 1963–64 and alternate years: academic year—evening; 1964–65 and alternate years: academic year—day. Selected tragedies of Aeschylus, Sophocles, Euripides, and Seneca; selected comedies of Aristophanes and Menander, Plautus and Terence; historical development of classical drama.

CLASSICAL HEBREW

First Group

21–22 *First-year Classical Hebrew* (3–3) Seidman
A year course: credit is not given for the first half until the second half is completed. 1962–63 and alternate years: academic year—day; 1963–64 and alternate years: academic year—evening. Fundamental principles of the language with practice in reading simple narrative prose.

23–24 *Second-year Classical Hebrew* (3–3) Seidman
A year course: credit is not given for the first half until the second half is completed. Not offered 1962–63. 1963–64 and alternate years: academic year—day; 1964–65 and alternate years: academic year—evening. Review of grammar and exegesis of selected passages from the Hebrew text of the Old Testament.

ECONOMICS*

Professors A. E. Burnst, D. S. Watson, T. W. Holland, J. W. Kendrick, W. E. Schmidt
Professorial Lecturers Gerhard Colm, R. A. Young, Hans Heymann, Jr.
Associate Professors J. W. Skinner *(Chairman)*, Henry Solomon *(Research)*
Associate Professorial Lecturer R. L. Sammons

Bachelor of Arts with a major in Economics (Departmental).— Prerequisite: the Arts and Letters curriculum, page 32, including Economics 1–2 and Statistics 51.
Required: the general requirements, pages 37–42, and 51 Economics 101–2 and 121 and seven additional hours in second-group courses to be selected with the approval of the adviser; (2) Economics 198 which may be taken upon the completion of Economics 101–2 and 121; (3) Statistics 111, 112; (4) nine semester hours of other second-group courses selected with the approval of the adviser.

* The Staff of Instruction here listed is for the academic year 1961–62.
† On sabbatical leave spring semester 1961–62.

Bachelor of Arts with a major in Latin American Civilization (Field-of-Study).—See the Department of History.

Master of Arts in the field of Economics.—Prerequisite: the degree of Bachelor of Arts with a major in Economics at this University, or the equivalent.

Required: the general requirements, pages 43–45, including Economics 210, at least nine semester hours in economic theory, and a thesis (Economics 299–300).

Doctor of Philosophy (Graduate Council).—See the pamphlet of the Graduate Council.

Master of Arts in Government with a major in Economic Policy (School of Government, Business, and International Affairs).—See the general catalogue.

First Group

1–2 *Principles of Economics (3–3)** — Skinner and Staff

Lecture (2 hours), recitation (1 hour). *First half:* fall—day and evening; spring—day and evening; summer 1962. *Second half:* fall—evening; spring—day and evening; summer 1962. Survey of the major economic principles, institutions, and problems in contemporary life. Economics 1 is prerequisite to Economics 2.

Second Group

101–2 *Economic Analysis* (3–3) — The Staff

First half: fall—day and evening; spring—evening; summer 1962. *Second half:* spring—day and evening. Analysis of demand, supply, and commodity pricing; theory of national income determination; pricing of productive services; welfare economics. Economics 101 is prerequisite to Economics 102.

104 *History of Economic Thought* (3) — Burns

Spring—day. History of the major schools of economic thought; influence of changing problems on the development of economic theory.

105 *Business Cycles* (3) — Kendrick

Fall—evening. Description and analysis of the facts of economic instability, survey of recent business cycle theory, forecasting, and consideration of counter-cyclical policies.

121 *Money and Banking* (3)

Fall—day and evening; spring—evening; summer 1962. Theory of money, credit, and banking; commercial banking and the Federal Reserve System; other financial institutions; international aspects of money; current financial problems.

123 *Monetary Theory and Policy* (3)

Fall—day. Principal contemporary theories, background of recent monetary policy.

133 *The Economy of the Soviet Union* (3)

Not offered 1962–63. Development and main features of the economic life of the Soviet Union (See History 145–46 and Geography 196).

141 *Unionism and Collective Bargaining* (3) — Holland

Fall—evening. The development and characteristics of American unionism and collective bargaining as economic and social institutions, appraisal of economic and social aspects, public policies and controls.

142 *Labor Economics* (3) — Holland

Spring—evening. Characteristics of the American labor force, operations of labor markets, wage theories and practices, impact of collective bargaining, causes and characteristics of unemployment, public policies and programs.

161–62 *Public Finance and Taxation* (3–3)

1962–63 and alternate years: academic year—evening; 1963–64 and alternate years: academic year—day. General survey of government expenditures; sources and methods of taxation; economic effects of expenditures, taxes, and of government debt policies.

* Economics 1–2 is prerequisite to all other courses in Economics.

165 *Government Control of Economic Activity* (3) Watson
Fall—day. Changing role of government in promoting and regulating economic activity, types and spheres of control.

181–82 *International Economics* (3–3) Schmidt
Academic year—day and evening; summer 1962—Economics 181 (3). Survey of world economics, theories of international trade, analysis of international economic problems and the international organizations.

185–86 *Economic History and Problems of Latin America* (3–3) ———
Academic year—evening. Evolution of the economies of Latin America with particular emphasis on present structures and problems, considered in the regional, country, and sub-region contexts. Economics 185, special attention to Middle America; Economics 186, special attention to South America.

198 *Proseminar in Economics* (3) Skinner
Fall—as arranged; spring—as arranged. Comprehensive survey of economics. Prerequisite: Economics 101–2 and 121.

THIRD GROUP

201–2 *History and Literature of Economic Thought* (3–3) Burns
Academic year—evening. Critical analysis and interpretation of the development and the literature of economic thought, origins, and problems, of the major types of theory, and their relation to present problems and policies.

203–4 *Contemporary Economic Theory* (3–3) Watson
Academic year—evening. The contributions of Marshall, Chamberlin, Robinson, Hicks, and others.

205 *Theory of Employment and Income* (3) Kendrick
Fall—evening. Determinants of the level of employment and income. Keynesian and classical systems contrasted, and recent literature on the subject.

206 *Business Cycle Analysis* (3) Kendrick
Spring—evening. Empirical analysis of American business cycles; evaluation of the methodology and findings of the National Bureau of Economic Research. Statistical tests of theories of the business cycle.

208 *The National Income* (3) Kendrick
Spring—evening. The theory of economic aggregates; measurement and policy aspects of national income.

210 *Seminar in Economics* (3) Skinner
Academic year—evening. Methodology of economics, integration of economic theories, methods of research. Open only to students who have completed fifteen hours of graduate work in economics.

212 *Seminar in Price Theory* (3) Watson
Fall—evening. Advanced topics in the theory of relative prices. Prerequisite: Economics 203–4 or the equivalent.

213 *Economic Thought in the Twentieth Century* (3) Burns
Summer 1962. Continuation of Economics 201–2. The principal trends in economic thought during the present century.

215–16 *Mathematical Economics* (3–3) Solomon
Academic year—evening. Introduction to the uses of mathematics in economic theory.

217–18 *Survey of Economics* (3–3) ———
Academic year—evening. Survey of economic analysis and policy. Not open to graduate students in economics or economic policy.

219 *Managerial Economics* (3) Watson
Summer 1962. Analysis of price, production, and inventory policies of business firms.

221–22 *Monetary Theory* (3–3)
Academic year—evening. Contemporary monetary theories.

223–24 *Monetary Policy and Central Banking* (3–3)
Academic year—evening. The money system in its relation to national income: monetary policies of the Federal Reserve and other central banking systems.

231–32 *Quantitative Economics* (3–3) Solomon
Academic year—evening. Selected topics in quantitative economics.

241 *Unionism, Collective Bargaining, and Labor Economics* (3) Holland
Fall—evening. An accelerated introductory course in labor economics primarily for graduate students in Personnel Administration.

244 *Problems in Unionism, Collective Bargaining, and Labor Economics* (3) Holland
Spring—evening. Concentrated study of selected economic, social, and legal aspects of labor relations and labor economics.

246 *Foreign Labor Movements* (3) Holland
Spring—evening. Labor in the economic, social, and political structures of selected foreign countries. Contrasts and comparisons with the United States.

251 *Theories of Economic Development* (3) Schmidt
Fall—evening; summer 1962. Growth and change in economic activity, capital accumulation, innovations in technology and business organization.

253 *Productivity Analysis* (3) Kendrick
Fall—evening. Concepts and measures of productivity; relations to economic growth and to structural changes in the American economy.

261–62 *Public Finance and Fiscal Policy* (3–3) Colm
Academic year—evening. Special problems in contemporary public finance and fiscal policy.

263–64 *Theory of Public Finance* (3–3)
Academic year—evening. Criteria for the allocation of government expenditures, principles of taxation, fiscal policy for stable growth.

265–66 *Theory of Economic Policy* (3–3) Watson
Academic year—evening. The nature, forms, methods, and objectives of economic policy; the relation of economic theory to economic policy.

267 *Economic Organization of the Communist Orbit* (3) Heymann
Fall—evening. Development of the Soviet-type economy; organization under the Soviets; policies and problems: monetary, fiscal, production, allocative, foreign trade, economic growth. (See also History 145–46, 247, and Geography 196.)

281–82 *International Economics* (3–3) Schmidt
Academic year—evening. The modern theories of international economics, the variables determining the balance of payments, techniques to obtain balance of payments equilibrium.

284 *United States Foreign Economic Policy* (3) Schmidt
Not offered 1962-63. Analysis of foreign aid program; international, commercial, and monetary policy of the United States; United States and international economic organization.

285–86 *Economic Development of Latin America* (3–3) Sammons
Academic year—evening. Current policies and programs, capital formation, public and private; foreign loans and investment; social and technological preconditions of investment.

287–88 *Latin America: Trade and Commodity Policy* (3–3)
Not offered 1962–63. Tariffs and exchange control systems, bilateral and general commercial agreements, terms of trade.

290 *Seminar in International Economics* (3) Schmidt
Spring—evening. Advanced topics in international economics. Prerequisite: Economics 281–82 or the equivalent.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged; summer 1962.

ENGLISH*

Professors E. S. Shepard, F. S. Tupper, C. D. Linton, C. W. Cole *(Chairman)*, R. H. Moore, J. H. Coberly, P. H. Highfill, Jr.
Associate Professors W. L. Turner, Muriel McClanahan, J. G. Allee, Jr., J. P. Reesing, Jr., R. H. Walker, Jr.
Assistant Professors R. E. Gajdusek, Elizabeth Wright, Nancy Tischler, J. G. Sweeney, M. E. Lyon
Instructors Jane Bauman, R. C. Rutledge, E. N. Harbert

Bachelor of Arts with a major in American Thought and Civilization (Field-of-Study).—Prerequisite: the Arts and Letters curriculum, page 32.
Required: the general requirements, pages 37–42, and the grade "pass" on the American Thought and Civilization major examination at the end of the senior year. The coordinated field of knowledge upon which the student will be examined is summarized under four general headings: (1) European cultural history—the Renaissance and modern social and intellectual cultures as a background to contemporary civilization with particular attention to English literature and history from the 16th through the 19th centuries; (2) American history—the political, economic, social, and religious thought and experience of the American people; (3) American philosophy and fine arts—a survey of periods and movements with a knowledge of outstanding individuals; (4) American literature—a knowledge of major writers, together with a study of poetry, fiction, and drama. The Department of English provides a proseminar (English 179–80) intended to assist the student in preparing himself for the major examination. The major adviser will give to each student at registration a check list of available courses grouped as prerequisite, necessary, or desirable for the completion of the major study program.

Bachelor of Arts with a major in English Literature (Field-of-Study).—Prerequisite: the Arts and Letters curriculum, page 32. It is recommended that prospective majors elect English 91–92 from among the listed offerings.
Required: the general requirements, pages 37–42, and the passing of the English Literature major examination at the end of the senior year. The field of coordinated knowledge upon which the student will be examined at the end of his senior year is summarized under the following general headings: (1) the history of English literature from the Anglo-Saxon period; (2) the chief English writers (a certain familiarity with each man and his main works and a detailed knowledge of Shakespeare); (3) English social and cultural history as it bears upon or is reflected in the literature; (4) European intellectual backgrounds and movements which have affected English literature. The proportion of work taken in each of these areas should be worked out by the student in consultation with one of the English Literature advisers. The Department of English provides a proseminar (English 199–200) to assist the student in preparing himself for the major examination. A detailed description of the major is available in the Office of the Dean of Columbian College.

Master of Arts in the field of American Literary and Cultural History.—Prerequisite: the equivalent of an undergraduate major in this University in (1) History (with American history as a major part), (2) American Thought and Civilization, or (3) English literature (with introductory courses in American literature and American history). The student who has not taken any of the above majors at this University must take a candidacy examination.

* The Staff of Instruction here listed is for the academic year 1961–62.

Required: in addition to the general requirements, pages 43–45, the following specific requirements must be met: twelve of the required semester hours must be of seminar study, six in American history and six in American literature; twelve of the required semester hours must be of second and third group courses in the fields of American history, literature, philosophy, education, and art recommended by the adviser; a thesis (six semester hours) in any of the foregoing fields or in some combination of them. Because of the various undergraduate majors which will be accepted for admission to this program, a basic reading list is assigned to all students, to assist in preparing them for the final Master's examination.

Master of Arts in the field of English and American Literature.—Prerequisite: an undergraduate major in English Literature or American Thought and Civilization at this University; or twenty-four semester hours in English and/or American literature above the sophomore level. The student who has not taken either of the above majors at this University must take a candidacy examination. The student offering split preparation (English and American literature) will be examined in English and American literature.

Required: in addition to the general requirements, pages 43–45, the following specific requirements must be met: (1) a schedule of courses amounting to twenty-four semester hours, planned in consultation with the adviser; on the basis of the student's undergraduate preparation, to include a comprehensive survey of American literature and of English literature from 1600; (2) a Master's thesis (six semester hours) written upon an approved topic under the direction of the instructor in whose field the major portion of the material falls; (3) a final written examination on American literature and on English literature from 1600.

Master of Arts in the field of English Literature.—Prerequisite: an undergraduate major in English Literature at this University, or twenty-four semester hours in English literature above the sophomore level. The student who has not passed the major examination in English at this University must take a candidacy examination which, in its scope and difficulty, is comparable to the major examination in English.

Required: in addition to the general requirements, pages 43–45, the following specific requirements must be met: (1) a schedule of courses amounting to twenty-four semester hours, planned in consultation with the adviser; (2) a Master's thesis (six semester hours) written upon an approved topic under the direction of the instructor in whose field the material falls; and (3) a final written examination.

Doctor of Philosophy (Graduate Council).—See the pamphlet on the Graduate Council.

Bachelor of Arts in Education with a teaching field in English (School of Education).—Prerequisite: the Education curriculum, page 34.

Required: the English option and the professional courses listed in the School of Education Catalogue.

ENGLISH COMPOSITION*

First Group

A *English for Foreign Students* (3) Allee and Staff

Fall—day and evening; spring—day and evening; summer 1962. A course in reading and writing designed to assist the foreign student in overcoming deficiencies in the use of English. Special attention is given to spelling, syntax, grammar, idiom, and vocabulary.

B *English for Foreign Students* (3) Allee and Staff

Fall—evening; spring—day and evening. For second-semester foreign students not yet ready for English 1. Writing of expository paragraphs and themes; outlining; reading for comprehension, vocabulary, and style.

---

* Before students are registered in English 1, they are tested in the minimum essentials of vocabulary, spelling, grammar, standard usage, and writing skill. Those students who show marked superiority may, upon passing further tests, be exempted from one or both halves of the English Composition course; those who are inadequately prepared are assigned to English 1X.

All students enrolled in curricula leading to Bachelor's degrees in Columbian College (who are required to take one year of English composition and one year of literature in English, Classical Languages, French, German, Slavic Languages, or Spanish) will follow the sequence of English 1 or 1X, both semesters of one of the introductory literature courses, and English 4.

English 1 or 1X is prerequisite to all other courses in English. English 2 is the second half of the six-hour composition course requirement of students *not* required to follow the Columbian College of Arts and Sciences sequence.

1 *English Composition** (3) Moore and Staff
Fall—day and evening; spring—day and evening; summer 1962. Review of grammar, exercises in composition, readings.

1X *English Composition** (3) Moore and Staff
Fall—day and evening; spring—day and evening; summer 1962. An intensive course in English grammar and composition to which are assigned students whose placement tests show them inadequately prepared for the regular work of English 1. The course begins with detailed instruction, drill, and exercises in the basic structure of the English language and in the writing of paragraphs; it continues with the content of English 1. English 1X meets five hours a week and carries 3 semester hours of credit. The tuition fee is $115 (the regular fee of $30 a semester hour, plus an additional fee of $25).

2 *English Composition** (3) Moore and Staff
Fall—day and evening; spring—day and evening; summer 1962. For second-semester freshmen not following the Columbian College of Arts and Sciences sequence. Readings and practice in expository and argumentative techniques and in research procedure. Prerequisite: English 1 or 1X.

4 *English Composition** (3) Moore and Staff
Fall—day and evening; spring—day and evening; summer 1962. The second half of the six-hour English Composition course required of students in Columbian College. A course in critical analysis and practice in expository and argumentative techniques and in research procedure. Prerequisite: English 1 or 1X and both semesters of one of the introductory literature courses.

11 *The Writing of Reports* (3) Turner and Staff
Fall—day and evening; spring—day and evening; summer 1962. Theory and practice in the writing of technical reports. Prerequisite: English 1 or 1X, and 2 or 4.

Second Group

109 *Expository Writing* (3) McClanahan and Staff
Fall—evening. A study of types of expository writing with weekly exercises. Prerequisite: English 1 or 1X, and 2 or 4.

113 *Narrative Writing* (3) Gajdusek
Fall—evening. Study of the techniques of narrative writing and class criticism of student writing. Prerequisite: English 1 or 1X, and 2 or 4.

114 *The Writing of Fiction—the Short Story* (3) Gajdusek
Spring—evening. Prerequisite: English 113; consent of instructor.

116 *Advanced Exposition* (3) Moore
Not offered 1962-63. Theory and practice in the writing of expository articles and essays. Prerequisite: English 109; consent of instructor.

117-18 *The Writing of Fiction—the Novel* (3-3) Gajdusek
Academic year—evening. Writing a novel. Prerequisite: English 114; consent of instructor.

ENGLISH LITERATURE

First Group

51-52 *Introduction to English Literature*† (3-3) Tupper and Staff
Academic year—day and evening; summer 1962. A historical survey. Prerequisite: English 1 or 1X.

91-92 *Introduction to European Literature*† (3-3) Shepard and Staff
Academic year—day and evening. Consideration of various types. Prerequisite: English 1 or 1X.

* See footnote on page 74.
† See footnote (*) on page 76.

Second Group*

121–22 *English Literature from the Beginnings to 1500* (3–3) — Allee
First half: not offered 1962–63. *Second half:* spring—evening; summer 1962. *First half:* English literature prior to Chaucer. *Second half:* Chaucer.

125 *Introduction to English Linguistics* (3) — Allee
Fall—evening. The development of the English language in a historical treatment of English grammar.

129–30 *Elizabethan Nondramatic Literature* (3–3) — Tupper
Academic year—day. Nondramatic literature from 1485 to 1601.

135–36 *Shakespeare* (3–3) — Tupper
Academic year—day.

139–40 *The Seventeenth Century* (3–3) — Linton, Reesing
Academic year—evening; summer 1962—English 139 (3). *First half:* poetry and prose from 1603 to 1660. *Second half:* Milton.

141–42 *The Neoclassical Movement* (3–3) — Highfill
Academic year—day. Poetry and prose from 1660 through the mid-18th century.

151–52 *The Romantic Movement* (3–3) — Reesing
Not offered 1962–63. From the mid-18th century through Shelley and Keats.

161–62 *Victorian Literature* (3–3) — Shepard
Academic year—day. Poetry and prose from 1830 to 1900.

165–66 *The Twentieth Century* (3–3) — Linton
Academic year—day; summer 1962—English 166 (3). British poetry, prose, and drama since 1900.

181–82 *The English Novel* (3–3) — Reesing
Academic year—day. Major English novelists from the 18th century to the present day.

183–84 *The English Drama* (3–3) — Highfill
Academic year—evening. *First half:* concerned principally with the drama of Shakespeare's contemporaries. *Second half:* a historical survey from 1660 to the present day.

192 *Medieval Legend and Saga* (3) — Allee
Not offered 1962–63. Celtic and Norse.

199–200 *Proseminar: Readings for the English Literature Major* (3–3) — Tupper, Highfill
Academic year—day and evening. Conferences and group discussions.

Third Group

222 *The Age of Chaucer* (3) — Allee
Not offered 1962–63.

223–24 *Old English* (3–3) — Allee
Academic year—evening. English language and literature before 1100. *First half:* Old English grammar and readings. *Second half:* Beowulf.

225 *Applied Linguistics* (3)
Not offered 1962–63. Survey of the English language since 1850; introduction to analytical methods of structural linguistics and their application to modern American and British writing and to secondary school teaching of English.

* All students enrolled in curricula leading to Bachelor's degrees in Columbian College (who are required to take one year of English composition and one year of literature in English, Classical languages, French, German, Slavic Languages, or Spanish) will follow the sequence of English 1 or 15, both semesters of one of the introductory literature courses, and English 4.
English 51–52, 71–72, 91–92, Classical Languages 71–2, French 51–52, German 51–52, Slavic Languages 91–92, or Spanish 51–52 is prerequisite to all second-group courses except English 125.

235–36 *Studies in Shakespeare and His Contemporaries* (3–3) Tupper
Summer 1962—English 236 (3). Prerequisite: English 135–36.

239–40 *Studies in Seventeenth Century Literature* (3–3) Reesing
Not offered 1962–63. Open to qualified undergraduates. *First half:* chief figures exclusive of Milton. *Second half:* Milton.

241–42 *Studies in Neoclassical Literature* (3–3) Highfill
Not offered 1962–63. Prerequisite: English 141–42.

251–52 *Studies in the Romantic Movement* (3–3) Reesing
Not offered 1962–63. Prerequisite: English 151–52.

261–62 *Studies in Victorian Literature* (3–3) Shepard
Not offered 1962–63. Prerequisite: English 161–62.

265–66 *Studies in Twentieth Century Literature* (3–3) Linton
Not offered 1962–63. Eliot and his contemporaries.

295–96 *Studies in the History of English Literary Criticism* (3–3) Shepard
Academic year—evening. Open to undergraduates with the approval of the instructor.

299–300 *Thesis* (3–3) The Staff

AMERICAN LITERATURE

First Group

71–72 *Introduction to American Literature** (3–3) Cole and Staff
Academic year—day and evening; summer 1962. A historical survey. *First half:* from the beginnings to the Civil War. *Second half:* from the Civil War to the present. Prerequisite: English 1 or 1X.

Second Group*

170 *The American Short Story* (3) Coberly
Fall—day. The historical development of the short story in America.

171–72 *Studies in American Literature* (3–3) Lyon
1962–63 and alternate years: academic year—day; 1963–64 and alternate years: academic year—evening. Major factors in the national cultural tradition as shown by outstanding writers. Prerequisite: English 51–52 or 71–72.

173–74 *Major American Poets* (3–3) Coberly
1962–63 and alternate years: academic year—day; 1963–64 and alternate years: academic year—evening; summer 1962—English 174 (3). Advanced critical study of significant writers and movements. *First half:* from beginnings through 19th century. *Second half:* the 20th century.

175–76 *American Drama* (3–3) Cole
1962–63 and alternate years: academic year—evening; 1963–64 and alternate years: academic year—day; summer 1962—English 176 (3). Historical and critical study of significant plays and forms. *First half:* from beginnings through 19th century. *Second half:* the 20th century.

177–78 *American Fiction* (3–3) Coberly
1962–63 and alternate years: academic year—evening; 1963–64 and alternate years: academic year—day. Historical and critical study of significant novels and short stories. *First half:* from beginnings through 19th century. *Second half:* the 20th century.

* All students enrolled in curricula leading to Bachelor's degrees in Columbian College who are required to take one year of English composition and one year of literature in English, Classical Languages, French, German, Slavic Languages, or Spanish will follow the sequence of English 1 or 1X, both semesters of one of the introductory literature courses, and English 4:
English 51–52, 71–72, 91–92, Classical Languages 71–72, French 51–52, German 51–52, Slavic Languages 91–92, or Spanish 51–52 is prerequisite to all second-group courses except English 171–72.

179–80 *Proseminar: Readings for American Thought and Civilization Majors* (3–3) — The Staff
Academic year—day and evening. Conferences and group discussions.

THIRD GROUP

271–72 *Seminar in American Thought* (3–3) — Walker
Not offered 1962–63. Intensive consideration of specific periods and themes, primarily literary, in the history of American civilization. Prerequisite: English 171–72 or the equivalent.

277–78 *Studies in American Fiction* (3–3) — Coberly
First half: fall—evening. *Second half:* not offered 1962–63. Prerequisite: English 177–78 or the equivalent. Open to the undergraduate with the approval of the instructor.

279–80 *Thesis* (3–3) — The Staff

GEOGRAPHY*

Professor R. D. Campbell *(Chairman)*
Associate Professor H. W. Westermann†
Associate Professorial Lecturer J. P. Pickard
Assistant Professor J. T. Davis
Associate Joan Barry

Bachelor of Arts with a major in Geography (Departmental).—Prerequisite: the Arts and Letters curriculum, page 32, including Geography 51 and 52. It is strongly recommended that this curriculum include Biology 1–2‡; Economics 1–2; Geology 1–2; and Sociology and Anthropology 1–2.

Required: in addition to the general requirements, pages 37–42, twenty-four semester hours of Geography beyond first-group courses, including Geography 103–4, 115–16; fifteen semester hours in one or more of the following departments: Botany, Economics, Geology, History, Political Science, Psychology, Sociology and Anthropology; and six semester hours of Mathematics or Statistics.

Master of Arts in the field of Geography.—Prerequisite: the degree of Bachelor of Arts with a major in Geography from this University, or the equivalent.

Required: the general requirements, page 43–45, including Geography 201–2, 205–6, and 299–300.

FIRST GROUP

51 *Introduction to Geography* (3) — The Staff
Fall—day; spring—evening; summer 1962. A study of place attributes and characteristics, patterns and associations of physical and cultural earth features.

* The Staff of Instruction here listed is for the academic year 1961–62.
† On sabbatical leave fall semester 1961–62.
‡ An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.

52 *World Regions* (3) The Staff
Fall—evening; spring—day; summer 1962. The analysis of world regional divisions, description and interpretation of region complexes, evaluation of regional differences as they affect the distribution and activities of man.

SECOND GROUP

103–4 *Cartography* (3–3) The Staff
A year course: credit is not given for the first half until the second half is completed. Academic year—Saturday morning. Principles of cartographic drafting; elementary map projections; map and graph planning design and construction; uses and interpretation of maps. Prerequisite: Geography 51 and 52. Laboratory fee, $11 a semester.

115–16 *Physical Geography* (3–3) Davis
Academic year: lecture (2 hours), laboratory and field trip (2 hours)—day. Introduction to the earth sciences: form of the earth, grids and time, weather and climate, geomorphic processes and land-forms, soils, vegetation; weather forecasting, map reading.

124 *Land Capabilities* (3)
1963–64 and alternate years. Evaluation of land capabilities based on analysis of locational, physical, economic, and social land characteristics. Principles of site analysis and best use. Systems of measurement of area potential.

125 *Transportation Complexes* (3)
1963–64 and alternate years. A study of transportation networks and systems by which people, things, and ideas are given varying degrees of place utility. An analysis of the role of transportation in urban, national, and international relationships.

126 *World Economies* (3) Davis
1962–63 and alternate years: fall—day. Description and comparison of differing regional economies—pastoral, agricultural, industrial; patterns of world distribution.

127 *World Population and Settlement* (3) Westermann
1962–63 and alternate years: spring—day. Population composition, structures, and distribution; characteristic world settlement patterns in terms of population organization. Assessment of factors contributing to population pressures, explosions and migrations, urban and rural settlement patterns and trends.

133 *Regional Industrial Structures* (3) Westermann
1962–63 and alternate years: fall—day. The nature of the industrial complex, types and distribution of industry, principles of industrial and economic development planning.

134 *Location of Industry* (3) Westermann
1962–63 and alternate years: spring—day. Structure and development of the major world industries, industrial location requirements, principles of industrial equilibrium.

137 *Industrial Planning for Underdeveloped Areas* (3)
Summer 1962. The appraisal of industrial development potentials in non-industrial areas; the preparation and implementation of industrial development plans; peculiar problems of industrial development in traditional societies; the role of industrialized countries, with particular emphasis on United States responsibilities.

141–42 *Urban Settlement* (3–3)
1963–64 and alternate years. Location, functions, and forms of cities; urban-rural relationships; the urban hierarchy; urban problems and the history of their development; the city of the future.

145 *World Cultural Geography* (3) Campbell
Fall—day. A study of differences in national character structures; modal behavior patterns and personality traits typical of various cultures; difficulties these differences present in interpersonal relations and intercultural communications.

146 *World Political Geography* (3) Campbell
Spring—day. Types and distributions of political systems, the major political units and associations of the world, factors which affect relative political power, areas of conflict and arbitration.

173–74 *City Planning: Theory and Practice* (3–3)
Academic year—evening. Theories of city functions and structures; evaluation of urban activities, value systems; analysis of contemporary urban problems; optimum designs for future cities; theory and techniques of planning; action techniques; implementation of plans.

181 *United States** (3)
Not offered 1962–63.

183 *Western Europe** (3) Westermann
1962–63 and alternate years: fall—day.

184 *The Mediterranean** (3) Westermann
1962–63 and alternate years: spring—day.

185 *Africa** (3)
Offered 1963–64.

186 *The Middle East** (3)
Offered 1963–64.

191 *Latin America** (3)
1963–64 and alternate years. Davis

194 *Communist China** (3)
Spring—day.

195 *Eastern and Southeastern Asia** (3)
Not offered 1962–63.

196 *The Soviet Union** (3) Westermann
Fall—day.

197 *The Pacific** (3)
Not offered 1962–63.

198 *Australia** (3)
Not offered 1962–63.

THIRD GROUP†

201–2 *Seminar: History and Philosophy of Geography* (3–3) Campbell, Westermann
A year course: credit is not given for the first half until the second half is completed. 1962–63 and alternate years; academic year—evening. A study of the development of geographic thought, from Herodotus to the present; a critical appraisal of the great works of the world's most famous geographers; an attempt to develop a useful, contemporary philosophy of geography.

205–6 *Area Data Collection and Analysis* (3–3)
A year course: credit is not given for the first half until the second half is completed. Lecture (1 hour), laboratory and field (3 hours). 1963–64 and alternate years. Sources of regional information; methods and systems of data collection; quantitative and qualitative methods of analysis; systems of synthesis.

* Regional survey. No prerequisites. For students particularly interested in the study of specific regions, regional courses in the departments of Economics, History, and Political Science are strongly recommended, for example: Economics 185–86, *Economic History and Problems of Latin America*; History 164, *South America since Independence*; and Political Science 177, *Recent Trends in Latin American Politics and Government*.

† Senior major or graduate status is required in all third-group courses.

211–12 *Reading Course in Economic Geography* (3–3)
Not offered 1962–63. The development of economic geography as a systematic approach to regional analysis, the literature of economic geography, research methods.

233–34 *Seminar: Regional and Urban Planning* (3–3) Westermann, Campbell
A year course: credit is not given for the first half until the second half is completed. Academic year—evening. Analysis of the planning function, major problems confronting the planner, contemporary status of planning—its areas of success and failure.

241–42 *Seminar: Place and Culture* (3–3)
1963–64 and alternate years. A study of the culture traits which characterize various ethnic groups and differentiate people-place associations.

251–52 *Seminar: World Problem Areas* (3–3)
Summer 1962—Geography 251 (3). A study of those parts of the world which have become matters of international concern, whether because of their political or social instability, unsound economic development, or aggressive tendencies. An evaluation of the complex of factors which have created the "problems".

295–96 *Research* (3–3) The Staff
Academic year—as arranged.

299–300 *Thesis* (3–3) The Staff

COURSES OFFERED IN SPECIAL PROGRAMS

In addition to the regular courses announced above, the University offers the following courses for students undertaking work toward the degree of Bachelor of Science in Cartography, which is administered by the College of General Studies. For information concerning the degree in Cartography, see the brochure on the subject.

Cartography Program

Geography

51 *Introduction to Geography* (3)
52 *World Regions* (3)
115–16 *Physical Geography* (3–3)
124 *Land Capabilities* (3)
125 *Transportation Complexes* (3)

Cartography

1 *Map Interpretation* (3)
11 *Cartographic Drafting and Descriptive Geometry* (3)
12 *Topographic Surveying* (3)
13 *Higher Surveying* (3)
17–18 *Elementary Photogrammetry* (3–3)
110 *Map Projections* (2)
111 *Map Reproduction* (3)
155 *Elementary Geodesy* (3)
156 *Geodetic Astronomy* (3)
160 *Theory of Errors and Geodetic Adjustments* (3)
191–92 *Map and Chart Construction* (3–3)

Oceanography

101–2 *Introductory Oceanography* (3–3)

GEOLOGY*

Professor Geza Teleki *(Chairman)*
Professorial Lecturers C. L. Christ, Michael Fleischer, H. T. Evans, Jr.
Associate Professor G. V. Carroll
Associate Professorial Lecturers Nicholas Hotton, I. G. Sohn
Lecturer Irving Friedman

Bachelor of Arts or *Bachelor of Science with major in Geology (Departmental).*—Prerequisite: the Arts and Letters or the Science curriculum, respectively, page 32. The following first-group courses must be included: Geology 1–2, 12; Chemistry 11–12; Physics 11, 12; Mathematics 6, 21, or 12.

Required: in addition to the general requirements, pages 37–42, twenty-seven semester hours in Geology beyond first-group courses for the Bachelor of Arts degree, thirty-three for the Bachelor of Science degree.

Master of Arts or *Master of Science in the field of Geology.*—Prerequisite: the degree of Bachelor of Arts or Bachelor of Science, respctively, with a major in Geology from this University, or the equivalent.

Required: the general requirements, pages 43–45. For graduate work, the foreign language studied should be French, German, or Russian.

First Group

1–2 *Introductory Geology* (3–3) The Staff
Academic year: lecture (2 hours), laboratory and field trip (2 hours)—day. A survey course covering the principles of geology. *First half:* physical geology—materials of the earth's crust, geologic processes. *Second half:* historical geology—geological periods, evolution of life on earth. Laboratory fee, $6 a semester.

12 *Minerals and Rocks* (3) Carroll
Spring: lecture (2 hours), laboratory (3 hours)—day. Introduction to the common minerals and rocks and their environments; identification of minerals by determination of their physical properties and by the use of elementary chemical tests. Prerequisite: Geology 1. Laboratory fee, $8.

Second Group

101 *History of Geological Sciences* (2) Teleki
Not offered 1962–63. Lectures on the development of geological thought and the history of geological and related sciences.

107 *Dynamic Geology* (3) Teleki
Fall: lecture (3 hours), recitation (1 hour)—day. The interrelation of endogene and exogene forces in the processes of sedimentation and vulcanism; geochemical and geophysical aspects of epicontinental and geosynclinal areas. Prerequisite: Geology 1–2, 12; Physics 11, 12.

111–12 *Mineralogy* (3–3) Carroll
A year course: credit is not given for the first half until the second half has been completed (except for chemistry majors who may receive credit for the first half only). Academic year: lecture (2 hours), laboratory (3 hours)—evening. *First half:* morphological crystallography and elementary aspects of optical crystallography with their application to the identification of minerals. *Second half:* optical mineralogy; identification of nonopaque minerals by use of the polarizing microscope. Prerequisite: Geology 1 and 12; Physics 11, 12, or permission of the instructor. Laboratory fee, $10 a semester.

115 *Petrography* (4) Carroll
Fall: lecture (2 hours), laboratory (4 hours)—evening. Megascopic and microscopic identification and classification of common rocks. Prerequisite: Geology 111–12. Laboratory fee, $10.

* The Staff of Instruction here listed is for the academic year 1961–62.

117 *Introduction to Petrology* (3) — Carroll

1963–64 and alternate years: lecture (2 hours), laboratory (3 hours). Lectures on petrogenic theory; laboratory work on the diagnosis of rock genesis by polarizing microscopic determination of mineralogical and textural characteristics. Prerequisite: Geology 115. Laboratory fee, $10.

122 *Structural Geology* (3) — Carroll

Spring: lecture (2 hours), laboratory and field trips as arranged—day. Genetic interpretation of geologic formations on the basis of their structures, with emphasis on applications to geological field work. Prerequisite: Geology 1–2; Physics 11, 12.

123 *Advanced Structural Geology* (3) — The Staff

1963–64 and alternate years: lecture (1 hour), laboratory (4 hours). Introduction to specialized techniques of structural analysis, and to tectonic theory. Prerequisite: Geology 122. Recommended: Mechanical Engineering 10.

128 *Geomorphology* (3) — Teleki

Lecture (2 hours), laboratory and field trips as arranged. 1962–63 and alternate years: spring—day. Nature and evolution of earth forms, interpretation of maps and aerial photographs. Prerequisite: Geology 107 or Geography 115–16.

132 *Economic Geology* (3)

1963–64 and alternate years: lecture (2 hours), laboratory and field trips as arranged. Genesis, distribution, mode of occurrence, and utilization of mineral raw materials. Mining industry in relation to economic life. Prerequisite: Geology 1, 12, 107. Laboratory fee, $10.

151–52 *Invertebrate Paleontology* (3–3) — Teleki

Academic year: lecture (2 hours), laboratory (3 hours), field trips as arranged—day. Taxonomy of fossil invertebrates, development of phyla, paleoecology of invertebrate organisms. Prerequisite: Geology 1–2, 12. Laboratory fee, $8 a semester.

154 *Vertebrate Paleontology* (3) — Hotton

Lecture (2 hours), laboratory or field as arranged. 1962–63 and alternate years: spring—evening. General features of vertebrate morphology and evolution as illustrated by the fossil record; problems of paleoecology and adaptation, where appropriate.

157 *Methods in Paleontology* (3) — Sohn

1963–64 and alternate years. An introduction to the principles and techniques of paleontological research, including the rules of zoological nomenclature. Prerequisite: Geology 151–52.

166 *Stratigraphy* (4) — Teleki

1963–64 and alternate years. Sedimentation, facies, evaluation of stratigraphic boundaries, principles of correlation, applied stratigraphic geology. Prerequisite: Geology 107, 115, 122.

173 *Regional Geology* (3) — Carroll and Staff

1962–63 and alternate years: fall—day. Lecture and map work on the regional distribution of geological formations and structures. This course may be reelected for credit. Prerequisite: Geology 107, 122; Geography 51, or permission of the instructor.

Third Group

205–6 *Seminar* (3–3) — The Staff

Academic year—as arranged. Special topics. Does not repeat itself and may be elected in successive years.

211 *X-ray Crystallography* (3) — Christ

1962–63 and alternate years: fall—evening. The structure of crystals as determined by the X-ray method.

212 *Crystal Chemistry** (3) Evans
1962–63 and alternate years: spring—evening. Chemistry of the solid state. Bonding and coordination and the role of crystalline structure in chemistry and mineralogy.

241 *Geochemistry** (3) Fleischer
1963–64 and alternate years. Principles and theories on the abundance, relationships, and the distribution in the various rock and mineral species.

244 *Isotope Geology** (3) Friedman
1963–64 and alternate years. Investigation of geological phenomena by means of stable and unstable isotopes of elements and of changes in their abundance.

251–52 *Micropaleontology* (4–4) Sohn
Lecture (2 hours), laboratory as arranged. Not offered 1962–63. Identification with the binocular microscope of Ostracoda and other fossil micro-organisms. Micropaleontological techniques, paleontological research methods, taxonomy, and paleoecology. Age determination and correlation of stratigraphic units. Laboratory fee, $12 a semester.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged.

GERMANIC LANGUAGES AND LITERATURES†

Professors W. K. Legner *(Chairman)*, Gretchen Rogers
Associate Professor J. C. King
Assistant Professor H. D. Osterle
Associate Anne Cordero

Bachelor of Arts with a major in Germanic Languages and Literatures (Departmental)—Prerequisite: the Arts and Letters curriculum, page 32.

Required in addition to the general requirements, pages 37–42, German 51–52 plus eighteen semester hours in German courses, above the first group; reasonable proficiency in speaking and writing German; History 39–40 or the equivalent; six semester hours in Philosophy selected with the approval of the adviser. Majors in German are strongly advised to study French.

Master of Arts in Germanic Languages and Literatures.—Prerequisite: a Bachelor of Arts degree with a major in Germanic Languages and Literatures from this University, or the equivalent.

Required: the general requirements, pages 43–45, including a reading knowledge of French and a thesis in the field of German literature or linguistics.

Doctor of Philosophy (Graduate Council).—See the pamphlet on the Graduate Council.

Bachelor of Arts in Education with a teaching field in German (School of Education).—Prerequisite: the Education curriculum, page 34.

Required: the German option and the professional courses listed in the School of Education Catalogue.

First Group

1–2 *First-year German* (3–3) The Staff
A year course: credit is not given for the first half until the second half is completed. *First half:* fall—day and evening; spring—day; summer 1962. *Second half:* fall—day; spring—day and evening; summer 1962. The essentials of German grammar; translation of easy prose. Aural training, oral practice in electronic language workshop. Workshop fee, $6 a semester.

* Prerequisite: an adequate background in physics and chemistry, to be determined in conference with the instructor.

† The Staff of Instruction here listed is for the academic year 1961–62.

3–4 *Second-year German* (3–3) — The Staff
A year course; credit is not given for the first half until the second half is completed. *First half:* fall—day and evening; spring—day; summer 1962. *Second half:* fall—day; spring—day and evening; summer 1962. Selections from modern German prose; continuation and review of grammar. Aural training, oral practice in electronic language workshop. Workshop fee, $6 a semester. Prerequisite: German 1–2 or two years of high school German.

9–10 *German Conversation and Composition* (3–3) — Osterle
Academic year—day. Aural training, oral practice in electronic language workshop. Workshop fee, $6 a semester.

47 *Beginning German for Reading Examination Candidates* (0) — The Staff
Fall—evening; spring—evening; summer 1962. Specifically for graduate students with little or no German, who are preparing for reading examinations. No academic credit. Tuition fee, $90.

49 *German Readings for Nonmajor Students* (3) — The Staff
Fall—evening; spring—evening; summer 1962. Primarily for graduate students preparing for reading examinations. Undergraduates admitted with permission of the instructor. No academic credit for graduate students. Prerequisite: German 4 or 47, or the equivalent.

51–52 *Introduction to German Literature* (3–3) — Osterle
Academic year—evening. Prerequisite: German 4 or the equivalent.

Second Group

103–4 *Goethe's "Faust"—Parts I and II* (3–3) — Legner
1962–63 and alternate years: academic year—evening.

131–32 *German Literature of the Eighteenth Century* (3–3) — Rogers
1963–64 and alternate years. The age of Lessing, Goethe, and Schiller.

141–42 *German Literature of the Nineteenth Century* (3–3) — King
1963–64 and alternate years. Romanticism, Biedermeier period, Young Germany, Realism.

151–52 *German Literature of the Twentieth Century* (3–3) — Rogers
1962–63 and alternate years: academic year—evening.

179–80 *Advanced Composition for Undergraduate and Graduate Majors* (1–1) — King, Legner
Academic year—as arranged.

Third Group

201–2 *Middle High German* (3–3) — Legner
1963–64 and alternate years.

205–6 *Gothic* (3–3) — Legner
1962–63 and alternate years: academic year—day. Introduction to the comparative study of Germanic languages.

209–10 *Old High German* (3–3) — King
1962–63 and alternate years: academic year—day.

213–14 *Old Norse* (3–3) — Allee
1963–64 and alternate years.

219 *Teaching German in College* (3) — The Staff
Fall—as arranged. Methodology, observation, and apprenticeship in college classes and the language workshop.

221–22 *General Linguistics; Comparative and Historical Indo-European Linguistics* (3–3) King

1963–64 and alternate years. *First half:* introduction to linguistics as a science. *Second half:* introduction to comparative and historical linguistics, with special reference to the Indo-European family.

223–24 *Linguistic Analysis of Modern German* (3–3)

1963–64 and every third year. Treatment of phonetics, phonemics, morphology, and syntax.

225–26 *Seminar: Linguistics* (3–3) King, Allee

1962–63 and every third year: academic year—day. Bibliography, methodology, readings, and research problems.

229 *German Literature of the Fifteenth and Sixteenth Centuries* (3) Legner

1963–64 and alternate years. Transition from chivalric to bourgeois literature. The eras of Humanism and the Reformation as reflected in the principal literary works.

230 *German Literature of the Seventeenth Century* (3) Legner

1963–64 and alternate years. Imitation of foreign models. The literary societies. Preciosity. The beginnings of realism in the novel. Pietism.

231–32 *German Classicism* (3–3) Rogers

1962–63 and alternate years: academic year—day. An advanced study and critique of the literature of the Goethezeit. Prerequisite: German 131–32 or the equivalent.

241–42 *Seminar: German Romanticism* (3–3) King

1962–63 and alternate years: academic year—evening. Treatment of individual writers, groups, motifs, and tendencies.

251–52 *Seminar: Studies in Twentieth Century German Literature* (3–3) Rogers

1963–64 and alternate years. Special projects in fiction, drama, poetry, and criticism.

261–62 *German-English and German-American Literary Relations and Interactions* (3–3) Osterle

Not offered 1962–63. Comparative study of major genres. Appraisal of influences.

271–72 *Seminar: German Literature* (3–3) Osterle

1962–63 and alternate years: academic year—day. Bibliography, methodology, readings, and research problems.

299–300 *Thesis* (3–3) The Staff

Academic year—as arranged. Required of all candidates for the Master's degree in German.

HISTORY*

Professors E. L. Kayser, Wood Gray, H. M. Merriman, R. H. Davison *(Chairman)*
Associate Professors W. C. Davis, R. B. Thompson, R. C. Haskett
Assistant Professor C. J. Herber
Instructor P. P. Hill

Bachelor of Arts with a major in History (Field-of-Study).—Prerequisite: the Arts and Letters curriculum, page 32, including History 39–40 and 71–72.

Required: the general requirements, pages 37–42, and the grade of "pass" on the History major examination at the end of the senior year.

* The Staff of Instruction here listed is for the academic year 1961–62.

The major, centered on the study of the rise, development, and spread, and the continuing challenges of Western civilization, is attested by a major examination. Under the guidance of an adviser the student will arrange his program in History to attain a balanced coverage of (1) the rise of civilization in Europe to the eve of the French Revolution, (2) the interaction of Western and non-Western culture, especially since the fifteenth century, (3) the historic problems of modern industrial civilization from the beginnings of the Industrial Revolution, and (4) the relations of the major nations of Europe and America in their world setting since the Napoleonic Wars. A six-hour research seminar to give training in fundamental technics is a required part of each major's program, and a proseminar (History 199–200) is offered as a means of integrating the student's understanding of the continuity of Western civilization. For details relating to the administration and content of the major, see the pamphlet on this subject, which is available in the offices of the Dean of Columbian College of Arts and Sciences and the Chairman of the History Department.

Bachelor of Arts with a major in Latin American Civilization (Field-of-Study).—Prerequisite: the Arts and Letters curriculum, see page 32.

Required: the general requirements, pages 37–42, and the grade of "pass" on the Latin American Civilization major examination at the end of the senior year. The coordinated field of knowledge upon which the student will be examined includes political and social history, economic development, governmental structures and international relations, and the principal literary works and writers of the Latin American republics. The Department of History provides a proseminar (History 197–98) intended to assist the student in preparing himself for the major examination. For further details, see the pamphlet, which is available in the Office of the Dean of Columbian College of Arts and Sciences.

Master of Arts in the field of History—Prerequisite: the degree of Bachelor of Arts with a major in History from this University, or the equivalent, and the approval of the Department.

Required: the general requirements, pages 43–45. Of the twenty-four semester hours of required second- and third-group courses (exclusive of the thesis), at least six must be in third-group history courses; a maximum of six may be in a closely related field outside the Department of History as approved by the Department. Master's candidates are responsible for arranging with instructors of second-group courses for extra work, in order to receive graduate credit for such courses.

Master of Arts in the field of Latin American Civilization.—Prerequisite: the degree of Bachelor of Arts with a major in Latin American Civilization from this University, or the equivalent.

Required: the general requirements, pages 43–45. Course work and the comprehensive examinations will embrace political and social history, governmental structures and international relations, economic development, and principal literary works of Latin America. The thesis may be written in any one of these four fields. All courses must be approved in advance by the Adviser.

Doctor of Philosophy (Graduate Council).—See the pamphlet on the Graduate Council.

Bachelor of Arts in Education with a teaching field in History (School of Education).—Prerequisite: the Education curriculum, page 34.

Required: the History option and the professional courses listed in the School of Education Catalogue.

First Group

39–40 *The Development of European Civilization* (3–3) Kayser, Herber

Academic year—day and evening; summer 1962. Primarily for freshmen. *First half*: the political, social, economic, and cultural history of the Old World from ancient times to 1715. *Second half*: from 1715 to the present.

71–72 *The Development of the Civilization of the United States* (3–3) Haskett, Hill

Academic year—day and evening; summer 1962. Primarily for sophomores. *First half*: the political, social, economic, and cultural forces of the United States in their world setting from 1492 to 1865. *Second half*: from 1865 to the present.

SECOND GROUP*

109–10 *Ancient History* (3–3) Kayser
Academic year—day. The political, social, and intellectual aspects will be considered. *First half:* the ancient Near East and Greece. *Second half:* Rome.

111–12 *Medieval History* (3–3) Kayser
Not offered 1962–63. The political, social, and intellectual aspects will be considered. *First half:* from the 4th to the 12th century. *Second half:* from the 13th through the 16th century.

130 *Nationalism* (3) Kayser
Summer 1962. The historical evolution of modern nationalism.

131–32 *History of Germany* (3–3) Herber
Academic year—day. The political, social, and cultural development of the German people. *First half:* from the Reformation to 1871. *Second half:* from 1871 to the present.

141–42 *History of France* (3–3) Herber
Not offered 1962–63. A survey of the political, social, and cultural history of France. *First half:* from earliest times to 1815. *Second half:* from 1815 to the present.

143 *History of Old Russia* (3) Thompson
Fall—day. The Slavic and Eurasian roots of Russian society and politics over a thousand-year period, 800–1800.

145–46 *History of Modern Russia* (3–3) Thompson
Academic year—day. The rise and fall of the revolutionary cycle. *First half:* Tsarist Russia in the Golden Age, 1800–1917. *Second half:* Soviet Russia and the politics of empire, since 1917.

147 *Economic History of Europe* (3) Gray
Not offered 1962–63. A survey from ancient times to the present day.

148 *Oversea Expansion of Europe* (3)
Not offered 1962–63. International rivalries and the impact of European civilization in Africa and the Pacific basin since 1500, with emphasis on the 19th and 20th centuries.

149–50 *European Diplomatic History* (3–3) Davison
First half: 1963–64 and alternate years. *Second half:* spring—day and evening. Background of the European state system and of diplomatic practices and relations since the Congress of Vienna, with emphasis on the policies and actions of the great powers and their statesmen. *First half:* to 1878. *Second half:* since 1878.

151–52 *English History* (3–3) Davis
Academic year—day. A general survey of the development of political, social, and economic institutions of lasting significance in the English speaking world. *First half:* to 1689. *Second half:* since 1689.

161 *Ancient Americans* (3) Davis
1962–63 and alternate years: fall—day. A study of the Maya, Aztec, Inca, and other early civilizations of North and South America.

162 *Iberian Background of Latin America* (3) Davis
Alternate spring and summer terms: spring—day; summer 1962. History of Spain and Portugal, with emphasis on developments leading to the rise and decline of the Spanish and Portuguese empires.

163 *Colonial Latin America* (3) Davis
Fall—evening. Political, economic, social, and institutional developments in Spanish and Portuguese America from the conquest through the wars of independence.

* History 39–40 is prerequisite to courses 109 through 152 and 190 through 196; History 71–72, to courses 170 through 184; either History 39–40 or 71–72, to courses 161 through 166.

164 *South America since Independence* (3) **Davis**
Alternate spring and and summer terms: spring—evening; summer 1962. Development of the independent South American states in the 19th and 20th centuries.

166 *Mexico and the Caribbean since Independence* (3) **Davis**
Alternate spring and summer terms: summer 1963; spring 1964. A survey of the republics of Mexico, Central America, and the Caribbean islands.

170 *American Colonial History* (3) **Haskett**
Spring—evening. The settlement of the British colonies, the development of provincial institutions, and the emergence of an American civilization in the 17th and 18th centuries.

171–72 *Social History of the United States* (3–3) **Gray**
Academic year—evening; summer 1962—History 172 (3). Daily life, institutions, intellectual and artistic achievements of the Agrarian Era, 1607–1861; and the Urban-Industrial Era, 1861 to the present time.

173 *Representative Americans* (3) **Gray**
Spring—day; summer 1962. A biographical approach to national history. Some fifty significant and pivotal personalities in the development of the United States in government, business, science, religion, journalism, the arts, and social reform.

174 *Economic History of the United States* (3) **Gray**
Fall—day. Main trends in the development of American agriculture, industry, and trade since 1607, with their Old World backgrounds and in their world setting.

175–76 *Political and Constitutional History of the United States* (3–3) **Haskett**
Academic year—day; summer 1962—History 175 (3). *First half:* to the eve of the Civil War. *Second half:* the Civil War to 1940.

177 *The South* (3) **Gray**
Not offered 1962–63. Rise of the plantation system and slavery; the intersectional conflict; and the problems and progress of the New South.

178 *The West* (3)
Not offered 1962–63. The role of the frontier in American history.

181–82 *Diplomatic History of the United States* (3–3) **Merriman, Hill**
Academic year—day and evening. Tendencies toward isolation, expansion, and collectivism; disputes with foreign countries and their settlement; and the activities of the American secretaries of state and diplomatic agents. *First half:* to 1898. *Second half:* since 1898.

183 *Oversea Expansion of the United States* (3) **Merriman**
Spring—day. The political, economic, social, and cultural life of our outlying possessions.

184 *Canada and the United States* (3) **Merriman**
Fall—day. The historical background and main trends in the relationship of the two English-speaking peoples of North America.

190 *History of India* (3) **Thompson**
Not offered 1962–63. The civilization of India and her neighbors from the beginnings to independence.

191–92 *Current History* (1–1) **Kayser**
Academic year—day. Contemporary events in their world setting.

193 *History of the Near East* (3) **Davison**
1962–63 and alternate years: fall 1962—day. The Byzantine, Arab, Persian, and Islamic backgrounds of Near Eastern history; the rise and decline of the Ottoman Empire; the action of European powers in the area; and the Ottoman breakup into the Turkish Republic and other successor states.

195–96 *History of the Far East* (3–3) Thompson
First half: not offered 1962–63. *Second half:* spring—day. *First half:* the civilization of China and Japan from the beginnings to 1600. *Second half:* the modern Far East under the impact of the West since 1600.

197–98 *Proseminar in Latin American Civilization* (3–3) Davis, Robb, Sammons
Academic year—as arranged. Reading course for coordination and review. Open only to majors in Latin American Civilization.

199–200 *Proseminar: Readings for the History Major* (3–3) Thompson
Academic year—evening. Limited to majors in History. Readings and discussions on main trends in the history of Western civilization, including representative selections from the classics of historical literature.

THIRD GROUP*

211–12 *Reading Course in Medieval History* (3–3) Kayser
Academic year—day. Primarily for graduate students.

241–42 *Seminar in Modern European History* (3–3) Herber
Academic year—evening.

243 *Reading Course in Modern European History* (3) Davison
Fall—as arranged. Primarily for graduate students.

246 *Seminar in Eurasian History* (3) Thompson
Spring—evening.

247 *Reading Course in Russian History* (3) Thompson
Fall—evening. Primarily for graduate students.

249 *Seminar in European Diplomatic History* (3) Davison
Fall—day.

261–62 *Seminar in Latin American History* (3–3) Davis
1963–64 and alternate years.

271–72 *Seminar in the Social History of the United States* (3–3) Gray
Academic year—evening.

273–74 *Reading Course in American Economic and Social History* (3–3) Gray
Academic year—as arranged. Primarily for graduate students.

275–76 *Seminar in American Political and Constitutional History* (3–3) Haskett
Academic year—evening.

277–78 *Reading Course in American Political and Constitutional History* (3–3) Haskett
First half: 1962–63 and alternate years—fall as arranged. *Second half:* 1963–64 and alternate years—fall as arranged. Primarily for graduate students.

281–82 *Seminar in the Diplomatic History of the United States* (3–3) Merriman
Academic year—day.

285–86 *Reading Course in American Diplomatic History* (3–3) Merriman
Academic year—evening. Primarily for graduate students.

291–92 *Seminar* (3–3) The Staff
Academic year—as arranged; summer 1962—History 291 (3). Prerequisite: approval of the Department.

* Approval of the instructor is required for registration in each third-group course.

294 *Seminar in the History of the Modern Near East* (3) Davison
Spring—evening.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged; summer 1962. Required of all candidates for the Master's degree specializing in history.

JOURNALISM*

Professor R. P. Schlabach, Jr. *(Chairman)*
Associate Professor R. C. Willson
Lecturers F. L. Dennis, J. V. Hinkel, Louis Robinson, T. R. Smith

Bachelor of Arts with a major in Journalism (Departmental).—Prerequisite: the Arts and Letters curriculum, page 32, including English 51–52 or 71–72, History 71–72, Political Science 9–10, and Journalism 71–72.
Required:
(1) The general requirements, pages 37–42.
(2) Twenty-four hours of second-group courses in Journalism, as follows: (a) Journalism 111, 196, 198; (b) nine hours chosen from Journalism 121, 133, 137, 144, 151; (c) six hours chosen from Journalism 115, 140, 142, 143, 145.
(3) Twelve hours of second group courses, chosen in consultation with the major adviser, in one other department of Columbian College of Arts and Sciences. Students selecting science may take courses in more than one department.

First Group

71–72 *Journalism in American Society* (3–3) Willson
Academic year—day and evening. Evolution of newspapers and other media in relation to political, social, and economic life; the concept of press freedom; problems of contemporary journalism.

Second Group

111 *Reporting* (3) Schlabach
Fall—day; spring—evening; summer 1962. Instruction and classroom practice in gathering, evaluating, and writing news; emphasis on newspapers, other media considered.

115 *Editing and Make-up* (3) Schlabach
Fall—evening; summer 1962. Editing of news and other material for publication, typography and display; use of pictures and other graphic presentations.

121 *Advanced Reporting: Magazine Feature Articles* (3) Willson
Spring—day; summer 1962. Instruction and practice in writing magazine articles, material for which is obtained through independent investigation.

133 *Advanced Reporting: Community News* (3) Schlabach
Fall—day. Instruction and practice in coverage and writing of local news.

137 *Advanced Reporting: National Affairs* (3)
Not offered 1962–63. Instruction and practice in coverage and writing of federal government news from the point of view of the press association.

140 *Pictorial Journalism* (3) Smith
Spring—evening. Photographic techniques affecting publication, the illustration and the story angle, standards of judgment in selection and use of pictures, captions, editing technique, cropping for effective reproduction.

* The Staff of Instruction here listed is for the academic year 1961–62.

142 *Retail Newspaper Advertising* (3) Robinson
Spring—evening. Retail newspaper advertising management, coordination of newspaper advertising with retail sales patterns, advertising readership, copy preparation, production methods.

143 *Industrial Communications* (3) Willson
Fall—evening. An introduction to the field of corporate journalism. Writing and editing the employee magazine. Preparation of annual reports. Editing stockholder publications, and external house organs.

144 *Advanced Reporting: the Arts and Sciences* (3) Willson
Not offered 1962–63. Instruction and practice in writing articles for publication in such fields as the arts, business and economics, science, and technology.

145 *Principles and Problems of Public Relations* (3) Hinkel
Fall—Saturday morning. Principles, problems, and ethics of public relations for government agencies, commercial establishments, educational and other public institutions. Case histories of successful programs.

151 *Editorial Writing* (3) Schlabach
Spring—day. Instruction and practice in writing of editorials on public affairs.

196 *Seminar* (3) Schlabach
Spring—as arranged. For Journalism majors only. Research in areas relating journalism to secondary fields of study.

198 *Law of the Press* (3) Dennis
Fall—Saturday morning. Freedom of the press, censorship, legislative controls, publications as contempt of court, copyright, news gathering agencies, labor law and the newspaper business, law of libel, privileged matter, fair comment on public characters, right of privacy.

MATHEMATICS*

Professors F. E. Johnston, Florence Mears, N. D. Nelson *(Chairman)*, T. P. G. Liverman, N. A. Wiegmann
Professorial Lecturers W. H. Marlow, D. M. Dribin, Thomas Saaty
Associate Professorial Lecturers Joseph Blum, P. A. Devore, J. P. Fennell
Assistant Professors W. A. Smith, R. Z. Vause, Hewitt Kenyon
Lecturers Mabel Morris, A. J. Ziffer, Howard Banilower, Jerome Deutschberger, R. F. Snyder, R. A. Welker

Bachelor of Arts or *Bachelor of Science with a major in Mathematics (Departmental).*—Prerequisite: the Arts and Letters or the Science curriculum, respectively, page 30.
Required: in addition to the general requirements, pages 37–42, twenty-four semester hours of Mathematics of approved second- and third-group courses.

Master of Arts or *Master of Science in the field of Mathematics.*—Prerequisite: a Bachelor of Arts or Bachelor of Science degree, respectively, with a major in Mathematics at this University, or the equivalent.
Required: the general requirements, pages 43–45.

Doctor of Philosophy (Graduate Council).—See the pamphlet on the Graduate Council.

Bachelor of Science in Engineering with an option in Mathematics (School of Engineering).—See the School of Engineering Catalogue.

Bachelor of Arts in Education with a teaching field in Mathematics (School of Education).—Prerequisite: the Education curriculum, page 34.
Required: the Mathematics option and the professional courses listed in the School of Education Catalogue.

* The Staff of Instruction here listed is for the academic year 1961–62.

FIRST GROUP*

3 *College Algebra* (3) — The Staff

Fall—day and evening; spring—day and evening; summer 1962. Exponents and logarithms; linear equations; complex numbers; quadratic equations; introduction to theory of equations; mathematical induction and the binomial theorem; permutations, combinations, and probability; determinants; progressions. Prerequisite: one year each of high school algebra and high school geometry.

6 *Plane Trigonometry* (3) — The Staff

Fall—day and evening; spring—day and evening; summer 1962. Prerequisite: two years of high school algebra and one year of high school geometry, or Mathematics 3 (or concurrent registration therefor).

9 *General Mathematics I* (3) — The Staff

Fall—day; spring—evening; summer 1962 (offered as Mathematics 2). For those students in the School of Education or others electing Mathematics 9 and 10 as a terminal sequence in mathematics. Propositional logic and truth values; the number system, number bases, arithmetical computation; algebraic functions; topics from plane geometry. Prerequisite: two years of high school mathematics. Not open to students who have had former Mathematics 2.

10 *General Mathematics II* (3) — The Staff

Spring—day. An introduction to matrices and vector spaces; non-Euclidean geometry; introduction to concepts of the calculus. Prerequisite: Mathematics 9 or former 2.

12 *Analytic Geometry* (3) — The Staff

(This course will be offered for the last time summer 1962.)

Summer 1962. Prerequisite: Mathematics 3 and 6, or two years of high school algebra, one year of high school geometry, and one-half year of high school trigonometry.

21 *Calculus I* (3) — The Staff

Fall—day and evening; spring—day and evening. Elementary concepts of analytic geometry. Differentiation and integration of algebraic and trigonometric functions with applications. Prerequisite: Mathematics 3 and 6; or two years of high school algebra, one year of high school geometry, and one-half year of high school trigonometry; or the equivalent.

22 *Calculus II* (3) — The Staff

Spring—day and evening. Differentiation and integration of transcendental functions and applications; conics; parametric equations; techniques of integration. Prerequisite: Mathematics 21.

23 *Calculus III* (3) — The Staff

Spring—evening. Vector concepts; improper integrals; solid geometry; partial differentiation and applications. Prerequisite: Mathematics 22.

24 *Calculus IV* (3) — The Staff

Offered 1963–64. Multiple integration with application; infinite series; differential equations. Prerequisite: Mathematics 23.

27 *Calculus I and II* (6) — The Staff

The equivalent of Mathematics 21 and 22.

Fall—day and evening; spring—day.

28 *Calculus III and IV* (6) — The Staff

The equivalent of Mathematics 23 and 24.

Spring—day.

* No first-group course in mathematics is available for college credit if the student's previous training in mathematics meets the prerequisite for a higher numbered course.

29 *Calculus I* (3) — The Staff

(This course is being offered for the last time summer 1962.)

Summer 1962. Differentiation and integration of algebraic and trigonometric functions with applications. Prerequisite or concurrent registration: Mathematics 12.

30 *Calculus II* (3) — The Staff

(This course is being offered for the last time fall semester 1962–63.)

Fall—day and evening; summer 1962. Differentiation and integration of transcendental functions with applications, methods of integration, vectors and parametric equations. Prerequisite: Mathematics 12 and 29.

31 *Calculus III* (3) — The Staff

(This course is being offered for the last time spring semester 1962–63.)

Fall—day and evening; spring—day and evening; summer 1962. Infinite series, partial differentiation, multiple integrals, solid geometry, improper integrals, and differential equations. Prerequisite: Mathematics 30 (or concurrent registration therefor).

SECOND GROUP*

101 *Introduction to Mathematical Logic* (3) — Nelson

Fall—evening. Development of propositional and predicate calculi, basic semantic concepts, elementary intuitive set theory, Boolean algebra. Prerequisite: Mathematics 31 or 24 or Philosophy 121.

102 *Fundamental Concepts of Mathematics* (3) — Nelson

Spring—evening. Axiomatic set theory, cardinal and ordinal arithmetic, foundations of the real number system. Prerequisite: Mathematics 101 or permission of the instructor.

106 *Topology for Undergraduates* (3) — Kenyon

1963–64 and alternate years.

111 *Mathematics for Engineers and Physicists I* (3) — The Staff

Fall—day and evening; spring—day and evening; summer 1962. Differential equations, vector analysis, introduction to matrix algebra. Prerequisite: Mathematics 31 or 24.

112 *Mathematics for Engineers and Physicists II* (3) — The Staff

Fall—day and evening; spring—day and evening; summer 1962. Topics from advanced calculus, partial differential equations, and complex variables. Prerequisite: Mathematics 111 or 132.

120 *Introduction to Theory of Numbers* (3) — Vause

1963–64 and alternate years.

122 *Introduction to Abstract Algebra* (3) — The Staff

Fall—evening.

123 *Theory of Equations* (3)

Not offered 1962–63.

124 *Introduction to Matrix Theory* (3) — The Staff

Fall—day; spring—evening; summer 1962. Elementary theory of finite vector spaces, determinants, equivalence, matrices with polynomial elements, similarity of matrices.

125 *Advanced Algebra* (3)

Not offered 1962–63.

126 *Advanced Analytic Geometry* (3)

Not offered 1962–63.

* Mathematics 31 or 24 is prerequisite to all second-group courses.

132 *Differential Equations* (3)
Not offered 1962–63.

134 *Introduction to Boundary Value Problems* (3) — The Staff
Spring—evening. Prerequisite: Mathematics 111, 132, or 142.

135 *Projective Geometry* (3) — The Staff
Fall—evening.

139 *Advanced Calculus I* (3) — The Staff
Fall—evening; spring—day; summer 1962. Limits, continuity, real number system, mean value theorems, partial differentiation, implicit function theorems, transformations, and mappings.

140 *Advanced Calculus II* (3) — Mears
Spring—evening. Vector fields, multiple integrals, line and surface integrals, point set theory, theory of integration, improper integrals. Prerequisite: Mathematics 139.

141 *Introduction to Infinite Series* (3) — Mears
Fall—evening.

142 *Theory of Differential Equations* (3) — ———
Fall—evening. Prerequisite: Mathematics 139.

167 *Fourier Series and Spherical Harmonics* (3)
Not offered 1962–63. Prerequisite: Mathematics 111 or 132.

171 *Vector Analysis* (3) — The Staff
Fall—day; spring—evening.

Third Group

201–2 *Mathematical Logic* (3–3) — Nelson
1963–64 and alternate years.

220 *Theory of Numbers* (3) — Vause
1963–64 and alternate years.

237–38 *Theory of Functions of a Complex Variable* (3–3) — Johnston
A year course: credit is not given for the first half until the second half is completed.
1963–64 and alternate years.

242 *Infinite Series* (3) — Mears
Spring—evening.

243–44 *Numerical Analysis* (3–3) — Marlow
1963–64 and alternate years. Prerequisite: Mathematics 111, 132, or 142.

249 *Ordinary Differential Equations* (3) — ———
Fall—evening.

250 *Integral Equations* (3)
Not offered 1962–63.

251–52 *Theory of Functions of a Real Variable* (3–3) — Liverman
A year course: credit is not given for the first half until the second half is completed.
Academic year—evening.

255 *Differential Geometry* (3)
Not offered 1962–63.

257 *Theory of Groups* (3) — Johnston
Fall—evening.

261 *Generalized Functions and Operational Methods* (3) — Liverman
1963–64 and alternate years. Theory of generalized functions in one variable. Op-

erational calculus of generalized functions. Applications to differential equations and Fourier analysis. Prerequisite: Mathematics 140.

262 *Advanced Operational Methods* (3) Liverman
1963–64 and alternate years. Generalized functions on test spaces of analytic functions. Operational calculus in several variables. Applications to partial differential and convolution equations of applied mathematics. Prerequisite: Mathematics 261

265–66 *Modern Algebra* (3–3) Wiegmann
Academic year—evening. Fundamental concepts of theory of groups, rings, and fields. Theory of finite fields, extension fields, Galois groups, factorization theory in Gaussian domains, and groups with operators.

267 *Topics in Matrix Theory* (3) Wiegmann
Not offered 1962–63. Theory of linear transformations (vector spaces over a division ring), advanced classical theory, matrix representation of groups and rings, special topics as time allows. Prerequisite: Mathematics 124 and an elementary knowledge of groups, rings, and fields.

268 *Calculus of Variations* (3)
Not offered 1962–63.

270 *Tensor Analysis* (3)
Not offered 1962–63.

272 *Hilbert Space* (3)
Spring—evening.

277 *Partial Differential Equations* (3)
Spring—evening.

281–82 *Introduction to Topology* (3–3) Kenyon
Academic year—evening.

295–96 *Reading and Research* (3–3) The Staff
Academic year—as arranged; summer 1962.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged; summer 1962.

MICROBIOLOGY*

Professors R. G. Beachley *(Emeritus)*, A. M. Griffin, Mary Robbins *(Acting Chairman)*, R. C. Parlett
Clinical Professor Murray Grant
Associate Professor Rudolph Hugh
Assistant Professor R. C. Wood
Clinical Instructor A. H. Traum

Special Lecturers L. S. Baron, R. C. Cook, C. W. Emmons, F. B. Gordon, Leon Jacobs, M. C. Leikind, J. D. MacLennan, H. J. Magnuson, W. J. Peeples, C. O. Pierce

Master of Arts or *Master of Science in the field of Microbiology.*—Prerequisite: a Bachelor of Arts or a Bachelor of Science degree, respectively, from this University, or the equivalent, with a major in Biology, Botany, Chemistry, or Zoology. The undergraduate

* The Staff of Instruction here listed is for the academic year 1961–62.

program must include the following courses or the equivalent: Biology 1–2*, Chemistry 11–12, 21, 22, 151–52; Physics 11, 12; Zoology 103–4 (formerly 41–42).

Required: the general requirements, pages 43–45. The thirty semester hours must include (if not presented for admission) Microbiology 112, 249–50, 293–94, 299–300 and Biochemistry 221–22. The remaining courses are to be selected from Microbiology 209, 219–20, 225, 232, 234, 240 and 295–96. The student with much bacteriological background may substitute for credit one or more courses from the following: cytology, genetics, cell physiology, entomology, histology, biostatistics, and protozoology. It is not always possible to arrange courses and research so that the student can be assured of completing all required work in one academic year.

Doctor of Philosophy (Graduate Council).—See the pamphlet on the Graduate Council.

112 *General Microbiology* (4) — Hugh

Spring—Mon., Wed., and Fri., 9:10 to 12:00 A.M. For nonmedical students. A study of the fundamentals of bacteriology, including hygienic applications. Methods of cultivation and control of several groups of microorganisms are studied in the laboratory. Prerequisite: any biological laboratory science; Chemistry 11–12. Laboratory fee, $13.

209 *Medical Microbiology* (1 to 11) — The Staff

Fall: lecture (4 hours), laboratory (10 hours)—as arranged. Bacteria, rickettsiae, viruses, yeasts, molds, protozoa, and metazoa which relate to the health and diseases of man—cultural study of most important forms; methods of diagnosis by microscopic, cultural, immunologic, and animal reactions; theory and methods of immunology; vaccines; serums; antibiotics. Open to suitably prepared graduate students; may be elected as a whole or in part by adding the appropriate letter to the course number, with credit allocated as follows: (a) *Bacteriology*, including rickettsiae and viruses—lecture (4), laboratory (3); (b) *Parasitology*, including medical mycology—lecture (2), laboratory (1); (c) *Immunology* (1). May be taken by a limited number of candidates for Master's degrees. Laboratory fee, $4.50 for each semester hour of laboratory work.

210 *Fundamentals of Epidemiology and Preventive Medicine* (2) — Grant

Spring—Mon., 2:00 to 4:00 P.M. Sources, modes, and implications of infection and injury. Consideration also given the problem of accidents and industrial medicine. Open to liberal arts graduate students. Prerequisite: Microbiology 112 or 209.

219–20 *Advanced Microbiology* (arr.) — Hugh and Staff

Academic year—as arranged. Special study of advanced methods and current problems in microbiology for suitably qualified students specializing in microbiology. Prerequisite: Microbiology 112 or 209; Chemistry 151–52 or the equivalent; permission of the instructor. Laboratory fee, $4.50 a semester hour.

225 *Bacterial Chemistry and Physiology* (2) — Wood

1963–64 and alternate years: fall—as arranged. A lecture course in those areas of biochemistry peculiar to Class Schizomycetes, including discussion of the use of bacteria in the elucidation of biochemical problems. Prerequisite: Biochemistry 221–22 or the equivalent. A course in microbiology is recommended but is not essential.

232 *Immunological Methods* (3) — The Staff

1962–63 and alternate years: spring—as arranged. Preparation and testing of serological materials. Demonstration of basic serological phenomena. For graduate students. Prerequisite: Microbiology 112 or 209 and permission of the instructor. Laboratory fee, $11.

234 *Virology* (6) — Robbins

1963–64 and alternate years: spring—as arranged. Study of viruses and rickettsiae. Lectures and laboratory exercises. For graduate students. Prerequisite: Microbiology 112 or 209 and permission of the instructor. Laboratory fee, $16.

* An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.

240 *Advanced Epidemiology* (3) — The Staff
Spring—as arranged. Conferences, readings, and problems for graduate students dealing with specialized and advanced phases of the topics presented in Microbiology 210. Prerequisite: Microbiology 210.

249–50 *Introduction to Medical Research** (3–3) — The Staff
Academic year—Wed., 1:00 to 6:00 P.M. Primarily for graduate students. A comprehensive introduction to the major medical research techniques—statistical, physical, chemical, electrical, and radioisotopic—as applied to biological materials in the medical sciences. Laboratory fee, $7.50 a semester.

293–94 *Staff Seminar* (1–1) — The Staff
Academic year as arranged. For graduate students. Bi-weekly throughout the year.

295–96 *Research in Microbiology* (arr.) — The Staff
Academic year—as arranged.

299–300 *Thesis* (3–3) — The Staff

PATHOLOGY†

Professors T. M. Peery *(Chairman)*, W. R. Duryee *(Research)*
Clinical Professor D. L. Weiss
Associate Professors F. N. Miller, Jr., William Newman, W. L. Marsh
Assistant Professors Lois Platt *(Cytology)*, Alexander Breslow, John Culberson

Special Staff for Demonstrations

Associate Clinical Professors J. S. Howe, E. F. Geever, R. G. Gottschalk
Assistant Clinical Professors R. E. Palmer, W. F. Enos, Cornelia Hoch-Ligeti
Associates L. E. Zimmerman, L. W. Fix, C. B. Cook
Clinical Instructors D. R. Parkinson, I. R. Godwin
Special Lecturers E. B. Helwig, L. C. Johnson

Bachelor of Science in Medical Technology.—Prerequisite: the Science curriculum, page 32, including Biology 1-2‡, Chemistry 11-12, and Microbiology 112.
Required: the general requirements, pages 37–42, including Chemistry 21 and 22 and the following second-group courses offered in the University Hospital: Pathology 115–16, 117–18, and 119–20.

Doctor of Philosophy (Graduate Council).—See the pamphlet on the Graduate Council.

115–16 *Introduction to Medical Science* (1–1) — Marsh and Staff
Academic year—1 hour a week. For students in medical technology at the University Hospital. These lectures, based upon physiology, pathology, and medicine, provide a background for the interpretation of laboratory data.

117–18 *Principles in Medical Technology* (4–4) — Marsh and Staff
Academic year—4 hours a week. For students in medical technology at the University Hospital. Theories, principles, and sources of error, of the methods used in clinical chemistry, clinical bacteriology, serology, hematology, and clinical microscopy.

119–20 *Medical Technology Laboratory* (10–10) — Marsh and Staff
30 hours a week for 50 weeks. Practice and experience by rotation through the various divisions of the Pathology laboratories of the University Hospital, as follows: be

* This is an interdepartmental course. The student should register in the department directing his research.
† The Staff of Instruction here listed is for the academic year 1961–62.
‡ An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.

matology and urinalysis, 12 weeks; chemistry, 12 weeks; bacteriology and parasitology, 10 weeks; blood bank, 8 weeks; serology, 4 weeks; tissue pathology, 4 weeks.

281 *Problems in Experimental Cellular Pathology* (1) Duryee

Fall—1 hour a week as arranged. For nonmedical graduate students. Also for a limited number of specially qualified medical students on an elective basis. Cytological and biophysical aspects of cellular function in relation to normal and selected pathological conditions.

PHARMACOLOGY*

Professor H. G. Mandel *(Chairman)*
Clinical Professor R. G. Smith
Professorial Lecturer B. B. Brodie
Associate Professor Clarke Davison
Assistant Professors V. H. Cohn, Jr., T. M. Farber, Paul Mazel, Melvin Reich *(Research)*, J. F. Henderson *(Research)*, George Fiala *(Research)*

Master of Arts or *Master of Science in the field of Pharmacology.*—Prerequisite: a Bachelor of Arts or Bachelor of Science degree, respectively. The undergraduate program must include the following courses or the equivalent: Biology 1–2†; Physics 12, 13, 55; Chemistry 11–12, 22, 151–52. Biochemistry 221–22 and Physiology 137 are recommended as the undergraduate electives if the candidate wishes to complete the work for the Master's degree in one year.

Required: the general requirements, pages 43–45, including Biochemistry 221–22; Physiology 137; Pharmacology 249–50, 261, 263, 267–68, 269–70, 299–300. The remaining courses may be selected from Biochemistry 224, 225–26, 232, 241; Physiology 170, 232; Microbiology 112, 209, 225, 230; Pharmacology 279–80.

Doctor of Philosophy (Graduate Council).—See the pamphlet on the Graduate Council.

249–50 *Introduction to Medical Research*‡ (3–3) The Staff

Academic year—Wed., 1:00 to 6:00 P.M. Primarily for graduate students. A comprehensive introduction to the major medical research techniques—statistical, physical, chemical, electrical, and radioisotopic—as applied to biological materials in the medical sciences. Laboratory fee, $7.50 a semester.

261 *Pharmacology* (5) The Staff

Fall—5 hours a week. Lectures and conferences concerning the interaction of drugs and biological systems as a basis for the rational therapy of disease. Open to qualified nonmedical students.

262 *Pharmacology* (1) The Staff

Spring—1 hour a week. Continuation of Pharmacology 261. Pharmacological uses of normal body constituents.

263 *Pharmacology Laboratory* (1) The Staff

Fall—3 hours a week. Laboratory instruction and demonstrations designed to complement Pharmacology 261. Open to qualified nonmedical students.

267–68 *Pharmacological Research* (arr.) The Staff

Academic year—as arranged. Primarily for those properly qualified graduate and medical students seeking careers in pharmacology.

---

* The Staff of Instruction here listed is for the academic year 1961–62.
† An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.
‡ This is an interdepartmental course. The student should register in the department directing his research.

269–70 *Pharmacology Seminar* (1–1) The Staff
Academic year—2 hours a week. Recent advances in pharmacology. For those interested in pharmacological research. Open to qualified nonmedical students.

279–80 *Mechanism of Drug Action* (1–1) The Staff
Academic year—as arranged. A course to familiarize the student with advanced biochemical, microbiological, and physiological methods employed in pharmacological investigations. Open to qualified nonmedical students.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged. Required of Master of Arts and Master of Science candidates.

PHILOSOPHY*

Professor C. E. Gauss *(Chairman)*
Associate Professor R. H. Schlagel
Lecturer C. H. Pfuntner

Bachelor of Arts with a major in Philosophy (Field-of-Study).—Prerequisite: the Arts and Letters curriculum, page 32.

Required: in addition to the general requirements, pages 37–42, the grade of "pass" for the Philosophy major examination at the end of the senior year. The coordinated knowledge upon which the student will be examined is schematized under the following two general headings: (1) methodology and theory of knowledge and (2) the history of ideas and social philosophy. The Department of Philosophy provides a proseminar (Philosophy 199–200) intended to assist the student in preparing for the major examination.

Master of Arts in the field of Philosophy.—Prerequisite: an undergraduate major in Philosophy at this University or the equivalent, as attested by the passing of this University's major examination in Philosophy; the following specific courses or the equivalent: Philosophy 111–12, 113, 121–22, and 131.

Required: the general requirements, pages 43–45. As much as possible of the required course work must be in third-group courses. Where second-group courses are elected, students will be required to do more intensive and extensive work than undergraduates. A general written examination in two areas of Philosophy and an oral examination in the student's special field will be required in addition to a Master's thesis of substantial length.

First Group

51–52 *Introduction to Philosophy* (3–3) The Staff
Academic year—day and evening; summer 1962—Philosophy 51 (3). A critical introduction to the problems of modern philosophy in relation to scientific and social developments since the Renaissance. This course is not merely intended as an introduction to those courses in philosophy which follow but is a unit complete in itself for those students in other departments interested in the problems of philosophy relevant to modern thought.

Second Group

101 *Philosophic Problems in Living Issues* (1) Gauss
Not offered 1962–63. Selected public issues used as the basis for demonstrating the methods and relevance of philosophical analysis. This course may be reelected for credit once only.

111–12 *History of Philosophy* (3–3) Pfuntner
Academic year—evening. The history of western philosophy from early Greece to Kant, seen as the development and modification of the Hellenic cultural pattern.

* The Staff of Instruction here listed is for the academic year 1961–62.

113 *History of Nineteenth and Twentieth Century Philosophy* (3) Pfuntner
Fall—evening. European philosophy from the time of Kant. "Isms" and ideologies at the root of contemporary thought.

121-22 *Logic and Scientific Method* (3–3) Gauss
Academic year—day. *First half:* the elementary principles of valid reasoning with emphasis on developing skill in using these principles, introductory consideration of symbolic logic, the nature of a formal system. *Second half:* general analysis of the methods of investigation and reasoning used in the natural and social sciences, procedures and requirements of definition, classification and sorting, analogical and inductive inference, causal determination, the nature and function of hypothesis, measurement, principles of the theory of probability.

131 *Ethics* (3) Schlagel
Fall—evening. A critical examination of traditional ethical theories from Plato to Ayer. Consideration of the theoretical problems of ethics: the meaning of "good", the nature of ethical judgment, the justification of ethical standards. The course aims at enabling the student to develop his own ethical view as a consequence of his greater understanding of moral phenomena.

142 *Philosophies Men Live by* (3) Schlagel
Spring—evening. Critique of the tenets, methodologies, and presuppositions of current, vital philosophical orientations: Existentialism, Positivism, Pragmatic Naturalism, Theism, Linguistic Analysis. A critique of reason and faith, and the nonrational aspects of man as guiding influences in life.

151 *The Philosophy of Science* (3) Schlagel
Fall—day. Brief history of modern science; problems of the meaning of causality, the justification of induction, theories of probability; the nature of scientific explanation and the status of inferred entities; the nature of a mathematical system. Consideration of the philosophic import of certain scientific theories such as Einstein's theory of relativity, Heisenberg's principle of indeterminacy, and Bohr's principle of complementarity.

152 *Epistemology* (3) Schlagel
Spring—day. The meaning and criteria of truth; the meaning and cognitive significance of common sense, scientific, and religious propositions or beliefs. Study of problems related to perception, verification, universals, *a priori* and *a posteriori* knowledge, the concept of mind.

162 *Aesthetics* (3) Gauss
Spring—day. The nature of aesthetic experience, problems of appreciation and judgment in the arts, and of the theories and process of artistic creation. Emphasis on contemporary arts and criticism.

172 *American Philosophy* (3) Pfuntner
Spring—evening; summer 1962. The philosophies of Peirce, Royce, James, Dewey, and Santayana as representative of American thought.

180 *Philosophy of History* (3) Gauss
Fall—day. Problems of historical knowledge and explanation. Critique of philosophies of history.

193 *Topics in Contemporary Philosophy* (3) Gauss
Summer 1962. Intensive study of one selected topic in contemporary philosophic literature.

199-200 *Proseminar: Readings for the Major* (3–3) Schlagel
Academic year—as arranged. Conferences and group discussions in preparation for field-of-study major examination.

THIRD GROUP

201-2 *Readings and Research* (3–3) The Staff
Academic year—as arranged. Advanced readings and reports. Investigation of special problems.

211 *Seminar in Plato* (3) Gauss
Spring—as arranged. Intensive study of Plato's later dialogues.

212 *Seminar in Aristotle* (3) Schlagel
Not offered 1962–63. Aristotle's logic, metaphysics, and philosophy of science.

216 *Seminar in Kant* (3) Schlagel
Not offered 1962–63. A study of one of Kant's Critiques.

262 *Seminar in Aesthetics* (3) Gauss
Not offered 1962–63. Intensive study in selected problems in the philosophy of art.

299–300 *Thesis* (3–3) The Staff

RELATED COURSES IN OTHER DEPARTMENTS

Classical Languages and Literatures 71–72, *Greek and Roman Backgrounds in Literature* (3–3)

Mathematics 101, *Introduction to Mathematical Logic* (3)

PHYSICS*

Professors G. M. Koehl *(Acting Chairman)*, Lewis Slack†, Herbert Jehle
Associate Professor H. H. Hobbs
Associate Professorial Lecturer H. H. Landon, Jr.
Assistant Professors S. S. Yeandle, Jr., Margaret Montzka, J. P. Hollinger, G. C. Murray *(Research)*
Lecturers J. N. Tevis, DeWitt Fisher, J. M. Harrison, K. F. Oerlein, Herbert Rabin, W. J. Condell, Jr., J. E. Tompkins

Bachelor of Arts or *Bachelor of Science with a major in Physics (Departmental)*—Prerequisite: the Arts and Letters or the Science curriculum, respectively, page 32, including Physics 11, 12, 13, 16; or 11, 14, 15, 16; Chemistry 21; Mathematics 29, 30, and 31 or Mathematics 21, 22, 23, and 24.

Students who started work toward a major in Physics prior to the reorganization of the introductory courses in Physics and Mathematics, which went into effect in the fall of 1959–60, may substitute Physics 5, 6, and 7 for Physics 11, 12, and 13; and Mathematics 19 and 20 for Mathematics 29, 30, and 31 or Mathematics 21, 22, 23, and 24.

Required, both for the Bachelor of Arts degree and the Bachelor of Science degree: the general requirements, pages 37–42, including Mathematics 112 and Physics 101, 105, 106, 113, 102 or 114, and 153, 155, or 156, plus *one* of the following: Physics 118, 123, and 132.

Master of Arts or *Master of Science in the field of Physics*—Prerequisite: the degree of Bachelor of Arts or Bachelor of Science, respectively, with a major in Physics at this University, or the equivalent.

Required: the general requirements, pages 43–45, including Mathematics 171 (if not taken earlier) and Physics 201, 202, 219, 255 or 256, and 291–92.

Doctor of Philosophy (Graduate Council).—See the pamphlet on the Graduate Council.

Bachelor of Science in Engineering with an option in Physics (School of Engineering).—See the School of Engineering Catalogue.

Bachelor of Arts in Education with a teaching field in Physics (School of Education).—Prerequisite: the Education curriculum, page 34.

Required: the physics option and the professional courses listed in the School of Education Catalogue.

---

* The Staff of Instruction here listed is for the academic year 1961–62.
† On leave of absence spring semester 1961–62.

First Group

For a one-year course offering an introduction to the methods and achievements of physical science, see Chemistry 3–4, page 65.

11 *Introductory Physics* (3) — Koehl and Staff

Lecture (1 hour), recitation (1 hour), laboratory (2½ hours). Fall—day and evening; spring—day and evening; summer 1962. An introduction to the phenomena of light, heat, force, energy; introduction to vectors; and the properties of matter. This course may be taken as a terminal course by nonscience students who wish an introduction to the physical sciences. Prerequisite: high school algebra and plane geometry. Material fee, $11.

12 *Introductory Physics* (3) — Koehl and Staff

Lecture (1 hour), recitation (1 hour), laboratory (2½ hours). Spring—day and evening; summer 1962. Mechanics, wave-motion, and sound. Prerequisite: Physics 11. Material fee, $11.

13 *Introductory Physics* (3) — The Staff

Lecture (1 hour), recitation (1 hour), laboratory (2½ hours). Fall—day and evening; summer 1962. Elementary electricity and magnetism. Prerequisite: Physics 11. Material fee, $11.

14 *General Physics* (3) — The Staff

Lecture (1 hour), recitation (1 hour), laboratory and conference (2½ hours). Spring—day and evening. Mechanics, wave-motion, and sound. Prerequisite: Physics 11, Mathematics 29 or 21. Material fee, $11.

15 *General Physics* (3) — Hobbs and Staff

Lecture (1 hour), recitation (1 hour), laboratory and conference (2½ hours). Fall—day and evening. Electricity and magnetism. Prerequisite: Physics 14, Mathematics 30 or 22. Material fee, $11.

16 *General Physics* (3) — Hobbs

Lecture (2 hours), conference (1 hour). Spring—day and evening. Modern physics, molecular structure of matter, structure of the atom. Prerequisite: Physics 13 or 15, Mathematics 30 or 22, and consent of the instructor.

Second Group

101 *Mechanics* (3) — Jehle

1962–63 and alternate years: fall—evening; 1963–64 and alternate years: fall—day. Statics, elasticity, dynamics of solids and fluids, and gravitation. Prerequisite: Physics 12 or 14, Mathematics 31 or 24.

102 *Heat and Thermodynamics* (3) — Yeandle

Fall—evening. Fundamental concepts, heat transfer, the laws of thermodynamics with applications to physical systems. Prerequisite: Physics 16, Mathematics 31 or 24.

105 *Principles of Electricity* (3) — Hollinger

1962–63 and alternate years: fall—day; 1963–64 and alternate years: fall—evening. Elementary d-c and a-c circuit theory, electric and magnetic fields, dielectric and magnetic materials, motion of charged particles in electric and magnetic fields. Prerequisite: Physics 16, Mathematics 31 or 24.

106 *Optics* (3) — Koehl

1962–63 and alternate years: spring—day; 1963–64 and alternate years: spring—evening. Geometrical optics; elementary theory of wave motions; interference, diffraction, polarization, and dispersion of light; laws of black-body radiation. Prerequisite: Physics 16, Mathematics 31 or 24.

113 *Atomic Physics* (3) — Hobbs

1962–63 and alternate years: fall—day; 1963–64 and alternate years: fall—evening. Properties of elementary particles, interactions with radiation, atomic structure, optical and X-ray spectra, introduction to wave mechanics. Prerequisite: Physics 16, 101 or 105, or the equivalent, Mathematics 31 or 24.

114 *Statistical Physics* (3) Jehle
Spring—evening. Classical and quantum statistics with emphasis on Maxwell-Boltzmann statistics; applications to kinetic theory of gases, gaseous diffusion, specific heats of gases and solids. Prerequisite: Physics 16, Mathematics 31 or 24, permission of the instructor.

116 *Quantum and Solid State Physics* (3) Hobbs
Spring—day and evening. Primarily for engineers. Prerequisite: Physics 16, Mathematics 111.

118 *Introduction to Solid State Physics* (3) Rabin
1962–63 and alternate years: spring—evening; 1963–64 and alternate years: spring—day. Dielectric and magnetic properties of solids, electron theory of metals, semiconductors, dislocations, and plastic flow. Prerequisite: Physics 113.

123 *Nuclear Physics* (3) Slack
1962–63 and alternate years: spring—evening; 1963–64 and alternate years: spring—day. Structure and stability of atomic nuclei, nuclear transformations and reactions, radiations of nuclei, fission. Prerequisite: Physics 113.

128 *Sound* (3)
1963–64 and alternate years: spring—evening. Production, propagation, and detection of sound waves; vibrations of sounding bodies; acoustic instruments and acoustic measurements. Prerequisite: Physics 16, Mathematics 31 or 24.

132 *Electronics* (3) Hollinger
Lecture (2 hours), laboratory (3 hours). 1962–63 and alternate years: spring—day; 1963–64 and alternate years: spring—evening. The phenomena of electron emission from solids, the physical properties of electron tubes, and the principles underlying their basic applications. Prerequisite: Physics 16 and a course in d-c and a-c circuits in Physics or Engineering. Material fee, $11.

153 *Advanced Laboratory in Atomic Physics* (3) Murray
Spring: Saturday—as arranged. Prerequisite: Physics 16. Material fee, $11.

155 *Advanced Laboratory in Electricity and Magnetism* (3)
Not offered 1962–63. Prerequisite: Physics 105. Material fee, $11.

156 *Advanced Laboratory in Optics* (3) Hobbs
Not offered 1962–63. Prerequisite: Physics 106. Material fee, $11.

181 *Biophysics* (3) Yeandle
Spring—evening. Molecular basis of biophysics, biosynthesis, and reproduction. Molecular and genetic aspects of the effects of radiation. Physiochemical equilibria, steady states, and transients in biological systems; order, disorder, and information theory. Admission by permission of the instructor.

191 *Nuclear Reactors* (3) Landon
Fall—evening. Neutron physics: sources of neutrons, neutron reactions, slowing down and diffusion; introduction to transport theory; fission process; reactor types; basic theory of homogeneous and heterogeneous reactors, including specific numerical studies from recent publications. Prerequisite: Physics 16, Mathematics 31 or 24.

THIRD GROUP

201 *Classical Physical Theory* (3) Jehle
Fall—evening. Classical nonrelativistic and relativistic field theories. Prerequisite: Physics 101 and 105; Mathematics 132, 171. (Mathematics 171 may be taken concurrently.)

202 *Classical Physical Theory* (3) Jehle
Spring—evening. Dynamics of systems of particles and of rigid bodies, generalized coordinates. Prerequisite: Physics 101; Mathematics 112 or 132, 171.

203–4 *Principles of Modern Physics* (3–3)
Academic year—evening. A critical survey of fundamental topics of modern physics including the theory of relativity, thermal radiation and quantum theory, atomic structure and spectra, wave mechanics, interactions present in multielectron atoms, X ray, the nucleus, properties of matter in bulk.

218 *Solid State Physics* (3) Hobbs
Spring—evening. Tensor properties of crystals. Application of quantum mechanics to problems in solid state physics.

219–20 *Quantum Mechanics* (3–3) Jehle
Academic year—evening. Criticism of classical ideas of mechanics and a formulation of quantum mechanical equations; matrix mechanics and its relation to quantum mechanics; application to various problems of atomic, molecular, and nuclear physics. Prerequisite: Physics 113, 201, 202.

221 *Quantum Electrodynamics and Field Theories* (3) Jehle
1962–63 and alternate years: fall—evening. Variation principles. Relativistic wave equations, quantization of fields, interaction between fields. Scattering theory. S matrix and causality. Prerequisite: Physics 219–20.

222 *Elementary Particles* (3) Jehle
1962–63 and alternate years: spring—evening. Scalar, vector, spinor fields, and elementary particles. Symmetry properties and associated conservation laws. Space inversion and parity, time reflection, charge conjugation. Prerequisite: Physics 219–20.

227 *Irreversible Processes* (3) Yeandle
Spring—evening. Extension of thermodynamic concepts to irreversible processes. Discussion of thermodynamic forces and fluxes, and the Onsager reciprocal relations. Review of the statistical mechanical reasons for assuming the postulate of irreversible thermodynamics. Prerequisite: Physics 102, 114; Mathematics 132 or 112.

255–56 *Graduate Laboratory* (4–4) The Staff
First half: fall—day. *Second half:* not offered 1962–63. Individual work on special topics. One semester of this course is required of all Master's candidates in physics. Students electing this course may begin with Physics 255 or 256. Not open to undergraduates. Material fee, $11 a semester.

291–92 *Seminar: Recent Developments in Physics* (1–1) The Staff
Academic year: alternate weeks—Monday evening. Individual investigations of special problems. All students registered for a Master's degree in physics are expected to attend this seminar during residence for the degree, and to take part in its programs. Credit for participation in the seminar work is obtained by registering for this course during the last two semesters of residence; this credit, however, is based upon the seminar work during the entire period of residence.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged. Fees to be arranged.

PHYSIOLOGY*

Professors C. E. Leese, E. M. Renkin *(Chairman)*
Associate Professor F. P. J. Diecke
Assistant Professors Ruth McClintock, C. S. Tidball *(Research)*, Margret Westecker

Master of Arts or *Master of Science in the field of Physiology.*—Undergraduate work should include chemistry and physics. It should be supplemented by further courses in mathematics and science such as calculus, physical and organic chemistry.

* The Staff of Instruction here listed is for the academic year 1961–62.

Required: the general requirements, pages 43–45. In addition to the thesis, the thirty hours of required work should include Physiology 221 or 222, 232, and at least three semester hours of research (Physiology 295 or 296).

Doctor of Philosophy (Graduate Council).—See the pamphlet on the Graduate Council.

115 *Introduction to Human Physiology* (3) Leese

Fall—Tues. and Thurs. 8:45 to 10:00 A.M. Lectures on the fundamentals of physiology in its various subdivisions. Prerequisite: one year of general science or one semester of a biological science.

130 *Psycho-Physiology* (2) Leese

Spring—Tues. and Thurs., 5:10 P.M. Lectures on the genesis and expression of personality, with emphasis on the physiological approach. Prerequisite: Physiology 115 or the equivalent and general psychology.

137 *Vertebrate Physiology* (4) Tidball and Staff

Fall—lecture, Mon., Wed., Fri., 11:10 to 12:00 A.M.; laboratory, Fri., 1:10 to 5 P.M. Fundamental principles of physiology as exemplified in the vertebrates. Prerequisite: Chemistry 11–12 or the equivalent and Physics 11, 12 or the equivalent. Laboratory fee, $18.

170 *General Physiology* (3) Westecker

Spring—Tues. 11:10 to 12:00 A.M., Thurs. 10:10 to 12:00 A.M. Lectures on basic topics in the physiology of cells and tissues. Prerequisite: Physiology 137 and the consent of the instructor.

211–12 *Problems in Physiology* (arr.) Renkin and Staff

Academic year—as arranged. Directed study under the supervision of a staff member. Prerequisite: Physiology 137 or 232 and the consent of the instructor.

221–22 *Physiology Seminar* (1–1) The Staff

Academic year—Fri., 9:00 to 9:50 A.M. Prerequisite: Physiology 137 or 232 and a reading knowledge of French or German.

232 *Advanced Mammalian Physiology* (12) Diecke and Staff

Lecture 6 hours a week, laboratory 12 hours a week. Spring—as arranged. For non-medical graduate students.

249–50 *Introduction to Medical Research** (3–3) The Staff

Academic year—Wed., 1:00 to 6:00 P.M. Primarily for graduate students. A comprehensive introduction to the major medical research techniques—statistical, physical, chemical, electrical and radioisotopic—as applied to biological materials in the medical sciences. Laboratory fee, $7.50 a semester.

259 *Comparative Physiology* (3) Diecke

1964–65 and every third year. Lectures and seminars on topics of current interest in comparative physiology, with emphasis on nonmammalian forms. Prerequisite: Physiology 137 or 232 and the consent of the instructor.

265 *Physiology of Cell Membranes* (3) Renkin

1962–63 and every third year: fall—as arranged. Lectures and seminars on ionic and molecular transport through biological membranes. Prerequisite: Chemistry 111–12, Physics 181 or Physiology 232 and the consent of the instructor.

281 *Biophysics* (3) The Staff

1963–64 and every third year. Lectures and seminars on biological topics which require development along physical lines. Prerequisite: Chemistry 111–12 or Physics 102 and the consent of the instructor.

295–96 *Research* (arr.) The Staff

Academic year—as arranged.

299–300 *Thesis* (3–3) The Staff

* An interdepartmental course. The student should register in the department directing his research.

POLITICAL SCIENCE*

Professors W. R. West *(Emeritus)*, J. W. Brewer *(Chairman)*, W. H. Kraus
Professorial Lecturer F. M. Riddick
Associate Professors H. L. LeBlanc, Benjamin Nimer, H. R. Ludden
Associate Professorial Lecturers William Spencer, R. C. Bain, H. M. Bain
Lecturer C. H. Slayman, Jr.

Bachelor of Arts with a major in Political Science (Departmental).—Prerequisite: the Arts and Letters curriculum, page 32, including Political Science 9–10.
Required: in addition to the general requirements, pages 37–42, thirty semester hours from the following groups distributed as follows: twelve hours from Group A; six hours from group B; six hours from Group C; and six additional hours from any group or groups. The student will normally complete all six hours of any full-year course which he selects.
Group A: Political Science 111, 112, 117–18, 121–22. Group B: Political Science 171, 172, 181–82. Group C: Political Science 104, 125, 145, 146, 151–52. Group D: 105, 107, 113, 120, 141, 157–58, 177–78, 187–88, 191–92, 194.
Undergraduate students interested in preparing for graduate work in Public Administration will consult the Chairman of the Department of Political Science for modifications of the above requirements.
Bachelor of Arts with a major in Latin American Civilization (Field-of-Study).—See the Department of History, page 87.
Master of Arts in the field of Political Science.—Prerequisite: a Bachelor of Arts degree with a major in Political Science at this University (or the equivalent major elsewhere) with a *B* average (or better) in the major.
Required: the general requirements, pages 43–45. The thirty hours of required work must be approved in advance by the Adviser.
Master of Arts in the field of Latin American Civilization.—See the Department of History, page 87.
Doctor of Philosophy (Graduate Council).—See the pamphlet on the Graduate Council.
Bachelor of Arts and *Master of Arts in Government in the fields of International Affairs and Public Affairs (School of Government, Business, and International Affairs).*—See the General Catalogue.

First Group

9 *Introduction to Government*† (3) — The Staff
Fall—day; spring—evening; summer 1962. Basic principles and problems of political life: theories, forms, and processes of government in the United States and foreign countries. Attention is also given to international relations.

9–10 *Government of the United States*† (3–3) — The Staff
First half: fall—day and evening; spring—day; summer 1962. *Second half:* fall—day; spring—day and evening. *First half:* structure, powers, and operation of the Federal Government: Congress, the President, and the Supreme Court; elections, political parties, and pressure groups. *Second half:* state and local governments; civil rights; major functions of government at federal, state, and local levels.

Second Group†

104 *State and Local Governments* (3) — LeBlanc
Spring—day. State, municipal, and other local governmental forms, operations, and problems, with attention to policy formulation and administration, and to the forces of practical politics.

105 *The Governmental Process of the District of Columbia* (3) — LeBlanc
Not offered 1962–63. Legal structure and political problems of the District of Columbia including restrictions on home rule, Congressional relations, and group politics.

* The Staff of Instruction here listed is for the academic year 1961–62.
† Six hours of first-group Political Science courses are prerequisite to all second-group courses.

107 *Problems in Modern Political Thought* (3) Kraus
Summer 1962. Development of democratic political institutions and analysis of the main challenges to constitutional democracy in the 19th and 20th centuries.

111 *Introduction to Comparative Government and Politics* (3) Kraus
Fall—day; summer 1962. Government and politics of the principal constitutional democracies of Western Europe: Great Britain and France.

112 *Introduction to Comparative Government and Politics* (3) Kraus
Spring—day. Government and politics of the principal political systems of Central and Eastern Europe: Germany and the Soviet Union.

113 *Political Problems of the British Commonwealth of Nations* (3) Kraus
Not offered 1962–63. From Colonial Empire to modern Commonwealth: questions of equal partnership; governments and policies in the principal Commonwealth states; problems of new states in Asia and Africa.

117–18 *Political Theory: the Nature and Growth of Political Thought in the West* (3–3) Kraus
Academic year—evening. *First half:* from Classical Antiquity to the Middle Ages; the forging of the western political tradition. *Second half:* from the Renaissance and Reformation to recent times. Theoretical foundations of the modern state: morals and politics, sovereignty, absolutism, and resistance; liberalism, democracy, and conservatism.

120 *Foundations of American Democracy* (3) Brewer
1962–63 and alternate years: spring—day. Introduction to political thought in the United States from colonial times to the end of the Civil War period.

121–22 *The Constitution of the United States* (3–3) West
Academic year—evening. Judicial power of federal courts in constitutional interpretation. *First half:* emphasis on separation of powers, federal-state relationships, and taxation. *Second half:* emphasis on constitutional protection of civil rights.

125 *Legislative Organization* (3) Riddick
1963–64 and alternate years. A study of Congress: constitutional aspects, legal analysis of make-up, and political organization. Political and parliamentary procedures used in the preparation and enactment of legislation. Not open to students who have credit for former Political Science 124.

141 *The Development of Legal Institutions* (3) Brewer
1963–64 and alternate years. Introduction to historical jurisprudence: primary attention to the origins of the Roman Law of Continental Europe and of the Anglo-Saxon Common Law.

145 *Political Parties and Politics* (3) LeBlanc
Fall—evening; summer 1962. Organization and operations of political parties in the United States: major and minor parties, bosses and corruption, nominations and elections, influence on President and Congress.

146 *Political Pressures and Public Reactions* (3) Ludden
Spring—evening. Public opinion, special interest lobbies, and pressure groups as they operate on government to influence public policy.

151–52 *Public Administration* (3–3) LeBlanc
First half: fall—day; summer 1962. *Second half:* not offered 1962–63. Introductory survey of the theory and practice of governmental administration and its relation to politics, legislation, the courts, and nongovernmental organizations and interests.

157–58 *Current Problems in Domestic Politics* (1–1) Slayman
Academic year—evening. Analysis of outstanding contemporary issues in interna. American politics with discussion of problems and policies.

166 *Field Work in Government* (3) LeBlanc
Fall—as arranged; spring—as arranged. Practical training in the operation of the Federal Government, based on experience through assignment to selected government offices. Students will have an opportunity to observe and participate in government in the Washington area. Open only to students in the Public Affairs curriculum, School of Government, Business, and International Affairs.

171 *International Politics* (3) Ludden, Nimer
Fall—day and evening; summer 1962. Basic forces underlying the conduct of international relations and the formation of foreign policy; power politics, imperialism, collective security, and international cooperation.

172 *International Organization: the United Nations* (3) Ludden
Spring—day and evening; summer 1962. Development and current operation of international organization within the system of sovereign states with emphasis on the United Nations.

177 *Recent Trends in Latin American Politics and Government* (3) Davis
Fall—day. Types of government, recent developments, and current political conditions in each of the twenty Latin American republics.

178 *International Politics in the Western Hemisphere* (3) Davis
Spring—day. Political relations of the American Republics in the 19th and 20th centuries, the development of Pan Americanism and the Organization of American States.

181–82 *International Law* (3–3) Brewer
Academic year—day and evening; summer 1962—Political Science 181 (3). Survey of the public law of nations with emphasis on the law of peace. Neutrality and the so-called law of war receive attention in the second semester.

187–88 *Current Problems in International Politics* (1–1) Slayman
Academic year—evening. Analysis of outstanding contemporary international issues with discussion of problems and policies.

191 *Politics of the Middle East* (3) Nimer
Fall—day. Domestic and international politics of Turkey, Iran, Israel, and the Eastern Arab States and Principalities. Special attention to the specifically regional aspect of the foreign policies of these countries.

192 *Politics of North and Central Africa* (3) Nimer
Spring—day. Domestic and international politics of the Western Arab States, Ethiopia, Somalia, Liberia, and the newly independent states of former British, French, and Belgian Africa. Special attention to the specifically regional aspect of the foreign policies of these countries.

194 *Far Eastern Politics: Contemporary International Relations in the Pacific Area* (3)
Spring—evening. Background and development of the major states of East Asia with attention to the constitutional systems and the foreign politics of the region.

197 *Proseminar in International Affairs* (3) Nimer
Fall—evening; spring—day; summer 1962. Reading and discussion course for coordination and review. Primarily for seniors in the International Affairs major.

THIRD GROUP

205–6 *The Federal Executive* (3–3) R. C. Bain
Academic year—evening. *First half:* nomination and election of the U. S. President, his constitutional and political powers; the cabinet and the Executive Office of the President; the relation of the President to the executive and legislative branches of the government. *Second half:* the practical politics of the presidency, presidential policy leadership and control, the President as party head and as moulder of public opinion.

209–10 *Seminar: the Federal Government of the United States* (3–3)
1963–64 and alternate years. Advanced research emphasizing legislative problems of Congress and relations of Congress with the Administration.

212 *Seminar: Comparative Government and Politics* (3) Kraus
Spring—evening. Selected topics and problems on comparative political and administrative institutions and the politics of modern constitutional governments and dictatorships. Each semester is devoted to a selected country or significant institutional or policy problem. Attention will be directed to questions of method.

213 *Readings in Comparative Government and Politics* (3) Kraus
Fall—evening; summer 1962. Readings and group discussions on methodological questions, comparative political and administrative institutions with attention to legislatures, the changing role of the executive, political parties, constitutional and totalitarian approaches to public management and public service, the role of the military, etc.

217 *Seminar: Topics in Political Theory* (3) Kraus
Fall—evening. Research and discussion on problems of modern political and constitutional theory, theoretical aspects of representative government, democracy, socialism, and totalitarianism. Each semester is devoted to a separately announced topic, such as socialism and communism, theories of resistance and revolution, problems of democratic theory.

220 *Reading Course in Political Theory* (3) Kraus
Spring—evening. Readings and group discussions, principally on modern political and constitutional theory since the 17th and 18th centuries.

221–22 *Seminar: The Constitution of the United States* (3–3) West
1962–63 and alternate years: academic year—evening. Selected topics in the development of the law of the Constitution. Primary attention will be given to the development of "due process of law" in the courts.

235 *Metropolitan Problems* (3) H. M. Bain
Fall—evening. Growth of American cities and changing land use patterns in relation to internal transportation systems. The respective roles of the private automobile and of public transportation. The problems of financing and administering public transportation systems under public and private ownership.

245–46 *The American Political Process: Political Parties and Interest Groups* (3–3) LeBlanc
Academic year—evening. *First half:* readings and group discussions on the nature and functions of political parties and the role and techniques of political interest groups. *Second half:* seminar on selected topics of American politics requiring the use of basic research materials.

271–72 *Problems in International Politics and Organization* (3–3) Ludden
Academic year—day. A seminar to develop techniques of research in recent international affairs and to examine developments in international politics and organizations.

273 *Public Opinion and Foreign Policy* (3) Ludden
Fall—evening. Development, organization, and operation of international information programs by major world powers. Public opinion in the United States influencing the formation and conduct of foreign policy.

274 *Methods and Objectives of Foreign Policy* (3) Davis
Spring—evening. Examination of the objectives of foreign policies of the major powers, with attention to political, economic, and military methods used to pursue these objectives.

277 *Seminar: Latin American Government* (3)
Fall—evening; summer 1962. Analysis of the political structures of selected Latin American republics. Two comparable governments studied each year.

278 *Seminar: Latin American Political Philosophy* (3) Davis
Spring—evening. Research in political personalities and philosophies of 19th and 20th century Latin America.

279 *Reading Course in International Affairs* (3) ———
Fall—evening; summer 1962. Reading and discussion of basic materials designed to stimulate investigation of problems in the nature and development of international law, politics, and organization.

281–82 *Seminar: International Law and Relations* (3–3) Brewer
First half: fall—evening; summer 1962. *Second half:* not offered 1962–63. Research in the public law of nations, with special attention to problems of pacific settlement, sanctions, war, neutrality, and state jurisdiction, and to their political implications.

292 *International Politics and Government in the Middle East* (3) Nimer
Spring—evening. Research and analysis of the international relations and major political problems of the Arab world and adjacent areas.

293–94 *Seminar: International Politics and Government in the Pacific Area* (3–3) ———
Academic year—evening. Research and analysis of the major patterns of development in internal and international politics of the area, with advanced study of the governmental institutions of the Far East.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged; summer 1962.

Courses Offered in Special Programs

In addition to the regular courses announced above, the University offers political science courses listed below for students in the following special programs: Air Force Advanced Management Program, Army War College Program, National War College Program.

283 *Topics in International Law* (3) Brewer
A consideration of theory, problems, and cases in the public law of nations, including the law of peace and the law of war.

285 *Diplomacy Since World War II* (3) Jordan
Recent changes in diplomatic procedures and objectives as compared with those of earlier periods.

287 *American Military Policy* (3) Stanley
Examination of the nature of military policy and its relation to domestic and foreign policy, the historical element, organization within the military establishment for policy making.

297 *Directed Individual Readings in Political Science* (arr.) The Staff
Bibliography and associated conferences on selected topics for advanced students.

PSYCHOLOGY*

Professors Mitchell Dreese†, Thelma Hunt *(Chairman)*, D. C. Faith
Professorial Lecturers H. F. Hubbard, Margaret Ives, G. H. Mowbray
Associate Professors C. E. Tuthill, W. E. Caldwell, J. N. Mosel, R. D. Walk, Eva Johnson, C. W. Hill, Virginia Kirkbride, L. E. Schlesinger *(Research)*

*The Staff of Instruction here listed is for the academic year 1961–62.
†On leave of absence 1961–62.

Associate Professorial Lecturer J. G. Colmen
Assistant Professors R. E. Nolan, Lila Ghent *(Research)*, Jacqueline Goodnow *(Research)*
Lecturer C. J. Lindley
Associate Janet Johnson

Bachelor of Arts with a major in Psychology (Departmental).—Prerequisite: the Arts and Letters curriculum, page 32, including Psychology 1, and 4 or 22 or 29.

The general requirements for the degree are stated on pages 37–42. The sixty required semester hours must include twenty-seven hours in Psychology in addition to those taken as prerequisites, including Psychology 98, 118, 131, 151, 191, and 196; and Statistics 53 or 104.

Master of Arts* or *Master of Science in the field of Psychology.—Prerequisite: the degree of Bachelor of Arts with a major in Psychology at this University, or the equivalent. Required: the general requirements, pages 43–45. Of the twenty four required semester hours (exclusive of the thesis), a minimum of eighteen must be in third-group courses; a minimum of twelve must be in psychology including Psychology 201 and 202; twelve may be in related fields approved by the Department.

Master's programs are available in the following fields of concentration: (1) tests and measurements, (2) counseling and guidance, (3) clinical-abnormal, (4) social, (5) personnel, (6) experimental, (7) personality, and (8) experimental comparative. For detailed requirements consult the Chairman of the Department.

Doctor of Philosophy (Graduate Council).—See the pamphlet on the Graduate Council.

Master of Arts in Government or *Master of Business Administration in the field of Personnel Administration including options in Counseling and Psychometrics (School of Government, Business, and International Affairs).*—See the General Catalogue.

Master of Arts in Education in the fields of Employee Training and of Guidance (School of Education).—Prerequisite: a Bachelor's degree from an accredited institution and two years of successful teaching experience. See the School of Education Catalogue.

First Group

1 *General Psychology** (3) — The Staff
Fall—day and evening; spring—day and evening; summer 1962. The fundamental principles underlying human behavior.

4 *Psychology of Adjustment* (3) — The Staff
Fall—day and evening; spring—day and evening; summer 1962. Processes involved in the total adjustment of the individual with emphasis on social environment; development in the individual of adjustment techniques.

22 *Introduction to Educational Psychology* (3) — Dreese, Faith
Fall—evening; spring—day. Consideration of individual and group differences, adjustments, and the psychology of learning in relation to education and training.

29 *Child Psychology* (3) — Johnson
Fall—day; spring—evening; summer 1962. A genetic approach to the study of the child. Special emphasis is placed on the socialization process, learning, and the child's view of the world.

98 *Abnormal Psychology* (3) — Nolan, Hunt
Fall—day and evening; spring—day; summer 1962. The causes, diagnosis, treatment, and prevention of the various types of maladjustments and mental disorders. Prerequisite: 6 credits in psychology, or 3 credits in psychology and 6 credits in a biological science.

Second Group†

112 *Adolescent Psychology* (3) — Johnson
Fall—day. Psychological characteristics and problems peculiar to adolescence, with emphasis on applications of psychology to solution of such problems.

* Psychology 1 is prerequisite to all other courses in Psychology.
† Six credits in first-group courses are prerequisite to all second-group courses.

115 *Psychology and Language and Communication* (3) Mosél
Fall—day. An introduction to psycholinguistics and verbal behavior. Information theory, the measurement of meaning, cultural and linguistic structures in the perception and learning of language.

118 *Physiological Psychology* (3) Hill
Fall—evening; spring—day; summer 1962. Structure, function, and phylogeny of receptors, nervous system, and effectors as mediators of behavior, including drives, learning, and emotions.

121 *Educational Psychology* (3)
Spring—evening. Advanced course in educational psychology. Designed for those with background in education and psychology.

129 *Introduction to Counseling and Guidance* (3) Dreese
Fall—evening; summer 1962. A survey of the basic principles, techniques, and procedures as applied to vocational, educational, and personal counseling.

131 *Psychological Tests* (3) Hunt
Fall—evening; spring—day; summer 1962. A survey of psychological tests and their more common uses in business, industry, government, law, medicine, and education. Material fee, $7.

141 *Leadership, Group Behavior, and Student Life* (3) Faith
Fall—day. A survey of the foundations of leadership, of the factors which underlie effective participation in group activities, and of the interrelations between the student and his university.

144 *Personnel Psychology* (3) Hubbard, Mosél
Fall—evening; spring—evening. Psychological concepts and techniques in personnel management and supervision. Applications to government, industry, and military organizations.

146 *Interpersonal Relations* (3) Schlesinger
Fall—day. The psychosocial processes involved in social interaction. The perception of other persons, social communication, small group processes, group problem-solving and change.

148 *Psychology of Advertising and Consumer Behavior* (3) Mosél
1963–64 and alternate years. The motivational and social processes in economic behavior. Consideration of current techniques and findings in motivational research. Evaluation of the effectiveness of mass media, public relations programs, and strategies of persuasion.

151 *Social Psychology* (3) Tuthill
Fall—evening; spring—day; summer 1962. The social foundations of attitudes and behavior. Individual adjustment to group situations, such as the family, school, fraternity, and occupation. The psychological basis of race prejudice, nationalism, and war.

156 *Psychology of Propaganda and Public Opinion* (3) Tuthill
Spring—evening; summer 1962. The psychology of opinion formation, the measurement of opinion, the social determinants of attitudes, the psychological processes in propaganda, the bases of receptivity of propaganda, psychological warfare.

161 *Comparative Psychology* (3) Caldwell
Spring—day. A lecture course in animal psychology. Covers psychological processes in infrahuman organisms, evolution of behavior, the place of animal experimentation and research in psychology.

162 *Experimental Comparative Psychology* (3) Caldwell
Fall—as arranged; spring—as arranged. Opportunity for individual psychological experimentation using lower animals as subjects. Offered on independent study plan. Prerequisite: Psychology 161 and permission of the instructor.

191 *Experimental Psychology* (3) Hill, Walk
Fall—day and evening; spring—day and evening. The application of experimental methods to various psychological problems. Prerequisite: 6 credits in psychology and an elementary course in statistics. Material fee, $10.

192 *Problems in Experimental Psychology* (3) Hill, Walk
Fall—as arranged; spring—as arranged. Opportunity for work on individual experimental projects. Prerequisite: Psychology 191 and permission of the instructor.

193–94 *Readings in Psychology* (3–3) The Staff
Academic year—as arranged; summer 1962—Psychology 193 (3). Supervised readings on specific topics in psychology, with conferences, for undergraduate majors. Open only to seniors with 18 or more credits in psychology with a quality-point index of 3.00 or higher. Admission by special permission of the instructor.

196 *History and Systems of Psychology* (3) Caldwell
Fall—day; spring—evening; summer 1962. A survey of the contemporary schools of psychology. Prerequisite: 12 credits in psychology.

Third Group*

201 *Seminar: Advanced General Psychology* (3) Hill
Fall—day; spring—evening. General review of the field for graduate students with an intensive study of selected problems. Required in all graduate programs.

202 *Psychological Research Methods and Procedures* (3) Walk
Fall—evening; spring—day; summer 1962. Required in all graduate programs. Prerequisites: Experimental Psychology and an elementary course in statistics.

207–8 *Readings in Psychology for Graduate Students* (3–3) The Staff
Academic year—as arranged; summer 1962—Psychology 207 (3). Supervised readings with conferences on specified topics in psychology. Open only to students who have had course work in the field of the readings.

209 *Seminar: Psychology of Motivation* (3) Caldwell
Fall—evening. A consideration of various theoretical approaches to the psychology of motivation and systematic concepts and experimental findings deriving from each approach.

212 *Personality Evaluation by Projective Techniques* (3) Nolan, Ives
Fall—day; spring—evening. Primary emphasis upon administration and scoring of the Rorschach Test. Prerequisite: Psychology 233.

213 *Clinical Psychometrics* (3) Ives
Spring—evening. A study of the clinical applications of nonprojective tests. Prerequisite: Psychology 233.

215 *Advanced Study of Projective Techniques* (3) Nolan, Ives
Fall—evening; spring—day. Primary emphasis upon interpretation of the Rorschach Test. Prerequisite: Psychology 212.

217 *Seminar: Developmental Psychology* (3) Ghent
Spring—day.

218 *Seminar: Clinical Psychology—Psychopathology* (3) Nolan
Fall—evening; summer 1962. Covers basic etiological factors in behavioral and psychological deviations and disorders.

219 *Seminar: Clinical Psychology—Psychotherapy* (3) Nolan
Spring—day. Covers theoretical principles underlying psychotherapy, techniques and procedures, and problems of evaluation.

* Open only to graduate students, except by special permission of Instructor and Chairman of the Department.

220 *Seminar: Abnormal Psychology* (3) Hunt
Fall—day; spring—evening. An intensive study of selected problems in the field of abnormal psychology.

223 *Seminar: Learning* (3) Walk
Fall—day. Covers research and theory in the psychology of learning.

225 *Seminar: Mental Hygiene* (3) Lindley
Fall—evening; spring—day. A study of mental health problems with special attention to needs of counselors.

226 *Seminar: Clinical Psychology of Childhood and Adolescence* (3) Johnson
Spring—evening. A survey of behavior and personality disorders.

227 *Seminar: Counseling and Guidance* (3) Dreese
Spring—evening. Recent developments and current problems in vocational, educational, and personal guidance in various types of agencies with particular reference to education. Prerequisite: educational or psychological measurements and Psychology 129 or the equivalent.

228 *Seminar: Techniques of Counseling* (3) Dreese
Fall—evening; spring—evening; summer 1962. An intensive study of the educational and psychological processes involved in counseling interviews. Specific types of vocational, educational, and personal counseling problems will be discussed. Prerequisite: 12 semester hours in testing and guidance, including Psychology 229 and 236. In exceptional cases Psychology 229 or 236 may be taken concurrently with 228.

229 *Seminar: Occupational and Educational Information* (3) ————, Faith
Fall—evening; spring—evening. Designed to acquaint vocational and educational counselors with the basic occupational and educational information necessary in counseling. Sources of data and techniques of collecting, analyzing, and disseminating for purposes of guidance.

231 *Test Construction* (3) Mosél
Fall—evening. The principles underlying test construction: statistical techniques in the construction, evaluation, and standardization of psychological, educational, and vocational tests. Prerequisite: a course in tests and measurements and an elementary course in statistics.

233 *Individual Psychological Testing* (3) Johnson
Fall—day; spring—day. Instruction and practice in giving of the Binet and Wechsler tests. Prerequisite: an elementary course in tests and measurements. Material fee, $7.

234 *Seminar: Test Theory* (3) Mosél
1962–63 and alternate years: fall—evening. Development of the axiomatic-deductive theory underlying the major notions in the construction, evaluation, and application of psychological tests.

235 *Seminar: Psychological Measurement* (3) Hunt
Spring—evening. Advanced instruction in the use and interpretation of psychological tests, with emphasis upon group tests; survey of recent research in psychological measurement. Prerequisite: a course in psychological or educational measurement.

236 *Seminar: Analysis of the Individual for Purposes of Counseling* (3) Faith, ————
Fall—evening; spring—evening; summer 1962. A detailed study of individual analysis techniques with practice in handling such methods. Prerequisite: an introductory course in educational or psychological measurements.

244 *Seminar: Job Analysis and Evaluation* (3) Mosél
Summer 1962.

245 *Seminar: Employee Motivation and Morale* (3) Mosél
Spring—evening. An analysis of organizational behavior, especially with regard to motivation and productivity. The implications of recent research on employee attitudes, the primary group, the effects of various patterns of supervisory leadership, the role of formal and informal organization, and job design.

246 *Seminar: Personnel Measurement Techniques* (3) Mosél
Fall—evening. Detailed consideration of the techniques of personnel selection and performance evaluation. The use of employment tests, personal data, assessment interviews, and performance ratings.

249 *Seminar: Human Engineering* (3) Mowbray
Fall—evening. Application of findings and methods of experimental psychology to design and operation of equipment and man-machine systems. Relation of capacities of the operator to information display systems, control mechanisms, work environment, and work methods.

251 *Seminar: Advanced Social Psychology* (3) Tuthill
Fall—evening. Current research and theory in social psychology; group dynamics, ego-involvements, action research, and social interaction theory.

254 *Seminar: Group Dynamics* (3) Tuthill
1963–64 and alternate years. The experimental study of small groups; autocratic and democratic group climates; interaction process analysis; Lewin's field-theoretical approach to individual and group processes.

255 *Seminar: Techniques of Opinion and Attitude Measurements* (3) Tuthill
1962–63 and alternate years: spring—evening. Methods of attitude measurement (interviews, questionnaires, scales, polls) as currently used by private and governmental investigators. The place of attitude studies in schools, industry, government, etc.

258 *Applied Social Psychology* (3) Mosél
Spring—evening. The development of personality, personality adjustment, nature of communication and interaction; structure and functioning of groups, group dynamics, opinion and attitude formation, and opinion and attitude measurement. Classroom activity supplemented by practical observations and projects. Open only to graduate students in hospital administration, engineering administration, and other graduate administrative programs.

261 *Seminar: International Communication* (3) Mosél
1963–64 and alternate years. The communication process, problems in mass communication, measuring and modifying opinions and attitudes, principles of persuasion, psychological warfare.

262 *Dynamics of Social Change* (3) Lippitt
Spring—evening. Current research and theory related to the process of social change. Basic principles of planned change will be explored in connection with individual, group, organization, community, and cultural change. Human factors in the change process will be emphasized.

264 *Sensitivity Training: Human Relations Laboratory Course* (3) Lippitt
Fall—evening; spring—evening. A sensitivity learning experience in human relations. The course is built around an unstructured group experience with opportunities for individual feedback, experimentation, and practice. The goal of the course is the development of self insight, situational sensitivity, and diagnostic skills in human relations. Prerequisite: 9 semester hours in psychology or sociology.

265 *Theory and Design in Human Relations Training* (3) Lippitt
Fall—day. Designed for those interested or involved in conducting human relations training. Theories of learning are reviewed. The laboratory approach to human relations training is explored in depth. Practice in designing, developing training skills, and evaluation of training are covered. Prerequisite: Psychology 264 or a human relations laboratory learning experience.

267 *Theories of Organization* (3) Schlesinger
Spring—day. Theory and research in formal organizations. Classical, human relations, and information processing theories of organizations. The effects of organizational design on communication processes, leadership, decision-making, intertroup relations, small group formation, status hierarchies, productivity, motivation, and morale. Open to graduate students in psychology and graduate administrative programs.

272 *Seminar: Theories of Personality* (3) Caldwell
Fall—evening. A survey of the various theories of personality, with emphasis upon theoretical problems and methodology in the field of personality study.

281–82 *Practicum in Counseling* (3–3) The Staff
Academic year—as arranged; summer 1962—Psychology 281 (3). Supervised practical instruction in agencies doing counseling. Prerequisite: graduate work in counseling. Admission by permission of the Chairman of the Department.

283–84 *Practicum in Clinical Psychology* (3–3) Nolan
Academic year—as arranged; summer 1962—Psychology 283 (3). Supervised practical instruction in agencies doing clinical psychological work. Prerequisite: Psychology 212 and 233. Admission by permission of the Chairman of the Department.

289–90 *Seminar: Current Research and Theory in Psychology* (3–3) ———
Academic year—evening; summer 1962—Psychology 289 (3). A review and discussion of contemporary research and theory in some advanced and specialized field of psychological study, by leaders in the field. The specific topic and instructor for each semester will be announced in advance of the beginning of the semester.

292 *Seminar: Perception* (3) Walk
Spring—evening. Study of current research and theory in the experimental psychology of perception.

295–96 *Research in Psychology* (arr.) The Staff
Academic year—as arranged; summer 1962. Individual research by student, carried out under supervision of staff member.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged; summer 1962.

Course Offered in Special Program

In addition to the regular courses announced above the University offers the following course, which is available only to students enrolled in the Engineering Administration program.

145 *Principles of Human Relations* (3) Schlesinger
Fall—evening; spring—evening; summer 1962.

RELIGION*

Professors J. R. Sizoo, C. E. Olmstead *(Chairman)*
Professorial Lecturers T. A. Stone, R. E. McNally
Associate Professor R. G. Jones
Associate Professorial Lecturer C. D. Kean
Lecturers A. B. Seidman, E. W. Seaman

*The Staff of Instruction here listed is for the academic year 1961–62.

Bachelor of Arts with a major in Religion (Departmental).—Prerequisite: the Arts and Letters curriculum, page 32, including Religion 9, 10, and 59–60. Required: the general requirements, pages 37–42, including a minimum of eighteen semester hours in religion beyond first-group courses.

Master of Arts in the field of Religion.—Prerequisite: an undergraduate major in Religion at this University or the equivalent.

Required: the general requirements, pages 43–45. Of the twenty-four semester hours of required courses (exclusive of the thesis), at least twelve must be in third group religion courses; a maximum of nine may be in a closely related field outside the Department of Religion as approved by the Department.

Master of Arts in the field of Religious Education.—Prerequisite: an undergraduate major in Religion at this University or the equivalent; the following specific courses or the equivalent: Education 108; Psychology 1, 22, and 29; Sociology and Anthropology 1; Speech 1 or 11.

Required: the general requirements, pages 43–45. Of the twenty-four semester hours of required courses (exclusive of the thesis), at least six must be in third-group religion courses; a maximum of twelve may be in a closely related field outside the Department of Religion as approved by the Department.

Doctor of Philosophy in the field of the History of Religion in the United States (Graduate Council).—See the pamphlet on the Graduate Council.

First Group

9 *The Old Testament* (3) Jones and Staff

Fall—day and evening; summer 1962. A historical and literary approach to the study of the books of the Old Testament with special consideration given to the development of religious ideas, institutions, and outstanding personalities.

10 *The New Testament* (3) Jones and Staff

Spring—day and evening; summer 1962. A study of the literature of the New Testament from the standpoint of occasion, purpose, dominant ideas, and permanent values. Special emphasis on the approach, the structure, and the significance of the Gospels and Epistles.

59–60 *History of Religion* (3–3) Olmstead and Staff

First half: fall—day and evening. *Second half:* spring—day and evening; summer 1962. *First half:* primitive and ancient national religions; Confucianism, Taoism, Buddhism, Hinduism, and Shintoism—their historical setting, founders, and development of religious thought and culture. *Second half:* Judaism, Christianity, and Islam—analysis of their origin, evolution, and contemporary status.

Second Group

103 *The Prophets, Their Times and Their Message* (3) Jones

Fall—day. The development of prophetism in the Old Testament; cultural, economic, psychological, and religious factors in the movement; elements of lasting value in the prophetic teaching. A few of the prophets will be selected for particular study.

104 *The Life and Thought of Jesus* (3) Kean

Spring—day. A comprehensive study of the life and teachings of Jesus as they relate to problems of belief, standards of value, and patterns of life; the significance of the message of Jesus for our own times.

105 *The Life and Thought of Paul* (3) Kean

Fall—evening. Greek and Hebrew backgrounds of early Christianity, the Roman world of the first century, religious and social conditions affecting the spread of Christianity, the life and journeys of Paul, Paul's teaching and presentation of the Christian faith, the place of the Pauline epistles in the New Testament.

121 *Problems of Western Religious Thought* (3) Olmstead

Fall—day. The nature of religious truth and experience; the existence, character, and activity of God; the predicament of modern man; the problem of evil and suffering; eternal life; science and religion; the meaning of worship; religious views of history.

122 *Christian Ethics and Modern Society* (3) Jones
Spring—day. The nature and principles of the Christian life as developed by the Christian community; problems of personal conduct; the application of the Christian standard to family, social, and economic institutions.

131 *History of Christianity to the Reformation* (3) Olmstead, McNally
Fall—day. The rise and expansion of Christianity, the development of Christian thought, the evolution of church organization and worship, the Renaissance and pre-Reformation dissent.

132 *History of Modern Christianity* (3) Olmstead, McNally
Spring—day. The origin and development of Protestantism; the Roman Catholic revival; the status of the Eastern churches; doctrines, worship, expansion, church and state, and relation to modern thought and life.

135 *History of Judaism to the Talmud* (3) Seaman
Fall—day. A study of the history and religious thought of the Jewish people from the Maccabean revolt to the compilation of the Talmud.

136 *History of Medieval and Modern Judaism* (3) Seaman
Spring—day. A study of the history and religious thought of the Jewish people from the compilation of the Talmud to the present.

141–42 *Religious Education* (3–3) Stone
Not offered 1962–63. Principles and practices of religious education in the home, church, and community; basic educational procedures and special techniques; organization and administration of religious education.

172 *Religion in American Culture* (3) Olmstead
Spring—evening; summer 1962. Growth of religious bodies and institutions in American culture, the heritage of religious freedom and diversity, religion and literature, revivalism and education, science and religious thought, divisions and cooperative movements in religion.

Third Group

209–10 *Seminar in Biblical Literature* (3–3) Jones
Academic year—evening. Study of the main problems of Biblical literary and historical criticism.

211–12 *Seminar in Biblical Thought* (3–3) Jones
Not offered 1962–63. Study of the Biblical interpretation of history and reality and its relation to Biblical beliefs about God, man, and the world.

231–32 *Seminar in Early and Medieval Christianity* (3–3) Olmstead, Jones
Academic year—evening. An advanced study of the development of Christian thought from primitive beginnings to the Reformation.

234 *Seminar in Modern Religious Thought* (3) Olmstead
Not offered 1962–63. Analysis of developments in western religious thought from the 18th century to the present.

241–42 *Seminar in Religious Education* (3–3)
Not offered 1962–63. Advanced course dealing with some of the major problems in the practice of religious education.

271 *Seminar in American Religious History to 1830* (3) Olmstead

ROMANCE LANGUAGES AND LITERATURES*

Professors A. T. Deibert *(Emeritus)*, G. E. McSpadden, L. A. Vignéras
Associate Professors Rafael Supervía, J. W. Robb, W. G. Clubb *(Chairman)*, C. Y. Meade, G. E. Mazzeo
Assistant Professors J. L. Metivier, Jr., Carlos Lozano, J. A. Frey
Instructors Elizabeth Neyman, Gérard Huvé, Eulogia Llansa
Language Workshops Supervisor R. T. Tyser

Courses are generally conducted in the language concerned. For General Courses in Romance Languages and Literatures (French, Italian, Portuguese, Spanish) see pages 126–27.

Bachelor of Arts with majors in (1) *French Language and Literature*, (2) *Spanish-American Literature*, and (3) *Spanish Language and Literature (Field-of-Study).*—Prerequisite: the Arts and Letters curriculum, page 32.

Required: the general requirements, pages 37–42 and the grade "pass" on the major examination at the end of the senior year. The coordinated field of knowledge upon which the student will be examined includes the political, social, and cultural backgrounds of the literature studied; the writers and their works. Proficiency in the spoken and written language is required. Majors in Romance Languages are strongly advised to study Latin, a knowledge of which is generally required for graduate work. The Department provides a proseminar in each of the major fields intended to assist the student in his preparation for the major examination.

Master of Arts in the fields of (1) *French Language and Literature*, (2) *Spanish American Literature*, and (3) *Spanish Language and Literature.*—Prerequisite: the degree of Bachelor of Arts in the appropriate field from this University, or the equivalent.

Required: the general requirements, pages 43–45. The thirty hours of required work must include a thesis, for which six hours of credit are allotted. The remainder of the program is arranged in consultation with the student's major adviser.

Doctor of Philosophy (Graduate Council).—See the pamphlet on the Graduate Council.

Bachelor of Arts in Education with teaching fields in French and in Spanish (School of Education).—Prerequisite: the Education curriculum, page 34.

Required: the French option or the Spanish option and the professional courses listed in the School of Education Catalogue.

* The Staff of Instruction here listed is for the academic year 1961–62.

1963–64 and alternate years. Principles common to communities throughout the world: social interaction and social disorganization, population growth and community structure, spatial organization, community change.

* The Staff of Instruction here listed is for the academic year 1961–62.
† Sociology and Anthropology 1 or 51 is prerequisite to all other courses in Sociology and Anthropology.

131 *Social Institutions* (3)
1963–64 and alternate years. Functional analysis of basic social institutions: family, education, religion, economy, and state in the structure of American society.

132 *Courtship and Marriage* (3) Stephens
1963–64 and alternate years. Dating and courtship as social processes, reasons for marriage, marriage laws, mate selection, factors in marital adjustment; prediction and counseling.

133 *The Family in Modern Society* (3) Baum
1963–64 and alternate years. Historical development of the family as a social institution, parent child relations, family problems, disorganization and divorce, and family reorganization.

134 *Sociology of Child Development* (3) Stephens
1963–64 and alternate years. Socialization of the child through the home and other social institutions; the changing status of childhood, dependent and handicapped children.

135 *Juvenile Delinquency* (3) Wickey
1962–63 and alternate years: fall—day. Factors producing delinquency, juvenile detention, the juvenile court, training schools, treatment of offenders.

136 *Criminology* (3)
1963–64 and alternate years. Nature and distribution of crime, police and court systems, prisons and reformatories; treatment and prevention of crime.

141 *Population Problems* (3) Baum
1962–63 and alternate years: fall—day. Composition of populations, trends in population growth and population pressure, factors producing population movements, effects of migration, population policies: eugenics and birth control.

142 *Race and Culture Configurations* (3) Gallagher
Spring—day. The biological background; the origin and races of mankind, and the social and cultural effects of concepts of race.

143 *Language and Culture* (3) Gallagher
Summer 1962. The nature and significance of human communication, the distribution and dynamics of languages, linguistic changes, the role of language in culture.

144 *Mass Communications* (3) Baum
1963–64 and alternate years. The communications process; barriers to communication; structure and function of communication in society; content, control, support, and effects of mass communication.

151 *Human Relations in Industry* (3) Stephens
1963–64 and alternate years. Sociological analysis of work situations, occupational mobility, development of the labor movement, industrial leadership and morale.

152 *Dynamics of Culture* (3) Campbell
1962–63 and alternate years: spring—evening. Factors and processes making for stability and change in cultures; "the nature and characteristics of cultural growth invention, diffusion, and acculturation"; the integration and disintegration of cultures.

153 *Culture and Personality* (3) Gallagher
Fall—evening. Influences of group membership and cultural conditions on personality; socio-cultural factors in mental health; the relationship of personality to class, caste, and occupation.

155 *Applied Anthropology* (3) Gallagher
1962–63 and alternate years: fall—day. The application of anthropological methods and techniques in the modern world. The use of applied anthropology in specific fields, including government, business, law, and medicine.

161 *Social Stratification: Class and Status* (3) Stephens
1962–63 and alternate years: fall—day. Nature of class structure patterns of status, prestige relations in American society, differential class behavior, analysis of comparative social structure and social mobility.

162 *Social Movements* (3) Stephens
1962–63 and alternate years: spring—day; summer 1962. Major contemporary movements examined as aspects of social change and collective behavior. Designed to disclose competing ideologies and show the way social movements develop.

164 *Social Control* (3)
1963–64 and alternate years. Informal and formal phases of human control, analysis of methods of control used in modern society and the situations in which they occur, policies and techniques of control.

172 *Contemporary Social Theory* (3) Stephens
Spring—evening. Systematic study of the important schools of contemporary sociology, including recent European as well as American developments; an evaluation of the scientific contributions of each school.

181 *Methods of Social Research* (3) Stephens
Fall—evening. Analysis of social research techniques and the scientific method; application to social data of the case study, social survey, statistical, sociometric, and experimental methods.

Third Group

221 *Seminar: Current Trends in Sociology* (3) Geisert
1962–63 and alternate years: fall—evening. Analysis and evaluation of recent developments in sociology and an appraisal of the role of systematic theory in sociology.

222 *Seminar: Anthropological Theory* (3) Gallagher
1962–63 and alternate years: spring—evening. Analysis of the theoretical postulates and assumptions underlying the development of modern cultural and social anthropology.

223 *Cultural Origins of the Western Hemisphere* (3)
1963–64 and alternate years. An examination of the problems of the nature and time of Early Man's entry to the Americas; the development of Paleo Indian societies, stressing their varied cultural adjustments to diverse environments.

224 *Anthropological Methods* (3)
1963–64 and alternate years. Traditional approaches to library and field research in linguistics, archeology, and ethnography; conceptual bases and bias in the delineation of problems, in the selection, analysis and organization of data, and in the preparation of the final report.

225 *Seminar: Small Groups* (3)
1963–64 and alternate years. General characteristics of small groups and their measurement; sociography of groups, evaluation of small group theory and sociometry; other techniques of small group research.

226 *Problems of Underdeveloped Areas* (3)
1963–64 and alternate years. Characteristics and problems of underdeveloped areas; the interrelationship of demographic, economic, social, and cultural factors; measures and techniques to introduce cultural changes.

227 *Religious Beliefs of Preliterate Peoples* (3) Campbell
1962–63 and alternate years: fall—evening. Conceptions of the supernatural in nonliterate societies. An examination of religious beliefs and practices; the interrelatedness of religion, magic, and philosophy.

228 *Criminal Behavior: Research and Theory* (3) Geisert
1962–63 and alternate years: spring—evening. A re-evaluation of theories of criminal and deviant behavior based on recent research findings; implications for the correction and prevention of criminal behavior.

295–96 *Research* (arr.) — The Staff
Academic year—as arranged; summer 1962.

299–300 *Thesis* (3–3) — The Staff
Academic year—as arranged: summer 1962.

SPEECH*

Professors L. P. Leggette *(Chairman)*, C. W. Pettit *(Director of Speech Clinic)*, G. F. Henigan, Jr., E. L. Stevens
Professorial Lecturer Zelda Fichandler
Associate Professor Lee Bielski
Associate Professorial Lecturers F. C. Strickland, Zelda Kosh
Lecturers Edith Surrey, A. A. Nilles, S. L. Berlinsky, Isabel Burger, R. E. Shutte, H. C. Krebs, L. W. Shollenberger
Associates Joan Regnell, Lois Richards, Marjorie Prussing

Bachelor of Arts with a major in Speech (Departmental).—Prerequisite: the Arts and Letters curriculum, page 32, including Speech 1, 2, 11, 32.

Required: the general requirements, see pages 37–42, including the passing of a speech proficiency test early in the program; Speech 101, 121, 154, 171; and a minimum of twelve additional hours in second-group courses in the speech arts or speech science, as approved by the adviser.

Bachelor of Arts with a major in Dramatic Art (Departmental).—Prerequisite: the Arts and Letters curriculum, page 32, including twelve hours in the basic courses in speech and six hours in English 51–52, 71–72, or 91–92.

Required: the general requirements, pages 37–42, including the passing of a speech proficiency test early in the program. Speech 101–2, a minimum of nine additional hours in theater arts in the Speech Department and nine hours in dramatic literature in the English Department, as approved by the adviser.

Master of Arts in the field of Speech Correction.—Prerequisite: the degree of Bachelor of Arts with a major in Speech from this University, or the equivalent.

Required: the general requirements, pages 43–45.

Master of Fine Arts in the field of Dramatic Art.—Prerequisite: the degree of Bachelor of Arts from this University, or the equivalent.

Required: the general requirements, see pages 43–45, twelve hours of second- and third-group courses in drama and dramatic literature offered on campus, and twelve hours in theatre offered at the Arena Stage.

Four semesters in residence are required to complete this program. For detailed information, consult the Chairman of the Department.

Bachelor of Arts in Education with a teaching field in Speech (School of Education).—page 34.

Required: the Speech option and the professional courses listed in the School of Education Catalogue.

First Group

A *Speech Clinic* — Pettit, Bielski
Academic year—as arranged; summer 1962. Individual or group lessons, without academic credit, for such speech difficulties as lisping, cleft palate, articulatory problems, and stuttering. Fee: for individual lesson, $7; for group lesson, $4.

B *American Speech for Foreign Students* (3) — Bielski
Fall—day and evening; spring—day and evening; summer 1962. Class limited to foreign-born students. Instruction in the formation of the sounds of spoken English, with emphasis on rhythm and inflection. The International Phonetic Alphabet is used. Recording fee, $5.

* The Staff of Instruction here listed is for the academic year 1961–62.

1 *Effective Speaking* (3) — Leggette and Staff
Fall—day and evening; spring—day and evening; summer 1962. Preparation and delivery of extempore speeches, developing confidence and poise, body and voice control; selecting and organizing material. Recording fee, $2.

2 *Persuasive Speaking* (3) — Henigan and Staff
Fall—day; spring—day and evening. A continuation of Speech 1, which is prerequisite, with emphasis on speech composition and elementary principles of persuasion.

11 *Voice and Diction* (3) — The Staff
Fall—day and evening; spring—day and evening; summer 1962. Developing ease, naturalness, and clarity in the speaking voice. Analysis of individual voices through recordings. Phonetic approach to the study of the sounds of English, the standards of speech. Class instruction in the problems of rate, volume, pitch, and quality. Recording fee, $4.

32 *Oral Reading* (3) — Leggette and Staff
Fall—day; spring—day and evening; summer 1962. Reading to others, theory and practice in the problems of interpreting the printed page. Prerequisite: Speech 11. Recording fee, $2.

SECOND GROUP

101 *Voice and Phonetics* (3) — Bielski
Fall—day. The International Phonetic Alphabet and its applications to the student's own speech improvement; also its application to such fields as theater, public speaking, speech correction, radio, television, and foreign languages. Prerequisite: Speech 11. Recording fee, $4.

102 *Oral Interpretation of Literature* (3) — Leggette
Spring—day. Theory and practice in the problems of communicating meaning and emotion. Selections for study include poetry and prose. Prerequisite: Speech 32. Recording fee, $2.

111 *Effective Speech Communication* (3) — Bielski
Not offered 1962–63. The tools and principles of effective speech communication, including practice in the organization, delivery, and the evaluation of presentations commonly encountered by professional personnel. Not open to speech majors.

121 *Group Discussion and Conference Leadership* (3) — Stevens
Fall—day; spring—evening; summer 1962. The process of thinking and problem solving in committees and small groups, and the methods of leading discussions and conferences. Prerequisite: 6 hours of speech or the permission of the instructor.

126 *Public Discussion and Debate* (3) — Henigan
Spring—day. Principles and types of public discussion and debate; practice in argumentative speaking on questions of current interest. Prerequisite: 6 hours of speech or the permission of the instructor.

127–28 *Advanced Debate Practice* (1–1) — Henigan
Academic year—as arranged. Admission by permission of the instructor, after one semester of satisfactory participation in the intercollegiate debate program. This course may be repeated for a total of 4 semester hours.

133–34 *Radio and TV Broadcasting* (3–3) — Shollenberger
Academic year—evening. A study of the development of the radio and TV industries, station organization and management, equipment, production techniques; practice in the preparation and performance of radio programs. Recording fee, $5 a semester.

141 *Public Speaking: Advanced Forms* (3) — Henigan
Spring—day. The preparation and presentation of speeches for formal occasions with emphasis on the psychology of the audience. Prerequisite: 6 semester hours of speech.

145 *Speech Criticism* (3) Henigan
Not offered 1962–63. A study of rhetorical theory with application to the criticism of representative American and British oratory. Admission by permission of the instructor.

153 *Acting* (3) Strickland
Fall—evening. Study and practice in the fundamentals of acting technique. Prerequisite: Speech 32. Laboratory fee, $5.

154 *Play Production* (3) Strickland
Spring—evening. Fundamentals of play production. Under the supervision of the instructor, students prepare one-act plays for presentation. Laboratory fee, $5.

155–56 *Play Production Practice* (1–1) The Staff
Academic year—as arranged. Practical work in theater.

166 *History of the Theater* (3) Nilles
Spring—evening. A general survey of the rise of the theater, the Classical, Medieval, Renaissance, later English and Continental, and the Modern theater.

169 *Creative Dramatics* (3) Prussing
Fall—evening. A study of creative dramatics and its use as a learning tool.

170 *Children's Theater* (3) Burger
Spring—evening. Theory and practice in creating and producing plays for children.

171 *Introduction to Speech Correction* (3) Pettit
Fall—evening. A survey of the disorders of speech, including symptomatology, testing, causation, and therapy.

173–74 *Speech Therapy* (3–3) Bielski
Academic year—day. Clinical techniques and procedures involved in the correction of the disorders of speech. Prerequisite: Speech 101 and 171.

176 *Speech Correction* (3) Pettit
Spring—evening. Advanced study of the disorders of speech. Prerequisite: Speech 171 and 173.

177–78 *Clinical Practice in Speech Therapy* (1–1) The Staff
Academic year—as arranged; summer 1962—Speech 177 (1). Supervised case work in remedial speech—the University Speech Clinic, Children's Hospital, District of Columbia Crippled Children's Society, and Public School system. Weekly meetings to discuss therapeutic techniques for the common speech problems. This course may be repeated for a total of 4 semester hours. Prerequisite: Speech 101, 171, 173, and permission of the instructor.

182 *Hearing Problems and the Testing of Hearing* (3) Shutts
Fall—evening. A study of the field of audiology with emphasis on the testing of hearing.

183–84 *Clinical Practice in Hearing Therapy* (1–1) The Staff
Academic year—as arranged; summer 1962—Speech 183 (1). Supervised case work with persons handicapped with hearing losses—the University Speech Clinic, the Washington Hearing Society, and Children's Hospital. This course may be repeated for a total of 3 semester hours. Prerequisite: Speech 182 and permission of the instructor.

THIRD GROUP

251 *Rehearsal and Performance* (3) Arena Stage Staff
Fall—as arranged; spring—as arranged. A course putting into practice the principles and techniques of acting through participation in play rehearsals and performances at the Arena Stage. Admission by audition or interview.

254 *Directing Problems* (3) — Arena Stage Staff
Fall—as arranged; spring—as arranged. Observation and participation in solving the problems involved in directing plays. Admission by interview.

255 *Techniques of Staging* (3) — Arena Stage Staff
Fall—as arranged; spring—as arranged. Application of theory and principles of scene design, costuming, lighting, make-up, and related stage techniques. Admission by interview.

263 *Theater Management* (3) — Arena Stage Staff
Fall—as arranged; spring—as arranged. Theory and practice in the psychology of handling the public: promotion, box office and house management. Admission by interview.

264 *Producing Problems* (3) — Arena Stage Staff
Fall—as arranged; spring—as arranged. Problems involved in producing community and professional theater. Admission by interview.

279 *Speech Science* (3) — Berlinsky
Fall—evening. The anatomy, physiology, physics, and psychology of speech production, with a survey of experimental work.

280 *Speech Pathology* (3) — Pettit
Summer 1962. An advanced study of the causes and symptoms of the major physiogenic and psychogenic disorders. Prerequisite: Speech 171 and 176.

284 *Speech Reading and Auditory Training* (3) — Shutts
Spring—evening. Theory and practice in speech reading and auditory training with an analysis of methods used for the instruction of hearing handicapped children and adults. Prerequisite: Speech 182.

286 *Seminar in Speech Pathology* (3) — Pettit
Spring—evening.

294 *Research in Dramatic Art* (ARR.) — The Staff
Spring—as arranged.

295–96 *Research in Speech and Hearing* (ARR.) — The Staff
Summer 1962—Speech 295 (ARR).

299–300 *Thesis* (3–3) — The Staff
Academic year—as arranged; summer 1962.

Courses Offered in Special Programs

In addition to the regular courses the University offers the following course, which is available to personnel in the U. S. Navy and Marine Corps.

111 *Effective Speech Communication* (3)

Related Courses in Other Departments

English 125, *Introduction to English Linguistics* (3)
English 135–36, *Shakespeare* (3–3)
English 175–76, *American Drama* (3–3)
English 183–84, *The English Drama* (3–3)
English 235–36, *Studies in Shakespeare and His Contemporaries* (3–3)
Education 134, *Student Teaching in Secondary Schools* (6–9)
Education 152, *Teaching Speech* (2 to 4)

STATISTICS*

Professors F. M. Weida *(Emeritus)*, E. H. Johnson, H. F. Bright *(Chairman)*
Professorial Lecturers Solomon Kullback, Samuel Greenhouse
Associate Professorial Lecturers Seymour Geisser, Morton Kupperman, Arnold Heyl
Assistant Professor R. E. Thomas
Lecturers S. J. Armore, Fred Frishman, H. F. Sieber, Jr., W. M. Wolman

Bachelor of Arts or *Bachelor of Science with a major in Mathematical Statistics (Field of Study).*—Prerequisite: the Arts and Letters or the Science curriculum, respectively, page 32, including Mathematics 23 or 30; Statistics 91.

Required: the general requirements, pages 37–42, including Mathematics 24; Statistics 117, 118, 155, 157–58, and six additional hours of second-group Statistics courses selected with the approval of the adviser; a minimum of twenty four semester hours of courses in other departments approved by the adviser as contributing to a well organized program; and the grade of "pass" on the major examination at the end of the senior year. For further details, consult the adviser.

Master of Arts or *Master of Science in the field of Mathematical Statistics.*—Prerequisite: a Bachelor of Arts or Bachelor of Science degree, respectively, with a major in Mathematical Statistics at this University, or the equivalent.

Required: the general requirements, pages 43–45, including a thesis in Statistics and at least twelve hours to be selected from approved third-group courses in Statistics. The remaining twelve hours must be selected in consultation with the adviser.

Doctor of Philosophy (Graduate Council).—See the pamphlet on the Graduate Council.

Bachelor of Business Administration or *Master of Business Administration with a major in Business and Economic Statistics (School of Government, Business, and International Affairs).*—See the general catalogue.

First Group†

51 *Introduction to Business and Economic Statistics* (3) The Staff
Lecture (2 hours), laboratory (2 hours). Fall—day and evening; spring—day and evening; summer 1962. Survey of elementary principles and procedures for presenting, analyzing, and interpreting statistical data: consideration of characteristic values; measures of variability, sampling processes, index numbers, time series analysis, and simple correlation. Prerequisite: one entrance unit in algebra. Laboratory fee, $9.

52 *Mathematics of Finance* (3) The Staff
Lecture (3 hours). Fall—day and evening; spring—day and evening. Interest and discount, annuities, valuation of stocks and bonds, sinking funds, amortization, valuation of depletable assets, depreciation. Prerequisite: one entrance unit in algebra.

53 *Introduction to Statistics in Psychology and Education* (3) The Staff
Lecture (2 hours), laboratory (2 hours). Fall—day and evening; spring—day and evening. Sources of data, tabulation, charts and graphs, averages, dispersion, quartiles and percentiles, raw scores and derived scores, frequency distributions, reliability and validity of tests, normal curve, correlation, elementary sampling, and an introduction to estimation and tests of hypotheses. Prerequisite: one entrance unit in algebra. Laboratory fee, $9.

91 *Principles of Statistical Methods*‡ (3) Thomas
Lecture (2 hours), laboratory (2 hours). Fall—evening; spring—day. Variates and attributes, averages and dispersion, frequency distributions and their characteristics, regression and correlation, statistical decision processes. Prerequisite: one entrance unit in algebra. Laboratory fee, $9.

---

* The Staff of Instruction here listed is for the academic year 1961–62.

† Of first-group courses, Statistics 51, 53, and 91 are related in their subject matter, and credit hours for only one of the three may be applied toward a degree. Statistics 52 lies outside of this group, and may be taken for degree credit in combination with any one of the other three.

‡ Statistics 91 is for Statistics majors, for students in engineering and in the biological and physical sciences.

SECOND GROUP

104 *Statistics in Psychology and Education I* (3) Bright
Lecture (2 hours), laboratory (2 hours). Fall—Saturday morning; summer 1962. Introductory study of statistical techniques necessary for application of statistics in research problems in psychology and education. Laboratory fee, $9.

105 *Statistics in Psychology and Education II* (3) Bright
Lecture (2 hours), laboratory (2 hours). Spring—Saturday morning. Advanced study of statistical techniques necessary for an application of statistics in research problems. Analysis of variance, correlation techniques, chi-square applications, and sampling theory. Prerequisite: Statistics 53 or 104. Laboratory fee, $9.

106 *Factor Analysis* (3)
Summer 1962. Matrix theory as applied to factor analysis, introduction to the concepts of factor analysis and their utility in various phases of research. Prerequisite: Statistics 53 or the equivalent. Laboratory fee, $9.

107 *Statistics for Engineers* (3) The Staff
Fall—evening; spring—evening; summer 1962. Simple probability models, discrete and continuous distributions, sampling, hypothesis testing and estimation, nonparametric tests. Emphasis on engineering applications. Prerequisite: differential and integral calculus.

109 *Managerial Statistics* (3)
Not offered 1962–63. Role of statistics and the contribution of statistical procedures in various phases of business management with emphasis on the need for and usefulness of the statistical method rather than the mechanics of analysis. Subject matter comprises sources and methods for collecting data, effective forms of presentation, techniques for summarizing and analyzing quantitative and qualitative information, interpretation of and inferences from available data. Admission by permission of the instructor or following Statistics 51.

110 *Quality Control Techniques* (3)
Not offered 1962–63. Applications of probability and distribution theory to industrial control problems; use of quality control charts; acceptance sampling plans; estimation of lot and process characteristics. Prerequisite: Statistics 51 or permission of instructor.

111 *Business and Economic Statistics I* (3) Johnson
Fall—day and evening. Statistical processes as related to the problems of business and economic research with emphasis on decision making under conditions of uncertainty. Topics include averages, dispersion, analysis of variance, correlation, quality control, and index numbers. Prerequisite: Statistics 51 or permission of instructor.

112 *Business and Economic Statistics II* (3) Johnson
Spring—day and evening. Specific problems of business and economics with statistics as a tool of analysis. Introduction to principles and use of linear programming, game theory and queueing theory techniques. Study of various economic relationships, including demand, supply, cost and price functions. Prerequisite: Statistics 111 or equivalent.

117 *Analysis of Variance I* (3) Thomas
Lecture (2 hours), laboratory (2 hours). Fall—evening. The analysis of variance to segregate factors producing significant variation; a method to estimate experimental error, multiple classifications, Latin Square, Greco-Latin Square, factorials; an introduction to model theory. Prerequisite: Statistics 91. Laboratory fee, $9.

118 *Correlation and the Chi-square Test I* (3) Thomas
Lecture (2 hours), laboratory (2 hours). Spring—evening; summer 1962. Regression and correlation theory: simple, partial, and multiple; nonparametric methods; analysis of covariance; contingency table analysis; tests of goodness of fit. Prerequisite: Statistics 91. Laboratory fee, $9.

121 *Index Numbers* (3)
Not offered 1962–63. Definition and theory of index numbers, methods of construction, their interpretation, use, and limitations. Prerequisite: Statistics 51 or the equivalent.

122 *Forecasting Principles and Techniques* (3) Johnson
Spring—day. Survey and appraisal of techniques for measuring the state of business conditions and an examination of current indicators. Study of procedures for estimating future values: budget requirements, price levels, or level of general business activity. Prerequisite: Statistics 51 or the equivalent.

123 *Introduction to Econometrics* (3) Johnson
Fall—day. A basic quantitative approach to fundamental problems in economic theory involving the use of statistical processes, simple model construction, and probability considerations. Prerequisite: elementary course in Economics and Statistics.

155 *Introduction to Mathematical Probability* (3) The Staff
Fall—day; spring—evening; summer 1962. Probability distributions, Bayes' theorem and postulate, Bernoulli's theorem and its experimental verification, mathematical expectation, laws of large numbers. Prerequisite: permission of instructor.

157–58 *Mathematical Statistics* (3–3) Kupperman
Academic year—day and evening. Distribution theory, sampling theory, estimation, hypothesis testing, confidence methods, regression analysis, experimental design. Prerequisite: differential and integral calculus.

189–90 *Mathematical Probability and Applications* (3–3) Geiser
Academic year—evening. Combinatorial analysis, conditional probability and stochastic independence, probability distributions, laws of large numbers, recurrent events, random walks, Markov chains, simple time-dependent stochastic processes. Prerequisite: Statistics 155 or permission of instructor.

191 *Statistical Mathematics I** (3) Bright
Fall—evening. Problems in statistics with the development of processes from modern algebra necessary for their solution. Prerequisite: differential and integral calculus or permission of instructor.

192 *Statistical Mathematics II* (3)
Lecture (2 hours), laboratory (2 hours). Not offered 1962–63. Linear computations as applied to least squares, multiple correlation, regression, and analysis of variance problems. Prerequisite: Statistics 191 or the equivalent. Laboratory fee, $9.

193 *Statistical Mathematics III** (3) The Staff
Spring—evening. Problems in statistics with the development of real variable theory necessary for their solution. Prerequisite: differential and integral calculus.

194 *Statistical Mathematics IV** (3) The Staff
Fall—evening. Problems in statistics with the development of complex variable theory necessary for their solution. Prerequisite: differential and integral calculus.

195–96 *Reading and Research in Statistics* (arr.) The Staff
Academic year—as arranged.

199–200 *Proseminar: Theoretical and Applied Statistics* (3–3) The Staff
Not offered 1962–63. In addition to the study of recent advances in statistical methods, this course is designed to coordinate the content of the baccalaureate major. Admission by permission of the instructor.

THIRD GROUP*

201 *Design of Experiments* (3)
Not offered 1962–63. Relative merits of random, repeated, stratified, and double sampling; Fisher-Pitman method of randomization; randomized blocks; Latin squares; factorial design; confounding, partial confounding.

* Statistics 191, 193, and 194 or the equivalent are prerequisite to all third-group courses.

203–4 *The Theory of Econometrics* (3–3)
A year course: credit is not given for the first half until the second half is completed. Not offered 1962–63. Statistical methods applied to analysis of production, supply, and demand; utility and disutility; interest and taxation; exchange. Emphasis on interpretation of results in terms of probability, correlation, and regression of time series. Admission by permission of the instructor.

205–6 *Advanced Business and Economic Statistics* (3–3)
Not offered 1962–63. Application of statistical methods to specific problems utilizing case method when possible. Emphasis on source materials, role of statistical methods, techniques of analysis, interpretation and presentation of results. Original work is required of each student. Prerequisite: Statistics 112 or the equivalent.

207 *Operations Analysis* (3) Bright
Fall—evening. Basic concepts and techniques of operations analysis as applied to problems in business management and economic research. An introduction to the processes of linear programming, game theory, and queueing theory. Admission by permission of the instructor.

211 *Theory of Sampling* (3) Bright
Spring—evening. Problems of sampling and sample design. Admission by permission of the instructor.

212 *Nonparametric Statistical Inference* (3)
Not offered 1962–63. Spring—1964. Statistical inference when the form of the underlying distribution is unknown; sign tests; rank order statistics; theory of runs; nonparametric discriminant analysis.

217 *Analysis of Variance II* (3)
Not offered 1962–63. Advanced theory of the applications of the linear hypothesis to research problems. Distributions of the analysis of variance. Extensions to multiple classifications with unequal cell frequencies. Studies of multiple contrasts and their importance. Normal versus non-normal problems.

218 *Correlation and the Chi-square Test II* (3)
Not offered 1962–63. Spring 1965. Theoretical analysis of simple, partial, and multiple regression. Examination of various distributions encountered. Rank correlation techniques and their distributions. Distribution of the chi-square statistic.

257–58 *Advanced Mathematical Statistics* (3–3) Kupperman
Academic year—evening. Random variables and probability distributions, distribution functions and their properties, convergence theorems, regression and correlation, multivariate normal distribution, asymptotic and exact sampling distributions, estimation, hypothesis testing.

259–60 *Advanced Mathematical Probability* (3–3) Kullback
A year course, credit is not given for the first half until the second half is completed. Not offered 1962–63. Modern theories and asymptotic laws: elementary theory of definite integration; limit theorems in probability.

261–62 *Information Theory for Engineers* (3–3) Kullback
Academic year—evening. The elements of information theory and its statistical and probabilistic background from an elementary point of view (nonmeasure theoretic). Measures of information, entropy, and their properties. Discrete stochastic sources, message ensembles. The transmission of information, channels, channel capacity. Encoding and decoding including error detection and correction. The fundamental theorems of information theory.

263–64 *Statistical Inference* (3–3) Greenhouse
A year course, credit is not given for the first half until the second half is completed. Academic year—evening. Sample space; methods for estimating population parameters; fiducial inference and its application to testing hypotheses; valid, efficient, and exact estimation; Student's distribution; variance distribution; sampling statistics. Prerequisite or concurrent registration: Statistics 257–58 or the equivalent.

265–66 *Multivariate Analysis* (3–3)
A year course, credit is not given for the first half until the second half is completed. Not offered 1962–63. Tests of significance, generalized variance and covariance, tests of independence, canonical and vector correlations, multivariate, normal distribution, generalized Student's ratio, problems of estimation, applications to factor analysis.

267–68 *Characteristic Functions* (3–3)
A year course, credit is not given for the first half until the second half is completed. Not offered 1962–63. Fourier integrals, set functions, inversion formulas, limit theorems, applications to the distribution problem in statistics.

269 *Sequential Testing* (3)
Not offered 1962–63.

270 *Statistical Decision Theory* (3)
Not offered 1962–63.

271–72 *Statistical Information Theory* (3–3)
A year course, credit is not given for the first half until the second half is completed. Not offered 1962–63. Basic concepts, definitions, and formulas of information theory; their significance and general properties. Shanon's coding theorem, channel capacity, and transmission of information; inequalities of information theory and sufficiency; applications to statistical problems of discrimination and hypothesis testing. Asymptotic distribution theory of information; analysis of contingency tables; loss of information due to grouping and sequential analysis; comparison or experiments.
Kullback

273–74 *Stochastic Processes* (3–3)
A year course, credit is not given for the first half until the second half is completed. Academic year—evening. Fundamental notions of stochastic processes; random walks; Markov processes; differential processes; Gaussian processes; applications.
The Staff

295–96 *Reading and Research* (3–3)
Academic year—as arranged. Admission by permission of the instructor.
The Staff

299–300 *Thesis* (3–3)

Courses Offered in Special Programs

In addition to the regular courses announced above the University offers the following courses for students enrolled in the following special programs: Navy Graduate Financial Management Program, Air Force Advanced Management Program, Engineering Administration, and Hospital Administration.

101 *Basic Principles of Statistical Methods* (3)
Variables and attributes, averages and dispersion, elementary principles of sampling, introduction to the making of statistical decisions.

119 *The Bases of Statistical Decision Making* (ATT.)
Introduction to the techniques of decision making, with emphasis on applications rather than theory. Includes: binomial distribution, normal distribution, Type I and II errors, estimation, research methodology, and problems of inference.

120 *Principles of Statistical Analysis* (3)
Introduction to the basic concepts of statistical analysis, measures of central tendency, dispersion, normal distribution, basic statistical inference including estimation and testing hypotheses.

262 *Managerial Statistics and Quality Control* (3)
The application of statistical principles and practices to management and quality control. Emphasis is placed on the use of statistical techniques in making management decisions, controlling quality and standardization. Prerequisite: Statistics 107 or the equivalent.

ZOOLOGY*

Professors I. B. Hansen *(Chairman)*, Edith Mortensen, P. W. Bowman, S. C. Munson
Professorial Lecturer K. C. Kates
Associate Professor A. H. Desmond
Lecturer J. R. Buchheit

Bachelor of Arts or *Bachelor of Science (Field-of-Study).*—Prerequisite: the Arts and Letters or the Science curriculum, respectively, page 32, including Biology 1–2† and Chemistry 11–12.

Required: the general requirements, pages 37–42, and the grade "pass" on the Zoology major examination at the end of the senior year. The correlated knowledge upon which the student will be examined includes the following fields: (1) classification, structure, and ecological relations of animals, both invertebrate and vertebrate; (2) embryological development and life histories of important animal types; (3) general principles of physiology, heredity, and evolution; (4) the development of biological principles, hypotheses, and theories as revealed in the study of the history of zoology.

Bachelor of Arts or *Bachelor of Science with a major in Biology (Departmental).*—This interdepartmental major may be arranged in conjunction with the Department of Botany. Prerequisite: the Arts and Letters or the Science curriculum, respectively, page 32, including Biology 1–2†, or the equivalent.

Required: in addition to the general requirements, pages 37–42, a minimum of twenty-four semester hours of second group courses in Zoology and Botany, as approved by the chairman of either Department.

Master of Arts or *Master of Science in the field of Zoology.*—Prerequisite: the equivalent of a Bachelor of Arts or Bachelor of Science degree, respectively, from this University with a major in Zoology or Biology.

Required: the general requirements, pages 43–45.

Master of Arts or *Master of Science in the field of Biology.*—This interdepartmental field may be arranged in conjunction with the Department of Botany. Prerequisite: the equivalent of a Bachelor of Arts or Bachelor of Science degree, respectively, from this University with a major in Zoology, Botany, or Biology.

Required: the general requirements, pages 43–45.

Doctor of Philosophy (Graduate Council).—See the pamphlet on the Graduate Council.

BIOLOGY ‡

First Group

1-2 *Introductory Biology*† (4–4) — **The Staff**

An interdepartmental course. Lecture (2 hours), laboratory (4 hours).

Biology 1—Plant Sciences (4): fall—day and evening; spring—day and evening.

Biology 2—Animal Sciences (4): fall—day and evening; spring—day and evening.

This course is designed to provide the nonscience student with an understanding of the life sciences and to serve as a basis for those who may wish to continue in some aspect of biology. It is the introductory course leading to all second- and third-group courses in botany and zoology, and is taught jointly by the staff members of the two departments. Designed to be taken in either sequence; students may be registered for either 1 or 2 at the beginning of the academic year, depending on laboratory space available. Material fee, $10 a semester.

* The Staff of Instruction here listed is for the academic year 1961-62.

† An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.

‡ Biology 1–2 is prerequisite to all second-group courses in Zoology, except by permission of the instructor.

Beginning with the academic year 1962-63, Biology 1–2 *Introductory Biology* (4-4) replaces Botany 1–2 *General Botany* (4-4) and Zoology 1–2 *Introduction to Zoology* (4–4). Botany 1–2 and Zoology 1–2 will be offered for the last time in the summer of 1962.

ZOOLOGY

Second Group*

101–2 *Invertebrate Zoology* (3–3) Mortensen

Lecture (1 hour), laboratory (4 hours). 1962–63 and alternate years: academic year—evening; 1963–64 and alternate years: academic year—day. A systematic study of invertebrate forms, including the morphology, classifications, life histories, and phylogenetic relationships. Material fee, $8 a semester.

103–4 *Comparative Vertebrate Anatomy* (3–3) Desmond

Lecture (1 hour), laboratory (4 hours). 1962–63 and alternate years: academic year—day and evening; 1963–64 and alternate years: academic year—day. Lectures on the organ systems of the vertebrates, laboratory dissections of types. Material fee, $11 a semester.

107–8 *Organic Evolution*† (3–3) Bowman

1962–63 and alternate years: academic year—day; 1963–64 and alternate years: academic year—evening. A study of the theories of organic evolution and present ideas on the principle lines of development in the plant and animal kingdoms; a review of the contributions to an understanding of the mechanisms involved in this process from the fields of genetics and cytology.

115–16 *Cytology*† (3–3) Bowman

Lecture and laboratory. 1962–63 and alternate years: academic year—evening; 1963–64 and alternate years: academic year—day; summer 1962—Zoology 115 (3) (as Biology 115). Plant and animal cells and their components, including the chromosomes and their role in heredity, with training in the preparation of materials for study. Material fee, $8 a semester.

127 *Genetics*† (3)

Fall—evening. A lecture course in which the general principles are illustrated with specific examples of inheritance in plants and animals, including man.

140 *Cell Physiology*† (3) Shropshire

Spring—evening. The fundamental physiology of protoplasm. Prerequisite: Chemistry 12.

145 *Introduction to Vertebrate Embryology* (3) Hansen

Lecture (1 hour), laboratory (4 hours). 1962–63 and alternate years: fall—day; 1963–64 and alternate years: fall—day and evening; summer 1962. Origin and early development of the individual, formation of organ systems. Emphasis on the frog, chick, and pig, with reference to the human embryo. Material fee, $11.

148 *Histology* (3) Desmond

Lecture (1 hour), laboratory (4 hours). 1962–63 and alternate years: spring—day; 1963–64 and alternate years: spring—evening. An introduction to the microscopical anatomy of normal tissues and organs. Material fee, $11.

152 *Protozoa* (3) Mortensen

Lecture (1 hour), laboratory (4 hours). 1963–64 and alternate years. Introduction to the protozoa: classification, life histories, and physiology, with special emphasis on free-living types. Material fee, $8.

155 *Parasitology* (3) Kates

Lecture (1 hour), laboratory (4 hours). 1963–64 and alternate years. An introduction to the study of animal parasitology, with a survey of parasitic types from the protozoa through arthropods. Material fee, $11.

161 *Entomology* (3) Munson

Lecture (1 hour), laboratory (4 hours). 1963–64 and alternate years. A study of the elementary morphology, physiology, and ecology of insects, with an introduction to the taxonomy of the more important groups. Material fee, $8.

---

* Biology 1–2 is prerequisite to all second-group courses in Zoology, except by permission of the instructor.

† An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.

162 *Insect Physiology* (3) Munson
1963–64 and alternate years. Lectures and laboratory work on the physiology of insects. Admission by permission of the instructor. Material fee, $11.

171–72 *Special Problems* (3–3) The Staff
Academic year—as arranged. Written approval of the instructor is required. Material fee, $11 a semester.

199–200 *Proseminar* (3–3) The Staff
Academic year—day and evening. Designed to correlate and supplement the work of Zoology majors.

THIRD GROUP

201–2 *Seminar: Cytology** (3–3) Bowman
Academic year—evening.

204 *Seminar in Invertebrate Zoology* (3) Mortensen
1962–63 and alternate years: spring—evening. A study of original publications on hormones of invertebrate animals.

214 *Advanced Invertebrate Zoology* (3) Mortensen
Not offered 1962–63. Lectures and laboratory work on problems in invertebrate physiology. Prerequisite: Zoology 101–2 or the equivalent. Material fee, $8.

247–48 *Morphogenesis* (3–3) Hansen
1962–63 and alternate years: academic year—evening. Lectures and class reports on experimental morphology. Prerequisite: Zoology 103–4 or the equivalent.

251 *Seminar in Vertebrate Zoology* (3) Desmond
1963–64 and alternate years. A study of current publications in the field of histophysiology.

295–96 *Research* (arr.) The Staff
Academic year—as arranged; summer 1962—Zoology 295 (3). Investigation of special problems.

299–300 *Thesis* (3–3) The Staff
Academic year—as arranged; summer 1962—Zoology 299 (3).

COURSES FROM OTHER DEPARTMENTS

The following courses are of interest chiefly to the preprofessional student who expects to take his upper-division work in one of the professional units of the University and to the student who seeks a two-year terminal degree (Associate in Arts or Associate in Science). Such professional credits do not normally count toward a Bachelor's degree from Columbian College of Arts and Sciences, but a student may, by prior petition, elect up to twelve hours of such work, with the exclusion of Secretarial Studies, which can count only for the terminal degree in that subject.

* An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.

ACCOUNTING

1–2 *Introductory Accounting* (3–3) Kennedy and Staff

First half: fall—day and evening; spring—day and evening; summer 1962.
Second half: fall—day and evening; spring—day and evening; summer 1962.
First half: basic principles underlying accounting records, preparation of the work sheet and financial statements, accounting for single proprietorships and partnerships. *Second half:* accounting for corporations and introduction to cost accounting, analysis of financial statements, and valuation and amortization problems. Prerequisite to Accounting 2: Accounting 1 or permission of the instructor.

101 *Cost Accounting* (3)

Fall—day and evening; summer 1962. Theory and purposes of industrial cost accounting; treatment of systems of cost control and determination; and analysis and interpretation of cost data. Prerequisite: Accounting 1–2.

111 *Financial Statement Analysis* (3) Kennedy, Steele

Fall—day; spring—evening; summer 1962. Methods and techniques of preparing, analyzing, and interpreting financial statements for the guidance of operating executives, directors, stockholders, and creditors; influence of price level changes on accounting data; determination and interpretation of trends and ratios. Prerequisite: Accounting 1–2 or permission of the instructor.

121–22 *Intermediate Accounting* (3–3) Eaton, Simpson

Academic year—day and evening. *First half:* valuation and amortization problems of current assets, long term investments, tangible fixed assets, intangible assets, and deferred charges; accounting for current, noncurrent, contingent, and estimated liabilities. Prerequisite to 121: Accounting 2 or permission of the instructor. *Second half:* accounting for the organization, financing, operation, and dissolution of corporations and partnerships; basic principles of consignment and installment sales. Prerequisite to 122: Accounting 121 or permission of the instructor.

161 *Income Tax Accounting* (3) Kurtz, Gallagher

Fall—evening. Problems involved in the federal income taxation of individuals and corporations, differences between tax accounting and financial accounting, social security taxes. Prerequisite: Accounting 1–2.

171 *Auditing* (3) Eaton

Fall—evening; spring—day. Duties and responsibilities of auditors; principles and procedures of making audits, techniques of verifying each financial statement item, preparation of audit working papers and reports. Prerequisite: Accounting 121–22.

181 *Accounting Systems* (3) Lewis

Fall—evening. Theory and procedure of designing and installing accounting systems, for collecting, recording, analyzing, and presenting accounting data. Prerequisite: Accounting 101, 121–22, and 171, or permission of the instructor.

191 *Advanced Accounting* (3) Kurtz, Simpson

Fall—evening; summer 1962. Consolidated statements, statement of affairs, realization and liquidation reports, and estate and trust accounting. Prerequisite: Accounting 121–22.

193 *Business Budgeting* (3) Lewis

Fall—day; spring—evening; summer 1962. Principles, techniques, and procedures involved in the development, installation, and operation of a system of budgetary control to aid in the management of commercial and industrial organizations. Prerequisite: Accounting 1–2.

AIR SCIENCE

Commission in the United States Air Force Reserve.—Upon being awarded a Bachelor's degree and upon the satisfactory completion of the Air Force ROTC course of instruction prescribed by law and regulations, the graduate will be appointed Second Lieutenant, United States Air Force Reserve.

Basic Course

1-2 *Leadership Laboratory—Freshman Year* (1–1) **The Staff**
Academic year—day. Cadet basic airman training. Military courtesy, discipline, appearance and bearing; element, flight squadron, and mass formation drill; parades and ceremonies; the military mission and the problem of national security. Minimum 15 hours a semester. Laboratory fee, charged one time a year, $3. (May be substituted for Physical Education 1–2.)

11-12 *Leadership Laboratory—Sophomore Year* (1–1) **The Staff**
Academic year—day. Cadet noncommissioned officer training. Military bearing and courtesy, all phases of drills and ceremonies, command voice training and command responsibility. Prerequisite: Air Science 1–2, 21–22 for men and Air Science 1–2 for women. Political Science 1 or 9 is recommended as an elective during the sophomore year in preparation for Political Science 171 (see Air Science 151–52). Minimum 15 hours a semester. Laboratory fee, charged one time a year, $3. (May be substituted for Physical Education 11–12.)

21 *Air Science—Freshman Year* (2 or 3)
Fall. Any 2 or 3 semester hour introductory college course in the areas of mathematics, physical and natural sciences, foreign languages, the humanities or social sciences approved by the Division of Air Science as meeting the pre-commission officer educational requirements.

22 *Air Science—Freshman Year* (2) **Garrell**
Spring: 2 hours a week—day. General survey of air power to include military instrument of national security, elements and potentials of air power, evolution of aerial warfare, and air vehicles and principles of flight.

51 *Air Science—Sophomore Year* (2) **Garrell**
Fall: 2 hours a week—day. Fundamentals of aerospace weapon systems, including missiles, aircraft, propulsion plants, space vehicles, and operations in space.

52 *Air Science—Sophomore Year* (2 or 3)
Spring. Any 2 or 3 semester hour introductory college course in the areas of mathematics, physical or natural sciences, foreign languages, the humanities or social sciences approved by the Division of Air Science as meeting the pre-commission officer educational requirements. Political Science 1 or 9 is recommended as an elective during the sophomore year in preparation for Political Science 171 (see Air Science 151–52).

Advanced Course

101-2 *Air Science—Junior Year* (1–1) **Gagnier**
Academic year—day. Air Force officer development. Knowledge and skills required of a junior officer in the Air Force. This includes the Air Force commander, his staff, and the air base; the military justice system; and preparation for summer training. Prerequisite or concurrent registration. Business Administration 102 and 193, which are not to be taken in the same semester of the academic year.

103-4 *Leadership Laboratory—Junior Year* **The Staff**
(Credit is a part of Air Science 101–2.)
Academic year—day. Cadet noncommissioned officer and officer training. Wearing of the uniform, parades and ceremonies, commands and command voice. Cadets perform duties involving planning for and supervision of Cadet Corps activities. Emphasis placed on leadership and management proficiency. Minimum 15 hours a semester.

105 *Summer Training Unit—Between Junior and Senior Years* (required) — The Staff

Attendance at a four-week Air Force ROTC summer training unit at an Air Force base within continental United States is mandatory. Program consists of familiarization flying, physical training, individual weapons, Air Force base activity and equipment, field exercises, air base problems, and leadership training.

151–52 *Air Science—Senior Year* (1–1) — Wall

Academic year—day. *First half:* weather and navigation. A study of the weather and navigational aspects of airmanship, such as temperature, pressure, air masses, precipitation, weather charts, and dead reckoning navigation. *Second half:* the Air Force officer. A study of materials to help the cadet make a rapid effective adjustment to active duty as an officer of the United States Air Force. Prerequisite or concurrent registration: Political Science 171 and Geography 146, which are not to be taken in the same semester of the academic year. Only pilot candidates need take weather and navigation. Others may substitute any college course approved by the Division of Air Science.

153–54 *Leadership Laboratory—Senior Year* (Credit is a part of Air Science 151–52) — The Staff

Academic year—day. Cadet officer training. Cadet officers conduct activities of Corps of Cadets through chain of command, instruct subordinates, plan and supervise Cadet Corps training and administration. Preparation for commissioned officer duties. Development of leadership and managerial responsibilities. Minimum 15 hours per semester.

BUSINESS ADMINISTRATION

131 *Business Finance* (3) — Clayton

Fall—day; spring—day and evening. Basic principles involved in the financing of business enterprises. Prerequisite: Accounting 1–2.

161 *Commercial Law: Contracts, Sales, Agency, and Bailments* (3) — Berns, Collins, McClure

Fall—day and evening.

162 *Commercial Law: Negotiable Instruments, Property, Mortgages* (3) — Berns, Collins, Murphy

Spring—day and evening.

HOME ECONOMICS

1 *Food Selection and Preparation* (3)

Not offered 1962–63. Composition, selection, and preparation of food; analysis of recipes; standard products; planning, preparing, serving, and estimating the cost of meals. Material fee, $18. — Towne

22 *Clothing: Its Selection, Cost, and Care* (3)

Not offered 1962–63. Clothing selections—the economic, aesthetic, and hygienic aspects; the application of the principles of color and design to individual selection; the care of clothing. — Osterndorf

51 *Family Meals* (3)

Fall—day. The choice, purchase, preparation, and service of foods; dietary standards, food habits, and the nutritional needs of the family; problems of purchasing, care, and use of food by the consumer. Material fee, $11.

62 *Clothing Construction* (3) Towne
Not offered 1962–63. Simplified techniques and unit method of construction suitable for cotton, wool, silk, and man made fibers; the use of commercial patterns and their alteration; the proper selection of color, design, and fabric. Material fee, $8.

PHYSICAL EDUCATION FOR MEN

1-2 *Freshman Physical Education* (1–1) The Staff
Academic year—as arranged. Two periods of supervised activity a week. Locker and towel fee,* $4.50 a semester.

11-12 *Sophomore Physical Education* (1–1) The Staff
Academic year—as arranged. Two periods of supervised activity a week. Locker and towel fee,* $4.50 a semester.

41 *Personal Health* (1) Krupa
Spring—day. Physical, mental, and social health of the individual—understanding, significance, and promotion. Emphasis on personal health knowledges for the future teacher.

43–44 *Techniques of Physical Education Motor Activities* (2–2) DeAngelis, Krupa
Academic year—day. Fundamental skills, rules, and organization. Locker and towel fee,* $4.50 a semester.

45–46 *Teaching Individual and Dual Sports in Secondary Schools* (2–2) Hanken, Krupa
Academic year—day. Tennis, golf, swimming, wrestling, badminton, bowling. Locker and towel fee,* $4.50 a semester.

47 *Introduction to Physical Education* (2) Myers
Fall—day. An orientation course presenting the problems of physical education, vocational analysis, scientific foundations, and scope of field.

49 *Human Anatomy* (3) Stallings
Fall—day. The structure of the human body. Basic course for physical education majors. Also open to both men and women not majoring in Physical Education. Prerequisite: Biology 1–2†.

50 *Kinesiology* (3) Lawrence
Spring—day. A study of the anatomical mechanism of movement, analysis of the action of muscles in physical education activities. Prerequisite: an approved course in anatomy.

58 *First Aid and Care of Athletic Injuries* (2) DeAngelis
Spring—day. Prevention and emergency care of injuries of all types, with special reference to first aid, civil defense, bandaging, and massage. Prerequisite: Biology 1–2†.

* The locker and towel fee is required for registration in one or more of the activity courses.
† An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.

PHYSICAL EDUCATION FOR WOMEN

1–2 *Freshman Physical Education* (1–1) — The Staff

Academic year: fundamentals of health and physical education—day; activity—day. One period of fundamentals of health and physical education and two periods a week chosen from the activities offered each semester.

Fundamentals of health and physical education: one semester on study of the factors involved in the general maintenance of health, efficient use of the body, and fundamentals of movement; one semester on fundamentals of rhythms.

Activities: badminton, basketball, body mechanics, field hockey, recreational dance, golf, fencing, modern dance, riding, skating, swimming, synchronized swimming, tennis, softball, lifesaving. Locker and towel fee,* $4.50 a semester.

11–12 *Sophomore Physical Education* (1–1) — The Staff

Academic year: two periods a week—day. Two periods a week chosen from the activities offered each season as listed under Physical Education 1–2. Locker and towel fee,* $4.50 a semester.

43–44 *Techniques of Physical Education Motor Activities* (2–2) — The Staff

Academic year—as arranged. Fundamental skills, rules, and organization. Locker and towel fee,* $4.50 a semester.

49 *Human Anatomy* (3) — Stallings

Fall—day. The structure of the human body. Basic course for physical education majors. Also open to both men and women not majoring in Physical Education. Prerequisite: Biology 1–2†.

50 *Kinesiology* (3) — Lawrence

Spring—day. A study of the anatomical mechanism of movement, analysis of the action of muscles in physical education activities. Prerequisite: an approved course in anatomy.

51–52 *Teaching Physical Education Activities* (2–2) — The Staff

1963–64 and alternate years. Team sports: basketball, hockey, softball, soccer, speedball. Individual and dual sports: tennis, badminton, archery, swimming and diving, lifesaving and water safety. Gymnastics: tumbling, apparatus and trampoline. Locker and towel fee,* $4.50 a semester.

SECRETARIAL STUDIES

1 *Elementary Typewriting* (3) — Shott and Staff

Fall—evening; spring—evening. Fundamental techniques of typewriting, basic styles of business letters, introduction to tabulation, and preparation of general office forms. Laboratory fee, $7.

2 *Intermediate Typewriting* (3) — Shott and Staff

Fall—evening; spring—day and evening. The business letter and its arrangement, advanced tabulation, manuscript typing, office forms, stencil cutting, and legal documents. Prerequisite: Secretarial Studies 1 or the equivalent; ability to type accurately at 30 words a minute. Laboratory fee, $7.

11 *Elementary Shorthand and Transcription* (3) — Shott and Staff

Fall—day and evening; spring—evening. A study of the principles of Gregg shorthand correlated with dictation and transcription. *Minimum* dictation speed of 60 words a minute attained. Laboratory fee, $3.

* The locker and towel fee is required for registration in one or more of the activity courses.

† An interdepartmental course offered by the departments of Botany and Zoology. Students may register in either department.

12 *Intermediate Shorthand and Transcription* (3) Shott and Staff
Fall—evening; spring—day and evening. Review of the principles of Gregg shorthand. Dictation and transcription on general and specialized business subjects. *Minimum* dictation speed of 80 words a minute attained. Prerequisite: Secretarial Studies 11 or the equivalent; ability to take dictation at 60 words a minute. Laboratory fee, $5.

15 *Advanced Shorthand, Typewriting, and Transcription* (3) Shott
Fall—day. Dictation and transcription involving vocabularies in specific businesses. *Minimum* speed of 100 words a minute attained in dictation. Prerequisite: Secretarial Studies 12 or the equivalent. Laboratory fee, $5.

16 *Secretarial Shorthand, Typewriting, and Transcription* (3) Shott
Spring—day. Dictation and transcription involving vocabularies used in the legal and medical professions. *Minimum* dictation speed of 120 words a minute attained. Prerequisite: Secretarial Studies 15 or the equivalent. Laboratory fee, $5.

51 *Business Correspondence* (3) Shott
1962–63 and alternate years: fall—day. 1963–64 and alternate years: fall—evening. Development of the technique of effective communication with reference to business letters and forms. Survey and analysis of current business literature.

54 *Secretarial Practice* (3) Shott
Spring—day. A thorough study of secretarial problems and procedures. Practice in the use of secretarial equipment and supplies. The study of secretarial personality and office relationships.

Baccalaureate Service	June 2	Sun.
Commencement	June 5	Wed.

* Registration will be held from 12:00 to 8:00 P.M., September 20 and 21 for the fall semester, January 31 and February 1 for the spring semester; from 10:00 A.M. to 1:00 P.M., September 22 for the fall semester, and February 2 for the spring semester.

THE BOARD OF TRUSTEES

The Board of Trustees of the University is composed of the President of the University ex officio and the following persons by election:

Newell Windom Ellison, A.B., LL.B., LL.D., *Chairman*
Edward Karrick Morris, LL.D., *Secretary*
Godfrey Leon Munter, A.B., LL.B., LL.D., *Assistant Secretary*

Walter Maximillian Bastian, LL.B., LL.D.
*Daniel LeRay Borden, A.M., M.D., Sc.D.
Wiley Thomas Buchanan, Jr.
Leonard Carmichael, Ph.D., Sc.D., LL.D., Litt.D., L.H.D., D.C.L.
Eugene Cassin Carusi, A.M., J.D.
R. Roy Dunn
Robert Vedder Fleming, LL.D., *Chairman Emeritus*
Charles Carroll Glover, Jr., A.M., LL.B., LL.D.
Philip L. Graham, A.B., LL.B., L.H.D.
Brooks Hays, A.B., LL.B., LL.D.
John Edgar Hoover, LL.M., LL.D.
Frank Atherton Howard, B.S. in M.E., LL.B., Sc.D.
Joseph D. Hughes, B.S., LL.B., LL.M., LL.D.
Alfred Henry Lawson, LL.B., LL.D.
John Keown McKee
Benjamin Mosby McKelway, Litt.D.
James Matlack Mitchell, A.M.
*George Edward Muth, A.B., LL.B.
*Frederick A. Reuter, M.D.
*Charles Sylvanus Rhyne, LL.B., D.C.L., LL.D.
Donald D'Arcy Shepard, LL.B.
Carleton D. Smith
Sidney William Souers, A.B., LL.D.
Lewis L. Strauss, Sc.D., LL.D., L.H.D.
L. Corrin Strong, Ph.B., LL.D.
*James Cornelius Van Story, A.M.
James Edwin Webb, A.B., LL.D.
*Frank Harvey Weitzel, A.B., LL.B.
Alexander Wetmore, Ph.D., Sc.D.
Watson W. Wise, Ph.B.

HONORARY TRUSTEES

Clarence Aiken Aspinwall, LL.D.
Lyman James Briggs, Ph.D., Sc.D., D.Eng., LL.D.
Mrs. Wilbur John Carr
Mrs. Joshua Evans, Jr., A.B., Ed.D.
Ulysses S. Grant, 3d, B.S., Graduate United States Engineers School, LL.D., Sc.D.
Gilbert Grosvenor, A.M., LL.D., Litt.D., Sc.D.
Charles Stanley White, M.D., Sc.D.
Lloyd Bennett Wilson

* Nominated by the alumni.

OFFICERS OF ADMINISTRATION*

Thomas Henry Carroll, B.S., M.B.A., D.C.S., LL.D., *President*
Oswald Symister Colclough, B.S., LL.B., LL.D., Sc.D., *Provost and Dean of Faculties*
Henry William Herzog, B.S., *Treasurer*
Tamis Wilson Borden, A.M., *Administrative Secretary*
Claud Max Farrington, A.M., *Assistant to the President*
Joseph Young Ruth, A.B., *Director of Admissions*
Frederick Russell Houser, A.M. in Govt., *Registrar; Secretary of the Faculties*
John Russell Mason, A.M., M.S. in L.S., *Librarian; Curator of Art*
William David Johnson, B.S. in B.A., *Comptroller*
Charles William Cole, Ph.D., *Dean of the Summer Sessions*
Benjamin Douglass Van Evera, Ph.D., Sc.D., *Dean for Sponsored Research*
Virginia Randolph Kirkbride, A.M., Ed.D., *Director of Activities for Women*
Don Carlos Faith, Ph.D., *Director of Activities for Men; Director of Veterans Education*
Joseph Richard Sizoo, A.M., D.D., Litt.D., LL.D., L.H.D., S.T.D., *Director of University Chapel*

Richard Bernard Castell, A.B., M.D., *Director of Health Administration*
Loretta May Stallings, A.M., *Director of Women's Athletics*
Robert Faris, B.S., *Director of Men's Athletics*
Edward Martin Wall, A.B., LL.B., *Director of Air Science*
John Francis Latimer, Ph.D., *Associate Dean of Faculties; University Marshal*

HISTORY AND ORGANIZATION OF THE UNIVERSITY

The idea of a university in the Capital of the Nation was sponsored by George Washington, who during his public life urged the establishment of such an institution and who in his will left fifty shares of stock in the Potomac (Canal) Company for the endowment of a university to be established in the District of Columbia "to which the youth of fortune and talents from all parts thereof might be sent for the completion of their Education in all the branches of polite literature;—in arts and Sciences,—in acquiring knowledge in the principles of Politics & good Government".

The George Washington University operates under a charter granted by an act of Congress of February 9, 1821, to Columbian College in the District of Columbia. In 1873 the name was changed to "Columbian University" and in 1904 to "The George Washington University".

The University as it is now organized consists of Columbian College of Arts and Sciences, which offers work leading to the Bachelor's and Master's degrees and two-year preprofessional and terminal curricula; the Graduate Council, which offers work leading to the degree of Doctor of Philosophy; the professional schools, which include Medicine; Law; Engineering; Pharmacy; Education; and Government, Business, and International Affairs; the College of General Studies; the Division of University Students; the Division of Special Students; the Division of Air Science; and the Summer Sessions.

* For the academic year 1961–62.

ACADEMIC STATUS

The George Washington University is accredited by its regional accrediting agency, the Middle States Association of Colleges and Secondary Schools. This is important to students who wish to transfer credits from one institution to another.

The University is on the approved list of the American Association of University Women and is a member of the College Entrance Examination Board.

The Law School is a charter member of the Association of American Law Schools and is approved by the Section of Legal Education and Admissions to the Bar of the American Bar Association.

LOCATION

The George Washington University is in downtown Washington, four blocks west of the White House and east of the Potomac River with its extensive parkway. Within a few blocks are the buildings housing the offices of many of the departments of the Government, including the Department of State, the Department of the Treasury, the Department of Justice, the Department of the Interior, the Department of Agriculture, the Department of Commerce, and the Department of Labor. Also readily accessible are the Capitol, the Library of Congress, the National Archives, the Supreme Court, and other federal courts.

THE LAW SCHOOL

OFFICERS OF ADMINISTRATION

Charles Bernard Nutting, A.B., J.D., LL.M., S.J.D., LL.D., Litt.D., L.H.D., *Dean of the National Law Center*
Robert Kramer, A.B., LL.B., *Dean of the Law School*
Carville Dickinson Benson, A.B., LL.B., S.J.D., *Assistant Dean of the Law School*
Edward Andrew Potts, A.B., LL.B., *Assistant Dean for Development in the National Law Center*

THE FACULTY AND STAFF OF INSTRUCTION*

EMERITUS FACULTY

CHARLES SAGER COLLIER, *Professor Emeritus of Law*
A.B. 1911, LL.B. 1915, S.J.D. 1932, Harvard University

GEORGE BOWDOIN CRAIGHILL, *Professor Emeritus of Law*
A.B. 1903, University of the South; LL.B. 1906, Georgetown University

JAMES OLIVER MURDOCK, *Professor Emeritus of Law*
Ph.B. 1916, University of Chicago; LL.B. 1924, Harvard University

ALVIN LEROY NEWMYER, *Professor Emeritus of Law*
LL.B. 1906, The George Washington University

* The President of the University, the Dean of Faculties, the Dean of the National Law Center, the Dean and Assistant Dean of the School, the Assistant Dean for Development in the National Law Center, the Registrar of the University, the Director of Admissions of the University, Professors, Adjunct Professors, Associate Professors, and Assistant Professors constitute the Faculty.
Faculty and Staff of Instruction for the academic year 1961–62.

ACTIVE FACULTY

WALLACE JOHN BAKER, *Assistant Professor of Law*
A.B. 1946, Dartmouth College; LL.B. 1949, Western Reserve University; LL.M. 1959, Yale University

EDWARD ABBOT BEARD, *Professorial Lecturer in Law*
LL.B. 1939, Georgetown University; Judge, Municipal Court for the District of Columbia

CARVILLE DICKINSON BENSON, *Professor of Law; Assistant Dean of the Law School*
A.B. 1920, Johns Hopkins University; LL.B. 1923, S.J.D. 1926, Harvard University

THOMAS HAYWARD BROWN, *Associate Professorial Lecturer in Law*
Member of the bar of the District of Columbia

GEORGE DAVIS CARY, *Lecturer in Law*
B.S. 1932, University of Pennsylvania; LL.B. 1938, The George Washington University; LL.M. 1942, Georgetown University

MANUEL FREDERICK COHEN, *Lecturer in Law*
B.S. 1933, Brooklyn College; LL.B. 1936, Brooklyn Law School

SHELDON STANLEY COHEN, *Lecturer in Law*
A.B. 1950, J.D. 1952, The George Washington University

OSWALD SYMISTER COLCLOUGH, *Professor of Law; Provost and Dean of Faculties*
B.S. 1920, United States Naval Academy; LL.B. 1935, Sc.D. 1961, The George Washington University; LL.D. 1946, Muhlenberg College; LL.D. 1958, Dickinson College

ROBERT MCKINNEY COOPER, *Professor of Law*
Ph.M. 1931, University of Wisconsin; J.D. 1934, University of Michigan

JAMES FORRESTER DAVISON, *Professor of Law*
A.B. 1921, LL.B. 1923, Dalhousie University; LL.M. 1924, S.J.D. 1929, Harvard University

ROBERT GALLOWAY DIXON, JR., *Professor of Law*
A.B. 1943, Ph.D. 1947, Syracuse University; LL.B. 1956, The George Washington University

JUSTIN LINCOLN EDGERTON, *Professorial Lecturer in Law*
A.B. 1929, LL.B. 1931, The George Washington University

MONROE HENRY FREEDMAN, *Associate Professor of Law*
A.B. 1951, LL.B. 1954, LL.M. 1956, Harvard University

WILLIAM THOMAS FRYER, *Professor of Law*
A.B. 1922, LL.B. 1924, The George Washington University; J.D. 1925, Yale University

GEORGE JOSEPH GOLDSBOROUGH, *Associate Professorial Lecturer in Law*
B.S. 1947, United States Military Academy; J.D. 1950, The George Washington University

WILLIAM WOOLCOTT GOODRICH, *Lecturer in Law*
LL.B. 1938, University of Texas

DAVID CRITTENDEN GREEN, *Associate Professor of Law*
A.B. 1948, Harvard University; LL.B. 1951, University of Virginia

HAROLD PAUL GREEN, *Lecturer in Law*
A.B. 1942, J.D. 1948, University of Chicago

JACKSON REID HAMBRICK, *Associate Professor of Law*
A.B. 1938, Wofford College; LL.B. 1942, Duke University

LOUIS JAMES HARRIS, *Professorial Lecturer in Law*
A.B. 1932, Cornell University; LL.B. 1939, S.J.D. 1942, Brooklyn Law School; LL.M. 1948, The George Washington University

GEORGE LUZERNE HART, JR., *Professorial Lecturer in Law*
A.B. 1927, Virginia Military Institute; LL.B. 1930, Harvard University; Judge, United States District Court for the District of Columbia

MURDOCK HEAD, *Professorial Lecturer in Forensic Medicine; Chairman, Forensic Medicine Institute*
D.D.S. 1947, University of Louisville; M.D. 1953, University of Vermont; LL.B. 1958, The George Washington University

PHILIP FIELD HERRICK, *Professorial Lecturer in Law*
A.B. 1929, Williams College; LL.B. 1933, LL.M. 1936, The George Washington University

JOHN WINGFIELD JACKSON, *Adjunct Professor of Law*
B.S. 1928, University of Pennsylvania; LL.B. 1932, The George Washington University

JOHN ALEXANDER KENDRICK, *Clerk of the Trial Practice Court*
A.B. 1942, LL.B. 1943, The George Washington University

WILLIAM WALLACE KIRKPATRICK, *Associate Professor of Law*
A.B. 1934, LL.B. 1938, Harvard University

ROBERT KRAMER, *Professor of Law; Dean of the Law School*
A.B. 1935, LL.B. 1938, Harvard University

GUST ANGELO LEDAKIS, *Associate Professor of Law*
B.B.A. 1953, LL.B. 1955, University of Washington; S.J.D. 1958, University of Michigan

HERBERT JOSEPH LIEBESNY, *Associate Professorial Lecturer in Law*
J.D. 1935, University of Vienna

WILLIAM THOMAS MALLISON, JR., *Professor of Law*
A.B. 1940, University of Washington; LL.B. 1948, Vanderbilt University

LOUIS HARKEY MAYO, *Professor of Law; Dean of the Graduate School of Public Law*
B.S. 1940, United States Naval Academy; LL.B. 1949, University of Virginia; J.S.D. 1953, Yale University

JOHN JOSEPH MCAVOY, *Assistant Professor of Law*
A.B. 1954, LL.B. 1958, University of Idaho; LL.M. 1959, Yale University

JOHN ALBERT MCINTIRE, *Professorial Lecturer in Law*
A.B. 1928, LL.D. 1954, Wittenberg College; LL.B. 1931, University of Cincinnati

LEROY SORENSON MERRIFIELD, *Professor of Law*
A.B. 1938, LL.B. 1941, University of Minnesota; M.P.A. 1942, S.J.D. 1956, Harvard University

ARTHUR SELWYN MILLER, *Professor of Law*
A.B. 1938, Willamette University; LL.B. 1949, Stanford University; J.S.D. 1959, Yale University

GEORGE EDWARD MONK, *Professorial Lecturer in Law*
A.B. 1928, LL.B. 1930, LL.M. 1934, The George Washington University

RALPH CLARKE NASH, JR., *Associate Professor of Law; Director of the Government Contracts Programs*
A.B. 1953, Princeton University; J.D. 1957, The George Washington University

CHARLES BERNARD NUTTING, *Professor of Law; Dean of the National Law Center*
A.B. 1927, J.D. 1930, State University of Iowa; LL.M. 1932, S.J.D. 1933, Harvard University; LL.D. 1957, University of Pittsburgh; Litt.D. 1957, Geneva College; L.H.D. 1957, Seton Hill College; LL.D. 1960, Dickinson College of Law

EDWARD ANDREW POTTS, *Lecturer in Law; Assistant Dean for Development in the National Law Center*
A.B. 1949, University of Michigan; LL.B. 1952, The George Washington University

IRVIN HAROLD RIMEL, *Lecturer in Law*
B.S. 1934, University of Illinois; J D. 1942, The George Washington University

GEORGE NELSON ROBILLARD, *Professorial Lecturer in Law*
B.S. 1924, United States Naval Academy; LL.B. 1930, St. John's University School of Law

PAUL ARCHIBALD ROSE, *Associate Professorial Lecturer in Law*
LL.B. 1930, Washington College of Law

DAVID EARL SEIDELSON, *Assistant Professor of Law; Faculty Editor-in-Chief of the Law Review*
A.B. 1951, LL.B. 1956, University of Pittsburgh

DAVID JAMES SHARPE, *Assistant Professor of Law*
A.B. 1950, University of North Carolina; LL.B. 1955, Harvard University

DUDLEY GRAHAM SKINKER, *Associate Clerk of the Trial Practice Court*
LL.B. 1940, The George Washington University

JOHN PAUL SULLIVAN, *Assistant Professor of Law; Associate Faculty Editor of the Law Review*
A.B. 1952, Boston College; Ph.B. 1953, St. John's Seminary; LL.B. 1958, Georgetown University

RALPH JASON TEMPLE, *Assistant Professor of Law*
B.B.A. 1953, University of Miami; LL.B. 1956, Harvard University

ORVILLE HASSLER WALBURN, *Professor of Law*
A.B. 1925, Franklin and Marshall College; LL.B. 1930, University of Pennsylvania; J.D. 1932, Georgetown University

LEONARD PATRICK WALSH, *Professorial Lecturer in Law*
A.B. 1927, University of Minnesota; LL.B. 1933, National University; Judge, United States District Court for the District of Columbia

*DAVID BENSON WEAVER, *Professor of Law*
A.B. 1943, Ohio Wesleyan University; LL.B. 1948, Western Reserve University

GLEN EARL WESTON, *Professor of Law*
B.S. 1943, University of Maryland; LL.B. 1948, The George Washington University

CHARLES JAMES ZINN, *Professorial Lecturer in Law*
A.B. 1927, LL.B. 1930, Fordham University; LL.M. 1951, S.J.D. 1954, Georgetown University

ASSISTANTS

WILLIAM MONTGOMERY CHAMPION, *Teaching Fellow*
B.S. 1953, Mississippi State College; LL.B. 1961, University of Mississippi

JOHN CHARLES LYONS, *Teaching Fellow*
A.B. 1952, University of Rhode Island; LL.B. 1960, Georgetown University

ADMINISTRATIVE ASSISTANTS

Hugh Yancey Bernard, Jr., A.B., B.S. in L.S., J.D., *Assistant Librarian in charge of the Law Library*
Isabel Robinson Bilisoly, A.B., *Recording Secretary in the Law School*
Celene Rodonick Bell, B.S., *Secretary to the Dean of the Law School*
Beverly Ann Benjamin, *Secretary to the Dean of the Graduate School of Public Law*
Judith Jane Clopton, *Secretary in the Law School*
Ardeth Keller Hines, *Secretary in the Law School*
Cynthia Pinkus Pokotilow, *Secretary in the Law School*
Dorothe Walsh Farquhar, *Editorial and Business Secretary of The George Washington Law Review*
Vera Taborsky, A.B., *Professional Assistant, Law Library*
Bertha Torquemada, *Assistant, Law Library*
Gary William Schenk, *Assistant, Law Library*

HISTORY OF THE LAW SCHOOL

The Law School, the oldest in the District of Columbia, was established in 1865 with a formal program of two years of study. This was largely through the efforts of the Reverend George Whitefield Samson, President of Columbian College, whose action resulted in the purchase of a separate building for holding law classes. This building had belonged to Trinity Church of which Francis Scott Key had been Senior Warden. It was occupied by the Law School until 1884.

* On leave of absence 1961–62.

Sixty graduates, from twenty-two of the then thirty-seven states, received degrees in 1867. The School continued to have a student body and a faculty which reflected the fact that it was at the seat of our nation's government. Associate Justices David J. Brewer and John Marshall Harlan of the Supreme Court of the United States were among the prominent members of the bench and bar who served as lecturers.

In 1877, one year after the first such program was adopted in the United States, the Law School instituted a course leading to the degree of Master of Laws. In 1898 the course of instruction for the degree of Bachelor of Laws was extended to three years. The School took part in 1900 in the organization of the Association of American Law Schools. Later women students were admitted and in 1916 the first woman to take a regular course in law was graduated.

The Law School moved into its present quarters in 1925, marking the occasion with a dedicatory address by Dean Roscoe Pound. The building, Stockton Hall, is named for Rear Admiral Charles H. Stockton, President of the University from 1910 to 1917.

In the past quarter-century the Law School has developed its course and seminar offerings with consideration for the needs of first-degree and graduate students. The degree of Doctor of Juridical Science was instituted in 1940. The needs of foreign lawyers who come to this country and who require additional preparation for law work in the United States resulted in the creation of programs for the degrees of Master of Comparative Law in 1946 and Master of Comparative Law (American Practice) in 1951.

National University, which had had an important place in legal education in the District of Columbia since 1869, was merged in The George Washington University in August 1954.

Programs of special research and study, such as the independent Patent, Trade-Mark, and Copyright Foundation, give richness to the basic curriculum of the Law School.

After years of planning, the National Law Center of The George Washington University, including the Law School and the Graduate School of Public Law, was inaugurated on February 1, 1960, with Dr. Charles B. Nutting as Dean.

LOCATION IN THE NATION'S CAPITAL

Of special significance is the location of the Law School in the Nation's Capital, the focal point of the law in action, both American and international. The work of the School goes on in this environment, presenting a unique opportunity for observation and study of federal agencies—judicial, legislative, and administrative. Readily accessible are the Supreme Court of the United States, the federal trial and appellate courts of the District of Columbia, and, in addition, federal courts of special jurisdiction, such as the United States Court of Claims, the United States Court of Customs and Patent Appeals, and the Tax Court of the United States. Current federal legislation can be studied as it is considered by Congressional committees and as it comes up for debate on the floors of the House of Representatives and the Senate. With respect to the federal administrative agencies, students here in Washington have matchless opportunities for study and observation. They can attend informal and formal hearings of these agencies and can obtain from the docket sections complete records of administrative adjudication in specific cases. Illustrative of such federal agencies are the Interstate Commerce Commission and the Civil Aeronautics Board in the field of transportation; the Federal Trade Commission in the field of trade regulation; the Securities and Exchange Commission in the field of security issues and

corporate finance; the National Labor Relations Board in the field of labor-management relations; the United States Patent Office in the field of patent law; the Federal Power Commission in the field of water, natural gas, and electric power; and the Federal Communications Commission in the field of radio and television.

Supplementing these environmental advantages of law in action are the exceptional research library collections in the Library of Congress, in the various departments of the Federal Government, and in the libraries of the headquarters of national and international organizations located in Washington. The notable library of the Carnegie Foundation for International Peace has been acquired by The George Washington University for use of research students in international and comparative law, fields with respect to which Washington has come to be called "The Capital of the World".

The years of residence at law school are years of participation in the life of the community, which in the case of The George Washington University Law School, is the government of the United States. As a consequence, the study of law takes on added meaning, whether the goal be government service or practice, general or specialized, and whatever the community in which the student plans to practice.

OBJECTIVES

The primary purpose of the Law School is to prepare men and women to meet the needs of society in the many fields of law, public and private. These needs call not only for technical skill but also for responsible leadership in the development of the law and the administration of justice. In fulfilling these responsibilities the Law School offers: (1) a program of study in preparation for the practice of law; (2) programs of study and research on the graduate level for foreign as well as for American students; (3) a continuing legal education program for members of the bar, (4) institutes and forums on current topics in domestic and foreign law; (5) the publication of a law journal containing the results of research in public law; and (6) the encouragement of student professional co-curricular activities.

THE BACHELOR OF LAWS PROGRAM

The wide geographical distribution of the students who come to the Nation's Capital to study law (see Summaries of Registration, page 59) makes for a truly national law school. Students from almost every state in the Union here join students from several foreign countries in their legal training. The basic curriculum leading to the Bachelor of Laws degree is addressed to the development and application of legal principles, skills, and ideals which are indispensable to the equipment of a lawyer for professional responsibility and leadership in modern society. It includes, first and foremost, the traditional core of legal education, namely, the study of legal materials—judicial, statutory, and administrative—and instruction in the understanding and technique of their use. It also includes the study of the nature and purpose of law, the history of the Anglo-American legal system, and the history and standards of the legal profession; practice in the skills of legal research and legal writing; elementary training in trial and appellate practice; and, through the medium of seminars, experience in group handling of legal problems.

ENTRANCE REQUIREMENTS

For the Degree of Bachelor of Laws.—An approved Bachelor of Arts or equivalent degree from an accredited college or university; a satisfactory quality of work; and

an acceptable distribution of courses are required. Eligibility is based on personal and scholastic records and on the result of the Law School Admission Test. No applicant will be accepted who is ineligible to return in good standing to a previously attended law school. From the applicants, a selection is made by the Committee on Admissions.

Information concerning the Law School Admission Test may be obtained from the Dean of the Law School or from the Educational Testing Service, 20 Nassau Street, Princeton, New Jersey. The test is administered at various centers of the United States in February, April, August, and November each year. Completed application blanks and fees must be received by the Educational Testing Service at least two weeks before the date of the test. It is not necessary that formal application for admission to the Law School be made prior to taking the test.

Advanced Standing

Advanced standing toward the degree of Bachelor of Laws is granted only for work successfully completed in other law schools which are members of the Association of American Law Schools. Transferred credits will not be recognized in excess of those which might be earned in a similar period in this Law School.

Advanced standing will not be granted for law work already counted toward the Bachelor of Arts or other pre-legal degree.

Unclassified Students

A degree candidate in good standing at another law school which is a member of the Association of American Law Schools may, at the discretion of the Dean, be admitted as an unclassified student to earn credits for transfer to the other law school.

REQUIREMENTS FOR THE DEGREES*

To be recommended for the degree of Bachelor of Laws (LL.B.) the student must have completed a residence period of not less than three academic years (four years for evening students) and 80 semester hours of required and elective courses, with a cumulative average of at least *C*. At least one academic year of residence and 28 semester hours are required of students admitted with advanced standing. Credits allowed by way of advanced standing are not included in computing the average required for graduation.

The degree of Bachelor of Laws "with distinction" is awarded students who obtain a minimum cumulative average of 85.

Graduation Requirements.—See pages 21–22 for a statement of the graduation requirements.

Residence

Candidates for the degree of Bachelor of Laws must complete a residence period of three academic years. Attendance in the day division for the fall and spring semes-

*The degree of Juris Doctor (J.D.) is conferred as a recognition of the completion at The George Washington University Law School, with high rank, of the required program of study for the Bachelor's degree, including experience in research and legal authorship. To be recommended for this degree the student must have completed: (1) a residence period of not less than three academic years (four years for evening students); (2) 80 semester hours with a cumulative average of at least *B* including one of the following courses: Comparative Law I, Jurisprudence, or one of the graduate seminars; and (3) one year of acceptable service on the board of student editors of *The George Washington Law Review*, election to which is subject to regulations laid down by the Faculty. All requirements for the degree must be completed at this Law School.

This degree is available only to students who entered the Law School prior to September 1961.

ters constitutes residence for an academic year; similar attendance in the evening division constitutes residence for three-fourths of an academic year. Consequently, a day student must attend 6 semesters to meet residence requirements, an evening student must attend 8. Students authorized to take schedules of less than 10 hours in the day division or less than 6 hours in the evening division receive residence credit on a proportional basis. Students who attend the summer sessions receive fractional residence credit. For details, see page 15.

Curriculum

Required and Elective Courses.—A program of required and elective courses has been developed to assure coverage of the basic courses and allow a degree of flexibility to meet the diverse interests of students. All first-year courses, four second-year courses, and one third-year course are required, leaving a total of 35 hours of electives. In general, second-year students are restricted to second-year electives but in appropriate cases the taking of third-year electives will be approved. Similarly, specially qualified third-year students may secure approval to take graduate courses and research in public law. It is important that students plan ahead regarding their electives.

Practice and Trial Practice Court.—Classroom instruction is conducted in pleading and procedure, trial and appellate practice, and evidence. This instruction includes grounding in the principles of the Federal Rules of Civil Procedure and the Federal Rules of Criminal Procedure. In addition, each senior student is required to participate in the work of the Trial Practice Court, which includes the trying of cases as junior counsel and as senior counsel. A special section of the court is devoted exclusively to the trial of patent cases. Experience in preparing and arguing appellate court cases is available through the course in Appellate Practice and Procedure and the Case Club Competition.

Patent Law.—Students interested in patent law should take the following group of courses: Unfair Trade Practices, Patent Law, Patent Office Practice, Patent Trial Practice Court, and Federal Antitrust Laws. Additional courses recommended are Advanced Topics in Patent Law and Trade Regulation Seminar.

Curriculum.—Following is the curriculum for students beginning in the fall semester. Adjustments are made to meet the needs of students beginning in the spring semester.

Day Division

THE GRADUATE SCHOOL OF PUBLIC LAW*

Louis Harkey Mayo, B.S., LL.B., J.S.D., *Dean; Professor of Law*
James Forrester Davison, A.B., LL.B., LL.M., S.J.D., *Professor of Law*
Robert Galloway Dixon, Jr., Ph.D., LL.B., *Professor of Law*
Robert Kramer, A.B., LL.B., *Professor of Law*
Leroy Sorenson Merrifield, A.B., LL.B., M.P.A., S.J.D., *Professor of Law*
Arthur Selwyn Miller, A.B., LL.B., S.J.D., *Professor of Law*
Charles Bernard Nutting, A.B., J.D., LL.M., S.J.D., LL.D., Litt.D., L.H.D., *Professor of Law*
Glen Earl Weston, B.S., LL.B., *Professor of Law*

PROGRAMS OF STUDY

Degrees of Master of Laws and Doctor of Juridical Science

The administration of justice under law is a matter so vast and complex that some graduates feel the need for further study to broaden and deepen their understanding of the law. Others wish to extend their study into rapidly developing specialized fields. Graduate instruction, leading to the degree of Master of Laws enables qualified students to attain one or both of these objectives.

The degree of Doctor of Juridical Science is offered for selected students whose aim is to extend still further their studies by pursuing original research in law.

Graduate work is available to evening as well as day students for the convenience of lawyers in private practice and in government service.

Continuing Legal Education

An important part of the graduate program is the offering of courses in various fields of the law for members of the bar not interested in degree candidacy but desirous of keeping abreast of current developments. The offerings in the field of governmental regulation provide opportunities for specialization. Although third-year and graduate courses are particularly suitable, first-year and second-year courses may be taken in appropriate cases. Members of the bar taking graduate work in this way register as unclassified students or as Continuing Legal Education students.

Programs for Foreign Lawyers

To meet the needs of lawyers from countries whose legal systems are not based on the English law, the Law School provides two additional programs of study. For those who wish to acquire an understanding of our system which will permit them to work with its materials and practitioners after returning to their own countries, the program for the degree of Master of Comparative Law permits a selection of regular courses taken with undergraduate and graduate students. Foreign lawyers who wish to practice in a common law jurisdiction may enroll in the program for the degree of Master of Comparative Law (American Practice), a more intensive program of courses appropriate to this goal.

* The President of the University, the Dean of Faculties, the Assistant Dean for Development in the National Law Center, the Registrar of the University, and the Director of Admissions of the University are members ex officio of the Faculty.

Research in Public Law

Research in public law is conducted under the supervision of members of the Faculty of the Graduate School of Public Law. The purpose of this research is to furnish means for training specialists in public law, either as government lawyers or as lawyers representing individuals or corporations in cases in which the Government is a party; and to assist in the analysis, clarification, formulation, and improvement of public law, substantive and procedural.

Candidates for graduate degrees and specially qualified seniors may pursue this work.

ENTRANCE REQUIREMENTS

Candidates for graduate degrees must be accepted by the Faculty of the Graduate School of Public Law.

*For the Degree of Master of Laws.**—A Bachelor of Arts or equivalent degree from an approved college or university and a Bachelor of Laws or equivalent degree from a member school of the Association of American Law Schools are required. Candidates for admission must have attained a minimum average of 75 on all work done for the Bachelor of Laws degree, except that at the discretion of the Faculty applicants otherwise eligible may be admitted on proof of experience and attainment as an alternative. Advanced standing will not be granted for credits earned while a candidate for the first degree in law or for credits earned at another law school. Credits earned as an unclassified student will not be applicable toward meeting the requirements for the degree unless specific provision therefore is included in the letter of admission.

For the Degree of Master of Comparative Law and *Master of Comparative Law (American Practice).*—The following are required: (1) the successful completion of and graduation from a course in arts, philosophy, letters, or sciences, equivalent to graduation from a gymnasium, lycee, or liceo; and (2) graduation in law from a recognized foreign university where training was in Civil Law.

For the Degree of Doctor of Juridical Science.—The following are required: a Bachelor of Arts or equivalent degree from an approved college or university; a Bachelor of Laws or equivalent degree, earned with high rank, from a member school of the Association of American Law Schools; and outstanding capacity for scholarly work in the field of law.

Unclassified Students

A member of the bar or a person, not a member of the bar, who is a graduate of a member school of the Association of American Law Schools may, at the discretion of the Dean, be admitted as an unclassified student.

Unclassified students participate in the work of the course and take examinations. Courses taken by unclassified students will not be credited toward degrees at this School.

Continuing Legal Education Students

A simplified admission and registration procedure is used for members of the bar who desire to take courses on a noncredit basis. Continuing Legal Education students may not participate in student activities or benefit from the medical privileges of the University.

* One-half of the work necessary for graduation from an approved college or university completed prior to entry into military service may be accepted as satisfying the admission requirement for pre-legal work provided the applicant completed not less than twenty months of continuous service in the armed forces of the United States during World War II and prior to the beginning of the 1948–49 fall semester.

REQUIREMENTS FOR THE DEGREES

Master of Laws

To be recommended for the degree of Master of Laws (LL.M.) the student must have completed a residence period of not less than two semesters. Such residence should normally be continuous. All requirements for the degree must be completed in this School and in a period not exceeding two years after registration for work for the degree. The student must have completed, with a minimum average of 75, 20 semester hours in courses listed in the law curriculum as graduate courses except that in appropriate cases second- and third-year courses may be approved for inclusion in the program of study if not previously taken.

Master of Comparative Law

The degree of Master of Comparative Law (M.Comp.L.) is for foreign students who intend to return to their countries. To be recommended for this degree the student must have completed a residence period of not less than one academic year. He must have completed satisfactorily 24 semester hours in approved courses in the curriculum of the School or of such other departments of the University as the Faculty of the School shall approve.

Master of Comparative Law (American Practice)

The degree of Master of Comparative Law, American Practice (M.Comp.L.(Am. Prac.)) is for foreign students who intend to remain in this country. To be recommended for this degree the student must have completed a residence period of not less than one academic year. He must have completed 28 semester hours in approved courses in the curriculum of the School with a cumulative average of at least 65.

Doctor of Juridical Science

To be recommended for the degree of Doctor of Juridical Science (S.J.D.) the student must have completed a residence period of not less than one academic year. He must have pursued a course of study and research designated by his consultative committee and approved by the Faculty of the Graduate School of Public Law. At the conclusion of his first year of residence, or at such other time as the Faculty may set, the candidate must pass an oral examination in those fields of study selected by the consultative committee. This examination is conducted by the consultative committee and such other members of the Faculty and qualified experts as are selected by the Faculty.

No later than the date specified in the University calendar the candidate must submit to the Dean of the Graduate School of Public Law three complete copies of the dissertation together with a fourth copy of the summary. It is the responsibility of the candidate for a Doctoral degree to obtain from the Dean a printed copy of the regulations governing the styling and reproduction of the dissertation, which are rigidly enforced. To be acceptable the dissertation must, in the opinion of the examining committee, constitute a substantial contribution to the field of law concerned and be suitable for publication. Additional information will be supplied by the Dean.

The summaries of accepted dissertations will be printed in a numbered issue of the University Bulletin. The successful candidate for the doctorate is required, before receiving his degree, to pay a fee to cover the expense of printing the summary of his dissertation.

GENERAL INFORMATION

Entering Classes

The curriculum is organized so that students may enter the Law School at the beginning of the fall or spring semester of the academic year, but not at the beginning of the summer term.

Day and Evening Divisions

Most day classes meet for fifty-minute periods between 9:10 A.M. and 1:00 P.M., Monday through Friday; Trial Practice Court meets for two-hour periods on Saturday morning.

Evening classes meet for two fifty-minute periods from 5:50 to 7:40 P.M., Monday through Friday. A four-credit course, e.g., Torts, meets two evenings a week; a three-credit course, e.g., Administrative Law, meets two evenings a week for one half the semester and one evening for the other half; a two-credit course, e.g., Personal Property, meets one evening a week. The evening division conforms to the standards of the morning division, the full-time faculty participating in the instruction.

Summer Term

A term of two sessions, with day and evening classes, is offered in the summer. Continuing students and transfer students may register for either or both sessions. *No beginning students are admitted to the summer term.*

The summer term is shorter than a semester of the academic year, and, as a consequence, a student must attend two and one-half summer terms to receive residence for one academic year or attend one and one-half summer terms to receive residence for a semester.

A maximum of 6 semester hours may be taken each session by day students. Such students will receive two-fifths of a semester of residence credit upon the completion of 4 or 6 semester hours in one session, and will receive four-fifths of a semester of residence credit upon completion of 8 or more semester hours in two sessions. A maximum of 4 semester hours may be taken each session by evening students. Such students will receive three-tenths of a semester of residence credit upon the completion of 4 semester hours in one session, and will receive six-tenths of a semester of residence credit upon the completion of 6 or 8 semester hours in two sessions.

Summer students planning to take the New York bar examination must register at the beginning of the term for both sessions and must complete both and carry a full program of courses.

The Library

The Law Library of 58,000 volumes contains the official reports of the decisions of the courts of last resort of all states prior to the National Reporter System, and of some states complete to date: the National Reporter System, complete; the reports of the United States Supreme Court and lower federal courts, and the reports of federal administrative agencies; Shepard's Citations for the units of the Reporter System; the English Reports, Full Reprint; the English Law Reports; the Times Law Reports; the Dominion Law Reports; the United States statutes and codes; complete sets of statutes of all the states; the English statutes; the principal English and American digests and encyclopedias; collections of special reports and annotated cases; United

Nations documents; and leading textbooks and treatises. Approximately 335 legal periodicals are currently received. A section of the library, consisting of books acquired from National University, is known as the National University Law Collection.

A student registered in the University is entitled to the reference use of the University Library. The Student Identification Card issued upon the payment of fees, must be presented as identification.

Also available to law students are 50,000 bound volumes and 20,000 pamphlets of the former library of the Carnegie Endowment for International Peace, in the fields of international law and relations, history, and economics, in the University Library.

The Law Library, which is on the fourth floor of Stockton Hall, is open from 9:00 A.M. to 10:00 P.M., Monday through Friday; from 9:00 A.M. to 5:00 P.M. on Saturday; and from 2:00 to 6:00 P.M. on Sunday. Books and other materials do not circulate and must be used in the library.

The Law Review

The George Washington Law Review, published by the University, is edited and managed by students of the Law School under the supervision of faculty advisers. It is devoted exclusively to state and federal public law. The location of the University in the National Capital, where the primary sources of federal public law may be observed in operation, affords an unexcelled opportunity for specialization in this field.

The student staff participates in a two-year *Law Review* program. The editorial staff is selected from among those students who have successfully completed the first year of *Review* work. Students receive four hours of academic credit for the two-year program.

Placement Service

The Law School takes a continuing interest in the placement of its graduates in private practice and governmental service, as well as with industry and commerce. The Dean, the Faculty, and the University Placement Office cooperate in collecting information from alumni, law firms, and government agencies concerning opportunities in legal positions throughout the country. Senior law students and recent graduates are urged to keep in touch with the Law School Placement Office.

APPLICATION FOR ADMISSION

Forms for application for admission are available at the Office of the Director of Admissions, 2029 G Street NW., Washington 6, D. C.; telephone: FEderal 8-0250, extension 344. The completed form should be returned to the Office of the Director of Admissions, with an application fee of $10 for a degree candidate, $5 for a non-degree candidate. Two recent signed photographs must accompany the application.

Bachelor of Laws Application.—In order to provide sufficient time for the evaluation of credentials, the Law School Admission Test score in addition to the other papers should be received by July 1 for fall semester admission. This means that the November, February, or April Law School Admission Test should be taken. (See "Entrance Requirements for the Degree of Bachelor of Laws," pages 8–9.) In cases of emergency, the Law School Admission Test may be taken in August, but this will delay action upon the application until just before the fall semester. *All papers should be received by the Admissions Office not later than December 1 for the spring semester and not later than May 1 for the summer term.*

Graduate Degrees.—Application for admission as a candidate for a graduate degree and all required credentials should be received by the Admissions Office by July 1 for the fall semester, December 1 for the spring semester, and May 1 for the summer term. An applicant for admission as a candidate for the degree of Doctor of Juridical Science should write to the Dean of the Graduate School of Public Law for special instructions.

Nondegree Study.—Application for admission for nondegree status should be received with necessary credentials at least *one month prior to the first day of registration for the semester or term for which the application is filed.*

The early filing of applications is urged. As a general rule, late applications will be considered only if the application form and all required credentials are received in the Admissions Office not later than two weeks prior to the first day of registration for the semester or term for which the application is filed.

READMISSION

A student who has previously registered in the Law School but who did not attend during the semester prior to registration (summer term excluded) should file an application for readmission at least two weeks in advance of registration. If the student applies as a degree candidate and was previously registered as a nondegree student, or if he has attended one or more higher institutions during his absence from the University, he must have complete, official transcripts sent to the Office of the Director of Admissions from each institution attended before his application will be considered. Applications for readmission are considered on the basis of regulations currently effective.

REGISTRATION

Before attending classes each student must present himself in person for registration. No student will be registered in the Law School or the Graduate School of Public Law until proper credentials have been filed and approved (see "Admission").

No registration is accepted for less than a semester or one summer session.

A student may not register concurrently in The George Washington University and another institution without the prior permission of the dean of the college, school, or division in which he is registered in this University. Registration in more than one college, school, or division of the University requires the written permission of the deans concerned, *prior to registration.* Allowance of credit for work done concurrently will be at the discretion of the appropriate Committee on Admission and Advanced Standing.

Registration is held in Stockton Hall, 720 Twentieth Street NW., during the following periods: *fall semester,* September 20 and 21, 12:00 to 8:00 P.M.; September 22, 10:00 A.M. to 1:00 P.M. *Spring semester,* January 31 and February 1, 12:00 to 8:00 P.M., February 2, 10:00 A.M. to 1:00 P.M.

A late-registration fee of $5 is charged each student who is permitted to register after the regular registration days.

Registration may be changed only with the permission of the Dean.

FEES AND FINANCIAL REGULATIONS

Application fee, charged each applicant for admission as a degree candidate, nonrefundable	$10.00
Application fee, charged each applicant for admission as a nondegree candidate, nonrefundable	5.00

Tuition Fees

Full-time program (more than 10 hours): for each semester	400.00
Part-time program: for each semester hour for which the student registers	30.00
For the degree of Doctor of Juridical Science:	
For work leading to and including the final examinations	1,000.00
Special fee, Law School (Student Bar Association activities, *Law Review*, and other services), charged each student in the Law School for each semester or any part thereof except summer term	10.00
Graduation fee	25.00
Fee for printing summary of doctoral dissertation	85.00
Fee for special examinations, for each subject	5.00
Late-registration fee, charged each student who fails to register within the designated period	5.00
Change fee, charged each student for each change in program involving one course or more than one course	2.00
Residence fee,* charged each student wishing to maintain "in residence" status during any semester of absence from the University or after completion of tuition requirements	30.00
Service fee, charged each student for late payment of tuition, see "Payment of Fees"	2.00
Reinstatement fee, charged each student who is reinstated after being suspended for delinquency in fees	5.00

Registration in the University entitles each student to the following University privileges: (1) the issuance of one certified transcript of record, if and when desired; (2) the services of the Placement Office; (3) the use of University library; (4) gymnasium privileges; (5) admission to all athletic contests, unless otherwise specified; (6) subscription to the *University Hatchet*, the student newspaper; (7) admission to University debates; (8) medical attention and hospital services as described under "Health Administration", page 26. These privileges, however, with the exception of the issuance of transcripts, terminate, and a student is no longer in residence, when he withdraws or is dismissed from the University.

Payment of Fees

All fees are payable at the Office of the Cashier, 725 Twenty-first Street NW. No student is permitted to complete registration or to attend classes until all fees are paid. Fees for each semester are due and payable in advance at the time of registration.

Subject to the approval of the Treasurer, a student may sign a contract for semester charges, except for fees payable in advance, permitting payments as follows:

Fall Semester.—One-third at the time of registration; one-third on the first working day† in November; one-third on the first working day† in December.

Spring Semester.—One-third at the time of registration; one-third on the first working day† in March; one-third on the first working day† in April.

A student who fails to meet payments when due but who pays his fees on or before the fifteenth of the month in which payment is due is charged a service fee of $2. A student who fails to meet payments by the fifteenth of the month in which payment is due will be automatically suspended and may not attend classes until he has been officially reinstated and has paid all accrued fees and a reinstatement fee of $5.

A student suspended for failure to meet payments when due may not be reinstated for the semester after two weeks from the date of suspension. Applications for reinstatement are to be made to the Office of the Cashier.

* Payment of the residence fee entitles the student who is granted leave of absence to return and continue his work toward a degree under the requirements which were in force at the time of his first registration but does not count as part of the residence requirement for the degree.

† The University work week is Monday through Friday, inclusive.

Withdrawals and Refunds

Application for withdrawal from the University or for change in class schedule must be made in person or in writing to the Dean. Notification to an instructor is not an acceptable notice.

In authorized withdrawals and changes in schedules, financial adjustments will be made as follows:

Fall Semester.—Withdrawal dated on or before the last working day* in October, cancellation of two-thirds of tuition charges; withdrawal dated on or before the last working day* in November, cancellation of one-third of tuition charges. No refund or reduction will be allowed on a withdrawal dated subsequent to the last working day* in November.

Spring Semester.—Withdrawal dated on or before the last working day* in February, cancellation of two-thirds of tuition charges; withdrawal dated on or before the last working day* in March, cancellation of one-third of tuition charges. No refund or reduction will be allowed on a withdrawal dated subsequent to the last working day* in March.

In no case will a refund be made of the first third of the total tuition charges unless the registration is in advance and the course is dropped before the regular registration day. In this case a withdrawal fee of $5 is charged and tuition fees refunded. In no case will tuition be reduced or refunded because of nonattendance upon classes.

Payment applies only to the semester for which a registration charge is incurred and in no case will this payment be credited to another semester.

Authorization to withdraw and certification for work done will not be given a student who has not a clear financial record.

Withdrawal from a course or from the University between the last working day* in October and the end of the fall semester and between the last working day* in February and the end of the spring semester is permitted only in exceptional cases.

The grade of zero will be given in a course dropped without the approval of the Dean.

All charges for courses dropped without the approval of the Dean must be met by the student. Reporting the dropping of a course to an instructor does not effect its discontinuance.

FELLOWSHIPS, SCHOLARSHIPS, PRIZES, LOAN FUNDS

Law School Research Assistantships.—Student research assistantships are available each year to students currently enrolled in the Law School, preference being given to applicants who are completing their second year. Each assistant receives an annual stipend. Awards are made on the basis of academic standing, financial need, and capacity for leadership. Research assistants have duties similar to those of teaching fellows. Applications should be submitted to the Dean of the Law School not later than May 1.

Law Teaching Fellowships.—Teaching fellowships are available each year to prospective candidates for the Master of Laws degree. Each fellow receives an annual stipend, plus tuition for the academic year. Teaching fellows follow an ap-

* The University work week is Monday through Friday, inclusive.

proved program of study and research, assist members of the Faculty in the guidance of first-year students, and supervise student work in legal bibliography and the drafting of legal instruments. Upon satisfactory completion of the year's work, a fellow is recommended for the degree of Master of Laws. Applications should be submitted to the Dean of the Graduate School of Public Law not later than March 15.

Mary Covington Memorial Scholarship.—Established in 1961 by Mary S. English in memory of her aunt, Mary Covington LL.B. 1922. Awarded annually to a deserving second-year student in the evening division of the Law School on the basis of scholastic achievement.

Charles Worthington Dorsey Memorial Scholarship.—This scholarship, established in 1947 as a memorial to Charles Worthington Dorsey, Bachelor of Laws, '81, Master of Laws, '82, is awarded upon the recommendation of the Faculty of the Law School to a needy and promising graduate of Columbian College of Arts and Sciences or other division of the University, with a Bachelor of Arts or other equivalent degree, who has maintained an average of *B* as an undergraduate student and who desires to pursue the study of law as a full-time student. The scholarship covers tuition for the course leading to the degree of Bachelor of Laws, provided that the holder maintains an average of 75. The right is reserved to suspend the benefits of the scholarship for cause at any time. The scholarship is awarded ordinarily once every three years.

Law School Scholarships.—Scholarships are available each year in the Law School to graduates of accredited colleges. Each scholarship provides full three-year tuition in the day division of the Law School. Candidates must have graduated in the upper fifth of their class and must have demonstrated qualities of leadership in addition to scholastic attainment. To retain the scholarship, the successful candidate must maintain a minimum average of 75. Application must be made before March 1 to the Dean of the Law School.

Tuition scholarships are also available to second- and third-year full-time students with averages between 75 and 100. Applications should be made to the Dean of the Law School prior to July 1. The scholarships are awarded after the spring semester grades are reported.

Phi Delta Delta Scholarship.—Zeta Chapter of Phi Delta Delta Legal Fraternity (International) offers annually a scholarship to the woman student in the sophomore class who has excelled in scholastic achievement and service to the Law School in her first year.

Charles Glover Prize.—This prize, established in 1957 by Charles Carroll Glover, Jr., a Trustee of the University, in memory of his great-grandfather, Charles Glover, an illustrious member of the bar of the District of Columbia, consists of selected law books and is awarded annually to the student in the Law School who has attained the highest average grade in the third-year, full-time course.

Kappa Beta Pi Prize.—Eta Alumnae Chapter of Kappa Beta Pi Legal Sorority offers an annual prize which consists of a copy of Blackstone's *Commentaries* or a legal dictionary. Awarded to the woman law student who attained the highest average in her first year.

John Bell Larner Prize.—This prize, established by the bequest of John Bell Larner, consists of a medal which is awarded annually to that member of the graduating class in the Law School who attains the highest average grade in the entire course for the degree of Bachelor of Laws or Juris Doctor.

John Ordronaux Prizes.—Established in 1909 by the bequest of John Ordronaux. Prizes are awarded annually to the student in the Law School who has attained the

highest average grade in the first-year, full-time course and to the student who has attained the highest average grade in the second-year, full-time course.

Through the generosity of friends of the University a number of loan funds are available to students in the Law School. Application for loans should be made to the Treasurer of the University.

REGULATIONS

Amount of Work

Students without substantial outside employment may take a program of studies of 14 hours a week. Such students may take courses in the evening only if they are not available in the daytime and if a majority of the hours taken are in day courses. Students with 20 hours or more of outside employment whether in the day or evening division, must take a limited program of studies not exceeding 10 hours a week. Students taking a majority of their classes in the evening may not take more than 10 hours a week; the minimum load is 8 hours, except in special cases where 6 may be approved for a limited time. A minimum schedule of 10 hours in the day division is required except in exceptional circumstances when a reduced program is authorized by the Dean for continuing students.

Attendance

Regular attendance at classes is required and is necessary for successful work. A student who is deficient in class attendance in any course may be barred from taking the examination, and the course must be repeated.

Changes in Program of Studies

A student may not drop or add courses or change from one section to another of the same course without the approval of the Dean.

Summer School Credit

Students planning to attend summer school sessions at other law schools and desiring to use credits obtained at such schools in their course at this Law School must first have the courses they wish to take approved by the Dean. In no event will credits be recognized in excess of those which might be obtained in a similar period in this School.

Transcripts of Record

Official transcripts of student records will be issued on request of the student or former student. No charge is made for the first transcript; a fee of one dollar is charged for each one thereafter. No certificate of work done will be issued for a person who does not have a clear financial record.

Graduation Requirements

Application for Graduation.—It is the student's responsibility to file an application for graduation in the Office of the Registrar at the time of registration for the last semester of the senior or final year.

Degree Requirements.—The student must meet the curriculum, scholarship, and residence requirements of the degree for which he is registered.

A student who is absent from the University for one semester or more is required to satisfy the curriculum requirements existing at the time of his return, unless during his absence he maintains "in residence" status by paying the residence fee, see page 18.

A student who has completed tuition requirements, but whose graduation is deferred for any reason must maintain "in residence" status by paying the residence fee for the semester immediately preceding the graduation at which he expects to receive his degree.

Attendance and Conduct.—The University reserves the right to refuse to confer a degree upon a candidate whose attendance or conduct has been unsatisfactory.

Presence at Graduation.—Presence at the graduation exercises is required of the candidate, unless the work for the degree was completed during the summer term or written application for graduation *in absentia* has been approved by the Dean.

Examinations

Written examinations are held at the end of each course. Every student is required to take the regular examinations unless excused. No excuse for absence will be granted except by the Dean and then only for illness or other emergency. Application for excuse must be made in writing not later than one month after the date of the examination. An entry of *I*, incomplete, will be made on the record of a student thus excused. To receive credit for the course, he must take the next regularly scheduled examination. The examination may not be taken after exclusion for low scholarship.

Permission to take an examination before the regularly scheduled date will not be granted. Permission to take a postponed examination is limited to the situation provided for in the preceding paragraph.

A special examination will be granted only to a student entitled to take a postponed examination, who is a candidate for a degree to be conferred at a convocation which precedes the next regular examination in the subject. Written application, showing sufficient cause, should be addressed to the Dean, and approval will be granted at the discretion of the Faculty.

If a student fails to take an examination, a grade of zero will be recorded unless he has been excused from the examination as provided above or has obtained the Dean's permission to drop the course.

Grades

Grades are given in numerical terms which are equivalent to letter grades according to the following scale: 85–100, *A*, excellent; 75–84, *B*, good; 65–74, *C*, satisfactory; 55–64, *D*, poor—below standard for graduation; below 55, *F*, failure. A student who has been excused from failure to take a regularly scheduled examination is given the grade of *I*, incomplete, and a student who has been barred from taking an examination because of excessive absences is given the grade of *EA*. See "Examinations" above, for grade upon failure to take an examination. Grades between 65 and 100 indicate that the work has been completed and credit given for the courses. Grades between 55 and 64, however, do not represent satisfactory work and adversely affect a student's cumulative average. No credit is given for grades below 55.

A student may not repeat a course he has failed, except by permission of the Faculty.

The cumulative average of a student includes all grades in all courses taken while he is a candidate for a particular degree. When a course is repeated, both the first grade and the subsequent grade or grades are counted in the cumulative average.

Exclusion and Probation for Poor Scholarship

Candidates for the Degrees of Bachelor of Laws and Juris Doctor.—A student will be excluded who fails in courses aggregating 8 or more semester hours in one semester or in two successive semesters, or who fails in courses aggregating 10 or more semester hours during his period of law study. A student subject to exclusion under this provision who is currently registered will be permitted to complete the work of the semester.

A student not subject to exclusion under the foregoing rule who at any time fails to maintain a cumulative average of at least 65 will be placed on probation. A student on probation may at the discretion of the Dean be required to reduce his program of study. If a student on probation does not, by the end of the second semester following that in which his average has fallen below 65, receive grades sufficient to give him a cumulative average of at least 65, he will be excluded. If a student on probation attains a cumulative average of at least 65 by the grades received during the semester his status will then become clear. A maximum of three semesters of probation is allowed. Thus, if a student whose status has become clear after two semesters of probation subsequently goes on probation, he will be allowed only one semester of probation in which to raise his average to at least 65.

In special cases in which a student who has been excluded can clearly demonstrate that his low grades were due to special circumstances beyond his control and that he has the capacity to pursue the study of law with a definite likelihood of success, such student may be readmitted by the Faculty subject to such conditions as the Faculty may impose.

Candidates for Graduate Degrees.—A candidate for one of the graduate degrees whose work is not satisfactory in the opinion of the Faculty, taking into consideration the requirements and standards for the degree, may, by action of the Faculty, be excluded at the end of the semester for which he is currently registered.

Unclassified Students.—An unclassified student whose work is not satisfactory in the opinion of the Faculty may, by action of the Faculty, be excluded at the end of the semester for which he is currently registered.

Academic Dishonesty

Evidence of dishonesty on the part of any student will result in his suspension by the Dean upon recommendation of the Dean's Council.

A student found guilty of dishonesty will be suspended for a stated period and will be deprived of credit for all courses in which he is enrolled during the semester in which the dishonest act occurs. A disciplinary grade of "Failure—Academic Dishonesty" will be recorded for each such course, and this grade will be employed in computation of the cumulative average.

If the student suspended for academic dishonesty should be readmitted, he may be required to repeat for grade all courses for which a disciplinary grade has been recorded, and both the grade earned on repetition and the disciplinary "Failure—Academic Dishonesty" grade will be employed in computation of the cumulative average.

Classification of Students

Candidates for the degree of Bachelor of Laws are divided into classes on the completion of semester hours as follows: (1) full-time students: first year, 1–28; second year, 29–56; third year, 57 or more; (2) part-time students: first year, 1–20; second year, 21–40; third year, 41–60; fourth year, 61 or more.

Right to Change Rules

The University and its various colleges, schools, and divisions reserve the right to modify or change requirements, rules, and fees. Such regulations shall go into force whenever the proper authorities may determine.

Right to Dismiss Students

If a student knowingly makes a false statement or conceals material information on an application for admission, registration card, or any other University document, his registration may be canceled and he will be ineligible (except by special action of the Faculty) for subsequent registration.

The right is reserved by the University to dismiss or exclude any student from the University or from any class or classes, whenever, in the interest of the student or the University, the University Administration deems it advisable to do so.

Property Responsibility

The University is not responsible for the loss of personal property in any University building. A "Lost and Found" Office is maintained in the Student Union.

STUDENT ACTIVITIES AND SERVICES

The Student Bar Association

Every student in the Law School is a member of the Student Bar Association, which is organized to enable students to become better acquainted with problems of the profession, to foster professional ideals, and to bring about closer contact with members of the profession engaged in active practice of the law. The work of the Student Bar Association is carried on by various committees and by group and general meetings of a professional and social nature. From time to time lectures are given by outstanding authorities on legal and professional problems.

An important activity is the Van Vleck Case Club Competition, which provides an opportunity for training in appellate advocacy. First and second year students participate as contestants before courts composed of members of the Faculty and the local bar. Senior law students of the Case Club also sit as judges. The final argument is held before a court composed of distinguished federal judges.

The Legal Aid Program is under the joint sponsorship of The George Washington University Student Bar Association and the Junior Bar Section of the District of Columbia Bar Association. Participating students assist court-appointed attorneys in the preparation of cases for trial or appeal. Qualified second- and third-year students are eligible for participation in the program.

In the ranking of member associations by the American Law Student Association, The George Washington University Student Bar Association has received first place twice and second place twice in the past six years.

Order of the Coif

The Order of the Coif, a national honor society with chapters in over forty law schools, aims "to foster a spirit of careful study and to mark in a fitting manner those who have attained a high grade of scholarship." The George Washington University Chapter was established in 1926. Members are elected each year from the highest-ranking 10 per cent of the graduating class of the Law School.

Living Accommodations

The University maintains five residence halls. Meals are served at the Student Union.

Admission to the University does not include room reservation. A separate application for a room should be made well in advance (for the fall semester by May 1, for the spring semester by January 1). Forms for application, together with detailed information; may be obtained from the Director of Activities for Women or the Director of Activities for Men.

Information concerning private rooming and boarding facilities near the University may be obtained at the Housing Office, Lisner Auditorium. The reservation of rooms in private houses must be made by students.

Girls under the age of twenty-one who are enrolled for twelve or more semester hours of academic work in the University and who are not living with their parents or relatives may live outside the residence halls only with the permission and approval of the Director of Activities for Women, upon receipt of written requests from parents. Permission is not granted for such girls to live outside the residence halls except with persons approved by the Director of Activities for Women.

Women Students.—Hattie M. Strong Hall provides single rooms at $47.50 a month and double rooms at $40 a month a person.

Dolly Madison Hall provides double rooms at $40 a month a person.

Men Students.—Welling Hall provides double rooms at $30 a month a person.

John Quincy Adams Hall provides double rooms, each with student alcove and bath. Rooms rent at $40 a month a person.

John C. Calhoun Hall provides double rooms at $40 a month a person.

Residence hall payments are due and payable in advance on the first day of each month. A student who fails to meet payments when due, but who makes his payment from the tenth to the fifteenth, inclusive, of the month in which payment is due, is charged a service fee of $2. A student who fails to meet payments by the fifteenth of the month in which payment is due will be automatically suspended and may not attend classes until he has been officially reinstated and has paid all accrued rent and a reinstatement fee of $5.

Student Employment

The Law School takes a continuing interst in the placement of its students and maintains a limited placement service for that purpose. In addition, the University Placement Office, 2114 G Street NW., provides assistance to students seeking full- and part-time employment. This office maintains a registry of positions locally and nationally available and refers qualified applicants for consideration. Information is also available on Civil Service examinations.

A day student taking the regular program (more than ten hours) must limit out-

side employment to less than twenty hours. (See "Amount of Work" page 21.) It is urged that day students refrain from engaging in outside employment during their first semester or first year in Law School. Although work in some special areas may contribute to the learning and experience of the student, as a general rule it will compete with time needed for adequate study and preparation, which are at the heart of a good legal education. The evening program is planned to provide a desirable reconciliation of these competing considerations but results in a more demanding schedule for the student.

Health Administration

The University maintains a health service that is primarily diagnostic in its intent. For medical emergencies and health consultations there is, on the Campus, a Student Health Clinic open from 9:00 A.M. to 5:00 P.M. with physician and nurse in attendance. There is also a rest room for women, with a graduate nurse in charge.

Medical privileges include: (1) physical examination of every student entering from secondary school; (2) three visits by the University physician or surgeon, office or residence (District of Columbia), in any one illness, exclusive of a specialist, surgical operation, laboratory, or X-ray examination; (3) hospitalization, including board and nursing, in the University Hospital for not more than one week during any twelve-month period—the necessity to be determined by the Director of Health Administration.* All additional hospital charges for operating room, laboratory, anesthetics, X-ray, medications, or any other special service must be paid by the student. The duration of hospitalization period (maximum, one week), is also to be determined by the Director of Health Administration.

This medical benefit applies only to illness or disability incurred while currently enrolled in the University. It does not apply to illness or disability incurred between the last day of examinations for a semester or summer session and completion of registration for the next semester or summer session.

The student is allowed, if he so desires, to engage physicians and nurses of his own choice, but when he does so he will be responsible for the fees charged.

Rules: (1) The Director of Health Administration is empowered to limit or deny the medical benefits where, in his discretion, a student has, by his misconduct or breach of the rules of the University, made himself ineligible; (2) the Director of Health Administration has authority to determine the necessity and length of hospitalization; (3) a student not currently enrolled or one who has severed his connection with the University is ineligible for medical benefits; (4) a student intending to train for an athletic team is required to pass a thorough examination at the beginning of each semester; (5) hospitalization is not available to those students availing themselves of other hospitalization coverage for the same illness.

The University is not responsible for injuries received in intercollegiate or intramural games, or in any of the activities of the departments of physical education.

* See Rule (5) for exception.

COURSES OF INSTRUCTION

IN THE LAW SCHOOL AND THE GRADUATE SCHOOL OF PUBLIC LAW

The courses of instruction listed below are subject to change. The University reserves the right to withdraw any course announced.

First-year courses are numbered from 100 to 200; second-year courses, from 201 to 300; third-year courses, from 301 to 400; and graduate courses, from 401 to 500.

The number of hours of credit given for the satisfactory completion of a course is indicated in parentheses after the name of the course. Thus, a year course giving two hours of credit each semester is marked (2–2), and a semester course giving two hours of credit is marked (2).

Day classes begin at 9:10 A.M. Evening classes begin at 5:50 P.M.

Specially qualified third-year students may secure approval to take graduate courses and research in public law.

In appropriate cases Master of Laws candidates may take second- and third-year courses not previously taken.

First Year

110 *Constitutional Law* (4) — Mayo, Dixon, Miller

Spring—day and evening. Basic principles of American constitutionalism; judicial function in constitutional cases; implementation of doctrines of separation of powers, federalism, limited government; development and exercise of national powers; introduction to civil rights and liberties.

115–16 *Contracts I-II* (4–2) — Mayo, Miller, Freedman, Temple

Academic year—day and evening; summer 1962. Legal remedies of contracting parties, including damages in contract and quasi-contract, specific performance, reformation, rescission, and remedies in tort; acts creating and terminating contractual rights, including offer and acceptance, mistake, and problems of proof; the function of consideration; conditions; assignments; third-party beneficiaries; the effect of changed circumstances; and protection of the client's interests upon breach or threat of breach by the other party. Emphasis on problems of analysis, draftsmanship, and adversary method.

125 *Criminal Law and Procedure* (4) — Cooper, Sharpe, Green

Spring—day and evening. Origin and purposes of criminal law; elements of criminal liability; mental disorders; solicitation, attempt, and conspiracy; crimes against the person, against property, and against both; statutory offenses; criminal procedure, with consideration of Federal Rules of Criminal Procedure.

135 *Legal Method and Legal System* (4) — Fryer, Benson, Sharpe, Goldsborough

Fall—day and evening; spring—day and evening. Introduction to substantive and procedural law dealing with basic concepts; training in method and technique of case law and legislation using modern case records; practice in use of law books and in legal writing; importance of language in law; legal reasoning and use of precedents under doctrines of stare decisis, law of the case, and res judicata; development of Anglo-American legal system; organization of judiciary and bar, stressing enforcement of ethical standards.

145 *Personal Property* (2) — Fryer, McAvoy, Sullivan, Green

Fall—day and evening; spring—day and evening. Concepts of property, including interests created by bailments, liens, and pledges; methods of acquiring ownership.

150 *Real Property* (4) — Benson, Walburn, Sullivan, Baker

Fall—day and evening; spring—day; summer 1962. Historical background of the law of estates and conveyancing; types of estates; dower and curtesy; landlord and

tenant relationship; concurrent estates; future interests at common law and after the Statute of Uses; the Rule Against Perpetuities; incidents of divided ownership, as waste; natural rights.

160 *Torts* (4) — Merrifield, Walburn, Temple, Seidelson

Fall—day; spring—day and evening. Liability for harm to others: intentional misconduct; the law of negligence, including consideration of fault and appropriate distribution to risk-costs as bases of liability; comparison of liability for physical harm with liability for mental and economic harm.

SECOND YEAR

201 *Agency* (2) — Cooper, Freedman

Fall—day and evening; summer 1962. Master and servant (status of agent), respondeat superior, nature of agency relation, actual authority, parties (disclosed and undisclosed principal), unauthorized transactions, notice, notification.

202 *Administrative Law* (3) — Davison

Fall—evening; spring—day; summer 1962 (as a four-credit course). The position of the administrative process in the separation of powers, including the status of administrative personnel, administrative hearings, judicial scrutiny of administrative action, discretion, and rule-making—particularly as relating to federal administrative agencies.

205 *Appellate Practice and Procedure* (2) — Freedman

Spring—day and evening. Appellate practice and procedure will be studied through texts; consultation with appellate judges and law clerks and with attorneys who have cases pending on appeal; observation of arguments in the United States Supreme Court and the Court of Appeals for the District of Columbia Circuit; and analysis of records, briefs, and oral arguments in actual and in moot cases. Each student will brief and argue one advanced-level moot case and will prepare one moot court record for use in first-year Case Club. Students taking this course will take only two hours of Trial Practice Court. Admission by permission of the instructor.

210 *Business Associations* (4) — McAvoy, Seidelson, Kirkpatrick

Fall—day and evening; summer 1962. Contrast of the partnership and corporation as alternative forms of organization; organizing partnerships and corporations—formalities, capital contributions, share structure; problems of operation; relations between partners; roles of shareholders, directors, officers; control devices; distributions to owners; voluntary reorganization; dissolution and termination.

215 *Civil Procedure* (4) — Walburn, Temple, Green

Fall—day and evening; summer 1962. The mechanics of litigation—the rules which govern the process by which the rights and duties studied in substantive law courses are enforced: pleadings, discovery, pre- and post-trial motions, jurisdiction and venue, equity jurisdiction and trial by jury, former adjudication. Emphasis is on the Federal Rules of Civil Procedure but the principles and main problems indigenous to all procedural systems are developed.

219 *Commercial and Investment Paper* (3) — Ledakis

Fall—day and evening; summer 1962 (as a four-credit course). Bills of exchange, promissory notes, checks, bonds, certificates of stock, and other forms of commercial and investment paper in the context of their business function and legal setting under the common law and uniform laws, including the proposed Uniform Commercial Code.

224 *Sales and Sales Financing* (3) — Ledakis

Spring—day and evening. The law relating to the sale and distribution of goods and to the security financing devices utilized in this connection, with particular attention to the effect of existing and proposed uniform laws.

230 *Conveyances* (2) — Baker

Fall—day and evening; spring—evening; summer 1962. Conveyances, recording; easements, profits, covenants, and equitable servitudes; adverse possession and adverse user; zoning and other land controls.

235 *Domestic Relations* (2) — Potts, Seidelson

Fall—day and evening; spring—evening; summer 1962. Marriage, annulment, and divorce; adoption and custody of children; economic relations.

238 *Equity* (2) — Sullivan

Spring—day and evening; summer 1962. A correlation of aspects of equity considered in earlier courses, and inquiring into the nature of equity jurisprudence through analysis of selected problems in equity: historical development of equity, including problems of merger of law and equity; use of equity jurisdiction offensively and defensively, including multi-party actions, injunction of executive and legal actions, and equitable abstention; emphasis on the fashioning of equitable remedies.

240 *Evidence* (4) — Fryer

Spring—day and evening; summer 1962. Functions of court and jury; qualifications and examination of witnesses; opinion, relevancy, and scientific evidence; proof of writing; application of the hearsay rule.

243 *Federal Jurisdiction* (2) — Cooper, Kirkpatrick

Fall—day and evening. Constitutional and statutory origins of federal courts, cases arising under the laws and the Constitution, diversity of citizenship, jurisdictional amount, removal procedure and jurisdiction, limitations on federal jurisdiction, state and federal conflicts, substantive law applied by federal courts.

251 *Insurance* (2) — Temple

Fall—day; summer 1962. A primary risk distributing medium and the rules by which legislative, administrative, and judicial bodies seek to promote its benefits and avert its dangers. Includes insurance marketing, insurable interest, subrogation, transfer of insurance benefits to nonpolicyholders, coverage and other insurance policy provisions, disposition of claims.

254 *International Law and World Order* (3) — Mallison

Fall—day and evening. Traditional content of course in international law presented in context of values and institutions of the world community; formal prescription and effective practice concerning participants in decision-making processes; roles of individuals, international public organizations, political parties, pressure groups, private associations, and national states.

259 *Labor Law* (3) — Merrifield

Spring—day and evening. Law governing labor-management relations, organization and representation of employees, regulation of economic weapons, enforcement of collective bargaining agreements, interunion and intraunion relations.

265 *Law and Accounting* (2) — S. Cohen

Fall—day; spring—evening. Study of fundamental accounting principles with emphasis on corporation accounting; legal and accounting implications of specific items on financial statements of corporations; inventory adjustments; corporate transactions, distributions, and capital adjustments.

270 *Legislation* (2) — Nutting, Mallison

Fall—evening; spring—day; summer 1962. The legislative process and roles of various participants in the process; operation of the United States Congress and state legislatures, including fact finding, organization, and procedure; problems of statutory interpretation.

274 *Taxation—Federal Estate and Gift* (2) — Kramer, Hambrick

Fall—day and evening. A survey of the substantive provisions of the federal estate and gift tax laws, including inter vivos transfers, transfers in contemplation of death, joint interests, life insurance proceeds, property subject to powers of appointment, the marital deduction and split gifts; tax procedure.

279 *Taxation—Federal Income* (3) — Hambrick, Weaver

Fall—evening; spring—day; summer 1962 (as a four-credit course). Survey of substantive provisions of federal income tax, including concept of gross income, limitations on allowable deductions, problems of capital gains taxation, nontaxable exchanges

of property, basis problems, provisions affecting the taxation of the family, and principles of income tax accounting.

285–86 *Trusts and Estates I-II* (2–4) Weaver, McAvoy

Academic year—day and evening. An integrated view of considerations (other than tax) in noncommercial transfers of wealth at death or during life with emphasis on the drafting of documents best suited to achieve the wishes of the property owner and meet the needs of his family. *First half:* distribution and administration of intestate estates; formal requirements for execution of wills and trusts; revocation and alteration; grounds for contest; limits on testamentary freedom. *Second half:* dispositive provisions in wills and trusts; common problems of construction; future interests questions including class gifts, powers of appointment, and limits imposed by Rule Against Perpetuities, etc.; problems of administration of estates and trusts including allocations to principal or income, investments, powers to manage, sell, etc.; charitable trusts. Supervised practice in drafting is included. Prerequisite to Law 286; Law 285.

295 *Unfair Trade Practices* (3) Weston

Fall—day and evening; summer 1962 (as a four-credit course). Unfair trade practices at common law and under statutes; trade-marks, trade names; copyright law; misappropriation of ideas; protection of competitors and consumers against false advertising under Federal Trade Commission Act; resale price maintenance under state Fair Trade Acts; state sales-below-cost statutes; Robinson-Patman Price Discrimination Act; miscellaneous business practices.

THIRD YEAR

302 *Admiralty* (2) Sharpe

Fall—evening. Sources and characteristics of the maritime law of the United States, jurisdiction of federal and state courts, personal injury and death questions peculiar to seamen and maritime workers, collision, limitation of liability.

307 *Comparative Law* (3) Davison

Spring—evening. The Civil Law System; general introduction to foreign law as exemplified by Roman Law and the French and German Civil Codes; comparative study of administration of justice and legal institutions. This course deals with delictual and contractual obligations.

309 *Conflict of Laws* (3) Dixon, Seidelson

Fall—day and evening; summer 1962 (as a four-credit course). Legal problems arising from occurrences transcending state or national boundaries; jurisdiction; foreign judgments; constitutional influences; theoretical bases of choice of law principles and their application to specific fields, including torts, contracts, property, family law, administration of estates, and business associations.

311 *Copyright Law* (2) Weston, Cary

Spring—evening. Historical background; formalities and essentials in securing a copyright; subject matter of copyright; remedies; international aspects of copyright under Berne Union, Universal Copyright Convention, and Inter-American Convention; copyright licensing and performing right societies.

313 *Constitutional Interpretations* (2) Dixon

Not offered 1962–63. Advanced course in constitutional law. The Constitution and constitutional tradition, process of judicial decision-making, significance of "due process", current constitutional developments, adequacy of the traditional system of powers and limitations, introduction to comparative constitutional law.

318 *Creditors' Rights* (3) Kirkpatrick

Spring—day and evening; summer 1962 (as a four-credit course). Remedies of unsecured creditors; judgments, fraudulent conveyances, creditors' agreements, equity and statutory receiverships, and bankruptcy. The general approach is that of law administration.

321–22 *Current Decisions* (2–2) Seidelson, Sullivan

Academic year—day and evening. Required of, and limited to, members of the student staff of the *Law Reveiw.*

330 *Federal Antitrust Laws* (3) Weston, Kirkpatrick
Spring—day and evening. Restraints of trade at common law and under Sherman Antitrust Act of 1890, Federal Trade Commission and Clayton Acts by mergers, monopolies, price-fixing agreements, trade associations, exclusive-dealing agreements, tie-in sales, and trade boycotts; patents and copyrights under antitrust laws.

335 *Jurisprudence* (2) Mayo, Kramer
Fall—evening; spring—day. History of jurisprudence; schools of jurists, particularly the nineteenth century schools; sociological jurisprudence; theories of justice; the nature of law; law and morals; law and the state; the scope and subject matter of law; sources and forms of law; the traditional element; analysis of general legal concepts.

339 *Collective Bargaining and Labor Arbitration* (2) Merrifield
Fall—evening. The collective labor agreement: its content, negotiation, and administration through the grievance procedure and arbitration; problems in the settlement of labor disputes.

341 *Labor Standards and Social Security Legislation* (2) Merrifield
Not offered 1962–63. Legal problems arising under federal and state statutes dealing with labor standards and social security. Particular emphasis is placed upon the regulation of wages and hours, workmen's compensation, and insurance against unemployment and old age.

345 *Legislative Drafting* (2) Zinn
Fall—evening. Advanced instruction and practice in legislative drafting.

349 *Local Government Law* (2) Mallison
Spring—evening; summer 1962. The decision-making processes in metropolitan and local communities; types and objectives of city, county, and special function local government units; intergovernmental relations; original organization and changes; local lawmaking; community planning and development.

355 *Mortgages* (2) Baker
Summer 1962. Security interests in real property, their creation, transfer, enforcement and extinguishment.

359 *Patent Law** (2) Robillard
Fall—evening. Origin and nature of patents, patentable subject matter, classes of patents, novelty, utility, invention, patent claims and their interpretation, acts constituting infringement, correction of patents.

360 *Advanced Topics in Patent Law* (2) Harris
Spring—evening. Lectures and discussion; licensing and protection of industrial property; uses and abuses of patents; governmental regulation; protection abroad; the role of patents in business; economic and social functions of patents, trade-marks, and copyrights. Prerequisite: Law 359.

362 *Patent Office Practice** (2) Rose
Spring—evening. Rules and practice; appeal and interference procedure.

365–66 *Patent Trial Practice Court** (2–2) Brown, Rimel
Academic year—evening. Practice before the United States Court of Customs and Patent Appeals and the federal courts. Prerequisite: forty-two semester hours, including Law 215 and 240. Law 359, which is also required, may be taken concurrently. *Patent Trial Practice Court* may be elected instead of Law 385–86 to satisfy the Trial Practice Court requirement. If *Patent Trial Practice Court* is started in the spring semester, Law 240 may be taken concurrently.

370 *Public Utilities* (2) Fryer, Davison
Spring—evening. Regulation by federal, state, and municipal authorities concerned with licensing, rates, services, and practices, with emphasis on federal regulation of interstate operations; judicial review.

* Patent law students may take Law 359 and Law 365 concurrently in the fall semester and Law 362 and Law 366 concurrently in the spring semester.

376 *Restitution* (2) Sharpe
Spring—day and evening; summer 1962. Remedies at law and in equity for restitution of benefits conferred, especially as based on the concept of unjust enrichment.

378 *Security Transactions* (3) _____
Spring—day and evening. Suretyship and mortgages: security interests in real and personal property, their creation, transfer, enforcement, and extinguishment; the law of suretyship, especially in the context of accommodation credit and commercial and financial practices.

380 *Suretyship* (2) _____
Summer 1962. The law of suretyship, especially in the context of accommodation credit and commercial and financial practices, with attention also to informal and non-consensual suretyship relations and the place of suretyship principles in the solution of legal problems generally.

385–86 *Trial Practice Court* (2–2) Jackson, Edgerton, Herrick, Monk, Walsh, Beard, Hart, Kendrick, Skinker
Academic year—day and evening. Trial of assigned cases; trial tactics and techniques; pre-trial and court room procedures pursuant to Federal Rules.
To be taken in the senior year. Prerequisite: forty-two semester hours, including Law 215 and 240. If *Trial Practice Court* is started in the spring semester, Law 240 may be taken concurrently.

391 *United Nations Constitutional Law* (2) Mallison
Spring—evening. Structure and process of decision of the United Nations—the peaceful settlement of disputes, collective security, regulation of armaments, regional arrangements, and types of functional cooperation.

Graduate Courses

401 *Administrative Law Seminar* (2) Davison
Spring—evening. Group study of specific problems in administrative law.

408 *Constitutional Law Seminar* (2) Nutting, Dixon
Spring—day. Group study of contemporary problems in constitutional law.

412 *Control and Use of Atomic Energy* (2) Green
Spring—evening. Various legal problems involved in the control and use of atomic energy will be examined, including the Atomic Energy Act, the policy underlying the present government monopoly, the security problem of safeguarding atomic military information, the implications in prospective industrial control and use, and legal means of protecting personal interests against the possible consequences of atomic warfare.

415 *Administration of Criminal Justice* (2) Nutting
Spring—evening. Selected problems in the field such as arrest, police interrogation, electronic interception, discovery, and the relative positions of prosecution and defense in preparing cases. The professional responsibility of lawyers will be emphasized.

420 *Estate Planning Seminar* (2) Weaver
Spring—evening. Group study of the effective disposition of wealth, inter vivos and testamentary gifts, conservation for owner's future use, use of insurance, tax and administrative problems, business interests, pension and profit-sharing arrangements.

424 *Evidence and Trials Seminar* (2) Fryer
Fall—evening. Study of selected problems involving presentation of documentary proof and expert testimony in connection with the reforms sought by the Uniform Rules of Evidence and recent developments in the field of forensic medicine.

426 *Forensic Medicine* (2) Head, Sharpe
Fall—evening. Introduction to problems created by the relationships between medicine and the law: a survey of the medical professions; medical education, specialties, ethics, and professional organizations; an outline of hospital organization and facilities; selected studies in the analysis and presentation of medical aspects of legal contro-

versies, as in personal injury litigation, workmen's compensation claims, and disputes over mental capacity, both civil and criminal; the lawyer's role in domestic and international governmental activities in medicine and public health.

428 *Food and Drug Law* (2) Goodrich
Spring—evening. A lecture and discussion course dealing with the Federal Food, Drug, and Cosmetic Act and governmental controls thereunder. Both government and industry viewpoints are considered.

431 *Government Contracts I* (2) McIntire
Fall—evening. A consideration of the basic power of the Federal Government to enter into contracts; the nature and construction of such contracts; normal and war or defense powers aspects of government procurement, including administrative and legislative policy and procedures; forms of contracts; standard clauses; advertised bid procedure problems; negotiated contracts; modification of contracts; remedies on contractual claims.

432 *Government Contracts II* (2) McIntire
Spring—evening. Special problems in government contracts, including adjustments and relief; procedure for prosecuting claims under government contracts; attempts at price, cost, or profit control; termination. Prerequisite: Law 431.

436 *International Regional Organizations Seminar* (2) Miller
Fall—evening. Legal and policy questions involved in American participation in multinational organizations, including General Agreement on Tariff and Trade, Organization for Economic Cooperation and Development, North Atlantic Treaty Organization, and Organization of American States. Concepts of sovereignty and nationalism will be studied. Special attention will be accorded the nascent "Atlantic Community."

442 *Labor Law Seminar* (2) Merrifield
Fall—evening. Group study of contemporary problems in labor law.

449 *Law of the Near East* (2) Liebesny
Not offered 1962–63. A study of the law of the Arab countries, including the basic principles of the Islamic law, an analysis of the present day codes, and an investigation of the Western influences on the laws of the Arab countries.

455 *Legal Problems in Modern Methods of Warfare* (2) Mallison
Fall—evening. The contemporary international law of war; legal aspects of modern methods of coercion (economic, political, psychological, and military); regulation of hostilities; the special problems of atomic, bacteriological, and chemical weapons; war crimes.

463 *Regulation of Communication Media* (2) Mayo
Fall—evening. An examination of the legal doctrine relating to regulatory practices in the channels of mass communication, i.e., newspapers, motion pictures, and radio-television; analysis of the operational structure of the mass media and the pattern of control exercised by government, private associations, and various community groups; appraisal of the comparative utility of various regulatory techniques for implementing policies affecting these media; special emphasis will be placed on the functions of the Federal Communications Commission.

466 *Regulation of Securities and Securities Markets* (2) M. Cohen
Fall—evening. A study of state and federal laws governing the offering and distribution of securities to the public by corporate issuers and others, the regulation of securities markets, and the rights and liabilities of purchasers under such statutes. Particular emphasis will be given to statutes administered by the Securities and Exchange Commission.

469 *Research in Patent, Trade-Mark, and Copyright Law* (2) Harris
Fall—as arranged; spring—as arranged. Registration limited to students with at least a *B* average who have taken Patent Law I and II and related courses including, as a rule, Trade Regulation Seminar. Request in writing, with proposed outline of topic of research, must be submitted to the Dean at least one month prior to registration day.

Registration permitted for one semester only; work must be completed within the semester and paper submitted not later than last day of classes.

471 *Research in Public Law* (2) — The Staff

Fall—as arranged; spring—as arranged. Registration limited to students with at least a *B* average who have had a seminar or comparable course in field of proposed research. Request in writing, with proposed outline of topic of research, must be submitted to the Dean at least one month prior to registration day. Registration permitted for one semester only; work must be completed within the semester and paper submitted not later than last day of classes.

475 *Taxation—Corporate* (2) — Hambrick

Fall—evening. Analytical study of income tax problems in corporate dividends and distributions in redemption of stock; corporate liquidations; reorganizations, mergers, and acquisitions; recapitalizations; organization and sales of corporate businesses; collapsible corporations; carryovers. Prerequisite: Law 279.

480 *Taxation—Oil and Gas* (2) — Hambrick

Spring—evening. A study of the application of the Federal income tax to the producing segment of the oil and gas industry; common types of interests in producing properties; tax treatment of exploration expenditures; intensive study of problems in the deduction of intangible development and drilling costs; the concept of "economic interest"—who is entitled to depletion?; tax distinctions between leasing transactions, sharing transactions, and sales of oil and gas properties and prospects; "ABC" transactions; organizational problems in oil and gas ventures—joint operating agreements, general and liquid partnerships, associations taxable as corporations and pooling arrangements; "carried interests" and other financial arrangements in development of oil and gas properties. Prerequisite: Law 279.

485 *Taxation Seminar* (2) — Hambrick

Spring—evening. Selected problems in federal income, estate and gift taxation, involving factual analysis and legal research, and the preparation of memoranda of law, legislative drafting or other appropriate disposition. Identical problems or cases will be assigned to small groups for development and disposition. Registration subject to approval of teacher. Prerequisite: Law 274 and 279.

490 *Income Taxation of Foreign Business and Investment* (2) — Hambrick

Fall—evening. The provisions and policies of the Federal Income Tax law applicable to foreign income, including considerations affecting the choice of methods of engaging in foreign business and investment, allocation of income in foreign commerce, credit for foreign taxes, principles and trends of U. S. tax treaties, including "tax sparing." The emphasis of the course is on analytical treatment of existing law and present and proposed tax policy with respect to foreign business and investment.

492 *Trade Regulation Seminar* (2) — Weston

Spring—evening. Group study of current problems relating to unfair trade practices and federal antitrust laws.

495 *Urban Redevelopment* (2) — Baker

Spring—evening. Selected problems in urban redevelopment and housing, with particular emphasis on programs under current federal and state legislation.

DEGREES CONFERRED

Bachelor of Laws

February 22, 1961

William Curtis Alford, Jr. — Md.
B.S. 1956, M.B.A. 1957, American University

Frank David AuBuchon — Va.
B.S. in M.E. 1957, University of Missouri

Ernest Sigmund Auerbach — Md.
A.B. in Govt. 1958, The George Washington University

Arthur Francis Bronczyk — Va.
A.B. 1954, Maryknoll College

Thomas Yellott Canby, Jr. — Md.
A.B. 1952, University of Virginia

Anna Joyce Capps — D.C.
A.B. 1957, The George Washington University

Loren Merle Carlson — S.D.
A.B. 1948, Yankton College
A.M. 1952, University of Wisconsin

Lincoln Drury Cathers — Md.
B.S. 1956, Webb Institute of Naval Architecture

Peter Aull Cerick — Va.
A.B. in Govt. 1953, The George Washington University

Walter Theodore Charton — Md.
B.S. 1952, University of Maryand

Kurt Rickey Conner — N.C.
A.B. 1958, Guilford College

John Alexander Dahlstrom — Utah
B.S. 1956, University of Utah

Roland Meade Dameron, Jr. — Va.
B.S. in E.E. 1957, Virginia Polytechnic Institute

Frank Leslie Deierhoi — Va.
A.B. 1949, College of William and Mary

James Edward Denny — Md.
B.E. 1955, Johns Hopkins University

Dan Donato, Jr. — Va.
B.S. 1950, College of Charleston

Frank Louis Fetta — Va.
A.B. 1954, Providence College

Edward James Freeman — N.Y.
A.B. 1951, Johns Hopkins University

Charles Freeman Geschickter, Jr. — Va.
A.B. 1955, Wesleyan University

Ronald Sanford Goldberg — Md.
B.S. 1955, University of Maryland

David Franklyn Grant — Md.
B.S. 1950, University of Vermont

John Robert Grinnell — Va.
B.S. in P.E. 1950, A.M. in Ed. 1951, The George Washington University

Robert Michael Guttman — D.C.
A.B. 1952, Harvard University

Blair Parks Hall — Md.
A.B. 1952, University of Maryland

Neal Hambleton — Md.
A.B. 1956, University of Delaware

Walter Henderson — Md.
B.S. 1953, U.S. Military Academy

Frank Clarence Hilberg, Jr. — Va.
A.B. 1956, University of Virginia

Howard Hosmer, Jr. — D.C.
A.B. 1954, Pennsylvania State University

Donald Dyer Jeffery — Va.
B.S. 1957, University of Wisconsin

Peter Jeffrey — Va.
B.S. in B.A. 1955, Ohio State University

Fred Aivars Keire — Wash.
B.S. in Chem.E. 1957, University of Washington

Adrian John LaRue — Va.
B.S. 1956, Virginia Polytechnic Institute

Julian Paul Lawson — Md.
A.B. 1954, University of Maryland

Charles Richard Lepchinsky — Va.
B.E.E. 1957, The George Washington University

Herbert Levine — D.C.
B.S. 1948, Brooklyn College

Jean Mansur — Va.
B.S. 1946, University of Kansas

Lawrence Stanley Margolis — Md.
B.S. in M.E. 1957, Drexel Institute of Technology

Patricia Louise McDermott — Idaho
A.B. 1958, Idaho State College

Mary Alice McEniry — Va.
B.S. 1942, University of Alabama

Robert Jay Miller — D.C.
B.S. in C.E. 1957, Pennsylvania State University

Sheridan Lew Neimark — Va.
B.S. in Chem.E. 1957, Carnegie Institute of Technology

Dexter Stetson Odin — Va.
B.S. 1956, University of Florida

Jack Ewart Phillips — N.C.
A.B. 1955, University of North Carolina

John Dwight Poffenberger — Va.
B.I.E. 1957, Ohio State University

Raymond Hugo Quist — Va.
B.S. 1957, Newark College of Engineering

Sheldon Foster Raizes — Va.
B.S. in C.E. 1957, University of New Mexico

Gerald Stuart Rosen — Md.
B.S. 1950, Michigan State University of Agriculture and Applied Science

Thomas Jefferson Rothrock — Va.
B.S. 1955, University of Maryland

Robert Morton Sandler — D.C.
A.B. 1958, The George Washington University

Arvid Andrew Sather — Wis.
A.B. 1954, University of Minnesota

Dean Schron — Va.
B.E.E. 1956, Rensselaer Polytechnic Institute

Leland Ancel Sebastian — Ark.
B.S. 1952, Arkansas State Teachers College

Kenneth Fred Sippel — Va.
A.B. 1950, University of California

Thomas Frank Smegal, Jr. — Va.
B.S. in Chem.E. 1957, Michigan College of Mining and Technology

James Enlo Smith — S.D.
B.S. 1952, South Dakota School of Mines and Technology

Dennis Truman Snyder — Md.
A.B. 1957, University of Maryland

Charles Alan Stein — Md.
B.S. 1954, Duke University
B.Chem.E. 1956, University of Florida

Thomas Locis Tarolli — Va.
B.S. in I.E. 1957, University of Pittsburgh

David Thomas Terry — Va.
B.S. in Chem.E. 1956, Purdue University

John Charles Tolford — D.C.
A.B. 1954, University of Michigan

Wayne Day White — Va.
A.B. 1953, Brigham Young University

Harold Anthony Williamson — Va.
B.S. in M.E. 1957, University of Wisconsin

Leonard Alfred Willson, Jr. — N.C.
B.M.E. 1957, North Carolina State College

June 7, 1961

Donald Ralph Antonelli — Va.
B.S. in E.E. 1957, Purdue University

Richard Volker Armstrong — Okla.
A.B. 1958, University of Oklahoma

Robert Freeman Asleson — Minn.
B.S., B.B.A. 1958, University of Minnesota

David Sheldon Band — D.C.
B.S. 1958, University of Maryland

Ira Philip Barsky — Va.
B.S. 1959, New York University
Harry Clark Bell, Jr. — N.Y.
B.S. 1957, Georgetown University
Margaret Anne Beller — Md.
A.B. 1955, A.M. 1957, The George Washington University
Albert Chick Blanchard — Maine
A.B. 1958, Yale University
William Sherwin Broadhead — Idaho
A.B. 1956, Idaho State College
Richard Sutton Buck IV — Va.
A.B. 1958, University of Maryland
John Francis Carney — Va.
B.S. 1957, Northeastern University
Alan William Cheever — Va.
B.S. 1958, New England College
Barry Loomis Clark — Ill.
B.S. in M.E. 1956, Northwestern Technological Institute
Paul Maxwell Coble — D.C.
B.S. 1957, M.S. 1958, Massachusetts Institute of Technology
Austin Brundage Comstock — Md.
A.B. 1956, Northwestern University
Joseph Allan Cooke — Pa.
B.S. in C.E. 1957, Drexel Institute of Technology
Kelly Ozelle Corley — Va.
B.S. 1955, Mississippi College
William Edward Cox — Va.
A.B. 1954, Bucknell University
Donald Lee Dennison — Md.
B.S. in M.E. 1955, Carnegie Institute of Technology
William B. Dickinson — Va.
A.B. 1958, University of New Mexico
Robert Roy Dively — Va.
A.B. 1957, Pennsylvania State University
Ronald Kaye Dunton — Va.
A.B. 1954, Dartmouth College
Davis Blair Dwinell — D.C.
B.S. 1957, Pennsylvania State University
Robert Hodgskin Erdmann — Vt.
A.B. 1958, University of Vermont
Semi Feuer — D.C.
A.B. 1958, The George Washington University
Jack Lloyd Foltz — Va.
B.S. in Ch.E. 1957, Rose Polytechnic Institute
Donald William Graves — Va.
B.C.E. 1957, Cornell University
Henry G. Green — Va.
A.B. 1958, Louisiana State University and Agricultural and Mechanical College
Roosevelt Browne Greene, Jr. — Va.
A.B. 1958, The George Washington University
Seymour David Gunod — Md.
A.B. in Govt. 1949, The George Washington University
Jack Herbert Hall — Va.
B.Ch.E. 1957, Rensselaer Polytechnic Institute
Ronald Moyer Halvorsen — Va.
B.S. in C.E. 1957, Drexel Institute of Technology
Louis Francis Heeb — Ind.
B.M.E. 1955, General Motors Institute
William Edwin Hegle — Md.
B.S. in F.S. 1949, Georgetown University
Harvey Sander Hertz — Va.
B.S. in E.E. 1955, University of Colorado
Stanley Manuel Hochhauser — N.Y.
A.B. 1958, Brooklyn College
Gary Clark Honeycutt — Va.
B.S. 1954, University of Arkansas
James Joseph Horgan — Del.
B.S. 1957, LaSalle University
Thomas Braden Hunter — Va.
B.S. in Ch.E. 1956, Case Institute of Technology
John David Jackson — Va.
B.S. 1958, University of Maryland
Bernice Harriet Jacobsen — Wis.
Ed.B. 1947, Wisconsin State College, River Falls
A.M. 1954, The George Washington University
Harold Dudley Jastram — Va.
B.S. in E.E. 1957, South Dakota State College of Agriculture and Mechanic Arts
Raymond Eric Johnson — D.C.
B.C.E. 1958, Rensselaer Polytechnic Institute
Charles Sherfy Jones — Va.
B.S. in C.E. 1953, Duke University
Harry Chapman Jones III — Va.
B.S. 1957, Yale University
Clarence Cyrus Keiser, Jr. — Md.
A.B. 1954, University of the South
Walter Kruger — Va.
B.S. in M.E. 1956, Lafayette College
Norman Nathan Kunitz — Pa.
B.S. in E.E. 1957, Drexel Institute of Technology
Clarence Victor LaBonte, Jr. — Mass.
A.B. 1958, Cornell University
Jay Calvin Langston — Mont.
B.S. 1957, Montana State College
Earl Levy — Va.
B.E.E. 1952, Rensselaer Polytechnic Institute
John Jacob Mackiewicz — N.Y.
B.Ch.E. 1957, Yale University
Richard Leo Madden — Va.
B.S. 1956, Indiana University
Philip David Main — Conn.
A.B. 1958, Bates College
Robert Marrero — Va.
A.B. 1958, The George Washington University
Edwin Floyd McDermott — D.C.
A.B. 1951, Denison University
Matthew Kenneth McElhaney — Va.
A.B. 1954, Thiel College
Clifford Johnson Moody — Va.
A.B. 1958, University of New Hampshire
Donald Russell Motsko — Va.
B.S. 1957, Pennsylvania State University
John Herbert Mulholland — Ill.
B.S. 1957, University of Illinois
George Joseph Neilan — Va.
B.E. 1957, Yale University
Charles Robert Nichols — N.M.
A.B. 1958, University of New Mexico
Francis James O'Rourke — Mass.
B.S. 1955, Northeastern University
Thomas Lee Peterson — Va.
B.S. in I.E. 1956, Stanford University
David Pollack — Va.
B.S. in A.E. 1956, University of Miami
Morris Irwin Pollack — Va.
B.S. in M.E. 1954, Newark College of Engineering
Parnell Jearl Porter, Jr. — Va.
A.B. 1958, University of Pittsburgh
Robert Ralph Priddy — Md.
B.S. 1958, Principia College
Jerry Arthur Rabinowitz — N.Y.
A.B. 1958, West Virginia Wesleyan College
John Charles Randa — Wis.
B.S. in E.E. 1957, Marquette University
George Thomas Rawding — N.J.
B.B.A. 1958, Upsala College
Ralph Raymond Reeser, Jr. — Md.
A.B. 1955, University of Washington
S. Jesse Reuben — Va.
A.B. 1958, The George Washington University
Gordon Albert Richardson — Md.
B.S. 1958, The George Washington University

Irwin Bennett Rosenstein — Conn.
B.S. 1958, University of Pennsylvania
Bertram Irwin Rowland — Va.
B.S. 1950, University of California at Los Angeles
Ph.D. 1954, University of Washington
Harold Aram Sakayan — D.C.
B.S. 1957, University of Maryland
Otto Schmid, Jr. — Va.
B.E.E. 1953, Georgia Institute of Technology
William Nelson Schnell — Ill.
A.B. 1958, University of Illinois
Melvin Sharp — Pa.
B.S. in E.E. 1957, Drexel Institute of Technology
Fred Willie Sherling — Tenn.
B.S. in Ch.E. 1957, University of Tennessee
Raymond Stevens Smethurst, Jr. — D.C.
B.Met.E. 1958, Cornell University
Edward Jarrin Snyder — Md.
A.B. 1955, Catholic University of America
Earl Chester Spaeth — Va.
A.B. 1942, Oberlin College
Ph.D. 1946, University of California at Los Angeles
George Pete Stavros — Ky.
A.B. 1958, Centre College
Murray Robert Stein — Md.
B.S. 1953, D.C. Teachers College
Garth A. Stephenson — Md.
A.B. 1951, Brigham Young University
Sheldon Stern — N.Y.
B.S. 1958, New York University
Beverly Joan Stiburek — Idaho
B.S. 1955, Brigham Young University
Steven Faraday Stone — Va.
B.Ch.E. 1957, Rensselaer Polytechnic Institute
Jan Arthur Strompf — Md.
B.S. 1958, University of Maryland
Grant Russell Sykes — D.C.
B.B.A. 1950, Tulane University
A.M. in Govt. 1953, The George Washington University
David Teschner — Va.
B.S. in E.E. 1955, Newark College of Engineering
John Charles Thompson — Va.
B.S. 1957, University of Rochester
William Clarence Thornton — Nev.
A.B. 1958, University of Nevada
Ethan Allen Turshen — N.Y.
A.B. 1954, Kenyon College
M.P.A. 1955, Syracuse University
John Klaas Uilkema — Va.
B.S. in M.E. 1957, University of Michigan
John Perley Vandenburg — Mich.
B.S. in E.E. 1956, University of Michigan
Franklin Joseph Visek — Nebr.
B.S. in B.A. 1957, Municipal University of Omaha
John Robert Waller — Md.
B.S. 1953, Georgetown University
Robert George Weilacher — Va.
B.S. 1957, Columbia University
John Edward Welch — Maine
B.S. in Agron. 1953, University of Maine
Melvin Pearson Williams — Va.
B.E.E. 1957, Rensselaer Polytechnic Institute
Warren Jay Willinger — N.Y.
A.B. in Govt. 1959, The George Washington University
Betty Marie Wisecarver — Va.
A.B. 1957, Mary Washington College
William Henry Witt — Md.
A.B. 1941, Harvard University
Raymond Leroy Worthington — Md.
B.S. 1941, University of Maryland
Robert Lloyd Zieg — Va.
B.I.E. 1956, General Motors Institute

October 21, 1961

Claude Leo Beaudoin — Md.
B.S. 1956, University of New Hampshire
Robert Ellis Best — Va.
B.B.A. 1954, University of Oklahoma
Samuel Herman Blech — Md.
B.S. 1950, Brooklyn College
Jack Lee Bohan — Va.
B.Met.E. 1956, Rensselaer Polytechnic Institute
Stewart Dawson Burton — Utah
A.B. 1951, Brigham Young University
Robert Allen Cahill — Wis.
B.S. in E.E. 1956, University of Wisconsin
Donald Eugene Campbell — Colo.
A.B. 1959, The George Washington University
Edgar Ronald Coffman — Va.
B.S. in M.E. 1958, University of Michigan
Rodger Duane Collons — Va.

James Frederick Doak — Okla.
A.B. 1956, University of Kansas
Joseph Franklin Dugan — N.J.
A.B. 1957, Pennsylvania State University
George Cordell Easter — Mass.
A.B. 1956, Princeton University
Alfred Paul Ewert — Va.
B.S. in E.E. 1955, University of Michigan
Vincent James Femia — Md.
A.B. 1959, The George Washington University
Edmund Eugene Fleming — Iowa
B.S. in F.S. 1959, Georgetown University
Bernard S. Gild — D.C.
B.B.A. 1957, University of Pittsburgh
Morton Norman Goldstein — D.C.
A.B. 1957, University of Maryland
James Edward Harvey, Jr. — Fla.
B.M.E. 1940, Tulane University
M.B.A. 1948, Harvard University
James Edmond Hawes — D.C.
B.S. in E.E. 1957, University of Illinois
William H. Holt — Va.
B.S. in Eng. 1957, The George Washington University
Carter Carol Hubbel, Jr. — Md.
A.B. 1959, University of Maryland
James Rozier Hulen, Sr. — Va.
B.S. in M.E. 1958, University of Missouri
Herbert Kenneth Hyde, Jr. — Okla.
A.B. 1955, University of Oklahoma
Peter Isakov — Ohio
B.Ch.E. 1958, University of Cincinnati
Vernon Webster Johnson, Jr. — Md.
A.B. 1956, Duke University

John Tyden Ketcham — Va.
A.B. in Govt. 1958, The George Washington University

John Arthur Koch — D.C.
B.I.E. 1954, Ohio State University

John Frederick Kovin — Md.
A.B. 1958, Washington Missionary College

Anthony Thomas Lane — Va.
B.E.E. 1957, The George Washington University

Stuart Lubitz — Mich.
B.I.E. 1957, B.M.E. 1958, University of Florida

John Raymond Manning — Iowa
B.S. in Eng. 1957, The George Washington University

James Francis McCarthy — Mass.
A.B. 1956, Boston University

John Joseph McCormack — Mass.
B.S. 1954, Boston College

John R. Nordstrom — N.D.
A.B. 1949, Minnesota State College, Moorhead
A.M. 1958, University of Minnesota

Edward William Nypaver — D.C.
B.S. in C.E. 1957, University of Pittsburgh

Dennis Edward Watson O'Connor — Hawaii
B.S. 1952, U.S. Naval Academy

Gordon Harold Olson — Va.
B.S. 1955, North Dakota State University

Alan Gilbert Paul — Va.
B.M.E. 1956, Rensselaer Polytechnic Institute

John Joseph Posta, Jr. — Va.
B.S. in Eng. 1957, The George Washington University

Warren Estes Ray — D.C.
B.S in E.E. 1952, M.S. in E.E. 1956, Oklahoma State University

Ronald William Reagin — Va.
B.S. 1958, University of Missouri

Wayland Henry Riggins — Va.
B.S. 1956, Clemson Agricultural College

Robert H. Rusis — Md.
A.B. 1956, The George Washington University

Donald Waters Seiler, Jr. — Va.
A.B. 1956, College of William and Mary

Edward Lawrence Sherman — Md.
A.B. 1951, A.M. 1953, Roosevelt University

Donald James Singer — Md.
B.S. in Ch.E. 1956, Michigan State University of Agriculture and Applied Science

Daniel Warren Sixbey — Md.
A.B. 1954, University of Maryland

Marvin Snyder — D.C.
B.E.E. 1954, Cornell University

George Vande Sande — Md.
B.S. in E.E. 1948, University of Michigan

Roger Alan Van Kirk — N.J.
B.S. in E.E. 1957, University of Vermont

Alan David Wolfe — N.Y.
B.S. 1952, Queens College
M.S. 1956, Massachusetts Institute of Technology

James Creighton Wray — N.Y.
B.M.E. 1958, Villanova University

Francis Kopp Zugel — Md.
B.S. in Eng. 1957, The George Washington University

Bachelor of Laws in National University

June 7, 1961

Leon B. Zeiger — D.C.

Juris Doctor

February 22, 1961

Hugh Yancey Bernard, Jr. — Va.
A.B. 1941, University of Georgia
B.S. 1947, Columbia University

Alfred Fearing Bridgman, Jr. — Mass.
B.S. 1954, U.S. Coast Guard Academy

Stanley Howard Cohen — Md.
B.S. 1957, Drexel Institute of Technology

Sheldon Feldman — Md.
A.B. 1957, The George Washington University

Harvey Jack Gordon — Md.
B.B.A. 1952, College of the City of New York
M.P.A. 1956, Harvard University

Eugene Gary Horowitz — D.C.
A.B. in Govt. 1958, The George Washington University

John Christian LaPrade — Va.
B.S. 1957, New Mexico College of Agriculture and Mechanic Arts

Francis Arthur Paintin — Ohio
B.S. in Ch.E. 1951, Case Institute of Technology

Arnold Edward Renner — Va.
B.S. in E.E. 1954, Purdue University

June 7, 1961

George LaVern Albright — Nev.
B.S. 1954, Brigham Young University

Lawrence Herbert Berul — Md.
B.S. in Com. 1957, Drexel Institute of Technology

Harold Randall Bixler — Va.
A.B. 1957, Michigan State University of Agriculture and Applied Science

Joseph Vincent Colaianni — Mich.
B.E.E. 1956, University of Detroit

Gene Oliver Enockson — N.D.
B.S. 1954, Jamestown College

James Peter Gregory — Conn.
A.B. 1956, Brown University

Clyde Henry Hamilton, Jr. — S.C.
B.S. 1956, Wofford College

Janet Goldrich Kohn — D.C.
(With distinction)
A.B. 1951, Antioch College

James Edwin Lemert — Ohio
B.S. in E.E. 1957, Purdue University

William Woods McDowell, Jr. — Md.
(With distinction)
B.E. 1953, Johns Hopkins University

Gerald Joseph Mossinghoff — Va.
B.S. in E.E. 1957, St. Louis University

Robert R. Perko — Va.
B.S. in F.S. 1950, Georgetown University

Michael Terry Platt — N.Y.
B.E.E. 1957, Rensselaer Polytechnic Institute

George Richard Powers — Va.
B.S. 1957, University of Illinois

Jenny Krohn Rose — N.J.
A.B. 1958, Hood College

Charles H. Schwartz — Pa.
B.S. in E.E. 1957, Drexel Institute of Technology

Kenneth John Sherk — Iowa
B.S. in Conn. 1955, State University of Iowa

Natalie Trousof — D.C.
A.B. 1947, A.M. 1950, Columbia University

William Edward Watson — W.Va.
A.B. 1958, West Virginia Wesleyan College

James William Williams — Va.
B.S. in E.E. 1957, Vanderbilt University

Robert Wayne Wise — Va.
B.S. 1956, McPherson College

October 21, 1961

Vida Marie Baugh — D.C.
A.B. 1950, University of Idaho

George Dennis Becker — Md.
A.B. 1956, Swarthmore College

William Sanford Corey — Md.
A.B. 1958, Dickinson College

Margaret Leslie Ervin — N.C.
A.B. 1952, University of North Carolina

John Smith Jenkins — Pa.
A.B. 1954, Lafayette College

George William King — Va.
B.S. in E.M. 1957, West Virginia University

Martin M. Krawiec — N.Y.
B.S. 1958, Cornell University

John Frederick Moring — Va.
B.S. in I.E. 1957, Virginia Polytechnic Institute

John Joseph Mullins, Jr. — Mass.
B.S. in C.E. 1956, University of Connecticut

Daniel Y. Sachs — N.Y.
B.S. 1955, Cornell University

James Clement Schultz — Nebr.
B.S. 1956, University of Nebraska

William John Swartz — Va.
B.S. in M.E. 1956, Duke University

Master of Laws

February 22, 1961

Charles Gailord Luellman — Nebr.
A.B. 1952, LL.B. 1958, University of Nebraska

Les J. Weinstein — Pa.
B.S. in M.E. 1956, University of Pennsylvania
J.D. 1959, The George Washington University

June 7, 1961

J. Francis Fowles, Jr. — N.M.
B.S. 1946, University of Idaho
LL.B. 1949, University of Utah

John Charles Lyons — Va.
A.B. 1956, University of Rhode Island
LL.B. 1960, Georgetown University

Jack Harvey Olender — Pa.
A.B. 1957, LL.B. 1960, University of Pittsburgh

Vernon Amos Peltzer — Ill.
A.B. 1941, Depauw University
J.D. 1953, The George Washington University

Daniel Joseph Sammon — Ohio
B.S. in E.A. 1957, Case Institute of Technology
LL.B. 1960, Georgetown University

Julius Elwood Slover — Mo.
B.S. in Ed. 1942, Southeast Missouri State College
LL.B. 1947, University of Texas

October 21, 1961

David William Johnson — N.Y.
B.S. 1952, Brooklyn College
LL.B. 1959, The George Washington University

Mordecai C. Johnson — S.C.
A.B. 1951, South Carolina State College
LL.B. 1959, Howard University

Master of Comparative Law

February 22, 1961

Raden Mohamad Sudjiman — Indonesia
M.L. 1948, Kyoto University, Japan

Doctor of Juridical Science

June 7, 1961

Gordon A. Christenson — Utah
B.S.L. 1955, LL.B. 1956, University of Utah
Dissertation: "Individuals before International Tribunals: Direct Access in Private Matters."

STUDENTS REGISTERED IN THE LAW SCHOOL

A

Abato, Anthony A. — Md.
A.B. 1955, University of Maryland

Adams, Don T. — Va.
B.C.E. 1957, University of Florida

Addams, Nicholas A. — N.J.
B.S. in E.E. 1960, Newark College of Engineering

Ake, Charles P. — Ga.
B.S. 1955, Villanova University

Albright, George L. — Va.
B.S. 1954, Brigham Young University

Allen, Dillis V. — Ill.
B.S. in M.E. 1960, University of Wisconsin

Allen, Kenneth D. — Mo.
A.B. 1960, Central Missouri State College

Allio, William H. — Miss.
A.B. 1960, University of Mississippi

Allnut, Robert F. — Va.
B.S. in I.E. 1957, Virginia Polytechnic Institute

Allsbrook, Robert C. — Pa.
B.B.A. 1961, University of Pittsburgh

Alpert, Allen S. — Fla.
B.I.E. 1961, University of Florida

Alvey, Ralph J. — D.C.
B.S. 1950, University of Colorado

Anderson, Billy R. — Wyo.
B.S. 1960, Brigham Young University

Andrews, George E. — Md.
A.B. 1960, University of Maryland

Angier, Anna P. — Tenn.
A.B. 1944, Maryville College of the Sacred Heart

Antonelli, Donald R. — Va.
B.S. in E.E. 1957, Purdue University

Antonelli, Joseph M. — Md.
B.S. 1960, University of Maryland

Aranoff, Robert I. — Fla.

Armstrong, Richard V. — Okla.
A.B. 1958, University of Oklahoma

Aron, Lewis G. — R.I.
B.S. 1959, Brown University

Arvidson, Philip R. — W.Va.
B.S. 1961, Oklahoma State University

Asay, Linda H. — Kans.
A.B. 1960, University of Oklahoma

Asher, Robert S. — N.Y.
B.S. 1958, College of the City of New York

Ashland, Calvin K. — Iowa
B.S. 1957, Iowa State College of Agriculture and Mechanic Arts

Asleson, Robert F. — Minn.
B.S., B.B.A. 1958, University of Minnesota

Aston, William M. — W.Va.
A.B. 1953, St. John's College

Astor, Sanford — Ind.
B.S. in Ch.E. 1958, Purdue University

B

Baca, Joseph F. — N.M.
A.B. in Ed. 1960, University of New Mexico

Baggott, William K. — Va.
B.S. in I.E. 1957, West Virginia University

Baker, Patrick C. — Mich.
A.B. 1956, Catholic University of America

Balistreri, Salvatore C. — Calif.
B.S. 1961, San Francisco State College

Band, David S. — D.C.
B.S. 1958, University of Maryland

Bannasch, Norma T. — Mich.
A.B. 1957, University of Michigan

Barnes, Andrew M. — D.C.
A.B. 1955, Middlebury College

Barone, Vito S. — Mich.
B.Ch.E. 1960, University of Detroit

Barrand, Kerwood W. — Oreg.
B.S. 1954, U.S. Military Academy
M.S. 1960, University of Missouri School

Barriage, Joan B. — Va.
B.S. in A.E. 1951, Purdue University

Barron, Melvin — Mass.
A.B. 1961, Boston University

Barsky, Ira P. — N.Y.
B.S. 1959, New York University

Barth, Charles A. — Va.
A.B. 1952, LL.B. 1954, Indiana University

Bartl, Richard A. — Ind.
B.S. 1957, Purdue University

Baugh, Vida M. — Idaho
A.B. 1950, University of Idaho

Baynham, Robert J. — Pa.
B.S. in M.E. 1959, University of Pittsburgh

Beach, Donald F. — D.C.
B.B.A. 1961, The George Washington University

Beall, Thomas E., Jr. — Md.
B.S. 1960, University of Maryland

Bean, James L. — Va.
B.S. in C.E. 1950, Tennessee Polytechnic Institute

Bean, Wiley E. — Mich.
A.B. 1960, Michigan State University of Agriculture and Applied Science

Beatley, Charles E., Jr. — Va.
A.B. 1938, M.B.A. 1947, Ohio State University

Beatman, James W. — Va.
A.B. 1948, Oberlin College
A.M. 1949, University of Pennsylvania

Beaudoin, Claude L. — Md.
B.S. 1956, University of New Hampshire

Beck, Andrew — Ill.
B.S. 1956, Virginia Polytechnic Institute

Beck, Richard M. — N.Y.
B.M.E. 1960, Rensselaer Polytechnic Institute

Beck, William R. — Va.
A.B. 1960, University of Miami

Becker, George D. — Md.
A.B. 1956, Swarthmore College

Becker, Roland W. — Va.
A.B. 1958, The George Washington University

Beerman, Bernard M. — Md.
A.B. 1959, Princeton University

Bell, Harry C. — N.Y.
B.S. 1957, Georgetown University

Bell, Rodland G. — Va.
B.S. 1961, Oregon State University

Beller, Margaret A. — Md.
A.B. 1955, A.M. 1957, The George Washington University

Belser, Townsend M., Jr. — S.C.
B.Ch.E. 1958, Georgia Institute of Technology

Bender, Sheldon M. — N.Y.
B.M.E. 1961, College of the City of New York

Bendere, George H. — N.J.
A.B. 1960, Lafayette College

Bennett, Robert C., Jr. — Texas
A.B. 1961, Agricultural and Mechanical College of Texas

Bennison, John C. — N.D.
A.B. 1961, Pomona College

Benson, Charles W. D.C.
B.S. 1955, Rutgers University
Benson, Ingram T. Va.
A.B. 1936, Carleton College
Bentzman, Marshall R. Mass.
B.S. in B.A. 1956, American International College
Berg, Egon E. N.J.
B.S. 1959, Rutgers University
Bernard, Lawrence J., Jr. Md.
B.S. 1960, University of North Carolina
Berneike, Richard H. N.Y.
B.S. in Ch.E. 1958, Purdue University
Bernens, John C. Va.
B.S. 1948, Xavier University
M.S. 1949, University of California
Bernstein, Saul H. Md.
B.S. in Eng. 1957, University of Maryland
Berrier, Erwin F., Jr. Ind.
B.S. in M.E. 1960, Purdue University
Berul, Lawrence H. N.J.
B.S. in Com. 1957, Drexel Institute of Technology
Berzins, Ivars Mich.
B.S. 1958, Michigan College of Mining and Technology
Best, Robert E. Va.
B.B.A. 1954, University of Oklahoma
Betts, Carolyn Va.
B.S. 1954, North Texas State College
Beyda, Cohen R. D.C.
A.B. in Govt. 1959, The George Washington University
Bielawski, David Va.
A.B. 1955, University of North Carolina
Biggert, Rody P. Ill.
A.B. 1958, Amherst College
Billings, Roger D., Jr. N.J.
A.B. 1959, Wabash College
Binns, Norman B. Wash.
B.S. 1949, U.S. Coast Guard Academy
Birch, Terrell C. Md.
B.E.E. 1959, The George Washington University
Bisson, Barry Gale A. N.H.
B.S. 1956, University of New Hampshire
Bisson, Gary B. N.H.
A.B. 1959, University of New Hampshire
Bitner, George E. Va.
A.B. 1961, Ohio Wesleyan University
Bixler, Harold R. Va.
A.B. 1957, Michigan State University of Agriculture and Applied Science
Bjorge, Gerald H. S.D.
B.S. in C.E. 1959, Northwestern University
Bjorge, Sara E. N.D.
B.S. 1959, Iowa State University of Science and Technology
Black, Wayne V Mo.
B.S. 1959, University of Missouri
Blanchard, Albert C. Maine
A.B. 1958, Yale University
Blech, Samuel H. D.C.
B.S. 1950, Brooklyn College
Bliss, Laurence T. Ala.
B.S. 1956, University of Alabama
Block, Daniel C. Va.
B.S. 1957, Texas College of Arts and Industries
Blondin, Carmen J. Alaska
B.S. 1955, U.S. Coast Guard Academy
Blood, Russell M. D.C.
A.B. 1951, University of California
Boardman, Harold F., Jr. Pa.
B.S. 1961, Trinity College
Bohan, Jack L. Va.
B.Met.E. 1956, Rensselaer Polytechnic Institute
Bond, Eugene M. Ohio
B.Ch.E. 1959, Ohio State University
Bond, Robert T. Md.
A.B. 1954, Southern Missionary College
Bonfanti, Reno E. D.C.
A.B. 1953, University of Pittsburgh
Booth, Henry H. D.C.
A.B. 1957, University of North Dakota
Bound, Arthur E. Fla.
B.S. in B.A. 1953, University of Florida
Bourdon, Reginald A. D.C.
B.S. in F.S. 1960, Georgetown University
Brand, Joseph L. Ohio
A.B. 1958, University of Michigan
A.M. 1959, Ohio State University
Branigan, Alan E. Va.
B.S. in M.E. 1959, University of Colorado
Branscomb, Anne W. Md.
A.B. 1949, Georgia State College for Women
Brass, Ronald B. D.C.
A.B. 1955, Brooklyn College
Braun, Howard W. Pa.

B.S. 1958, Northeastern University

Kinzie, Robert W. — Md.
B.S. 1958, A.M. 1961, University of Maryland

Kirchman, Charles V. — Md.
A.B. 1959, University of Maryland

Kirkpatrick, Thomas H. — D.C.
B.S. 1958, University of Oregon

Klein, Melvin A. — N.Y.
B.S. 1956, U.S. Naval Academy

Klein, Zelda D. — D.C.
LL.B. 1934, National University Law School

Knechtel, Robert G. — D.C.
A.B. 1958, Cornell University

Kneipp, Robert F. — D.C.
A.B. 1935, Duke University

Knowles, Allen N. — Va.
B.S. in M.E. 1955, Iowa State College of Agriculture and Mechanic Arts

Knudson, James E. — Va.
A.B. 1960, Brigham Young University

Koch, John A. — D.C.
B.I.E. 1954, Ohio State University

Kodani, Roy M. — Hawaii
A.B. 1961, Lafayette College

Koeckert, Arthur H., Jr. — Ohio
B.S. 1957, Case Institute of Technology
M.S. 1959, Lehigh University

Koffsky, David N. — N.Y.
B.S. in E.E. 1956, Lafayette College

Kohn, Janet G. — D.C.
A.B. 1951, Antioch College

Kondo, Peter H. — Va.
B.S. 1957, Michigan College of Mining and Technology

Kondracki, Edward J. — N.J.
B.S. in E.E. 1959, Newark College of Engineering

Koth, Dean R. — Md.
A.B. 1958, University of Maryland

Kovac, Michael — Mo.
B.S. 1959, Washington University

Kovell, Stanley P. — Va.
B.S. in Ch.E. 1955, Northeastern University

Kovin, John F. — Md.
A.B. 1958, Washington Missionary College

Kraemer, John R. — Conn.
A.B. 1960, Georgetown University

Kratchman, Jack — Md.
B.S. 1948, College of the City of New York
M.S. 1953, New York University

Kraus, Charles K. — Md.
B.S. 1956, Georgetown University

Krause, Benjamin D. — Md.
B.S. 1959, University of Maryland

Krauss, Jerome F. — D.C.
A.B. 1958, Notre Dame University

Krawiec, Martin M. — N.Y.
B.S. 1958, Cornell University

Kreba, Henry C. — D.C.
A.B. in Govt. 1949, The George Washington University

Kregg, John — Va.
B.S. 1953, LL.B. 1958, Wayne State University

Kruger, Walter — D.C.
B.S. in M.E. 1956, Lafayette College

Krumme, Robert D. — Mo.
B.S. 1960, University of Nebraska

Kucharski, John M. — Wis.
B.E.E. 1958, Marquette University

Kud, Thaddeus J. — Alaska
Master of Laws 1933, Jagellonian University, Alaska

Kunitz, Norman N. — Pa.
B.S. in E.E. 1957, Drexel Institute of Technology

L

La Bonte, Clarence V. — Mass.
A.B. 1958, Cornell University

Labowski, Joseph — Pa.
B.S. 1956, Pennsylvania State University

LaBran, Ronald M. — Calif.
B.S. 1958, University of Pennsylvania

Lahr, Jack L. — Ill.
B.S. in M.E. 1956, University of Toledo

Laiche, Calvin J. — La.
B.S. 1954, Louisiana State University

Lake, Robert G. — D.C.
B.S. 1945, U.S. Military Academy
M.B.A. 1950, University of Chicago

Lakes, Cecil T. — Ohio
A.B. 1948, LL.B. 1950, University of Cincinnati

Lalli, Paul J. — Va.
A.B. 1952, College of the City of New York
A.M. 1953, Columbia University

Lamay, Joseph A. — N.J.
A.B. 1960, Pennsylvania State College

Lamb, Owen L. — N.Y.
B.E.E. 1956, Rensselaer Polytechnic Institute

Lamb, Roberta — Iowa
A.B. 1957, Simpson College
A.M. 1960, American University

Lambe, James M. — Mont.
A.B. 1959, Montana State University

Lampe, Thomas R. — Iowa
B.S. in I.E. 1959, Iowa State University of Science and Technology

Lamphere, George E. — D.C.
B.S. 1952, Haverford College
B.S. 1954, Massachusetts Institute of Technology

Landesman, Charles H. — N.J.
B.S. 1960, Rutgers University

Lane, Anthony T. — Va.
B.E.E. 1957, The George Washington University

Lane, Helen S. — Va.
A.B. 1928, University of Michigan

Lang, William A. — Va.
A.B. in Govt. 1954, The George Washington University

Langston, Jay C. — D.C.
B.S. 1957, Montana State College

Larsen, Kent W. — Utah
A.B. 1960, University of Utah

Latimer, Edwin P. — D.C.
B.S. 1959, University of Maryland

Latshaw, Betty J. — Okla.
B.B.A. 1959, University of Oklahoma

Lawson, William S. — Va.
B.S. 1957, Michigan State University of Agriculture and Applied Science

Leatherman, Stanley J. — Ind.
A.B. 1957, Taylor University

Leavitt, Alfred L. — Oreg.
B.S. in Ch.E. 1957, Oregon State College

Lee, Linda K. — Conn.
A.B. 1961, Smith College

Leiner, Charles P. — Md.
B.S. 1951, San Diego State College

Leitner, Saul — N.Y.
B.M.E. 1959, Polytechnic Institute of Brooklyn

Lemert, James E. — Ohio
B.S. in E.E. 1957, Purdue University

Lenkin, Ronald L. — D.C.
A.B. 1959, The George Washington University

Leppink, James A. — Va.
B.S. 1957, University of Wyoming

Lerch, Harry W. — Md.
A.B. 1959, Wesleyan University

Leslie, David E. — Calif.
B.S. 1957, California State Polytechnic College

Levin, Stanley — Md.
A.B. 1949, Yeshiva University

Levine, Morton H. — N.Y.
B.S. 1960, American University

Levison, Floyd S. — Va.
B.S. 1957, U.S. Merchant Marine Academy

Levitz, Saylor L. — Pa.
B.S. 1956, Pennsylvania State University

Levy, Earl — Va.
B.E.E. 1952, Rensselaer Polytechnic Institute

Lewis, Ancel W., Jr. — D.C.
B.S. 1959, South Dakota School of Mines

Lewis, Eric K. — Md.
A.B. 1955, University of Rochester

Lewis, Edward G. — Va.
B.S. 1956, Michigan College of Mining and Technology

Lewis, Samuel H. — Del.
A.B. 1959, Cornell University

Liberman, Arthur L. — N.J.
A.B. 1955, M.S. 1957, Columbia University

Liegel, Robert G. — N.Y.
B.S. 1955, Syracuse University

Lilly, David G. — W.Va.
A.B. 1960, University of California at Los Angeles

Lindrooth, Charles H. — Ill.
B.S. 1956, University of Illinois

Lineberry, Robert G. — Va.
B.B.A. 1961, The George Washington University

Litton, Randall G. — Idaho
B.S. in E.E. 1961, University of Idaho

Llewellyn, James M., Jr. — Ark.
B.S. in A.E. 1956, St. Louis University

Lochte, Albert J. — Va.
B.S. 1957, University of Maryland

Loepp, Marie T. — D.C.
A.B. 1951, State University of Iowa

Long, Stefan C. — Va.
A.B. 1960, Roanoke College

Lotz, William E. — Md.
B.S. 1947, A.M. 1949, University of Oregon
Ph.D. 1957, University of Tennessee

Lourie, Leonard L. — Md.
A.B. 1942, Miami University

Love, James W. — Va.
B.A.E. 1950, Catholic University of America

Lubitz, Stuart — Fla.
B.I.E. 1957, B.M.E. 1958, University of Florida

Lucero, Carlos F. — Colo.
A.B. 1961, Adams State College

Lukasik, Frank A. — N.Y.
B.S. 1958, Rhode Island School of Design

Lynch, Robert E. — D.C.
A.B. 1956, University of Maryland

Lyne, Robert C. — Va.
B.S. 1958, North Carolina State College

Lyons, John C. — Va.
A.B. 1956, University of Rhode Island

Lyons, Joseph S. — D.C.
B.S. 1958, Mississippi Southern College

M

MacAdam, Daniel B. — D.C.
B.S. 1957, State Teachers College at Boston

MacDonald, Roderick W. — Va.
M.E. 1959, Colorado School of Mines

Mackiewicz, John J. — D.C.
B.Ch.E. 1957, Yale University

Madden, Richard L. — Ind.
B.S. 1956, Indiana University

Madigan, Robert J. — D.C.
B.S. 1960, The George Washington University

Madsen, Lowell L. — Utah
B.S. 1954, Brigham Young University

Magnuson, Robert L. — Idaho
B.S. in B.A. 1960, University of Idaho

Maher, Robert E. — D.C.
A.B. 1954, St. Mary's University

Main, Philip D. — Conn.
A.B. 1958, Bates College

Maki, Allan O. — Wis.
B.S. in Ch.E. 1959, University of Wisconsin

Makris, James L. — N.H.
B.S. 1958, University of New Hampshire

Malone, John D. — D.C.
B.M.E. 1956, Cornell University

Manatt, Charles T. — Iowa
B.S. 1958, Iowa State College of Agriculture and Mechanic Arts

Manning, John R. — Iowa
B.S. in Eng. 1957, The George Washington University

Marin, Louis — N.Y.
B.B.A. 1957, College of the City of New York
M.B.A. 1959, Cornell University

Marinaccio, Charles L. — Conn.
A.B. 1957, University of Connecticut

Marjama, Owen D. — Va.
B.S. in Met.E. 1958, Michigan College of Mining and Technology
M.S. in Met.E. 1961, Wayne State University

Marlo, George J. — Md.
B.S. 1956, Pennsylvania State University

Marlowe, Freddie — Texas
A.B. 1961, B.S. 1961, Agricultural and Mechanical College of Texas

Marmer, Melvin E. — Md.

M.S. 1957, Georgetown University
Werdegar, Kathryn J. — Calif.
A.B. 1957, University of California
Werdig, Robert M., Jr. — N.M.
B.S. 1960, University of New Mexico
West, Ronald D. — Md.
A.B. in Govt. 1958, The George Washington University
Westerman, Christian C. — Texas
B.S. 1955, University of Virginia
Western, Marion W. — Utah
B.S. 1961, Utah State University of Agriculture and Applied Science
Wheeless, Kenneth G. — D.C.
B.S. 1959, University of Arkansas
Whisenhunt, Fred S. — D.C.
B.Ch.E. 1956, North Carolina State College
Whisler, John W. — Iowa
B.S. 1957, Iowa State College of Agriculture and Mechanic Arts
White, Leonard A. — Md.
B.M.E. 1959, The George Washington University
Whitescarver, James — D.C.
A.B. 1953, Duke University
Whitlock, Douglas H — Va.
A.B. 1955, Duke University
Wiener, Richard — D.C.
A.B. 1950, Columbia University
Wilbur, Helen J. — Va.
A.B. 1956, Bates College
Wildhack, William A. — Va.
B.S. 1957, Miami University

Willette, Helen B. D.C.
A.B. 1941, Syracuse University
Williams, Edwin A. Okla.
A.B. 1961, Oklahoma State University of Agriculture and Applied Science
Williams, Gerald E. Va.
B.S. 1955, Delta State College
Williams, James A. Nebr.
B.S. in C.E. 1958, University of Nebraska
Williams, James W. Va.
B.S. in E.E. 1957, Vanderbilt University
Williams, Jerry D. Okla.
B.B.A. 1959, University of Oklahoma
Williams, Melvin P. Va.
B.E.E. 1957, Rensselaer Polytechnic Institute
Williamson, Walter L. D.C.
B.S. 1960, Brigham Young University
Willinger, Warren J. N.Y.
A.B. in Govt. 1959, The George Washington University
Willis, Betty J. Ga.
B.S. in Nursing 1950, M.B.A. 1957, University of Pittsburgh
Willis, Floyd III Md.
A.B. 1961, University of Maryland
Wilson, Harold K. Va.
LL.B. 1955, University of Oklahoma
B.B.A. 1961, The George Washington University
Winebrenner, Tommy L. D.C.
B.S. 1960, American University
Winer, David E. Va.
B.E. 1956, Vanderbilt University
Wing, John A. D.C.
A.B. 1958, Union College
Wintercorn, Richard A. D.C.
A.B. 1957, Rockford College
Wise, Joseph G. Utah
B.S. 1960, Brigham Young University
Wise, Robert W. Md.
B.S. 1956, McPherson College
Wisecarver, Betty M. D.C.
A.B. 1957, Mary Washington College
Witt, William H. Md.
A.B. 1941, Harvard University
Wohl, Paul N.Y.
A.B. in Govt. 1954, The George Washington University
Wolfe, Alan D. N.Y.
B.S. 1952, Queens College
Wolfe, William S. N.Y.
B.S. in E.E. 1959, Lehigh University
Wolff, Nancy J. N.Y.
A.B. 1954, Wellesley College
Wolson, Milton M. N.Y.
B.S. in A.E. 1959, University of Alabama

Wood, Richard L. Mich.
B.S. in M.E. 1958, M.B.A. 1959, University of Michigan
Woodruff, Eugene B. Mich.
B.S. 1954, University of Michigan
M.D. 1957, Purdue University
Worthington, Raymond L. Md.
B.S. 1941, University of Maryland
Wray, James C. N.Y.
B.M.E. 1958, Villanova University
Wright, Charles K. S.C.
B.S. 1942, Clemson Agricultural College
LL.B. 1948, University of South Carolina
Wright, Joseph S., Jr. Ill.
A.B. 1960, Beloit College
Wyman, Charles M. Mass.
A.B. 1955, The George Washington University

Y

Yeager, Frederick G. Iowa
B.S. 1960, University of South Dakota
Young, Charles J. Va.
A.B. 1961, Randolph-Macon College
Young, Donald P. Md.
A.B. 1961, University of Maryland
Young, Glenn F. D.C.
B.S. 1953, U.S. Coast Guard Academy
Young, Roger D. D.C.
A.B. 1957, Randolph-Macon College

Z

Zanfagna, Philip E. Mass.
A.B. 1958, Ohio Wesleyan University
B.D. 1961, Yale University
Zeiger, Leon D.C.
Zeldon, Joan M. D.C.
A.B. 1960, Smith College
Zettler, Arthur M. Md.
A.B. 1959, University of Maryland
Zieg, Robert L. Va.
B.I.E. 1956, General Motors Institute
Ziehm, Eugene C. N.Y.
A.B. 1959, University of Buffalo
Zinn, Robert J. Pa.
B.M.S. 1958, M.S. 1959, Bucknell University
Zoole, Jon L. N.Y.
A.B. 1960, Duke University
Zugel, Francis K. Md.
B.S. in Eng. 1957, The George Washington University
Zugschwerdt, David W. Tenn.
A.B. 1961, Northwestern University

THE BOARD OF TRUSTEES

THE UNIVERSITY

The Board of Trustees of the University is composed of the President of the University ex officio and the following persons by election:

Newell Windom Ellison, A.B., LL.B., LL.D., *Chairman*
Edward Karrick Morris, LL.D., *Secretary*
Godfrey Leon Munter, A.B., LL.B., LL.D., *Assistant Secretary*

Walter Maximillian Bastian, LL.B., LL.D.
*Daniel LeRay Borden, A.M., M.D., Sc.D.
Wiley Thomas Buchanan, Jr.
Leonard Carmichael, Ph.D., Sc.D., LL.D., Litt.D., L.H.D., D.C.L.
Eugene Cassin Carusi, A.M., J.D
R. Roy Dunn
Robert Vedder Fleming, LL.D., *Chairman Emeritus*
Charles Carroll Glover, Jr., A.M., LL.B., LL.D.
Philip L. Graham, A.B., LL.B., L.H.D.
Brooks Hays, A.B., LL.B., LL.D.
John Edgar Hoover, LL.M., LL.D.
Frank Atherton Howard, B.S. in M.E., LL.B., Sc.D.
Joseph D. Hughes, B.S., LL.B., LL.M., LL.D.
Alfred Henry Lawson, LL.B., LL.D.
John Keown McKee
Benjamin Mosby McKelway, Litt.D.
James Matlack Mitchell, A.M.
*George Edward Muth, A.B., LL.B.
*Frederick A. Reuter, M.D.
*Charles Sylvanus Rhyne, LL.B., D.C.L., LL.D.
Donald D'Arcy Shepard, LL.B.
Carleton D. Smith
Sidney William Souers, A.B., LL.D.
Lewis L. Strauss, Sc.D., LL.D., L.H.D.
L. Corrin Strong, Ph.B., LL.D.
*James Cornelius Van Story, A.M.
James Edwin Webb, A.B., LL.D.
*Frank Harvey Weitzel, A.B., LL.B.
Alexander Wetmore, Ph.D., Sc.D.
Watson W. Wise, Ph.B.

HONORARY TRUSTEES

Clarence Aiken Aspinwall, LL.D.
Lyman James Briggs, Ph.D., Sc.D., D.Eng., LL.D.
Mrs. Wilbur John Carr
Mrs. Joshua Evans, Jr., A.B., Ed.D.
Ulysses S. Grant, 3d, B.S., Graduate United States Engineers School, LL.D., Sc.D.
Gilbert Grosvenor, A.M., LL.D., Litt.D., Sc.D.
Charles Stanley White, M.D., Sc.D.
Lloyd Bennett Wilson

---

* Nominated by the alumni.

OFFICERS OF ADMINISTRATION *

THE UNIVERSITY

Thomas Henry Carroll, B.S., M.B.A., D.C.S., LL.D., *President*
Oswald Symister Colclough, B.S., LL.B., LL.D., Sc.D., *Provost and Dean of Faculties*
Henry William Herzog, B.S., *Treasurer*
Tamis Wilson Borden, A.B., *Administrative Secretary*
Claud Max Farrington, A.M., *Assistant to the President*
Joseph Young Ruth, A.B., *Director of Admissions*
Frederick Russell Houser, A.M., in Govt., *Registrar; Secretary of the Faculties*
John Russell Mason, A.M., M.S. in L.S., *Librarian; Curator of Art*
William David Johnson, B.S. in B.A., *Comptroller*
Charles William Cole, Ph.D., *Dean of the Summer Sessions*
Benjamin Douglass Van Evera, Ph.D., Sc.D., *Dean for Sponsored Research*
Virginia Randolph Kirkbride, A.M., Ed.D., *Director of Activities for Women*
Don Carlos Faith, Ph.D., *Director of Activities for Men; Director of Veterans Education*
Joseph Richard Sizoo, A.M., D.D., Litt.D., LL.D., L.H.D., S.T.D., *Director of University Chapel*
Alan Thomas Deibert, A.M., *Adviser to Students from Foreign Countries*
Richard Bernard Castell, A.B., M.D., *Director of Health Administration*
Loretta May Stallings, A.M., *Director of Women's Athletics*
Robert Faris, B.S., *Director of Men's Athletics*
Edward Martin Wall, A.B., LL.B., *Director of Air Science*
John Francis Latimer, Ph.D., *Associate Dean of Faculties: University Marshal*

THE SCHOOL OF ENGINEERING

Martin Alexander Mason, B.S. in Eng., Ing.-Dr., *Dean of the School of Engineering*
Carl Hugo Walther, B.E., M.C.E., *Assistant Dean in the School of Engineering*
Herbert Ernest Smith, C.E., Ph.D., *Director of the Engineering Administration Program*

* The Officers of Administration listed here are for the academic year 1961–62.

THE UNIVERSITY

HISTORY AND ORGANIZATION

The idea of a university in the Capital of the Nation was sponsored by George Washington. During his public life he urged the establishment of such an institution; and in his will he left fifty shares of stock in the Potomac (Canal) Company for the endowment of a university in the District of Columbia "to which the youth of fortune and talents from all parts thereof might be sent for the completion of their Education in all the branches of polite literature;—in arts and Sciences,—in acquiring knowledge in the principles of Politics & good Government".

The George Washington University operates under a charter granted by an act of Congress of February 9, 1821, to Columbian College in the District of Columbia. In 1873 the name was changed to "Columbian University" and in 1904 to "The George Washington University".

The University as it is now organized consists of Columbian College of Arts and Sciences which offers work leading to the Associate in Arts, Associate in Science, the Bachelor's, and Master's degrees; the Graduate Council, which offers work leading to the degree of Doctor of Philosophy; the professional schools, which include Medicine; Law; Engineering; Pharmacy; Education; and Government, Business, and International Affairs; the College of General Studies; the Division of University Students; the Division of Special Students; the Division of Air Science; and the Summer Sessions.

The George Washington University is a privately endowed University located on a well planned campus in the center of Washington within a few blocks of the White House. The government and educational management of the University are vested in a self-perpetuating Board of Trustees, with the President of the University serving as an ex officio member of the Board.

ACADEMIC STATUS

The George Washington University is accredited by its regional accrediting agency, the Middle States Association of Colleges and Secondary Schools. This is important to students who wish to transfer credits from one institution to another.

The University is on the approved list of the American Association of University Women and is a member of the College Entrance Examination Board.

Those curricula of the School of Engineering which are within the purview of the Engineers' Council for Professional Development are accredited by that agency.

LOCATION

The George Washington University is in downtown Washington four blocks west of the White House and east of the Potomac River with its extensive parkway. Readily accessible to the University are many of the departments of the Government, including the Department of State, the Department of the Treasury, the Department of Justice, the Department of the Army, the Department of the Navy, the Department of the Interior, the Department of Agriculture, the Department of Commerce, and the Department of Labor, as well as the National Archives, the Capitol, the Library of Congress, the National Academy of Sciences, the Pan American Union, the National Gallery of Art, and the Corcoran Gallery of Art.

THE SCHOOL OF ENGINEERING

THE FACULTY AND STAFF OF INSTRUCTION*

EMERITUS FACULTY

BENJAMIN CARPENTER CRUICKSHANKS, B.S. in M.E., *Professor Emeritus of Mechanical Engineering*

GENERAL INFORMATION

INTRODUCTORY

The School of Engineering was organized October 1, 1884 as the Corcoran Scientific School of Columbian University and was situated in the University Building then at 15th and H Streets, NW. The school was named in honor of William W. Corcoran, Trustee and President of the Corporation from 1869 to 1888. Day and evening courses were offered in Literature, Science, and Technology and led to the degrees of Bachelor of Science, Civil Engineer, Mechanical Engineer, and Mining Engineer. The school was among the first to accept women for degree candidacy in engineering.

In 1903 the Corcoran Scientific School, the School of Graduate Studies, and the Columbian College were merged into a single Department of Arts and Sciences. Engineering degrees were made graduate.

Administrative changes led to The Washington College of Engineering being initiated in 1905 as one of the several semi-independent undergraduate colleges of the University, each with its own Board of Trustees. The College provided instruction leading to undergraduate degrees in engineering and architecture.

In 1909 the name of the College was changed to the College of Engineering and Mechanic Arts, and the curricula were revised to give the student a thorough understanding of the theory underlying engineering practice. Emphasis was placed on the development of a knowledge of scientific principles upon which the student could build and by which he might solve new problems as they are met in practice.

The name of the school was changed again in 1914 to the College of Engineering and later to the School of Engineering. Architecture was dropped from the curriculum and degrees were limited to the field of engineering. However, the primary emphasis upon principles rather than technology which had characterized the School since 1903 was continued and has remained to this day as one of the important distinguishing features of the School.

The location of the School of Engineering in the nation's capital makes available a group of outstanding engineers and scientists as lecturers. It is traditional for the School to include these eminent professional specialists among the staff of instruction.

Since 1884 courses of instruction have been open to both men and women.

Objective

The objective of the School of Engineering is to produce graduates who possess knowledge and understanding of the fundamental scientific principles in their fields of study; some skill in their application; and an attitude of responsibility toward society and the engineering profession.

* Appointed by the Dean upon recommendation of the Faculty.

ORIENTATION PROGRAM*

Students in the School of Engineering participate in the Orientation Program of the University, which is held during the week preceding registration for the fall semester. Events of the program include an advising period when members of the Faculty in the School of Engineering are available for personal interviews to assist students in planning their programs to best prepare them for ultimate goals; an Orientation Assembly, required of all new students; a Curriculum Assembly, for guidance in the selection of courses for the coming semester; placement tests for new students who do not have advanced standing in mathematics and English; qualifying examinations for students who wish to waive curriculum requirements or qualify for advanced standing; scheduled social events; and the opportunity to discuss with older students and with staff members concerned with student activities the extracurricular program of the University, so that a wise and rewarding selection may be made.

The placement tests are required and are scheduled during Orientation week for students entering the School of Engineering, and again during the week prior to the spring registration for students entering at that time. The results are available to students and advisers before registration as a guide to class placement. Students shown by such tests to be inadequately prepared are required to take remedial work before undertaking Engineering courses in areas of deficiency.

Programs of Study

Programs of undergraduate study are offered leading to the Engineering Technologist Certificate and the degrees of Bachelor of Civil Engineering, Bachelor of Electrical Engineering, Bachelor of Mechanical Engineering, and Bachelor of Science in Engineering (with optional areas of concentration).

Graduate work is offered under the supervision of the Committee on Graduate Studies, leading to the degrees of Master of Science in Engineering, Master of Engineering Administration, and Doctor of Science.

HOURS OF INSTRUCTION

Classes are scheduled in the morning, afternoon, and evening. By taking evening and summer classes and extending the time of study beyond the usual four years, a part-time student may complete the requirements for a degree.

VETERANS EDUCATION

The Office of Veterans Education of the University is a service bureau for eligible persons interested in studying at the University. It acts in a liaison capacity between the University and the Veterans Administration. Those who are eligible are advised to consult this Office about the educational program of the University and the procedure for securing benefits, before applying to the Veterans Administration for certification. The Veterans Administration is on Constitution Avenue at Twentieth Street NW., Washington 25, D.C.

Public Law 634
(War Orphans' Educational Assistance Act)

A child of a person who died of a disease or injury incurred or aggravated while on active duty in the Armed Forces during World War I, World War II, or the

* See the calendar for dates of scheduled events.

Korean Conflict may be eligible for educational assistance under this Act, if certain age requirements are met. In the case of a child who has not reached the age of majority, his guardian must make application for him to the Veterans Administration.

PUBLIC LAW 190

(World War II GI Bill Extension)

The educational benefits for World War II veterans terminated July 25, 1950, except that persons enlisting or reenlisting in the Armed Forces between October 6, 1945, and October 5, 1946, may count the entire period of such enlistment or reenlistment as war service for purposes of GI Bill benefits. Such enlistees have four years from the date that enlistment ended to begin training and nine years from that separation date to complete training under this provision.

PUBLIC LAW 550

(Korean GI Bill)

To be eligible under this Law, a veteran must have been in service between June 27, 1950 and January 31, 1955, and must no longer be on active duty.

At least thirty days prior to registration the veteran should apply to the Veterans Administration for a Certificate for Education and Training, for presentation to the University Office of Veterans Education at the time of registration. A photostatic copy of his DD214 must accompany the original application for certification.

PUBLIC LAWS 16 AND 894

(Vocational Rehabilitation)

Disabled veterans desiring vocational rehabilitation under either Law should apply to the Veterans Administration for approval of their training objectives at least sixty days prior to registration.

SERVICE SCHOOLS CREDITS

A limited amount of credit earned in service schools since 1941 may be considered for assignment to qualified degree candidates in the School of Engineering. Veterans should submit to the Director of Admissions photostatic copies of their service school records, indicating courses successfully completed with sufficient identification of the course to locate it in the Guide to Evaluation of Educational Experience in the Armed Forces.

AIR FORCE RESERVE OFFICERS' TRAINING CORPS

The Air Force Reserve Officers' Training Corps (Air Force ROTC) unit was established at the University in 1951 under authority of Section 40-47C, National Defense Act of June 3, 1916, as amended. Air Force personnel, approved by the President of the University, are assigned by the Department of the Air Force to supervise and conduct the Air Force ROTC program.

The mission of the Air Force ROTC is to develop in selected university students, through a permanent program of instruction, those qualities of leadership and other attributes essential to their progressive advancement to positions of increasing responsibility as commissioned officers in the United States Air Force. Classroom instruction and leadership training are provided to develop in the stu-

dent the knowledge and the attributes of character, personality, and leadership required of commissioned officers.

Course of Study

The course of study is divided into the basic course covering the first two years and the advanced course covering the junior year, summer training unit, and senior year.

Many academic subjects in the University's liberal arts program have a direct relationship to military as well as to civilian careers. Consequently, some of these have been substituted for academic courses included in standard Air Force ROTC curricula. Courses have been carefully selected to avoid duplication in instruction and to provide practical training in organization, leadership, and discipline, which will be of value in industrial or professional careers. The duties and responsibilities of commissioned officers, oral and written expression, and the techniques of problem solving are emphasized throughout the course, both in theory and practice.

Cadets in the advanced course receive subsistence allowances from the Government totaling approximately $500, which is exempt from income tax. During the period of summer training, cadets receive $75 a month, food, lodging, and travel expense. Uniforms, textbooks, and training materials are provided for all Air Science courses at no expense to the cadet.

Eligibility Requirements

Enrollment in the Division of Air Science basic course is open to all men students who are at least 14 years of age, physically fit, of good character, and candidates for a Bachelor's degree. All students enrolling in the basic course are required to successfully complete the two-year course as a prerequisite to graduation from the University. Upon successful completion of the basic course, a cadet may apply for enrollment in the advanced course.

A cadet enrolled in the advanced course must successfully complete the junior- and senior-year Air Science curricula and summer training unit as a prerequisite to graduation. Upon graduation he is obligated to accept a commission in the United States Air Force, if tendered. Any cadet who for academic, physical, or other reasons becomes disqualified for a commission is relieved of this obligation. Cadets enrolled in the category leading to pilot training may be required to pursue a 35-hour course of flying instruction during the senior year. This flying instruction is provided by a Civil Aeronautics Administration approved school at government expense, and leads to qualification for a private pilot's certificate.

Military Service Delay

Deferment from induction under the Selective Service Act of 1951 may be granted to selected cadets within authorized quotas. Normally, a cadet is not considered for draft deferment until he has completed one semester's work in the University, with a quality-point index of at least 2.00. A cadet's deferment is subject to withdrawal if his quality-point index falls below 2.00.

STUDENT LIFE

HEALTH ADMINISTRATION

The University maintains a health service that is primarily diagnostic in its intent. For medical emergencies and health consultations there is, on the Campus,

a Student Health Clinic open from 9:00 A.M. to 5:00 P.M. with physician and nurse in attendance. There is also a rest room for women, with a graduate nurse in charge.

Medical privileges include: (1) physical examination of every student entering from secondary school;* (2) three visits by the University physician or surgeon, office or residence (District of Columbia), in any one illness, exclusive of a specialist, surgical operation, laboratory, or X-ray examination; (3) hospitalization, including board and nursing, in the University Hospital for not more than one week during any twelve-month period—the necessity to be determined by the Director of Health Administration.† All additional hospital charges for operating room, laboratory, anesthetics, X-ray, medications, or any other special service must be paid by the student. The duration of hospitalization period (maximum, one week) is also to be determined by the Director of Health Administration.

This medical benefit applies only to illness or disability incurred while currently enrolled in the University. It does not apply to illness or disability incurred between the last day of examinations for a semester or summer session and completion of registration for the next semester or summer session.

The student is allowed, if he so desires, to engage physicians and nurses of his own choice, but when he does so he will be responsible for the fees charged.

Rules: (1) The Director of Health Administration is empowered to limit or deny the medical benefits where in his discretion, a student has, by his misconduct or breach of the rules of the University, made himself ineligible; (2) the Director of Health Administration has authority to determine the necessity and length of hospitalization; (3) a student not currently enrolled or one who has severed his connection with the University is ineligible for medical benefits; (4) a student intending to train for an athletic team is required to pass a thorough examination at the beginning of each semester; (5) hospitalization is not available to those students availing themselves of other hospitalization coverage for the same illness.

The University is not responsible for injuries received in intercollegiate or intramural games, or in any of the activities of the physical education departments.

LIVING ACCOMMODATIONS

The University maintains five residence halls. Meals are served at the Student Union.

Admission to the University does not include a room reservation. A separate application for a room should be made well in advance (for the fall semester by May first, for the spring semester by January first). Forms for application, together with detailed information, may be obtained from the Director of Activities for Women or the Director of Activities for Men.

Information concerning private rooming and boarding facilities near the University may be obtained at the Housing Office, Lisner Auditorium. The reservation of rooms in private houses must be made by students.

All girls (except freshmen) under the age of twenty-one, who are enrolled for twelve or more semester hours of academic work at the University and who are not living with their parents or relatives may live outside the dormitories only with the permission and approval of the Director of Activities for Women, upon receipt of written requests from parents. In no case will permission be granted for such

* A charge of $2 for a special physical examination is made by the University if a student fails to appear for a physical examination during the period set for this purpose.

† See Rule (5) for exception.

girls to be domiciled outside the dormitories except with persons approved by the Director of Activities for Women.

Freshman girls may be domiciled outside the dormitory only with their parents or with immediate relatives with the written approval of their parents.

Women Students.—The Hattie M. Strong Hall provides single rooms at $47.50 a month and double rooms at $40 a month a person.

The Dolly Madison Hall provides double rooms at $40 a month a person.

Men Students.—Welling Hall provides double rooms at $30 a month a person.

The John Quincy Adams Hall provides 69 double rooms each with study alcove and bath. Rooms rent at $40 a month a person.

The John C. Calhoun Hall provides 75 double rooms at $40 a month a person.

Dormitory payments are due and payable in advance on the first day of each month. A student who fails to meet payments when due, but who makes his payment from the tenth to the fifteenth, inclusive, of the month in which payment is due, is charged a service fee of $2. A student who fails to meet payments by the fifteenth of the month in which payment is due will be automatically suspended and may not attend classes until he has been officially reinstated and has paid all accrued rent and a reinstatement fee of $5.

RELIGIOUS LIFE

The University recognizes the contribution that religion makes to the life of its students and encourages them to participate in the various religious organizations of their own choice. Catholic, Jewish, and Protestant bodies sponsor these groups and form a link between the University and the religious community. The advisers of the religious organizations are available for counseling.

University Chapel

The University Chapel is a nonsectarian service of workship for the University community. The service is held Wednesday of each week from 12:10 to 12:30 o'clock at 1906 H Street NW. Among the guest speakers are representative clergymen of Washington. The Director of Chapel is available for counseling on personal problems.

STUDENT UNION

The Student Union, 2125 G Street NW., is the center for student life. From the cafeteria on the first floor to the reading room on the fourth floor, it is well planned to meet the students' need for meals, study, recreation, and activities. In addition to the recreation lounge and social lounge the Student Union provides office space for the Student Council and for the other major student organizations.

The Student Activities Office, also in the Student Union, has available information concerning the student organizations and campus events.

DAVIS-HODGKINS HOUSE

The Davis-Hodgkins House, 731 Twenty-second Street NW., is the engineering student center, providing lounges, reading rooms, and student organization offices. The House provides convenient, comfortable facilities for the exchange of ideas and good fellowship among student engineers.

INTERNATIONAL HOUSE

The International House, 2110 G Street NW., is the social center for students from foreign countries. A series of teas, dances, and other forms of entertainment, and the use of club rooms and lounge enable students to become acquainted and feel at home in the University.

The International Students' Society welcomes as members students from other lands as well as North American students.

The Adviser to Students from Foreign Countries, whose office is in International House, is available for advice and guidance.

THE PLACEMENT OFFICE

The Placement Office, 2114 G Street NW., provides assistance to students and alumni seeking full-time, part-time, temporary, or permanent employment. The Office maintains a registry of positions available in many fields, both locally and nationally, and refers qualified applicants for consideration. The Office administers the On-Campus Industrial and Government Recruitment Interview Program for seniors and graduate students, in which well over 150 private companies, as well as certain government agencies, participate. This program offers employment opportunities to persons seeking careers.

Students and alumni interested in placement are asked to register in person at the Office and to select from written descriptions of current openings positions for which they wish referral. Those interested in planning careers are invited to study the information on career fields and the brochures of business and industrial organizations, government agencies, etc., which are on display in advance of campus visits by recruiting officers. The services of the Counseling Center are available to students and alumni wishing career guidance.

The Placement Office is open from 9:00 A.M. to 5:00 P.M., Monday through Friday.

THE TESTING AND COUNSELING CENTER

The Testing and Counseling Center, 718 Twenty-first Street NW., offers services which are available to students enrolled in the University, to high school students, and to adults of the community.

The services are designed to assist individuals in the evaluation of their educational and vocational potentialities and objectives, diagnose academic difficulties, provide educational and vocational literature and information, and refer individuals to qualified agencies for assistance with problems not handled by the Center.

The Center provides special testing services including: diagnostic tests prescribed by the School of Engineering, admissions tests for the University and for other educational institutions, and tests for business and industry.

Fees.—Except for specialized testing, the fee covers testing and counseling based on the results of the tests. For students who are currently registered as degree candidates in the University, the fee is $7.50; for students currently enrolled in the University but not as degree candidates, the fee is $30; for graduates of the University, $30; for community clients, $45. Fees for specialized testing are dependent upon the services involved. All fees are payable at the Office of the Center.

THE READING CLINIC

The Reading Clinic, 2018 I Street NW., offers individual diagnostic and corrective services for all levels: primary, elementary, secondary, and adult. In addition

special reading improvement classes are conducted on the high school and adult level.

A complete diagnosis includes psychological tests; vision, hearing, and dominance tests; and the various reading and spelling tests. Results are interpreted and a written report is presented in conference with the parents or the individual.

The special reading classes for high school students and adults are offered throughout the year at stated intervals. Emphasis is placed on improvement of vocabulary, speed, comprehension, and study skills. Machines such as the tachistoscope, rate accelerator, and controlled reader are also used for increasing speed of comprehension.

Fees.—The fee for individual diagnosis is $35; for individual instruction, $4.50 a lesson; for semi-individual instruction, $3.50 a lesson; for instruction in small groups with common reading difficulties, $2.75 a lesson; for materials, $4. All fees are payable in advance at the Office of the Cashier.

STUDENT ACTIVITIES

Directors of Student Activities

The University maintains the offices of the Director of Activities for Men and the Director of Activities for Women, for the guidance of students in all nonacademic phases of student life, such as student activities, social life, and housing. The directors are available for individual counseling concerning personal adjustment to university life.

Student Government

Student Council.—The Student Council, which is elected annually by the Student body, is responsible for the conduct of student activities.

Committee on Student Life.—The Committee on Student Life is the judicial branch of the student government. It is composed of not more than seven members of the faculty, two of whom are the Director of Activities for Men and the Director of Activities for Women, appointed by the President of the University, and the following members: President of Student Council, an Editor of the *Hatchet*, President of Mortar Board, President of Omicron Delta Kappa, President of the Interfraternity Council, and President of Panhellenic Council. This Committee has the power to review the acts of all student organizations, including the Student Council, and set aside acts that are contrary to established policy and regulations of the University or the Committee. It is granted authority to approve or disapprove the establishment of any proposed organization on campus. No student club or society (except social fraternities, sororities, scholastic honor societies, religious or professional clubs or societies) organized as a branch or affiliate of a non-George Washington University organization will be recognized by the Committee on Student Life.

Eligibility for Student Activities

Any student registered in the University is eligible to participate in nonathletic student activities of the University; however, a student having a scholastic average of less than 2.00 is not eligible to be:

1. A member of the Band, Dance Production groups, Enosinian Debate Society, Glee Club, Cheerleaders, Student Council, Religious Council, Panhellenic Council, Interfraternity Council, Engineers' Council, Student Life Committee,

Adams Hall Council, Calhoun Hall Council, Madison Hall Council, Welling Hall Council, Strong Hall Council, or any publications staff

2. An officer, permanent committee chairman, or member of the executive board of any activity.

The rules and policies of the Southern Conference govern participation in intercollegiate athletics.

The Engineers' Council

The Engineers' Council is the student governing body for the School of Engineering, composed of two elected representatives from each year class and from the graduate student body, one representative from each student organization in the School, the Business Manager of the *Mechelectiv*, and the House Manager of the Davis-Hodgkins House. The purpose of the Council is to provide liaison between the student body of the School of Engineering and the Faculty Administration, and Student Government of the University in all matters affecting the general interests and welfare of the student body, the School of Engineering, or the University. The Council is maintained financially by the Engineers' Council Fee paid by each student in the School of Engineering, and sponsors the engineers' student magazine, *Mechelectiv;* the Annual Engineers' Mixer, Engineers' Ball, and the Annual Christmas Tree Ceremony in the University Yard. Council meetings are open to all students in the School of Engineering.

The Council acts as the directing body for *Mechelectiv*, which is published six times a year and is sent free to all engineering students. This magazine includes campus and alumni news, a calendar of events, news of the student organizations, and articles on engineering by students and faculty members. The magazine is published by a student Board of Editors and a volunteer student staff.

The control and administration of all student activities are outlined in a separate bulletin.

Sports Activities

The University is a member of the Southern Conference and the National Collegiate Athletic Association. Its teams participate in intercollegiate contests in football, basketball, baseball, tennis, golf, rifle, sailing, and crew.

The University maintains a complete program of intramural sports for both men and women. The men's program is conducted by the Intramural Council. The Women's Athletic Association and Intersorority Athletic Board cooperate with the departments of Physical Education in conducting the women's intramural and informal extra-mural sports program in tennis, hockey, basketball, rifle, swimming, golf, bowling, and badminton.

Arts

Interested students may participate in dance, drama, forensics, and music through the following organizations: Dance Production Groups I, II, III: Enosinian Debate Society; University Dramatic Production Group; and University Glee Club. Each of these groups presents programs during the academic year.

With the cooperation of the Curator of Art, an annual student art exhibit is presented.

Scheduled Events

Colonial Program.—The Student Council sponsors a series of ten cultural programs to which all students are invited.

Recreation Program.—The Student Council and the Dance Production Groups arrange dances—square, folk, and social—at frequent intervals for all students.

Engineers' Mixers.—At the beginning of each semester the Engineers' Council sponsors a program of orientation, good fellowship, and entertainment to introduce new students.

Engineers' Day.—Sponsored by the Engineers' Council to acquaint high school students and their parents with the School of Engineering.

Homecoming.—Scheduled about the middle of the fall semester, Homecoming is the primary festive period of the school year. It includes the annual Pep Rally and Variety Show, the homecoming football game, and the homecoming dance.

Religion In Life Week.—Observed during the week of Thanksgiving, Religion In Life Week includes special lectures, classroom lectures, and fraternity and sorority discussion groups. Religion In Life Week is sponsored by the University Chapel in cooperation with the Committee on Religious Life and the religious organizations.

Holiday Season.—The University traditionally greets the holiday season with appropriate ceremonies including the lighting of the Christmas tree (given and decorated by the School of Engineering), the singing of Handel's Messiah, and the observance of a special Christmas service at the University Chapel.

Engineers' Ball.—In the spring the Engineers' Council sponsors the Engineers' Ball, a social event for students and alumni.

Career Conference.—Under the sponsorship of the Student Council, guest speakers from many professions discuss with students the potentialities of vocations available on graduation.

May Day.—This is the traditional time for the award of honors in student activities. Mortar Board and Omicron Delta Kappa tap new members.

The Colonial Cruise.—An afternoon and evening cruise on the Potomac in the late spring. Students, alumni, and faculty picnic, dance, and engage in games and athletic contests.

STUDENT ORGANIZATIONS

Honor Societies

Sigma Xi.—A national scientific honor society, the purpose of which is to encourage original investigation in science pure and applied. Outstanding graduate students in the sciences are eligible for full membership, and undergraduates who have shown marked ability in research may be elected to associate membership.

Omicron Delta Kappa.—A national fraternity emphasizing leadership in extracurricular activities.

Order of Scarlet.—A service honorary society for sophomore and junior men.

Phi Eta Sigma.—A national fraternity, established to encourage and reward high scholarship and attainment, membership in which is limited to those freshman men who attain a scholastic average of at least 3.50.

Sigma Epsilon.—A local engineering honor society established to recognize distinguished scholarship and exemplary character. Members are elected from the top one-eighth of those students in their next-to-last calendar year before graduation and from the top one-fifth of those students in their last calendar year.

Sigma Tau.—A national engineering fraternity, the purpose of which is to recognize scholarship and professional attainment.

Professional Organizations

American Institute of Electrical Engineers—Institute of Radio Engineers (Student Chapter).—Membership open to candidates for the degree of Bachelor of Electrical Engineering.

American Society of Civil Engineers (Student Chapter).—Membership open to students who are candidates for the degree of Bachelor of Civil Engineering.

American Society of Mechanical Engineers (Student Chapter).—Membership open to candidates for the degree of Bachelor of Mechanical Engineering.

Theta Tau (Gamma Beta Chapter).—A national professional (engineering) fraternity. Membership by invitation to outstanding students who have completed successfully at least the freshman year in the School of Engineering.

Social Fraternities

Sigma Chi, Kappa Sigma, Phi Sigma Kappa, Sigma Alpha Epsilon, Sigma Phi Epsilon, Phi Sigma Delta, Sigma Nu, Tau Kappa Epsilon, Pi Kappa Alpha, Tau Epsilon Phi, Alpha Epsilon Pi, Delta Tau Delta.

Social Sororities

Pi Beta Phi, Chi Omega, Sigma Kappa, Alpha Delta Pi, Delta Zeta, Kappa Delta, Phi Sigma Sigma, Zeta Tau Alpha, Kappa Kappa Gamma, Delta Gamma, Kappa Alpha Theta, Alpha Epsilon Phi, Sigma Delta Tau.

Religious Organizations

Baptist Student Union, B'nai B'rith Hillel Foundation, Canterbury Association, Christian Science Organization, Eastern Orthodox Club, Lutheran Student Association, Newman Club, Religious Council, Student Christian Fellowship, Unitarian Club, United Christian Fellowship, Wesley Foundation.

Student Publications

Amicus Curiae (Law School publication), *The Cherry Tree* (the annual), *The University Hatchet* (weekly newspaper), *The George Washington Law Review*, *Mecheleciv* (engineers' publication), *The Percolator* (pharmaceutical publication), *The Potomac* (literary magazine), *The Student Handbook*.

Other Organizations

Adams Hall Council, Alpha Theta Nu (scholarship winners), Big Sisters, Calhoun Hall Council, Cheerleaders, Colonial Boosters, Colonial Campus Party, Democratic Club, Flying Sponsors, Foggy Bottom Sports Car Club, Interfraternity Council, Interlaw Fraternity Council, International Relations Club, International Republican Club, Students' Society, Intersorority Athletic Board, Junior Panhellenic Association, Madison Hall Council, Old Men, Senior Panhellenic Association, Strong Hall Council, Student Council, Students for Better Government (political party), Student Legal Aid Society, Station WRGW, University Pep Band, Wandering Greeks, Welling Hall Council, Writers' Club.

ADMISSION

The School of Engineering accepts men and women.

Students may enter at the beginning of the fall semester, the spring semester, or the Summer Sessions.

APPLICATION FOR ADMISSION OR READMISSION

Forms for application for admission or readmission are available at the Office of the Director of Admissions, 2029 G Street NW., Washington 6, D. C.; telephone: FEderal 8-0250, extension 344. The completed form should be returned to the Office of the Director of Admissions, with an application fee of $10 for a degree candidate; $5 for a nondegree candidate. The degree candidate must attach to his application a recent photograph, signed by him.

Application for admission or readmission for degree candidacy, together with all required credentials, should be received by July 1 for the fall semester, January 1 for the spring semester, and May 1 for the Summer Sessions to insure consideration. Late applications will be considered only if the application form and all required credentials are received in the Admissions Office no later than two weeks prior to the first day of registration for the semester or session for which application is made. Exceptions may be made under extraordinary circumstances, at the discretion of the Director of Admissions.

Applications for nondegree status must be received with necessary credentials no later than the Saturday preceding the first day of registration as stated in the University calendar.

An applicant from a secondary school must send the high school record form provided by the University to his high school principal with the request that the completed form be mailed directly to the Office of the Director of Admissions.

The applicant must request the College Entrance Examination Board to send to the Office of the Director of Admissions the scores of all College Entrance Examination Board Scholastic Aptitude tests and Achievement tests taken. Arrangement for tests is the responsibility of the applicant and should be made with the College Entrance Examination Board, 20 Nassau Street, Princeton, New Jersey, not less than one month before the date of the test. On the application for the test, the student should specify that the scores be sent to the Director of Admissions, The George Washington University, Washington 6, D. C.

An applicant who has attended one or more institutions of higher learning must request each registrar to mail directly to the Office of the Director of Admissions a transcript of his record, *even though credits were not earned.* An honorable dismissal is required from the institution last attended.

The appropriate report of Graduate Record Examinations, when available, should accompany application for admission to graduate degree candidacy.

APPLICATION FOR READMISSION

A student previously registered in the University who was not registered on-campus during the immediately preceding semester (summer session excluded) must apply for readmission in the Office of Admissions (time stated above) in advance of registration. If the student applies as a degree candidate and was previously registered as a nondegree student, or if he has attended one or more higher institutions during his absence from the University, he must have complete, official transcripts sent to the Office of the Director of Admissions from each institution attended before his application will be considered. Applications for readmission are considered on the basis of regulations currently effective.

ENTRANCE REQUIREMENTS

Good character and academic background appropriate for the program of studies contemplated are required.

For Undergraduate Study

For the Engineering Technologist Certificate and the degrees of Bachelor of Civil Engineering, Bachelor of Electrical Engineering, Bachelor of Mechanical Engineering, Bachelor of Science in Engineering.—Admission is based on the following factors:

1. An acceptable certificate of graduation from an accredited high school showing at least fifteen "units" *
2. The principal's statement that the applicant is prepared to undertake college work
3. Scores on the following College Entrance Examination Board tests: the Aptitude Test, the English Composition Achievement Test, and a Mathematics Achievement Test. If the applicant studied trigonometry in high school he should take the Advanced Mathematics Achievement Test; if he did not study trigonometry in high school he should take the Intermediate Mathematics Achievement Test.

The qualifications of applicants who, because of unusual circumstances, do not meet the above requirements will be considered by the Committee on Admission and Advanced Standing. The Committee may prescribe admission tests.

Nine and one-half of the fifteen units required for entrance must be distributed as follows: three in English, two in algebra, one in plane geometry, one-half in plane trigonometry, one in physics or chemistry, and two in one foreign language or history. General Science may not be counted in satisfaction of the science requirement but may be counted as an elective unit.

It is recommended that *both* physics and chemistry be studied in high school. Study of these sciences contributes to the student's general education, aids in his choice of a career, and affords a qualitative measure of his ability and potential for engineering study. Superior students are encouraged to begin collegiate study of physics or chemistry at the highest level consistent with their preparation, by the use of waiver examinations.

The study of solid geometry is recommended, in order that the student may have a firm foundation for his collegiate studies in mathematics.

Quantitative Deficiency.—A graduate of an approved high school who does not offer for admission the particular subjects required for the engineering curriculum, but who does present not less than fifteen acceptable units, may be admitted to pursue a prescribed program of studies including courses to make up for deficiencies if the deficiency in distribution does not exceed two units.

Qualitative Deficiency.—In the Summer Sessions of 1962 a special program will be available for a limited number of applicants for full time study who do not fully meet qualitative admission requirements. In order to meet the qualifications for admission to degree candidacy all courses in the special program must be passed with an average grade of *C* or better.

Applicants for part time study will be admitted fall, spring, or summer, but must complete the prescribed program of two courses in that semester.

ADVANCED STANDING

Credit for Advanced Placement Examinations

Advanced standing may be granted for study at the collegiate level in advanced courses in an approved secondary school, if substantiated by satisfactory perform-

* A unit represents a year's study in a secondary school subject, including in the aggregate not less than 120 sixty-minute periods of prepared classroom work.

ance in the Advanced College Placement Examination. Arrangement for the examination is the responsibility of the applicant and should be made with the College Board Advanced Placement Examinations, Educational Testing Service, 20 Nassau Street, Princeton, New Jersey.

The applicant must request the examining service to submit the test papers and scores to the Office of Admissions. Consideration is given to both the quality of performance on the examination and the quality and content of the course of study completed by the applicant.

Total credit that may be so granted is ordinarily limited to 15 semester hours, not more than 8 semester hours of which may be in any one examination area. In exceptional cases these limits may be exceeded, but in no case will the credit granted exceed 30 semester hours.

Credit from Higher Institutions

Advanced standing may be granted for work successfully completed at accredited institutions of higher learning. Credit will be granted for transferred work only when it meets the requirements for the degree sought at this University, and subject to the general University regulations concerning satisfactory subsequent work.

For Graduate Study

For regulations concerning admission to graduate study toward the degrees of Master of Science in Engineering and Master of Engineering Administration, see page 35; toward the degree of Doctor of Science, see page 39.

For Degree Candidacy

For regulations concerning admission to candidacy for the Master's degrees, see pages 36 and 37.

REGISTRATION

A student cannot register for classes until he has received a letter of admission to the University, issued by the Office of the Director of Admissions.

A student previously registered in the University who was not registered on-campus during the immediately preceding semester (summer session excluded) must apply for readmission in the Office of Admissions in advance of registration. (See "Application for Admission and Readmission", page 17.)

Registration is for the semester unless otherwise indicated on the registration paper. No registration is accepted for less than a semester or one summer session.

A student may not register concurrently in the School of Engineering and in another institution or another division of this University without the permission of the Dean. Allowance of credit for work done concurrently will be at the discretion of the Committee on Admission and Advanced Standing.

Registration in the School of Engineering entitles each student to the following University privileges: (1) the issuance of one certified transcript of record, if and when desired: (2) the services of the placement Office: (3) the use of the University library; (4) gymnasium privileges: (5) admission to all athletic contests, unless otherwise specified; (6) subscription to *Mecheleciv*, the engineers' student magazine; (7) subscription to the University *Hatchet*, the student newspaper; (8) admission to University debates: (9) medical attention and hospital services as described under Health Administration, pages 9–10. These privileges, except for the

issuance of transcripts, terminate, and a student is no longer in residence, when he withdraws or is dismissed from the University.

FEES AND FINANCIAL REGULATIONS

Application fee, charged each applicant for admission as a degree candidate, nonrefundable	$10.00
Application fee, charged each applicant for admission as a nondegree candidate, nonrefundable	5.00
Application for Transfer fee, charged* each applicant for transfer within the University from one college, school, or division to another, except in cases of normal progression, nonrefundable	5.00
Tuition Fees:	
For work leading to the Engineering Technologist Certificate and the Bachelor's degrees in Engineering:	
Full-time program (15 hours or more), for each semester	500.00
Part-time program:	
For each semester hour for which the student registers	35.00
For each semester hour for which the student registers for courses in Departments of Instruction other than in the School of Engineering	30.00
For the Master's degrees†:	
For work leading to and including the Comprehensive Examination	900.00
Tuition for all prerequisite course work required will be charged at the normal rate for part-time enrollment in the applicable department of instruction.	
For the degree of Doctor of Science:	
For work leading to and including the Qualifying Examination‡	1,200.00
For work leading to and including the final examination	1,200.00
Graduation fees:	
Wherein the Engineering Technologist Certificate is granted	10.00
Wherein a degree is granted	25.00
Fee for Binding Master's Thesis	6.00
Fee for Printing Summary of Doctoral Dissertation	85.00
Admission Tests (when required)	6.00–12.00
Graduate Record Examination fee (to cover two examinations), charged each candidate for a Bachelor's degree at the time of registration for the final semester	10.00
Late-registration fee, charged each student who fails to register within the designated period	5.00
Change fee, charged each student for each change in program involving one or more than one course	2.00
Withdrawal fee, charged each student who preregisters and withdraws prior to the regular registration	5.00
Service fee, charged each student for late payment of tuition	2.00
Reinstatement fee, charged each student who is reinstated after suspension for delinquency in fees	5.00
Residence fee,‡ charged each student wishing to maintain "in residence" status during any semester of absence from the University or after completion of tuition requirements	35.00
For special physical examination	2.00
Engineers' Council fee, charged each student in the School of Engineering for each semester or any part thereof except the summer term	1.50
For each examination to qualify for advanced standing and for each special examination	5.00
Laboratory checkout fee, charged each student in chemistry courses who fails to check out of the laboratory by the time set by the instructor	3.00

* Payable at the time of application for transfer or readmission.

† Tuition is to be paid in full at the time of registration or in two years at the rate of $225 a semester. The tuition must be paid in full before admission to the Comprehensive Examination.

‡ Candidates for the Master's degrees who have paid in full the fee for work leading to and including the Comprehensive Examination but whose Comprehensive Examinations have not been completed will be granted up to one full academic year on an "in residence—no charge" basis, on authorization by the Dean.

Transcript fee, charged for each transcript of record after the first..... 1.00

Additional Course Fees

In certain courses additional fees, such as laboratory and material fees, are charged as indicated in the course descriptions. These fees are charged by the semester and, unless otherwise indicated, may be defrayed in three payments when the tuition is paid in this manner. Breakage of apparatus is charged against the individual student. When breakage is in excess of the normal amount provided for in the laboratory fee the individual student will be required to pay such additional charges as are determined by the department concerned.

PAYMENT OF FEES

All fees are payable at the Office of the Cashier, 725 Twenty-first Street NW. No student is permitted to complete registration or to attend classes until all fees are paid. Fees for each semester are due and payable in advance at the time of registration.

With the approval of the Treasurer, the student may sign a contract for semester charges, except for fees payable in advance, permitting payments as follows:

Fall Semester.—One-third at the time of registration; one-third on the first working day* in November; one-third on the first working day* in December.

Spring Semester.—One-third at the time of registration; one-third on the first working day* in March; one-third on the first working day* in April.

A student who fails to meet payments when due, but who pays his fees within the following two weeks of the date on which payment is due, is charged a service fee of $2. A student who fails to meet payments within these two weeks after payment is due will be automatically suspended and may not attend classes until he has been officially reinstated and has paid all accrued fees and a reinstatement fee of $5.

A student suspended for failure to meet payments when due may not be reinstated for the semester after two weeks from the date of suspension. Applications for reinstatement are to be made to the Office of the Cashier.

An auditor pays all fees chargeable to the student registered for credit except the late-registration fee.

WITHDRAWALS AND REFUNDS

Application for withdrawal from the University or for change in class schedule must be made in person or in writing to the Dean. Notification to an instructor is not an acceptable notice.

All charges for courses dropped without the approval of the Dean must be met by the student. Reporting the dropping of a course to an instructor does not effect its discontinuance.

For regulations governing students in the School of Engineering concerning withdrawal without academic penalty, see page 27.

A student may not withdraw from either the basic course (2 years) or the advanced course (2 years) of the Air Force ROTC without the approval of the President of the University.

No tuition refunds are made to students in the Master's programs. Financial adjustments may be authorized by the Dean in cases of death, physical or mental disability, and termination of studies by reason of scholastic deficiency.

In authorized withdrawals and changes in schedules, financial adjustments will be made as follows:

* The University work week is Monday through Friday, inclusive.

FALL SEMESTER

Full-time program.—Complete withdrawal from the University dated on or before the last working day* in October or November, cancellation of two-thirds or one-third, respectively, of the full-time program charges.

Partial withdrawal dated on or before the last working day* in October or November, cancellation of two-thirds or one-third, respectively, of the difference between the charges for the full-time program and the hourly charges of the part-time program continuing in effect.

Part-time program.—Withdrawal dated on or before the last working day* in October or November, cancellation of two-thirds or one-third, respectively, of tuition charges.

SPRING SEMESTER

Full-time program.—Complete withdrawal from the University dated on or before the last working day* in February or March, cancellation of two-thirds or one-third, respectively, of the full-time program charges.

Partial withdrawal dated on or before the last working day* in February or March, cancellation of two-thirds or one-third, respectively, of the difference between the charges for the full-time program and the hourly charges of the part-time program continuing in effect.

Part-time program.—Withdrawal dated on or before the last working day* in February or March, cancellation of two-thirds or one-third, respectively, of tuition charges.

No refund or reduction will be allowed on any withdrawal dated after the last working day* in November (fall semester) or March (spring semester).

A student enrolled in a full-time program, who drops or adds a course and continues to be in a full-time program, will have no financial adjustments of tuition made other than those involving course fees.

In no case will a refund be made of the first third of the total tuition charges unless the registration is in advance and is cancelled before the regular registration day. In this case a withdrawal fee of $5 is charged and tuition fees refunded. In no case will tuition be reduced or refunded because of nonattendance upon classes.

Payment applies only to the semester for which a registration charge is incurred and in no case will this payment be credited to another semester.

Any student in chemistry who fails to check out of the laboratory on or before the date set by the instructor, unless excused by the instructor, will be charged a checkout fee in the amount of $3. A student who drops a course before the end of the semester must check out of the laboratory at the next regular laboratory period.

Any student enrolled in the Air Force ROTC who fails to turn in uniforms, equipment, and textbooks on separation from the Corps will be charged the value of the missing items.

Authorization to withdraw and certification for work done will not be given a student who has not a clear financial record.

---

* The University work week is Monday through Friday, inclusive.

Students are encouraged to provide their own cash funds until they can make banking arrangements in the community.

SCHOLARSHIPS, PRIZES, FINANCIAL AID

Scholarships and Prizes

The following scholarships and prizes are limited to students in the School of Engineering. The University offers many others which are open to engineering students. A special bulletin containing a complete list and full information concerning teaching fellowships, scholarships, and prizes, may be obtained from the Chairman of the Committee on Scholarships, The George Washington University, Washington 6, D. C.

Association of Federal Communications Consulting Engineers Scholarship.—This scholarship, which includes tuition, laboratory fees, and books, established in 1958 by the Association of Federal Communications Consulting Engineers (AFCCE), is available to a student of good character, promise, and leadership pursuing a course of study leading to a Bachelor of Electrical Engineering degree and intending to major in communications.

Frederick Albert and Alma Hand Britten Scholarships.—These scholarships, established in 1959 by bequest of Alma Hand Britten, in amounts to be specified from time to time by the Trustees, are available to needy full-time graduate or undergraduate students registered in the School of Engineering, who would not otherwise be able to pursue such professional study. Application should be made before March 1 for the following academic year. Application forms are available in the Office of the Dean.

Henry Harding Carter Scholarship.—A $500 scholarship, established in 1896 by Mrs. Maria M. Carter in memory of her husband, Henry Harding Carter. Available to a deserving student who is preparing for the civil engineering profession.

School of Engineering Scholarships.—Four scholarships are available each year in the School of Engineering to graduates of accredited secondary schools. The holders of these scholarships must carry a full program in the School of Engineering.

Each scholarship is a full-tuition scholarship but does not cover special fees. Each scholarship is for four academic years (summer work is not to be included), provided the holder thereof meets all academic and other standards of the University.

To retain a School of Engineering scholarship, an average of *B* and a satisfactory standard of deportment must be maintained. Application should be made before March 1 for the following academic year. Application forms are available in the Office of the Dean.

Henry Parsons Erwin Scholarship.—Established in 1955 by Mrs. Helen B. Erwin as a memorial to her husband, Henry Parsons Erwin, a former Trustee of the University. Available for a student in Engineering.

Norman B. Ames Memorial Award.—Established in 1960 in memory of Dr. Norman B. Ames by many of his friends and awarded annually to a member of the graduating class of the School of Engineering whose class standing is in the upper 25th percentile and who has an outstanding record for participation in extracurricular activities of the University.

Martin Mahler Prize in Materials Testing.—Established in 1953 by Martin Mahler consists of a one-year membership in the American Society for Testing Materials

and is awarded to the upper-division or graduate student in engineering who submits the best reports on tests in the Materials Laboratories course with preference given to prestressed concrete tests.

School of Engineering Distinguished Scholar.—The Faculty of the School of Engineering awards a certificate to the senior who graduates with the highest scholastic standing. In addition, the student's name is engraved on a plaque displayed in Tompkins Hall. One award is made each year.

Sigma Tau Prize.—Xi Chapter of Sigma Tau Fraternity offers annually a medal to be awarded to that member of the freshman class in the School of Engineering who maintains the highest scholastic standing in the work of the entire year.

Theta Tau Activities Plaque.—Gamma Beta Chapter of Theta Tau Fraternity offers annually the Deacon Ames Activities Award in the form of a plaque awarded to that member of the senior class who has the most outstanding record in activities in the School of Engineering during the entire period of his attendance.

Financial Aid

The following loan funds are available to students in the University in accordance with the qualifications placed thereon by the donors. Inquiries should be directed to the Office of the Treasurer.

University Loan Fund.—The Trustees of The George Washington University have made available a fund for short-term loans to students.

National Defense Student Loan Fund.—This fund is available to full-time undergraduate and graduate students who are in need of financial assistance. Priority is given those applicants who express a desire to teach in elementary or secondary schools, and whose academic background indicates a superior capacity or preparation in science, mathematics, engineering, or a modern foreign language. After application for admission to the University has been completed, application on forms prescribed for this loan fund must be filed in the Office of the Treasurer no later than July first for the fall semester, December first for the spring semester, and May first for the Summer Sessions.

For information concerning full- and part-time employment, see "The Placement Office", page 12.

REGULATIONS

A student who withdraws or is suspended, or is otherwise absent from the University for one semester or more, may re-enter and continue his work only under the rules and regulations in force at the time of his return.

If a student knowingly makes a false statement or conceals material information on an application for admission, registration card, or any other University document, his registration may be canceled and he will be ineligible (except by special action of the Faculty) for subsequent registration in any unit of the University.

ATTENDANCE

A student cannot attend classes until registration is completed and fees due are paid. A student may be dropped from any course for undue absence.

A student suspended for any reason may not attend classes during the period of suspension.

The student is expected to attend every meeting of the course in which he is registered, fully prepared to carry on the work required. The student is held responsible for all work in the course, and all absences must be excused before pro-

vision will be made for him to make up the work missed. Excuses for absences from examinations which have been announced in advance can be obtained only by making written application to the instructor in charge of the course.

AMOUNT OF WORK

A full-time undergraduate student who is not on probation may take no more than 20 semester hours. A student employed more than 24 hours a week who is not on probation may take no more than 10 semester hours.

A student previously unemployed who accepts employment after registration must immediately report that fact to the Dean so that his schedule may be adjusted if necessary.

ADVISORY SYSTEM

The School of Engineering encourages a close Faculty-student relationship. Every entering undergraduate student is assigned a permanent Faculty adviser to assist him to orient himself in the engineering discipline. Faculty advisers counsel students on their programs of study, the achievement and maintenance of satisfactory scholastic performance, professional development, and extracurricular activity as part of the educational process. The adviser represents the student in all cases requiring Faculty action.

Students who have not satisfactorily completed 70 semester hours must obtain their advisers' approval of programs of study prior to registration.

Until a student has completed the work of the freshman and sophomore years he must follow the recommendations of his adviser in all academic matters. However, an adviser may not deny a student entry into any course or activity to which he is entitled under the regulations of the School. Students having junior or senior status are encouraged to consult their advisers. The Dean acts as temporary adviser to entering or transfer students pending assignment of their permanent advisers.

All students are encouraged to discuss college problems with their advisers or instructors at any time; and parents or guardians are invited to consult with the Dean and advisers, concerning any student problems.

Faculty advisers discharge their counseling duties in accordance with the high principles of their professional responsibility; however, the final responsibility for a student's action lies wholly with the student.

SCHOLARSHIP REQUIREMENTS

A student must maintain a quality-point index of at least 2.00 to be in good academic standing.

A student who fails to maintain the scholarship requirements of the School of Engineering may be suspended from the University.

Grades

Grades are not given out by instructors but are mailed to the student through the Office of the Registrar at the close of each semester. Upon request, a copy of the student's grades will be forwarded to his parent or guardian.

The following undergraduate grading system is used: excellent, *A;* good, *B;* average, *C;* passing, *D;* failing, *F.* Whenever a grade has not been assigned, the symbol *I* (incomplete) or the symbol *W* (authorized withdrawal) will be recorded. The symbol *I* indicates that a satisfactory explanation has been given to the in-

structor for the student's failure to complete the required work of the course. An "incomplete" can not be made up after the lapse of one calendar year except by permission of the Faculty. Courses from which a student has withdrawn by proper authorization will be indicated by the symbol *W*. No student may repeat for grade a course in which he has received a grade of *D* or above, unless required to do so by the department concerned. A written statement to this effect must be submitted to the Registrar by the appropriate departmental executive officer.

For graduate work, grades are indicated as *E* (excellent), *S* (satisfactory), *U* (unsatisfactory). The grade *S* signifies a high level of scholastic achievement.

Quality-Point Index

Quality points are computed from grades as follows: *A*, four points; *B*, three points; *C*, two points; *D*, one point; *F*, no points, for each semester hour for which the student has registered.

Scholarship is computed in terms of the quality-point index, obtained by dividing the number of quality points by the number of semester hours for which the student has registered, both based on the complete collegiate record. Courses marked *W* or *I* are not considered in determining the index, except that courses marked *I* will be considered when a formal grade is recorded, or at the close of a calendar year, whichever occurs first. If an "incomplete" is not replaced by a proper grade within the allotted time, it is computed as zero quality points.

Grades in courses taken at another institution or taken to satisfy entrance requirements are not included in the quality-point index.

Scholarship*

Undergraduate

In order to graduate, a student must have a quality-point index of at least 2.00 in all work taken at this University and accepted in the School of Engineering.

Mid-semester Warning.—At the end of the seventh week of each semester, instructors report to the Dean the names of students whose scholarship is unsatisfactory. On receipt of a warning notice the student must consult his instructor and his adviser immediately.

The adviser may prescribe diagnostic tests and/or remedial study to be completed before the end of the current semester.

Probation.—A student whose quality-point index falls below 2.00 is placed on probation. This probation extends over the period in which the student attempts 12 semester hours of study.

A student on probation may be required to follow a program of study, including remedial studies, prescribed by the Committee on Scholarship. He may not hold office, participate in the activities of any student organization, or represent the School in any student activity.

Suspension.—A student whose quality-point index is below 2.00 at the end of his probationary period is suspended. A student whose index falls below 2.00 after removal from probation is suspended.

At the time of his suspension a student may apply to the Committee on Scholarship for guidance concerning remedial action he should take during the period of his suspension.

---

* For graduate scholarship requirements, see page 36.

A student suspended for poor scholarship may apply* to be readmitted in the semester or summer session which begins next after an interval of one calendar year. To be considered for readmission he must pass prescribed tests. A student readmitted after suspension is on probation. He must maintain a current quality-point index of at least 2.50 on each 12 semester hours of work undertaken until his cumulative index is 2.00. In no case will the probationary period after readmission exceed 24 hours of study. A student suspended twice for poor scholarship will not be readmitted.

Academic Dishonesty

Evidence of dishonesty on the part of any student will result in his suspension by the Dean upon the recommendation of the Dean's Council.

A student found guilty of dishonesty will be suspended for a stated period and will be deprived of credit for *all courses* in which he is enrolled during the semester in which the dishonest act occurs. A disciplinary grade of "Failure—Academic Dishonesty" will be recorded for each such course, and this grade will be employed in computation of the quality-point index.

If a student suspended for academic dishonesty should be readmitted, he may be required to repeat for grade all courses for which a disciplinary grade has been recorded, and both the grade earned on repetition and the disciplinary "Failure—Academic Dishonesty" grade will be employed in computation of the quality-point index.

A student may apply to be readmitted in the semester or summer session which begins next after an interval of one year from the date of suspension.

CHANGES IN PROGRAM OF STUDIES

After the registration period a student may not make any changes in his registration without the approval of the Dean. Requests for chances in registration must be made on forms provided in the Office of the School of Engineering.

Transfer from one college, school, or division to another may be made only with the approval of the deans concerned. Application for such change must be made on the proper form, obtainable in the Office of the Director of Admissions, where it should be filed.

During the seven days following the first day of classes of a semester, additional courses may be added to the student's program with the approval of the instructor, the student's adviser, and the Dean.

Withdrawal from a course or from the University, *without academic or financial penalty*, requires the permission of the Dean. Unauthorized withdrawal from a course at any time entails a penalty of failure in the course and financial responsibility for the full fee for the course. Permission to withdraw from the University will not be granted a student who does not have a clear financial record.

Withdrawal from any course without academic penalty after the fourteenth day following the first day of classes of a semester may be granted by the Dean under the following conditions: (1) exceptional circumstances make the request necessary; (2) the request is submitted on the official form for late withdrawals; (3) as of the date of request, the grades in all courses involved are *C* or better; and (4) approval of the Committee on Scholarship is obtained by the student.

In the exceptional circumstances mentioned above the Dean, upon recommendation of the Committee on Scholarship, may authorize withdrawal without academic

* Application for readmission should be made two months in advance to permit the taking and grading of readmission tests.

penalty. In all cases financial regulations governing withdrawals remain in full effect. (See pages 21 and 22.)

A graduate student may withdraw from a graduate course without academic penalty only within the first four weeks of a semester.

HONORS LIST

The Faculty of the School of Engineering recognizes meritorious scholastic achievement by an Honors List, containing in alphabetical order the names of candidates for undergraduate degrees in engineering, whose scholastic achievement satisfies all of the following requirements:

1. The candidate's cumulative quality-point index is equal to or exceeds 3.00.
2. At least 30 semester hours of credit have been earned while a degree candidate in the School of Engineering.
3. At least 15 (part-time student) or 30 (full-time student) semester hours of credit in an engineering degree curriculum have been earned in the two semesters immediately preceding the award.
4. No grade below *C* has been received during the qualifying period stated above.
5. No disciplinary action has been taken in respect to the student.

The Honors List is prepared at the end of the fall and spring semesters and displayed in an appropriate public place in the School of Engineering. A notation is made on the student's record each time his name is included in an Honors List.

CREDIT

Credit toward a degree is given only after registration for and satisfactory completion of the required work of classes or upon the granting of advanced standing in accordance with the regulations of the School. A student who takes a course as an auditor may not take the same course later for credit.

On request the Registrar will issue to the student a balance sheet showing the amount of work completed and the requirements, both quantitative and qualitative, remaining to be met for the degree.

Transcripts of Record

Official transcripts of student records will be issued on request of the student or former student. No charge is made for the first transcript; a fee of one dollar is charged for each one thereafter. No certificate of work done will be issued for a person who does not have a clear financial record.

Summer School Credit

A student who plans to attend summer school sessions at another institution and transfer credits so earned toward graduation from this University must first secure the written approval of the Dean. Transferred credits will not be recognized in excess of those which might be earned in a similar period in this institution.

USE OF CORRECT ENGLISH

Any student whose written or spoken English in any course is unsatisfactory may be reported by the instructor to the Dean's Council. The Council may assign supplementary work, without academic credit, varying in amount with the needs of the student. If the work prescribed is equivalent to a course, the regular tuition fee is charged. The granting of a degree may be delayed for failure to make up any such deficiency in English to the satisfaction of the Dean's Council.

GRADUATION REQUIREMENTS

To be recommended by the Faculty for graduation a student must have met the admission requirement of the School, completed satisfactorily the scholarship, curriculum, residence, and other requirements for the certificate or degree for which he is registered, and be free from all indebtedness to the University.

Application for Graduation.—Application for a certificate or degree must be filed in the Office of the Registrar at the time of registration for the last semester of the senior or final year.

Curriculum.—Curriculum requirements for the Engineering Technologist Certificate are stated on page 42; for the Bachelor's degrees, on pages 32–34 and 42–43; for the Master's degrees, on pages 36–38.

Graduate Record Examination.—All candidates for Bachelor's degrees must take two parts of the Graduate Record Examination in the University's institutional testing program. The examinations are conducted by the University twice a year: the Fall Testing Session (December 8, 1962), for seniors graduating in February, and the Spring Session (April 6, 1963), for those graduating in June. Dates of the examinations are announced in the *Schedule of Classes.*

Each senior required to take the Graduate Record Examination must register for it in the Office of the Dean when he registers for his final regular semester of study (excluding summer sessions). A $10 examination fee is payable at the time of registration.

Students receive individual reports of test scores and may avail themselves of the transcript services of the Educational Testing Service. By special permission seniors who expect to graduate in June may take the Graduate Record Examination at the previous Fall Testing Session, so as to have transcripts available early in the year when applying for admission to graduate schools.

Residence.—For the Engineering Technologist Certificate, a minimum of 30 weeks and the last 36 semester hours must be completed in residence.

For the Bachelor's degrees, a minimum of 30 weeks and 36 semester hours must be completed in residence. Summer work may be counted. Unless special permission is granted by the Dean to study elsewhere, the work of the senior or final year must be completed in residence.

The graduate student must meet the residence requirements for the degree for which he is registered.

A student who is absent from the University for one semester or more is required to satisfy the curriculum requirements existing at the time of his return unless during his absence he maintains "in residence" status by paying the appropriate fee, see page 20. For the purpose of this regulation the summer term will be disregarded.

The student who has completed his tuition requirements, but whose graduation is deferred for any reason, must maintain "in residence" status by paying the residence fee for the semester immediately preceding the graduation at which he expects to receive his degree.

If a candidate for the degree of Doctor of Science fails to maintain his residence during a period of absence, he must reapply for admission to study under whatever new conditions and regulations are set up by his consultative committee.

Attendance and Conduct.—The University reserves the right to refuse to confer a degree upon a candidate whose attendance or conduct has been unsatisfactory.

Thesis or Dissertation.—A thesis or dissertation submitted in partial satisfaction of requirements for a Master's or Doctor's degree, respectively, must be presented

in its final form to the Dean no later than the date specified in the calendar. Three complete copies are required. It is the responsibility of the candidate for a graduate degree to obtain from the Dean a printed copy of the regulations governing the styling and reproduction of the thesis or dissertation, which are rigidly enforced.

Accepted theses and dissertations with accompanying drawings become the property of the University and are deposited in the University Library, where the duplicate copies are bound and made available for circulation. Permission to publish or adapt material in a thesis or dissertation must be secured from the Dean.

Presence at Graduation.—Presence at the graduation exercises is required of the candidate, unless the work for the degree was completed during the summer term or written application for graduation *in absentia* has been approved by the Dean.

Honors

With distinction.—A Bachelor's degree may be conferred "with distinction", at the discretion of the Faculty, if a student attains a quality-point index of 3.50 or higher on all work taken at this institution. To be eligible for this honor a student must have completed at this institution at least one-half of the work required for the degree.

Special honors.—A Bachelor's degree may be conferred with "Special honors", at the discretion of the Faculty, for outstanding achievement in the student's major field of work on recommendation of the major department, under the following regulations:

1. The student must have his candidacy for special honors approved by the faculty member representing the major department or field not later than the beginning of the senior year.
2. The student must meet such other conditions as may be set at the time his candidacy is approved.
3. No student will be awarded special honors unless he has a quality-point index of at least 3.00 on all work taken at this institution.
4. To be eligible for honors a student must have completed at this institution at least one-half of the work required for the degree.

Military honors.—An Air Force ROTC cadet may be designated a "Distinguished Air Force ROTC Cadet" if he (1) has completed Air Science 101–2 in the upper third of the students enrolled therein; (2) has a cumulative academic average of *B* or better; (3) possesses high moral character and definite aptitude for service in the Air Force; (4) has distinguished himself in leadership in recognized extracurricular activities and while in attendance at an Air Force ROTC Summer Training Unit. A "Distinguished Air Force ROTC Cadet" may wear a "Distinguished Cadet" badge above the right breast pocket of the uniform. He may apply for a regular commission in the United States Air Force, which is given final consideration upon his designation as a "Distinguished Air Force ROTC Graduate".

An Air Force ROTC cadet may be designated a "Distinguished Air Force ROTC Graduate" if he has (1) been a "Distinguished Air Force ROTC Cadet" in good standing during the period between designation and graduation; (2) completed the Air Force ROTC Advanced Course; and (3) completed the requirements for the Bachelor's degree. A "Distinguished Air Force ROTC Graduate" will be presented with a certificate signed by the Commandant, Air Force ROTC, and, if he applied, will be considered for a regular commission in the United States Air Force.

THE LIBRARY

A student registered in the University is entitled to the reference use of the University Library. The Student Identification Card, issued upon the payment of fees, must be presented as identification.

The loan period for most books available for home circulation is two weeks, with an additional two-week renewal. A fine of five cents will be charged for each day a book is overdue. Any book which does circulate is subject to recall by the Librarian at any time. Reserve books for collateral reading must be used in the reading rooms when the Library is open. With special permission they may be drawn for overnight use when the Library closes. A fine of twenty-five cents will be charged for the first hour or fraction of an hour and five cents for each hour or fraction thereafter that a reserve book is overdue. Grades of a student will be withheld until his library record is clear.

Hours

The University Library is open from 9:00 A.M. to 10:00 P.M. each class day (Saturday 9:00 A.M. to 5:00 P.M.), and from 2:00 to 6:00 P.M. on Sunday.

RIGHT TO DISMISS STUDENTS

The right is reserved by the University to dismiss or exclude any student from the University, or from any class or classes, whenever, in the interest of the student or the University, the University Administration deems it advisable to do so.

RIGHT TO CHANGE RULES

The University and its various colleges, schools, and divisions reserve the right to modify or change requirements, rules, and fees. Such regulations shall go into force whenever the proper authorities may determine.

PROPERTY RESPONSIBILITY

The University is not responsible for the loss of personal property in any University building. A "Lost and Found" Office is maintained in the Student Union.

THE DEGREES

ENGINEERING TECHNOLOGIST CERTIFICATE

A two-year program of studies, leading to the Engineering Technologist Certificate, prepares the student to assume minor responsibilities in the field of measurement science. It is open to high school graduates who meet the requirements for admission stated on page 18.

THE BACHELOR'S DEGREES

The Bachelor's degrees are Bachelor of Civil Engineering, Bachelor of Electrical Engineering, Bachelor of Mechanical Engineering, and Bachelor of Science in Engineering.

The degree of Bachelor of Science in Engineering may be earned with any of the following options: Chemistry, Engineering Administration, Machine Computer, Mathematics, Measurement Science, or Physics.

Curricula leading to the degrees of Bachelor of Civil Engineering, Bachelor of Electrical Engineering, and Bachelor of Mechanical Engineering are accredited by

the Engineers' Council for Professional Development, the recognized accrediting body of the engineering profession.

CURRICULUM REQUIREMENTS

The satisfactory completion of one of the following curricula is required of all students registered for a Bachelor's degree in Engineering except those in the field of Measurement Science. For curricula leading to the Engineering Technologist Certificate and the degree of Bachelor of Science in Engineering with option in Measurement Science, see pages 42 and 43.

Variations from the prescribed curricula may be made, with the permission of the Dean's Council. A student desiring to omit a required course and substitute another must make written application to the Dean presenting satisfactory reasons for the substitution; written approval must be obtained before registration for the course.

A student who is absent from the University for one semester or more is required to satisfy the curriculum requirements existing at the time of his return unless during his absence he maintains "in residence" status, see pages 20 and 29.

	Freshman Year*	Semester Hours
†Eng. 1 or 1X, 2	English Composition	6
‡Math. 21, 22, 23, 24 or Math. 27, 28	Calculus I, II, III, IV	12
ME 9	Introduction to Engineering	3
ME 10	Graphical Communication	2
Phys. 11	Introductory Physics	3
Phys. 14	General Physics	3
	Total	29

ROTC.—Air Force ROTC students take Air Science 1–2 and 22 (4).

	Sophomore Year	Semester Hours
Chem. 13–14	General Chemistry	8
CE 21	Rigid Body Mechanics I	3
CE 24	Mechanics of Deformable Bodies I	3
EE 11–12	Fundamentals of Electrical Engineering	6
Math. 111, 112	Mathematics for Engineers and Physicists I, II	6
Phys. 15, 16	General Physics	6
Elective	In humanities or social studies (see page 57)	3
	Total	35

ROTC.—Air Force ROTC students substitute Air Science 11–12 and 51 (4) for Elective (3).

BACHELOR OF CIVIL ENGINEERING

	Junior Year	Semester Hours
CE 112	Surveying	3
CE 121	Rigid Body Mechanics II	3
CE 125	Engineering Materials	4
CE 132	Fluid Mechanics	3

* Exceptional students may qualify for admission to advanced courses by successfully completing qualifying examinations.

† Before students are registered in English 1, they are tested in the minimum essentials of vocabulary, spelling, grammar, standard usage, and writing skill. Those students who show marked superiority may, upon passing further tests, be exempted from one or both semesters of the English Composition course; those who are inadequately prepared for English 1 are assigned to English 1X.

‡ Students who started to meet the freshman-year mathematics requirement with the sequence of Mathematics 12, 29, 30, 31 should continue in that sequence. They should note, however, the terminal semesters for the offering of these courses.

CE 143–44	Structural Theory I–II	8
ME 113	Thermodynamics I	3
ME 118	Heat Transfer	3
Elective	In humanities or social studies (see page 57)	10
	Total	37

SENIOR YEAR

		Semester Hours

	Total of Required courses	31
Option	As approved by the Department of Option and by the Dean	30
Elective	In humanities or social studies (see page 57)	15
	Total	76

ROTC.—Air Force ROTC students must elect Geography 146 (3) and Political Science 171 (3) for elective (3) and option course (3).

The Bachelor of Science in Engineering curriculum provides training in the basic physical principles employed in engineering and in engineering methods of analysis.

and in addition, offers an opportunity for study in an optional field in which the student has special interest.

Optional studies can be selected from one or (occasionally) more of the fields of Chemistry, Engineering Administration, Machine Computer, Mathematics, Measurement Science,* or Physics. The program of study in the option is formulated by the department concerned in conference with the student. The program, bearing the approval of the Executive Officer of the department concerned, must be submitted by the student to the Dean before the beginning of the junior year.

THE MASTER'S DEGREES

Upon satisfactory completion of appropriate graduate requirements, the degree of Master of Science in Engineering or Master of Engineering Administration is conferred.

Study for the Master's degree is based upon a faculty-student relationship in which the ability and needs of the individual student are important elements in determining the curriculum. Programs are not restricted to one department or to a single field or type of study. They may include special instruction by assigned members of the engineering faculty or approved courses offered in other colleges and schools of the University. The Committee on Graduate Studies is responsible for establishing each student's program and for providing for its direction.

ADMISSION TO GRADUATE STUDY

For admission to graduate study the student must have a Bachelor's degree from a recognized institution and he must satisfy the Committee on Graduate Studies of his capacity for productive work in the field selected.

Applicants who have significant deficiencies in their preparation may qualify for admission to graduate study by taking prescribed undergraduate courses.

In some cases such study may be carried on in addition to a limited graduate program. In no case may the undergraduate courses fulfill any part of the requirements for the graduate degree.

ADMISSION TO DEGREE CANDIDACY

Admission to graduate study does not constitute admission to degree candidacy. Specific requirements for admission to degree candidacy are stated under the headings of the appropriate degrees.

ADVANCED STANDING

Graduate courses completed before admission are not transferable for degree credit. The Committee on Graduate Studies may, however, consider them in planning individual programs. Course work to satisfy requirements for another degree granted by the University may not be used again to satisfy requirements for a Master's degree in the School of Engineering.

REQUIREMENTS FOR THE DEGREES

Residence

The candidate for a Master's degree must complete a minimum of one year of full-time study, or the equivalent in part-time study, under the direction of the Committee on Graduate Studies. A full-time student must complete all requirements for the degree within three years; a part-time student, within five years.

* The curriculum in Measurement Science is stated on pages 42 and 43.

Scholarship

A minimum grade of "Satisfactory" is required in all courses. A student who makes one grade of "Unsatisfactory" may repeat the course once, or he may appeal to the Committee on Graduate Studies for guidance. A student who receives two or more grades of "Unsatisfactory" will not be permitted to enroll further in the School of Engineering until he demonstrates by examination, or as the Committee may direct, that his deficiencies in course work have been removed. A grade of *B* or better is required for undergraduate courses taken to remove deficiencies in preparation for graduate study.

Master's Thesis

The degree candidate must submit an acceptable thesis to demonstrate his ability to make independent use of the knowledge and discipline of thought acquired and developed by graduate study, and to furnish objective evidence of constructive power in a given field. Work of a suitable character for which the student has professional responsibility may be considered, whether done on or off campus, provided no significant amount of work is completed without faculty supervision.

Comprehensive Examination

To demonstrate substantial understanding of principles and methods of their use in the area of his interest, the student must pass a comprehensive examination, written, oral, or both, as prescribed by the Committee on Graduate Studies. This examination will not be taken until the candidate has successfully completed the prescribed program of study and submitted an acceptable Master's thesis.

THE DEGREE OF MASTER OF SCIENCE IN ENGINEERING

The objective of this discipline is a substantial comprehension of scientific principles and methods for their use, as applied in modern engineering. Increased understanding of engineering science and its use in solving engineering problems are sought, rather than a breadth of familiarity with applications and techniques.

A program of study consisting of at least 24 semester hours of graduate courses to prepare the candidate for his comprehensive examination and a written Master's thesis (6 semester hours) is formulated, with particular attention to the individual student's needs and objectives. The program may provide for broad coverage in a variety of fields or may be designed to give some degree of specialization in a particular area, as determined by conference with the Committee at the time of admission to candidacy.

The level of the courses ordinarily requires as prerequisite the satisfactory completion of at least one undergraduate course in mathematics beyond the first course in ordinary differential equations and at least one in the area of the graduate course to be undertaken.

Admission to Degree Candidacy

Application for admission to degree candidacy must be made in writing to the Committee on Graduate Studies. To be accepted the applicant must: (1) have completed satisfactorily all prescribed prerequisite study, (2) have satisfactorily completed a graduate course in each of two different subjects designated as Engineering Science, and (3) give evidence of satisfactory personal and intellectual qualifications.

Required Courses

Upon admission to graduate study, two courses designated as Engineering Science must be taken prior to application for admission to degree candidacy. Additional courses must be chosen from the areas of fundamental engineering study listed below.

Automatic Control	Fluid Dynamics
Elasticity	Structural Theory
Electric Networks	Thermodynamics
Electromagnetic Fields	Transients

Graduate courses in the basic areas of mathematics, physics, or chemistry may be substituted for these additional courses with the approval of the Committee.

Program of Study

Upon admission to candidacy for the degree, the remainder of the program is formulated by the student and his adviser. Major emphasis is usually given to study in fundamental and applied areas of engineering, mathematics, or science. The program may, however, include study in any areas which are characterized by a scientific discipline.

THE DEGREE OF MASTER OF ENGINEERING ADMINISTRATION

The objective of this discipline is to develop an understanding of the principles and a competence in the practices of administration as applied to engineering and scientific activities. Knowledge and understanding are sought rather than mere familiarity with techniques.

A study program is prescribed for each candidate, in accordance with his preparation and objective, by the Committee on Graduate Studies or an assigned adviser. Programs are integrated sequences of courses.

The degree of Master of Engineering Administration is granted upon the successful completion of (1) 30 semester hours of graduate courses, including the written Master's thesis, and (2) the Comprehensive Examination.

Prerequisite to Admission to Graduate Study

In addition to the requirements for admission to graduate study stated on page 35, the applicant must have an adequate knowledge of the principles of human relations, the fundamentals of accounting, and the fundamentals of statistics. This requirement can be met by the successful completion of the following undergraduate courses or an approved equivalent: Psychology 145 *Principles of Human Relations*, Accounting 115 *Survey of Accounting*, and Statistics 107 *Statistics for Engineers*.

Admission to Degree Candidacy

Application for admission to degree candidacy must be made in writing to the Committee on Graduate Studies. To be accepted the applicant must: (1) have completed satisfactorily all prescribed prerequisite study; (2) have satisfactorily completed courses EA 201 *Engineering Administration I*, EA 202 *Engineering Administration II*, and EA 271 *Operations Research;* and (3) give evidence of satisfactory personal and intellectual qualifications.

Program of Study

The content of the courses immediately following is considered essential knowledge for every candidate for the degree of Master of Engineering Administration. The candidate is required to complete all of the courses except those in which he (1) has successfully completed graduate study or (2) can demonstrate to the Committee on Graduate Studies an acceptable knowledge of the course field.

		Semester Hours
EA 201	Engineering Administration I	3
EA 202	Engineering Administration II	3
EA 271	Operations Research	3
EA 299–300	Master's Thesis	6

The following courses provide knowledge in certain special areas which are significant in engineering administration. The candidate is required to select at least two; it is preferable that he elect three.

		Semester Hours
EA 206	Human Relations in Administration	3
EA 251	Management of Research and Development	3
EA 252	Production and Maintenance Management	3
Stat. 262	Managerial Statistics and Quality Control	3

Elective

Courses are to be elected to provide a total of 30 semester hours for the program.

		Semester Hours
EA 261	Economic Analysis in Engineering Planning	3
EA 263	Quantitative Techniques of Engineering Administration	3
EA 272	Problems in Operations Research	3
EA 273–74	Techniques of Operations Research	6
EA 285	Seminar in Engineering Administrative Problems	3
EA 295	Applied Research in Engineering Administration (arr.)	
EA 296	Research in Engineering Administration (arr.)	
Acct. 215	Survey of Managerial Accounting	3
Acct. 293	Budget Preparation and Administration	3
Bus. Adm. 250	Contract Administration	3
Pub. Adm. 213	Administration in Government	3
Stat. 271–72	Statistical Information Theory	6
Elective	(To be selected from Engineering or the sciences), as approved by the Committee on Graduate Studies	3–6

THE DOCTORAL PROGRAM

Introductory

The School of Engineering offers a program of advanced study and research leading to the degree of Doctor of Science. This program is limited to recognized engineering fields in which a scientific discipline exists and for which the University has adequate resources.

The Doctoral discipline is designed to prepare the student for a career of creative scholarship by providing a broad background of knowledge and an understanding of research methods. It requires study of interrelated fields of learning as well as original research in the engineering field of central interest.

The discipline for the degree is divided into two stages. The first—made up of a study of interrelated fields of learning which support the general area of research concentration—culminates in the qualifying examination. The second—composed

of research investigation of a particular subject in a special field and the presentation of such research findings in a written dissertation—culminates in the final examination.

Detailed information on the program is provided in a separate publication obtainable on request.

Admission

The applicant must have adequate preparation for advanced study, including a satisfactory Master's degree, or the equivalent, together with acceptable personal qualities and a capacity for creative scholarship. The applicant must have capabilities and interests beyond the ability to assimilate organized materials in formal courses of instruction. Originality of mind combined with balanced judgment and accuracy in observation or experiment are necessary to the successful applicant.

Language Requirements

A reading knowledge is required of two foreign languages important in the student's field of interest. One language examination must be passed before admission to graduate study. The second must be passed before admission to the qualifying examination and within one year of the start of study for the qualifying examination.

Application for Admission

Well in advance of the opening of the semester for which the student seeks admission, he must have a personal interview with the Chairman of the Committee on Graduate Studies or the professor under whom he wishes to study, to discuss the field of study, the University's facilities for guidance in this field, the applicant's qualifications, and the possibilities of an effective doctoral program. If an application for admission is indicated, the student will be advised concerning the details of application procedure.

Study for the Qualifying Examination

Upon admission to study for the qualifying examination the student's admission committee becomes his Consultative Committee, which prescribes and directs his studies. The Committee assigns to him a group of fields of learning deemed necessary to insure his breadth of knowledge, as well as to support research in his central field. Members of the Committee advise the student concerning the scope and content of these fields of study, which are generally more inclusive and intensive than courses of instruction announced in the University catalogue, and will guide him in preparation for his examination in them.

The purpose of the qualifying examination is to ascertain that the student's breadth of background and intellectual development are adequate to support doctoral research and investigation in his central field. The qualifying examination is both written and oral and usually extends over a period of six days. It is given by a special committee consisting of members of the student's Consultative Committee and other scholars. Upon favorable report of the examiners to the Committee on Graduate Studies the student is admitted to candidacy for the degree, to pursue his specialized study and research under the supervision of a designated member of the Faculty.

The examination is the sole test of the student's ability to qualify for admission as a candidate for the degree, and to enter the second stage of his doctoral discipline.

Research, the Dissertation, and the Final Examination

The student admitted to candidacy for the degree requests as Master in Research the member of the Faculty under whom he wishes to pursue research and specialized study. The Faculty member may accept or reject such request. The research is arranged by the Master and approved by the Committee on Graduate Studies. Throughout the remainder of the doctoral program, the candidate is responsible solely to his Master in his research and in the presentation of his dissertation.

A dissertation is required as evidence of ability to perform scholarly research and to interpret and present its results. Upon approval of the dissertation (see pages 29–30) by the Master, the candidate is presented for his final examination. The summaries of accepted dissertations are printed in a numbered issue of the University Bulletin. The successful candidate is required before receiving his degree to pay a fee to cover the expense of the printing of the summary of his dissertation.

The final examination is oral and is open to the public. The candidate must demonstrate a mastery of his special field of interest and of the materials and techniques used in the research. The committee of examiners includes members of the Committee on Graduate Studies competent in the research field or in closely related subjects and may also include qualified experts brought to the University especially to participate in the examination. If the candidate satisfies the examining committee concerning the high quality and originality of his contribution to knowledge as well as his mastery of the scholarship and research techniques of his field, the Committee on Graduate Studies recommends him for the degree of Doctor of Science.

Residence and Continuous Study

All of the work for the degree must be done in residence (on the campus), except in certain circumstances when the student may be permitted to undertake a portion of the research problem in an approved off-campus facility. The student must maintain continuous registration in the School of Engineering, even when the Committee on Graduate Studies has granted a leave of absence. Failure to maintain registration in each semester of the academic year disrupts the residence status of the student, and he must apply for readmission to graduate study under whatever new conditions and regulations are set up by his consultative committee.

There is no formal regulation concerning the minimum amount of time to be spent in preparation for the qualifying examination or as a candidate engaged in doctoral research. The qualifying examination, however, must be completed within five years of the date of admission, and the entire degree program must be completed within seven years. After admission the student may apply for his qualifying examination whenever his consultative committee believes that he is prepared to take it; his research and specialized study may be undertaken with whatever concentration of time meets the approval of his research adviser. Normally a minimum of two years of full-time study and research is spent in meeting the requirement for the degree.

THE CENTER FOR MEASUREMENT SCIENCE

The Center, under the direction of the School of Engineering, is a cooperative activity of the University, industry, and government providing education, research, and service programs related to measurement. It was established by the University in 1960, with the collaboration of the National Bureau of Standards and the financial support of a grant from The Martin Company of Baltimore, Maryland.

The principal, but not exclusive, activities of the Center are:

The education of persons for careers in measurement science;

The development and improvement of measurement, standardization, and calibration techniques, apparatus, and data—with particular reference to high precision.

The provision of staff and facilities available to industry for research and consultation on measurement problems in industry, and including the maintenance of primary standards of measurement directly traceable to the national standards.

The publication of results of research, manuals of practice and procedures, and information related to measurement science.

The Center maintains relations with industry and government through its Associate Program, in which interested individuals, companies, or other organizations may participate. The mutual communication, collaboration, and support made possible by this program bring vitality to the Center activities and insure attention to the needs of industry and government.

Through these and other activities the Center serves as a source of personnel competent in measurement science, as an instrument for collaborative research on measurement problems, and as a service organization providing expert capability to industrial and government organizations in the solution of their measurement problems.

The Education Program

The Education Program of the Center consists in part of four curricula offered by the School of Engineering, which prepare the student to assume responsibilities in the field of measurement science. The curricula are integrated, to permit a student to terminate his formal education at any level, or to proceed to the next level. Programs lead to the Engineering Technologist Certificate and the degrees of Bachelor of Science in Engineering, Master of Science in Engineering, and Doctor of Science.

In addition to the certificate and degree programs, the education program includes seminars, special conferences, and short courses offered from time to time.

The Research Program

The research program of the Center includes all aspects of research and development related to measurement science. Research and/or development may be undertaken as independent studies by staff members for the Center, as studies for a sponsor under contract, or by personnel of Associates of the Center assigned to the Center to undertake the specific work. Associates receive publications of the Center; certain publications may be restricted in distribution.

The Service Program

The Service Program of the Center provides a mechanism for obtaining consultation and assistance of the faculty, staff, and facilities of the Center in connection with specific problems in measurement. The program is restricted to the use of the Associates of the Center.

Additionally the Service Program makes it possible for Associates to engage the various resources of the University, through the Center, as may be desirable and feasible, in solution of their problems in measurement.

For complete information concerning the Center for Measurement Science, see the bulletin, which is available upon request to the Director of the Center for Measurement Science, Tompkins Hall, 725 Twenty-third Street, NW., Washington 7, D. C., FEderal 8-0250, Extension 246.

ENGINEERING TECHNOLOGIST CERTIFICATE

This is a two-year program open to high school graduates who meet the requirements for admission stated on page 18.

Regulations governing students enrolled in the Engineering Technologist program are stated on pages 24–31.

CURRICULUM

First Year

		Semester Hours
Chem. 13–14	General Chemistry	8
Engl. 1 or 1X	English Composition	3
*Math. 21, 22, 23, 24 or Math. 27, 28	Calculus I, II, III, IV	12
Physics 11	Introductory Physics	3
Physics 14	General Physics	3
ME 9	Introduction to Engineering	2
ME 10	Graphical Communication	3
	Total	34

Second Year

CE 21	Rigid Body Mechanics I	3
CE 24	Mechanics of Deformable Bodies I	3
CE 121	Rigid Body Mechanics II	3
EE 11–12	Fundamentals of Electrical Engineering	6
Math. 111	Mathematics for Engineers and Physicists I	3
Metr. 5	Foundations of Metrology I	5
†Metr. 6	Foundations of Metrology II	4
Metr. 4	Introduction to Statistics for Metrology	3
Physics 15, 16	General Physics	6
	Total	36

* Students who started to meet the freshman-year mathematics requirement with the sequence of Mathematics 12, 29, 30, 31 should continue in that sequence. They should note, however, the terminal semesters for the offering of these courses.

† Students intending to continue study toward the degree of Bachelor of Science in Engineering should substitute Mathematics 112 for Metrology 6 and English 2 for CE 121.

BACHELOR OF SCIENCE IN ENGINEERING

Measurement Science Option

Regulations governing students enrolled in this program are stated on pages 24–31.

CURRICULUM

The curriculum for the first two years is the same as that stated above, for the Engineering Technologist Certificate. (See footnote on page 42.)

Junior Year

		Semester Hours
CE 121	Rigid Body Mechanics II	3
CE 132	Fluid Mechanics	3
EE 102	Engineering Electronics I	3
EE 103	Electric and Magnetic Fields	3
EE 104	Field Analysis	3
ME 113	Thermodynamics I	3
ME 118	Heat Transfer	3
Metr. 6	Foundations of Metrology II	4
Metr. 113	Introduction to Transducers and Instrumentation	2
Elective	In humanities or social studies	9
	Total	36

Senior Year

CE 125	Engineering Materials	4
ME 100	Analytical Kinematics	3
ME 120	Physical Metallurgy	3
Metr. 111–12	Precise Electrical Measurements I, II	6
Metr. 114	Advanced Transducers and Instrumentation	3
Metr. 121	Precise Mechanical Measurements	4
Metr. 131	Precise Heat Measurements	4
Physics 116	Quantum and Solid State Physics	3
Elective	In humanities or social studies	5
	Total	35

GRADUATE DEGREES

Graduate programs in Measurement Science are offered, which lead to the degrees of Master of Science in Engineering (see pages 35–37) and Doctor of Science (see pages 38–40).

COURSES OF INSTRUCTION

On the following pages, under the alphabetically arranged names of the departments of instruction, are listed the courses of instruction offered in the School of Engineering. Also listed are courses offered by other schools and colleges of the University, but required or accepted as electives for the degrees in engineering. The courses as here listed are subject to some slight change. Students are referred to the *Schedule of Classes*, which is available prior to the opening of each semester, for the hourly scheduling of all courses of instruction.

The University reserves the right to withdraw any course announced.

Explanation of Course Numbers

The following system of numbering is used to identify courses.

Undergraduate courses.—Courses numbered from 1 to 100 are planned for students in the freshman and sophomore years. Courses numbered from 101 to 200 are planned for students in the junior and senior years.

Graduate courses.—Courses numbered from 201 to 300 are planned primarily for graduate students. They are open, with the approval of the Chairman of the Committee on Graduate Studies and the Dean, to qualified seniors.

Indication of the Amount of Credit

The number of semester hours given for the satisfactory completion of a course is, in most cases, indicated in parentheses after the name of the course. Thus, a year course giving three hours of credit each semester is marked (3–3), and a semester course giving three hours of credit is marked (3). A semester hour usually consists of the completion of one fifty-minute period of class work or of one laboratory period a week for one semester.

ENGINEERING

UNDERGRADUATE COURSES

Civil Engineering

21 *Rigid Body Mechanics I* (3)

Fall—day and evening; spring—evening. An introduction to vector mechanics. Newton's Laws; equilibrium of a particle and systems of particles, rigid bodies, and systems of rigid bodies; kinematics. Prerequisite: Mathematics 31 or 24, Physics 14.

24 *Mechanics of Deformable Bodies I* (3)

Fall—evening; spring—day and evening. An introduction to elastic and inelastic behavior of solids acted upon by forces. Analysis of stress and strain at a point; stress-strain temperature relations; criteria for yielding; applications including tension, compression, torsion, bending, shear, and buckling. Prerequisite: Civil Engineering 21, Mathematics 31 or 24.

112 *Surveying* (3)

Spring: lecture (2 hours), field work (2 hours)—Saturday. Plane surveying, including measurements, simple curves, and topographical surveying; space measurements; treatment of observational errors; earthwork computations; field astronomy. Prerequisite: Mathematics 31 or 24, Mechanical Engineering 10. Surveying fee, $13.

121 *Rigid Body Mechanics II* (3)

Fall—day and evening; spring—evening. Continuation of Civil Engineering 21. Kinematics and dynamics of a particle, systems of particles, and rigid bodies and their applications. Prerequisite: Civil Engineering 21, Mathematics 111.

125 *Engineering Materials* (4)

Fall: lecture and laboratory—day and evening. Mechanical and surface properties of engineering solids; relationships between the structure of a material and its mechanical and physical behavior; principles of the control of the properties of metals and nonmetallic solids. Prerequisite: Chemistry 12 or 14. Civil Engineering 24, Physics 16. Laboratory fee, $11.

128 *Soil Mechanics* (3)

1962–63 and alternate years: spring—day; 1963–64 and alternate years: spring—evening. Mechanical properties of soils; theory and applications of lateral earth pressure, bearing capacity, and settlement of foundations. Prerequisite: Civil Engineering 125, 137, 144.

132 *Fluid Mechanics* (3)

Fall: lecture and laboratory—evening; spring: lecture and laboratory—day and evening. Development of the fundamental principles of flow of viscous and ideal compressible and incompressible fluids; dimensional analysis and model theory; laboratory work emphasizes principles, analysis of tests, and systematic observations of phenomena. Prerequisite: Civil Engineering 121, Mathematics 111, Mechanical Engineering 113. Laboratory fee, $11.

135 *Hydraulic Engineering* (3)

1962–63 and alternate years: spring—day; 1963–64 and alternate years; spring—evening. Applied fluid mechanics, pipe and open channel flow, hydroelectric development, drainage and irrigation, control of river flow and floods, water supply and sewerage. Prerequisite: Civil Engineering 137.

137 *Applied Earth Sciences* (3)

1962–63 and alternate years: fall—day; 1963–64 and alternate years: fall—evening. Formation and properties of soils and rock, seismology, climatology, hydrology, ground water and river flow. Prerequisite: Civil Engineering 125, 132.

143–44 *Structural Theory I–II* (4–4)

1962–63 and alternate years: academic year—day; 1963–64 and alternate years: academic year—evening. Theory and structural behavior of statically determinate and indeterminate plane and space structures by classical and modern methods; included are model analysis, plastic collapse, numerical methods, and matrix algebra methods. Prerequisite or concurrent registration: Civil Engineering 125, Mathematics 111. Laboratory fee, $11 a semester.

145 *Metal Structures* (3)

1962–63 and alternate years: spring—evening; 1963–64 and alternate years: spring—day. Application of structural theory and engineering materials to the analysis and design of metal structures under static and moving loads; plastic design, buckling. Prerequisite: Civil Engineering 144, 157.

146 *Reinforced Concrete* (3)

1962–63 and alternate years: fall—evening; 1963–64 and alternate years: fall—day. Theory and design of plain and reinforced concrete structures including prestressed concrete and ultimate strength design. Prerequisite or concurrent registration: Civil Engineering 157.

154 *Structural Dynamics* (3)

Spring—day. Free, forced, steady-state, and transient vibration of structural members and framed structures; earthquake, blast, and other dynamic loadings; methods of analysis including energy methods and applications of matrix algebra. Prerequisite: Civil Engineering 121, 144, Mathematics 111.

157 *Mechanics of Deformable Bodies II* (3)

Fall—day. An introduction to the advanced mechanics of deformable bodies including the theory of two-dimensional linear elasticity in cartesian and polar coordi-

nates and the theory of perfectly plastic solids. Prerequisite: Civil Engineering 125, Mathematics 112. Prerequisite or concurrent registration: Civil Engineering 144 or Mechanical Engineering 123.

165 *Engineering Analysis and Planning* (3)
1962–63 and alternate years: fall—evening; 1963–64 and alternate years: fall—day. Mathematical analysis, planning, and economics of engineering problems and projects including modern computational methods. Prerequisite: senior standing in Civil Engineering.

166 *Transportation Engineering* (3)
Time to be arranged. Planning and systems analysis of transportation networks. Prerequisite: Civil Engineering 165.

168 *Regional and Urban Planning* (3)
1962–63 and alternate years: spring—evening; 1963–64 and alternate years: spring—day. Regional and urban planning including engineering aspects in connection with transportation, water supply and sewerage, public safety, and convenience. Prerequisite: Civil Engineering 165.

195–96 *Problems in Civil Engineering* (arr.)
Academic year—as arranged. Special problems approved by the Staff. Prerequisite: senior standing.

Electrical Engineering

11–12 *Fundamentals of Electrical Engineering* (3–3)
Academic year—day and evening. Electric and magnetic fields, d-c and a-c electrical circuits and networks, energy sources, electromechanical energy conversion, power, electronic devices, and circuits. *First half:* circuits and electronics. *Second half:* energy, power, and fields. Prerequisite to Electrical Engineering 11: Physics 15 and Mathematics 111 or concurrent registration. Prerequisite to Electrical Engineering 12: Electrical Engineering 11.

102 *Engineering Electronics I* (3)
Fall—day and evening. Vacuum tube and solid state devices as circuit elements, equivalent circuits, voltage and power amplifiers. Emphasis placed on design of electronic circuits. Prerequisite: Electrical Engineering 12, Mathematics 112.

103 *Electric and Magnetic Fields* (3)
Fall—day and evening. Introduction to vector analysis and its application to static electric and magnetic fields; method of images, solid angle, particle motion in electric and magnetic fields. Prerequisite: Electrical Engineering 12, Mathematics 112.

104 *Field Analysis* (3)
Spring—day and evening. Vector potential, magnetic scalar potential, conformal mapping, solutions of Laplace's equation, field plotting, analogues. Introduction to Maxwell's equations and electromagnetic waves. Prerequisite: Electrical Engineering 103, Mathematics 112.

107 *Steady-state Network Analysis* (3)
Fall—day and evening. Four-terminal networks, network theorems, poles and zeroes of network functions, resonance, filters, coupled circuits, transmission lines. Fourier series, matrices. Prerequisite: Electrical Engineering 11, Mathematics 112.

111 *Electrical Measurements* (3)
Fall—day and evening. Systems of units; theory of errors; d-c indicating instruments and galvanometer dynamics; precision measurement of voltage, current, and resistance. Theory of a-c indicating instruments, a-c bridges, waveforms, frequency measurements, measurement of power and energy. Prerequisite: Electrical Engineering 12, Mathematics 112.

113 *Electrical Engineering Laboratory I* (2)
Fall—day and evening. Experiments in d-c and a-c circuits, instruments, and machines. Prerequisite: Electrical Engineering 12, Mathematics 112. Laboratory fee, $11.

118 *Electrical Energy Conversion* (3)

Spring—day and evening. Analysis of physical systems involving electrical, mechanical, and thermal energy conversion; mathematical formulations using the Euler-Lagrange equation; transient and steady-state analysis of special machines including the generalized rotating energy converter. Prerequisite: Electrical Engineering 12, Mathematics 112. Prerequisite or concurrent registration: Electrical Engineering 104, 112.

122 *Electrical Engineering Laboratory II* (2)

Spring—day and evening. Continuation of Electrical Engineering 113. Measurement of electrical quantities, design and construction of laboratory circuits. Prerequisite: Electrical Engineering 102, 103, 107, 111, 113. Laboratory fee, $11.

123–24 *Electrical Engineering Laboratory III–IV* (2–2)

Academic year—day and evening. *First half:* theory and use of electronic devices and instruments. Experiments at radio- and microwave frequencies. Prerequisite to 123: Electrical Engineering 122 and senior status. *Second half:* Creative projects in electrical and elctromechanical devices and systems carried out under individual supervision. Prerequisite to 124: Electrical Engineering 123. Laboratory fee, $11 a semester.

127 *General Network Analysis* (3)

Fall—day and evening. Solutions of linear integro-differential equations using transformation calculus. Laplace transforms, Fourier integral, poles and zeroes of network functions, correlation of time and frequency domains, elements of network synthesis. Prerequisite: Electrical Engineering 107, Mathematics 112.

133 *Engineering Analysis* (3)

Fall—day. Application of fundamental principles of engineering, physics, and mathematics to problems in various fields of engineering. Emphasis is placed on problem solving using concepts previously studied. Prerequisite: Civil Engineering 121, Electrical Engineering 102, Mathematics 112, Physics 16.

134 *Engineering Electronics II* (3)

Spring—day and evening. Continuation of Electrical Engineering 102. Feedback amplifiers, oscillators, relaxation circuits, computing circuits, modulation. Prerequisite: Electrical Engineering 102.

136 *Electromagnetic Waves* (3)

Spring—day and evening. Electromagnetic waves in bounded media, radiation from antennas, high-frequency transmission lines, cavity resonators, and microwave devices. Prerequisite: Electrical Engineering 104, Mathematics 112.

137 *Active Network Theory* (3)

Fall—day and evening. Analysis of two-port networks; matrix representation of linear active networks; vacuum-tube and semiconductor circuit theory; concepts of feedback, stability, and oscillators. Nonlinear circuit analysis, modulation, detection, communication systems. Prerequisite: Electrical Engineering 102 or Physics 132, Electrical Engineering 107, Mathematics 112.

142 *Information Theory* (3)

Spring—day and evening. Introduction to probability. Discrete and continuous information sources. Coding, transmission, channel capacity, correlation function. Noise in information systems. Prerequisites: Mathematics 112 and senior status.

171 *Digital Circuitry and Systems* (3)

Fall—day. Introduction to basic concepts of modern digital programmed systems, mathematical foundations and techniques for logical design of digital circuits, electronic design of computer circuits. Prerequisite: Mathematics 111, Electrical Engineering 134 or Physics 132.

172 *Digital Techniques* (3)

Spring—day. Continuation of Electrical Engineering 171. Automatic programming techniques, self-detecting and correcting codes, advanced logical circuit design, electronic design of digital transistor and magnetic-core circuits, memory systems, analog-to-digital techniques, wiring diagrams. Prerequisite: Electrical Engineering 171.

174 *Digital and Analog Computer Laboratory* (2)
Spring—day. Theory and use of digital and analog computers: programming, operating, logical circuitry, design, troubleshooting. Prerequisite: Electrical Engineering 134, 171. Laboratory fee, $11.

Mechanical Engineering

9 *Introduction to Engineering** (3)
Fall—day and evening; spring—evening. Number systems, computation aids, scientific method, problem solving techniques, use of mathematical tables. Emphasis is placed on the development of sound reasoning and study methods.

10 *Graphical Communication* (2)
Fall—evening; spring—day and evening. Spatial visualization, engineering drawing, schematic diagrams, descriptive geometry. A laboratory course. Laboratory fee, $10.

100 *Analytical Kinematics* (3)
1962–63 and alternate years: spring—evening; 1963–64 and alternate years: spring—day. Theoretical study of the motion of constrained and unconstrained rigid bodies. Prerequisite or concurrent registration: Civil Engineering 121, Mathematics 112.

113 *Thermodynamics I* (3)
Fall—day and evening. Theoretical study of fundamental concepts, equations of state, first and second laws of thermodynamics, entropy, single and two-phase mixtures. Prerequisite: Chemistry 12 or 14, Mathematics 111, Physics 16

114 *Thermodynamics II* (3)
Spring—day. Theoretical study of vapor cycles, combustion, gas dynamics, equilibrium, multiphase mixtures. Prerequisite: Mechanical Engineering 113. Prerequisite or concurrent registration: Civil Engineering 132, Mechanical Engineering 118.

118 *Heat Transfer* (3)
Spring—day and evening. Heat transfer theory, conduction, convection, radiation, field and potential theory applied to conduction. Prerequisite: Mathematics 112, Mechanical Engineering 113. Prerequisite or concurrent registration: Civil Engineering 132.

120 *Physical Metallurgy* (3)
1962–63 and alternate years: spring—day; 1963–64 and alternate years: spring—evening. Physics of metals, crystal and lattice structures, binary and ternary alloys, properties of alloys, nonequilibrium conditions, phase diagrams. Lecture and laboratory. Prerequisite: Civil Engineering 125, Mathematics 31 or 24. Laboratory fee, $10.

123 *Advanced Dynamics I* (3)
1962–63 and alternate years: fall—evening; 1963–64 and alternate years: fall—day. Shock and vibrations in linear mechanical systems, electromechanical analogies, transient and steady-state analysis. Prerequisite: Mechanical Engineering 100. Prerequisite or concurrent registration: Civil Engineering 157.

124 *Advanced Dynamics II* (3)
1962–63 and alternate years: spring—evening; 1963–64 and alternate years: spring—day. Advanced study of dynamics of continuous mechanical systems. Lagrange's equations, Hamilton's principle, gyrodynamics. Prerequisite: Mechanical Engineering 123.

135–36 *Thermal Power* (3–3)
1962–63 and alternate years: academic year—evening; 1963–64 and alternate years: academic year—day. Analysis and design principles governing systems and components in heat power, gas and vapor turbines, internal combustion engines, heat pumps, nuclear power systems. Lecture and laboratory. Prerequisite: Civil Engineering 132; Mechanical Engineering 114, 118; Physics 191. Prerequisite or concurrent registration: Mechanical Engineering 139. Laboratory fee, $15 a semester.

* This course should be completed before the beginning of the sophomore year.

139 *Fluid Machinery* (3)

1962–63 and alternate years: fall—evening; 1963–64 and alternate years: fall—day. General theory of dynamic machines: velocity diagrams and work transfer; radial, axial, and mixed-flow machines; torque converters and couplings; jet machines. Lecture and laboratory. Prerequisite: Civil Engineering 132, Mechanical Engineering 113. Prerequisite or concurrent registration: Mechanical Engineering 123. Laboratory fee, $10.

143 *Production Analysis* (3)

1962–63 and alternate years: fall—day; 1963–64 and alternate years: fall—evening. Principles of schematic models, mathematical programming, quality control, operations analysis. Prerequisite: Mathematics 112.

146 *Dynamics of Compressible Fluids* (3)

1962–63 and alternate years: spring—evening; 1963–64 and alternate years: spring—day. Mathematical theory of compressible fluid flow, flow around immersed bodies, airfoil theory, shock-wave theory, thermodynamics of compressible fluids. Lecture and laboratory. Prerequisite: Civil Engineering 132, Mechanical Engineering 118. Laboratory fee, $10.

195–96 *Special Topics in Mechanical Engineering* (arr.)

Academic year—as arranged. Special problems approved by the Staff. May be substituted for required senior courses. Prerequisite: senior status and approval of the instructor.

Metrology*

1 *Introduction to Statistics for Metrology* (3)

Measurement—qualitative and quantitative aspects. The role of corrections. Measurement as a production process. Errors, limiting mean, true value, precision, and accuracy. Classification of errors; statistical tools for the detection and diagnosis of errors. Quality control of measurement processes. Measurement of the precision and assessment of the accuracy of a measurement process. Expression of the uncertainties affecting a measured value. Prerequisite: Mathematics 31 or 24, and a laboratory course in physical science or engineering.

5–6 *Foundations of Metrology I–II* (5–4) (NBS)

Origin and development of standards, relative and absolute measurements, systematic and random errors, comparison and dissemination of standards, effective design of experiments, translation of standards to manufacturing. Use of standard devices for measurement of length, time, speed, force, weight, mass, density, specific gravity; calibrations. Fluid flow and electrical measurements; measurements involving use of several instruments. Prerequisite: Mathematics 31 or 24, Physics 14.

111–12 *Precise Electrical Measurements I–II* (3–3) (NBS)

Electrical measurements from direct current through radio frequencies. Units and dimensional systems; techniques of substitution and comparison; transfer techniques; ratio techniques; detectors; bridges; measurement of current, voltage, power, resistance, capacitance, inductance, energy, phase angle, frequency, and time; dielectric and magnetic measurements; special topics in high-frequency measurements; field strength, signal-to-noise ratio, impedance, attenuation. Prerequisite: Electrical Engineering 102, 104, and Mathematics 111, or the equivalent.

113 *Introduction to Transducers and Instrumentation* (2)

Theory and application of simple transducers; techniques in instrumentation of systems of one type (electrical, electronic, fluid, mechanical, optical, acoustical, nuclear); analysis and design of simple instrumentation systems, with emphasis on the precision and accuracy of measurement. Prerequisite: Electrical Engineering 102, Mathematics 111, Metrology 6, or the equivalent.

114 *Advanced Transducers and Instrumentation* (3)

Advanced study of practical transducers and instrumentation; theory and applications of advanced transducers in instrumentation problems involving measurements on sys-

* NBS in parentheses indicates courses which will be taught at the National Bureau of Standards.

tems containing multiple quantities of one type or mixture of types (such as electrical, electrical-electronic, fluid, fluid-mechanical-acoustical, etc.), with emphasis on optimal instrumentation for precision measurement. Prerequisite: Metrology 113 or graduate status.

121 *Precise Mechanical Measurements* (4) (NBS)
Measurements of mass, time, weight; visual, mechanical, length, and interferometric methods; density, force, pressure, vibration, acceleration, flow, and viscosity measurements. Prerequisite: Metrology 4, 5, or the equivalent.

131 *Precise Heat Measurements* (4) (NBS)
Temperature measurement, the thermodynamic and international temperature scales; resistance thermometry, thermocouples, and pyrometry. Vapor pressure thermometry and other techniques for low-temperature measurement. Heat transfer quantities and their measurement, conduction, convection, and radiation. Calorimetry; isothermal and adiabatic calorimeters, flow calorimeters; types of heat quantities measured by calorimetry. Prerequisite: Metrology 4, 5, 111, or the equivalent.

GRADUATE COURSES

Prerequisites for graduate courses are not listed explicitly. Instructors in individual courses will state prerequisites, and may recommend preparatory work to be completed prior to admission to the course. (See also page 35.)

Engineering Administration

The School of Engineering offers the following courses primarily for candidates for the degree of Master of Engineering Administration. Other courses listed in this program are offered by the departments of Accounting, Business and Public Administration, Psychology, and Statistics.

201 *Engineering Administration I* (3)
Fall—evening; spring—evening. Application of scientific method to the administrative processes of (1) planning and (2) organizing; including development of objectives, key factors in planning, basics of organization, stages of organizational growth, special problems of organization in an engineering or scientific enterprise.

202 *Engineering Administration II* (3)
Fall—evening; spring—evening. Continuation of Engineering Administration 201. Application of scientific method to the administrative processes of (3) managing or directing and (4) evaluation and control. Study of delegation; decentralization; personnel relations; management development; systems engineering; automation; financial analysis, budgeting, and administrative audits.

206 *Human Relations in Administration* (3)
Fall—evening; spring—evening. The meaning, principles, and practices of management development and personnel relations; collective bargaining; principles and practices of personnel administration; professional social relations.

251 *Management of Research and Development* (3)
Fall—evening; spring—evening. Management problems involved in the administration of research and development programs; exploration of techniques in programming; the planning of research and development; selection of organizations for research, maintenance, control, and evaluation of projects.

252 *Production and Maintenance Management* (3)
Fall—evening; spring—evening. Planning, organizing, and managing of production and systems. Managerial implications of automation. Study of skills and abilities essential to industrial management, including maintenance of equipment and real property.

261 *Economic Analysis in Engineering Planning* (3)
Fall—evening; spring—evening. Application of economic principles to engineering administration: inputs, outputs, investments, and prices. Studies are made of the methods of analyzing economic factors in evaluating alternate courses of administrative action in government and industry.

263 *Quantitative Techniques of Engineering Administration* (3)
Spring—evening. Application of the various quantitative techniques, mathematical, statistical, and other management sciences' techniques to the analysis of engineering administration and the solution of administrative problems by the use of models, theories, and measurements.

271 *Operations Research* (3)
Fall—evening; spring—evening. Background and application of operations research; history, characteristics, capabilities, administrative considerations, cases, methods, and techniques, including construction of conceptual and mathematical models.

272 *Problems in Operations Research* (3)
Spring—evening. Illustrations of the application of operations research by study of case histories: examples of the formulation and preliminary order-of-magnitude case; examples of broader scope.

273–74 *Techniques of Operations Research* (3–3)
Academic year—evening. Theory and application of techniques used in operations research, including order-of-magnitude estimation, probability and mathematical statistics, symbolic logic, inequality-constrained stationary-value problems, dynamics of populations, Monte Carlo simulation, strategic gaming, and error and sensitivity analysis.

285 *Seminar in Engineering Administrative Problems* (3)
Fall—evening; spring—evening. Individual analysis of complex administrative problems, with group evaluation and discussion. Prerequisite: admission to candidacy and completion of at least 18 semester hours of graduate study.

295 *Applied Research in Engineering Administration* (arr.)
Fall—as arranged; spring—as arranged. Application of established principles to new engineering administrative situations; the development of new knowledge of administration.

296 *Research in Engineering Administration* (arr.)
Fall—as arranged; spring—as arranged. Creative thinking in engineering administration, initiation of new theories and principles, development of new hypotheses, experimentation, proof of theories and hypotheses.

299–300 *Thesis* (3–3)
Academic year—as arranged.

Engineering Science

The following courses serve as foundations for specialization, since they are concerned with a body of knowledge applicable in a variety of engineering fields.

130 *Introductory Astronomy* (3)
Spring—evening. Coordinate systems and nomenclature used in astronomy, description of astronomical systems from solar system to metagalaxies, introduction to celestial mechanics, types of stars, stellar physics. Prerequisites: integral calculus and one year of college physics.

154 *Automatic Control** (4)
Spring—day and evening. Theory of automatic control systems including electromechanical, pneumatic, and hydraulic systems. Transient analysis, transfer functions,

* An undergraduate course which may be taken for graduate credit with the approval of the Committee on Graduate Studies.

stability criteria. Experimental study of automatic control systems. Lecture and laboratory. Prerequisite: Electrical Engineering 127 or Mechanical Engineering 123. Laboratory fee, $11.

201 *Automatic Control* (3)
Fall—evening. Advanced theory of automatic control. Systems analysis, multiple-loop systems, nonlinear systems.

211 *Mathematical Methods in Engineering I* (3)
Fall—day and evening; spring—evening. A course in such topics as functions of complex variables, infinite series, linear vector spaces and matrices, and partial differential equations. The required level of preparation is equivalent to Mathematics 111 and 112 as given at this University.

212 *Mathematical Methods in Engineering II* (3)
Fall—evening; spring—evening. Continuation of Engineering Science 211. Mathematical topics include: introduction to tensor analysis, calculus of variations, finite differences, and integral equations.

216 *Advanced Dynamics* (3)
Time to be arranged. Dynamics of continuous mechanical systems; Lagrange's equations, Hamilton's principle, gyrodynamics; operational methods. Prerequisite: permission of the instructor.

217 *Analytical Mechanics* (3)
Fall—evening; spring—evening. Fundamental principles, generalized coordinates, variational principles and Lagrange's equations, nonholonomic systems, Hamilton's equations, theory of small oscillations.

218 *Mechanics of Orbits and Trajectories* (3)
1962–63 and alternate years: fall—evening. Celestial mechanics. Orbits and trajectories in force fields. Dynamics of space vehicles.

219 *Mechanics of Continua* (3)
Time to be arranged. Mechanics of elastic, plastic, and vicous solids and of fluids; introduction to theory and formulation of basic equations.

220 *Nonlinear Mechanics* (3)
Spring—evening. Topological and analytical methods in nonlinear mechanics, nonlinear resonance, relaxation oscillations.

221 *Theory of Elasticity I* (3)
Spring—evening. Introduction to mathematical theory of elasticity, analysis of strain and stress, generalized Hooke's law, equilibrium equations, Beltrami-Michell equations, strain energy functions, torsion, general flexure.

222 *Theory of Elasticity II* (3)
1962–63 and alternate years: fall—evening. First and second boundary-value problems in plane elasticity, uniqueness of solutions, simply and multiply connected regions, three-dimensional problems, thermoelasticity, vibration of elastic solids, variational methods.

223 *Celestial Mechanics* (3)
Time to be arranged. General equations of motion; Lagrange's planetary equations; disturbing function; Delaunay and Poincaré variables; secular inequalities; lunar theory; precession and nutation.

227 *Experimental Stress Analysis* (3)
Time to be arranged. Applications of the theory of elasticity in the analysis of strain and stress; theory of gaging for static and dynamic strain and stress measurements.

230 *Dynamics of Compressible Fluids* (3)
Time to be arranged. Mathematical theory of compressible fluid flow and thermodynamics of compressible fluids. Prerequisite: permission of the instructor.

231 *Fluid Dynamics* (3)
Fall—evening. Theory of compressible and incompressible fluid motion including potential motion, circulation and vorticity, mathematical treatment of flow at sub-, trans-, and supersonic velocities, normal and oblique shock, and elements of heat transfer.

233 *Engineering Problems* (3)
Spring—evening. Investigation of problems in engineering science, emphasizing imaginative and systematic application of fundamental principles in engineering, physics, and mathematics.

241 *Science of Engineering Materials* (3)
1963–64 and alternate years: fall—evening. Relation of the atomic and microscopic structure of engineering materials to their physical and mechanical properties and their mechanical behavior in engineering applications.

251 *Magnetohydrodynamics* (3)
Time to be arranged. Study of the interaction of electromagnetic and fluid fields. Dynamics of conducting fluids in electromagnetic and magnetic fields.

299 300 *Thesis* (3–3)
Academic year—as arranged.

Civil Engineering

216 *Metal Structures* (3)
Time to be arranged. Structural behavior and failure of metal structures; materials; residual stresses; analysis and design of connections and members; theory of plastic collapse of structures; plastic design.

217 *Ultimate Strength of Reinforced Concrete Structures* (3)
Time to be arranged. Modes of failure of reinforced concrete structures; experimental data on failure; ultimate strength concepts for the analysis of beams, slabs, and columns.

218 *Prestressed Concrete Structures* (3)
Time to be arranged. Structural behavior and failure of prestressed concrete structures; materials; theory, analysis, and design of prestressed concrete structures and members.

224 *Theory of Plates and Shells* (3)
1962–63 and alternate years: spring—evening. Classical and modern theories of plates and shells; plates and cylindrical shells under different loadings and boundary conditions; equations for plates including shear, rotationally symmetric shells under small deformations and their applications.

226 *Plasticity of Solids* (3)
1963–64 and alternate years: fall—evening. Plastic flow and fracture of solids; theory of elastic perfectly plastic solids, including basic concepts, limit analysis of beams, rigid frames, and plane stress problems, theory of fracture.

234 *Geotechnics in Soil Mechanics* (3)
1962–63 and alternate years: fall—evening. Dynamic geology in the formation and properties of soils; Boussinesq and Westergaard equations for stresses and deformations in soil masses; analysis of settlement; flow of water in soils; solutions of Laplace-type equations for seepage involving foundations, earth dams, and wells; theory of frost action.

235 *Theoretical Soil Mechanics* (3)
1962–63 and alternate years: spring—evening. Theories of soil strength and conditions for failure, bearing capacity of footings, pile foundations, theories of lateral earth pressure, stability of slopes, soil dynamics.

238 *Foundation Engineering* (3)
Time to be arranged. Principles of soil mechanics and structural mechanics in the analysis and design of spread footings, mat and pile foundations, retaining walls, sheet piling and water front structures.

251 *Theory of Structures I* (3)
Fall—evening. Classical and modern theories for plane statically indeterminate structures, matrix analysis of structures, special problems.

252 *Space Structures* (3)
Spring—evening. Theory of structures in three dimensions; trusses, rigid frames, and thin-shell structures; matrix analysis and applications of computers.

253 *Theory of Structures II* (3)
Time to be arranged. Statically indeterminate structural theory, including single and multi-span rigid frames and arches, deflection theory for arches and suspension bridges, thermal stress, and failure of structures.

254 *Theory of Structural Dynamics* (3)
1963–64 and alternate years: spring—evening. Analysis of elastic structures under various dynamic loadings, both steady-state and transient, including vibrations of rigid frames, plates, and thin shells.

256 *Theory of Elastic Stability* (3)
1962–63 and alternate years: fall—evening. Beam-column problems and methods of analysis (including numerical analysis); lateral buckling of beams; buckling of rigid frames, arches, plates, stiffened plates, and shells; inelastic buckling.

272 *Experimental Structural Analysis* (3)
Time to be arranged. Experimental analysis of truss, rigid frame, plate, and shell structures; large- and small-deflection models; similitude.

275 *Concepts of Structural Design* (3)
Time to be arranged. Mechanical behavior and failure of structures as determined by properties of materials, nature of structure, and type of loading; selection of type of structure; structural analysis, its applications and possible simplifications.

295–96 *Research* (arr.)
Academic year—as arranged. Research or directed study.

Electrical Engineering

201 *General Network Analysis* (3)
Spring—morning and evening. Solutions of linear integro-differential equations using transformation calculus. Laplace transforms, Fourier integral, poles and zeros of network functions, correlation of time and frequency domains, elements of network synthesis.

202 *Advanced Network Analysis* (3)
Fall—evening. Advanced theory of lumped and distributed linear networks, matrices, stability, activity.

203 *Network Synthesis* (3)
Spring—evening. Basic techniques in the synthesis of linear two- and three-terminal passive networks; positive real functions; Foster, Cauer, Brune, Bott-Duffin, Darlington procedures; elements of active network synthesis.

211 *Electromagnetic Waves* (3)
Fall—day and evening. Electromagnetic waves in bounded media, radiation from antennas, high-frequency transmission lines, cavity resonators, and microwave devices.

212 *Field Analysis and Potential Theory* (3)
Spring—evening. Fields of force, divergence, Newtonian potentials at points of free space, solutions of Laplace's equation, harmonic functions, logarithmic potential.

213 *Microwaves* (3)
Fall—evening. Transmission lines; waveguides; antennas; resonators; amplifiers and oscillators; klystrons, magnetrons, traveling wave tubes.

214 *Electrodynamics* (3)
Spring—evening. Presence of moving matter in electromagnetic fields, force and energy in moving systems, relativistic concepts, tensors.

215 *Antennas* (3)
Fall—evening. Maxwell's equations, radiation, impedance, directional characteristics, arrays, aperture antennas.

221 *Active Network Theory* (3)
Fall—day and evening. Analysis of two-port networks; matrix representation of linear active networks; vacuum-tube and semiconductor circuit theory; concepts of feedback, stability, and oscillators. Nonlinear circuit analysis, modulation, detection, communication systems.

222 *Physical Electronics* (3)
Spring—evening. Physical principles underlying operation of various electronic devices including vacuum tubes, electron lenses, transistors, and recent solid-state electronic devices.

223 *High-frequency Electronics* (3)
Fall—evening. High frequency operation of electron tubes and semiconductor devices, transit time, bunching, pulse techniques.

224 *Industrial Electronics* (3)
Spring—evening. Gaseous tubes and applications; rectifiers; timing circuits; induction and dielectric heating; regulation and control, magnetic amplifiers.

225 *Electronic Measurements in Psychometrics and Medicine* (3)
Fall—evening. Theory of measurements in biological areas, field and circuit theory as a foundation for measurements, techniques for electronic measurements on biological specimens, problems in medicine and psychology with emphasis on measurements and measuring devices.

226 *Physical Basis for Medical Electronics* (3)
Spring—evening. Electrical and acoustical properties of biological material; structural components of biological material as they affect its dielectric and acoustical behavior, electrical relaxation phenomena in general and their application to biological material in particular, applications in diathermy and electrocardiography, impedance determination.

231 *Digital Circuitry and Systems* (3)
Fall—day. Introduction to basic concepts of modern digital programmed systems, mathematical foundations and techniques for logical design of digital circuits, electronic design of computer circuits.

232 *Digital Techniques* (3)
Spring—day. Automatic programming techniques, self-detecting and correcting codes, advanced logical circuit design, electronic design of digital transistor and magnetic-core circuits, memory systems, analog-to-digital techniques, wiring diagrams.

233 *Digital Systems* (3)
Fall—evening. The programmed system; system design of digital computers, special-purpose digital computers, reliability, data-processing techniques, analog-to-digital and digital-to-analog techniques.

234 *Automata and Self-organising Systems* (3)
Spring—evening. Effectively computable functions and Turing machines, digital computational methods in Boolean algebra, combinational circuits and their analysis, recursion circuits and their analysis, reliability of automata, networks of automata, artificial intelligence.

241 *Analysis of Modulation and Noise* (3)
Fall—evening. Analysis by Fourier series and integrals of signals and linear networks, modulation and spectra, noise analysis including probability method of determining power spectra.

242 *Information Theory* (3)
Spring—evening. Discrete and continuous systems; ergodic ensembles and random processes; correlations, filtering, prediction; redundancy.

243 *Electromagnetic Wave Propagation* (3)
Fall—evening. Ground waves; space-wave propagation, atmospheric effects, ionosphere; maximum usable frequency; bandwidth.

244 *Communication Systems* (3)
Spring—evening. Radar; television; ultra-high frequency; navigational aids.

251 *Power Transmission* (3)
Fall—evening. Transmission lines, exact and approximate equivalent circuits, standing waves, filtering, protection, radio interference, high voltage, line configurations.

252 *Power Generation* (3)
Spring—evening. Steam, hydroelectric and nuclear plants, fuel cells and magnetohydrodynamics, efficiency, reheat cycles, stability, load factors, generator swings.

253 *Power Systems* (3)
Fall—evening. Substations, transformers, distribution, networks; short and open circuit analysis; symmetrical components; stability; network analysers.

Mechanical Engineering

211 *Thermodynamics* (3)
Fall—evening. Reversible and irreversible processes, equilibrium, ideal and van der Waal's gases, dilute solutions, phase equilibria, electric and magnetic effects, radiation. Introduction to kinetic theory and statistical mechanics.

213 *Heat Transfer* (3)
Spring—evening. Physical and mathematical concepts of heat transfer phenomena under steady and unsteady conditions, including: Stefan-Boltzmann and Planck laws for radiation, Fourier heat equation for conduction, dimensional analysis, and boundary layer theory for convection.

215 *Gas Dynamics* (3)
Spring—evening. Theory of gas dynamics including: combustion, shock phenomena, dynamics of flow, and heat transfer for high temperature gases.

235 *Hypersonic Fluid Dynamics* (3)
Time to be arranged. Small disturbance theory; Newtonian theory; constant-density solutions; thin shock layers; viscous interactions; free molecule and rarefied gas flows.

255 *Combustion Processes* (3)
Time to be arranged. Thermodynamics of combustion; chemical kinetics; flame propagation; combustion of liquids and solids; detonation processes.

256 *Reaction Kinetics* (3)
Time to be arranged. Theoretical aspects of kinetics of homogeneous and heterogeneous reactions in gaseous and liquid systems.

Metrology

201 *Advanced General Metrology* (3)

203–4 *Probability and Statistics of Metrology I–II* (3–3)
Probability distributions, discrete and continuous distributions; sampling; combinational analysis; stochastic processes; conditional probability; correlation; analysis of

† Credit is not given for English A, B; Mathematics 3, 6; or Speech B.

variance; design and analysis of experiments, Latin Square experiments, factorial experiments, block and lattice designs. Prerequisite: Metrology 4 or the equivalent and graduate status.

214 *Microwave Measurements* (3)
Measurement of power, frequency, impedance, wavelength, and attenuation at microwave frequencies. Characteristics and Q of resonant devices. Prerequisite: Electrical Engineering 104 or the equivalent and graduate status.

220 *Precise Optical Measurements* (3)
Optical constants of lens systems; aberration; resolving power; illumination in focal plane; image evaluations, magnification, index of refraction; color and color temperature.

REQUIRED AND ELECTIVE COURSES FROM OTHER DEPARTMENTS

On the following pages appears a list of courses, offered in other departments of instruction, which are required in one or more of the engineering curricula.

Courses in the options of the Bachelor of Science in Engineering curriculum are to be selected from the offerings of the department of option with the approval of the chairman of the department. A complete listing of courses in these departments appears in the general catalogue of the University.

Required elective courses in the humanities and social studies may be selected from the offerings of the following departments of instruction:

Art
Classical Languages and Literatures
Economics
English:
  American Literature
  English Literature
Geography
Germanic Languages and Literatures
History
Philosophy
Political Science
Religion
Romance Languages and Literatures
Slavic Languages and Literatures
Sociology and Anthropology

Courses offered in these departments are described in the general catalogue of the University.

Electives (other than required electives in the humanities and social studies) taken to fulfill the 140 semester hour degree requirement need not to be confined to the above list, but credit is not given for courses in Physical Education or Secretarial Studies. Credit is not given for English A, B; Mathematics 3, 6; or Speech B.

ACCOUNTING

115 *Survey of Accounting* (3)
Accounting systems used by single proprietorships and corporations with emphasis on methods of compiling, analyzing, classifying, and summarizing accounting data; and the use of accounting information in the management process. Not open for credit to Accounting or Business Administration majors.

215 *Survey of Managerial Accounting* (3)
Nature, preparation, analysis, and interpretation of accounting reports; study of cost accounting, business budgeting, and internal accounting controls with emphasis on their use in the management process.

293 *Budget Preparation and Administration* (3)
Principles, techniques, and procedures involved in the development, installation, and operation of a system of budgetary control to aid in the management of commercial, industrial, and government organizations.

AIR SCIENCE

Basic Course

1–2 *Leadership Laboratory—Freshman Year* (1–1)
Cadet basic airman training. Military courtesy, discipline, appearance, and bearing; element, flight squadron, and mass formation drill; parades and ceremonies. Minimum 15 hours a semester. Laboratory fee, charged one time a year, $3.

11–12 *Leadership Laboratory—Sophomore Year* (1–1)
Cadet noncommissioned officer training. Military bearing and courtesy, all phases of drills and ceremonies, command voice training and command responsibility. Prerequisite: Air Science 1–2 and 22 for men; Air Science 1–2 for women. Minimum 15 hours a semester. Laboratory fee, charged one time a year, $3.

22 *Air Science—Freshman Year* (2)
Foundations of Air Power. General survey of air power to include control, navigation, and propulsions systems; space vehicles; military instruments of national security; and professional opportunities in the United States Air Force.

51 *Air Science—Sophomore Year* (2)
Foundations of Air Power. General survey of the roots and development of aerial warfare emphasizing the principles of war, concepts of employment of forces, and the impact of changing weapon systems. Treatment of aerial warfare is undertaken to include targets and weapons.

Advanced Course

101–2 *Air Science—Junior Year* (1–1)
Air Force Officer Development. Knowledge and skills required of a junior officer in the Air Force. First half includes staff organization and functions. Second half includes the military justice system. Prerequisite or concurrent registration: Business Administration 102 and 193 which are not to be taken in the same semester of the academic year.

103–4 *Leadership Laboratory—Junior Year*
(Credit is a part of Air Science 101–2)
Cadet noncommissioned officer and officer training. Wearing of the uniform, parades and ceremonies, commands and command voice. Cadets perform duties involving planning for and supervision of Cadet Corps activities. Emphasis placed on leadership and management proficiency. Minimum 15 hours a semester.

105 *Summer Training Unit—Between Junior and Senior Years* (required)
Attendance at a four-week Air Force ROTC summer training unit at an Air Force base within continental United States is mandatory. Program consists of familiarization flying, physical training, individual weapons, Air Force base activity and equipment, field exercises, air base problems, and leadership training.

151–52 *Air Science—Senior Year* (1–1)
First half: weather and navigation. A study of the weather and navigational aspects of airmanship, such as temperature, pressure, air masses, precipitation, weather charts, and dead reckoning navigation. *Second half:* the Air Force officer. A study of materials to help the cadet make a rapid, effective adjustment to active duty as an officer of the United States Air Force. Prerequisite or concurrent registration: Political Science 171 and Geography 146, which are not to be taken in the same semester of the academic year.

153–54 *Leadership Laboratory—Senior Year*
(Credit is a part of Air Science 151–52)
Cadet officer training. Cadet officers conduct activities of Corps of Cadets through chain of command, instruct subordinates, plan and supervise Cadet Corps training and administration. Preparation for commissioned officer duties. Development of leadership and managerial responsibilities. Minimum 15 hours a semester.

BUSINESS AND PUBLIC ADMINISTRATION

Business Administration

250 *Contract Administration* (3)
Primarily for students in the Engineering Administration program. The administration, negotiation, and renegotiation of contracts between the government and industry for engineering, scientific, and other professional services, facilities, and materials. Contract policies; fixed-price and cost-plus-fixed-fee, bidding, etc.

Public Administration

213 *Administration in Government* (3)
Selected topics in problems of federal administration, with particular attention to the role of Congress and the public in the administrative processes.

CHEMISTRY

11–12 *General Chemistry* (4–4)
A year course: credit is not given for the first half until the second half is completed. Lecture, laboratory, and recitation. Prerequisite: one year of high school algebra. Laboratory fee, $18 a semester.

13–14 *General Chemistry* (4–4)
A year course: credit is not given for the first half until the second half is completed. Lecture (2 hours), laboratory (4 hours), recitation (1 hour). General chemistry for engineering students. Prerequisite: Mathematics 12 or 21, Physics 11. Laboratory fee, $18 a semester.

ENGLISH*

A *English for Foreign Students*†
A course in reading and writing designed to assist the foreign student in overcoming deficiencies in the use of English. Special attention is given to spelling, syntax, grammar, idiom, and vocabulary.

B *English for Foreign Students*† (3)
For second-semester foreign students not yet ready for English 1. Writing of expository paragraphs and themes; outlining; reading for comprehension, vocabulary, and style.

1 *English Composition** (3)
Review of grammar, exercise in composition, readings.

1X *English Composition** (3)
An intensive course in English grammar and composition to which are assigned students whose placement tests show them inadequately prepared for the regular work of English 1. The course begins with detailed instruction, drill, and exercises in the basic structure of the English language and in the writing of paragraphs; it continues with the content of English 1. English 1X meets five hours a week and carries 3 semester hours of credit. The tuition fee is $115 (the regular fee of $30 a semester hour, plus an additional fee of $25).

2 *English Composition** (3)
The second half of the six-hour English Composition course required of all students. Readings and practice in expository and argumentative techniques and in research procedure.

---

* Before students are registered in English 1, they are tested in the minimum essentials of vocabulary, spelling, grammar, standard usage, and writing skill. Those students who show marked superiority may, upon passing further tests, be exempted from one or both halves of the English Composition course; those who are inadequately prepared for English 1 will be assigned to English 1X. English 1 or 1X is prerequisite to all other courses in English.

† Credit is not given for English A, B; Mathematics 3, 6; or Speech B.

MATHEMATICS

3 *College Algebra*† (3)
Exponents and logarithms; linear equations; complex numbers; quadratic equations; introduction to theory of equations; mathematical induction and the binomial theorem; permutations, combinations, and probability; determinants; progressions. Prerequisite: one year each of high school algebra and high school geometry.

6 *Plane Trigonometry*† (3)
Prerequisite: two years of high school algebra and one year of high school geometry or Mathematics 3 (or concurrent registration therefor).

12 *Analytic Geometry* (3)
(This course will be offered for the last time summer 1962.)
Prerequisite: Mathematics 3 and 6, or two years of high school algebra, one year of high school geometry, and one-half year of high school trigonometry.

21 *Calculus I* (3)
Elementary concepts of analytic geometry. Differentiation and integration of algebraic and trigonometric functions with applications. Prerequisite: Mathematics 3 and 6; or two years of high school algebra, one year of high school geometry, and one-half year of high school trigonometry; or the equivalent.

22 *Calculus II* (3)
Differentiation and integration of transcendental functions and applications; conics; parametric equations; techniques of integration. Prerequisite: Mathematics 21.

23 *Calculus III* (3)
Vector concepts; improper integrals; solid geometry; partial differentiation and applications. Prerequisite: Mathematics 22.

24 *Calculus IV* (3)
Multiple integration with applications; infinite series; differential equations. Prerequisite: Mathematics 23.

27 *Calculus I and II* (6)
The equivalent of Mathematics 21 and 22.

28 *Calculus III and IV* (6)
The equivalent of Mathematics 23 and 24.

29 *Calculus I* (3)
(This course will be offered for the last time summer 1962.)
Differentiation and integration of algebraic and trigonometric functions with applications. Prerequisite or concurrent registration: Mathematics 12.

30 *Calculus II* (3)
(This course will be offered for the last time fall semester 1962–63.)
Differentiation and integration of transcendental functions with applications, methods of integration, vectors, and parametric equations. Prerequisite: Mathematics 12, 29.

31 *Calculus III* (3)
(This course will be offered for the last time spring semester 1962–63.)
Infinite series, partial differentiation, multiple integrals, solid geometry, improper integrals, and differential equations. Prerequisite: Mathematics 30 (or concurrent registration therefor).

111 *Mathematics for Engineers and Physicists I* (3)
Differential equations, vector analysis, introduction to matrix algebra. Prerequisite: Mathematics 30 and 31, or 24.

112 *Mathematics for Engineers and Physicists II* (3)
Topics from advanced calculus, partial differential equations, and complex variables. Prerequisite: Mathematics 111 or 132.

† Credit is not given for English A, B; Mathematics 3, 6; or Speech B.

PHYSICS

11 *Introductory Physics* (3)
An introduction to the phenomena of light, heat, force, energy; introduction to vectors; and the properties of matter. This course may be taken as a terminal course by non-science students who wish an introduction to the physical sciences. Prerequisite: high school algebra and plane geometry. Lecture, laboratory, and recitation. Material fee, $11.

14 *General Physics* (3)
Mechanics, wave motion, and sound. Prerequisite: Physics 11. Prerequisite or concurrent registration: Mathematics 29 or 22. Lecture, laboratory, and recitation. Material fee, $11.

15 *General Physics* (3)
Electricity and magnetism. Prerequisite: Physics 14. Prerequisite or concurrent registration: Mathematics 30 or 23. Lecture, laboratory, and recitation. Material fee, $11.

16 *General Physics* (3)
Modern physics, molecular structure of matter, structure of the atom. Prerequisite: Physics 13 or 15, Mathematics 30 or 23, and consent of the instructor.

116 *Quantum and Solid State Physics* (3)
Primarily for engineers. Prerequisite: Physics 16, Mathematics 111.

191 *Nuclear Reactors* (3)
Neutron physics: sources of neutrons, neutron reactions, slowing down and diffusion; introduction to transport theory; fission process; reactor types; basic theory of homogeneous and heterogeneous reactors, including specific numerical studies from recent publications. Prerequisite: Physics 16, Mathematics 31 or 24.

PSYCHOLOGY

145 *Principles of Human Relations* (3)
Primarily for students in the Engineering Administration program. Survey of the psychological principles involved in dealing with individuals and groups.

STATISTICS

91 *Principles of Statistical Methods* (3)
Variates and attributes, averages and dispersion, frequency distributions and their characteristics, regression and correlation, statistical decision processes. Prerequisite: one entrance unit in algebra. Laboratory fee, $9.

107 *Statistics for Engineers* (3)
Simple probability models, discrete and continuous distributions, sampling, hypothesis testing and estimation, nonparametric tests. Emphasis on engineering applications. Prerequisite: differential and integral calculus.

262 *Managerial Statistics and Quality Control* (3)
Primarily for students in the Engineering Administration program. The application of statistical principles and practices to management and quality control. Emphasis is placed on the use of statistical techniques in making management decisions, controlling quality and standardization. Prerequisite: Statistics 107 or the equivalent.

271–72 *Statistical Information Theory* (3–3)
A year course: credit is not given for the first half until the second half is completed. Basic concepts, definitions, and formulas of information theory; their significance and general properties. Shannon's coding theorem, channel capacity, and transmission of information; inequalities of information theory and sufficiency; applications to statistical problems of discrimination and hypothesis testing; asymptotic distribution theory of information; analysis of contingency tables; loss of information due to grouping and sequential analysis; comparison of experiments.

ALUMNI AND ALLIED ASSOCIATIONS

THE GENERAL ALUMNI ASSOCIATION

The obectives of this Association are to unite the graduates who wish to associate themselves for charitable, educational, literary, and scientific purposes, and to promote the general welfare of the University.

Eligible members are those who have matriculated in any school of the University and who have left the University in good standing, or any person who is or has been a member of the teaching, research, or administrative staff of the University, or the Board of Trustees of the University. Active members are those eligible members who are current contributors to or life members of The George Washington University General Alumni Association, the Alumni Associations of any school of the University, or contributors to the Alumni Fund.

The Alumni Office is in Bacon Hall, 2000 H Street NW., Washington 6, D. C.

All alumni are urged to keep the Alumni Office informed of changes of address or occupation and to supply information with regard to their fellow alumni.

THE ENGINEER ALUMNI ASSOCIATION OF THE GEORGE WASHINGTON UNIVERSITY

The Engineer Alumni Association was organized in 1936 and has been affiliated with the General Alumni Association since that time. Its objects are to unite the graduates and Faculty of the School of Engineering in closer fellowship, to promote the general welfare of the School of Engineering and of the University at large, to foster activities of the engineering organizations recognized by the University, and to advance the profession of engineering in general.

THE GEORGE WASHINGTON UNIVERSITY

Washington 6, D. C.

Academic programs leading to degrees are offered in the following colleges and schools:

Columbian College of Arts and Sciences: Associate in Arts (A.A.), Associate in Science (A.S.), Bachelor of Arts (A.B.), Bachelor of Science (B.S.), Bachelor of Science in Medical Technology (B.S. in Med. Tech.), Master of Arts (A.M.), Master of Fine Arts (M.F.A.), and Master of Science (M.S.)

Graduate Council: Doctor of Philosophy (Ph.D.)

School of Medicine: Doctor of Medicine (M.D.)

National Law Center

Law School: Bachelor of Laws (LL.B.)

Graduate School of Public Law: Master of Laws (LL.M.), Master of Comparative Law (M.Comp.L.), Master of Comparative Law (American Practice) (M.Comp.L. (Am.Prac.)), and Doctor of Juridical Science (S.J.D.)

School of Engineering: Engineering Technologist Certificate (Eng. Tech. Cert.), Bachelor of Civil Engineering (B.C.E.), Bachelor of Electrical Engineering (B.E.E.), Bachelor of Mechanical Engineering (B.M.E.), Bachelor of Science in Engineering (B.S. in Eng.), Master of Science in Engineering (M.S. in Eng.), Master of Engineering Administration (M.E.A.), and Doctor of Science (D.Sc.)

School of Pharmacy: Bachelor of Science in Pharmacy (B.S. in Phar.) and Master of Science in Pharmacy (M.S. in Phar.)

School of Education: Bachelor of Arts in Education (A.B. in Ed.), Bachelor of Science in Physical Education (B.S in P.E.), Master of Arts in Education (A.M. in Ed.), Advanced Professional Certificate (Adv. Prof. Cert.), and Doctor of Education (Ed.D.)

School of Government, Business, and International Affairs: Bachelor of Arts in Government (A.B. in Govt.), Bachelor of Business Administration (B.B.A.), Master of Arts in Government (A.M. in Govt.), Master of Business Administration (M.B.A.), and Doctor of Business Administration (D.B.A.)

College of General Studies: Associate in Arts (A.A.(C.G.S.)), Associate in Science (A.S.(C.G.S.)), Associate in Secretarial Administration (A.Sec.Adm.), Bachelor of Arts (A.B.(C.G.S.)), Bachelor of Science in Cartography (B.S. in Cart.), Master of Arts (A.M.(C.G.S.)), Master of Arts in International Affairs (A.M. in I. A.), and Master of Business Administration (M.B.A.(C.G.S.)).

CALENDAR OF THE SCHOOL OF MEDICINE

1962–63

Fall Semester:	1962	
Registration	Sept. 13	Thurs.
Classes begin	Sept. 17	Mon.
Veterans Day. Holiday	Nov. 12	Mon.
Thanksgiving recess	Nov. 22–24	Thurs.–Sat.
Christmas recess	Dec. 22–Jan. 2	Sat.–Wed.
	1963	
Classes resume	Jan. 3	Thurs.
Tuition for spring semester due	Jan. 11	Fri.
Examination period	Jan. 21–26	Mon.–Sat.
Spring Semester:		
Classes resume for spring semester	Jan. 28	Mon.
Winter Convocation. Holiday	Feb. 22	Fri.
Easter recess	April 12 and 13	Fri. and Sat.
Examination period	May 20–28	Mon.–Tues.
Memorial Day. Holiday	May 30	Thurs.
Baccalaureate Service	June 2	Sun.
Commencement	June 5	Wed.
Registration for the academic year 1963–64	Sept. 12	Thurs.

THE BOARD OF TRUSTEES

The Board of Trustees of the University is composed of the President of the University ex officio and the following persons by election:

Newell Windom Ellison, A.B., LL.B., LL.D., *Chairman*
Edward Karrick Morris, LL.D., *Secretary*
Godfrey Leon Munter, A.B., LL.B., LL.D., *Assistant Secretary*

Walter Maximillian Bastian, LL.B., LL.D.
*Daniel LeRay Borden, A.M., M.D., Sc.D.
Wiley Thomas Buchanan, Jr.
Leonard Carmichael, Ph.D., Sc.D., LL.D., Litt.D., L.H.D., D.C.L.
Eugene Cassin Carusi, A.M., J.D.
R. Roy Dunn
Robert Vedder Fleming, LL.D., *Chairman Emeritus*
Charles Carroll Glover, Jr., A.M., LL.B., LL.D.
Philip L. Graham, A.B., LL.B., L.H.D.
Brooks Hays, A.B., LL.B., LL.D.
John Edgar Hoover, LL.M., LL.D.
Frank Atherton Howard, B.S. in M.E., LL.B., Sc.D.
Joseph D. Hughes, B.S., LL.B., LL.M., LL.D.
Alfred Henry Lawson, LL.B., LL.D.
John Keown McKee
Benjamin Mosby McKelway, Litt.D.
James Matlack Mitchell, A.M.
*George Edward Muth, A.B., LL.B.
*Frederick A. Reuter, M.D.
*Charles Sylvanus Rhyne, LL.B., D.C.L., LL.D.
Donald D'Arcy Shepard, LL.B.
Carleton D. Smith
Sidney William Souers, A.B., LL.D.
Lewis L. Strauss, Sc.D., LL.D., L.H.D.
L. Corrin Strong, Ph.B., LL.D.
*James Cornelius Van Story, A.M.
James Edwin Webb, A.B., LL.D.
*Frank Harvey Weitzel, A.B., LL.B.
Alexander Wetmore, Ph.D., Sc.D.
Watson W. Wise, Ph.B.

HONORARY TRUSTEES

Clarence Aiken Aspinwall, LL.D.
Lyman James Briggs, Ph.D., Sc.D., D.Eng., LL.D.
Mrs. Wilbur John Carr
Mrs. Joshua Evans, Jr., A.B., Ed.D.
Ulysses S. Grant, 3d, B.S., Graduate United States Engineers School, LL.D., Sc.D.
Gilbert Grosvenor, A.M., LL.D., Litt.D., Sc.D.
Charles Stanley White, M.D., Sc.D.
Lloyd Bennett Wilson

* Nominated by the alumni.

OFFICERS OF ADMINISTRATION *

THE UNIVERSITY

Thomas Henry Carroll, B.S., M.B.A., D.C.S., LL.D., *President*
Oswald Symister Colclough, B.S., LL.B., LL.D., Sc.D., *Provost and Dean of Faculties*
Henry William Herzog, B.S., *Treasurer*
Tamis Wilson Borden, A.B., *Administrative Secretary*
Claud Max Farrington, A.M., *Assistant to the President*
Joseph Young Ruth, A.B., *Director of Admissions*
Frederick Russell Houser, A.M. in Govt., *Registrar; Secretary of the Faculties*
John Russell Mason, A.M., M.S. in L.S., *Librarian; Curator of Art*
William David Johnson, B.S. in B.A., *Comptroller*
Charles William Cole, Ph.D., *Dean of the Summer Sessions*
Benjamin Douglass Van Evera, Ph.D., Sc.D., *Dean for Sponsored Research*
Virginia Randolph Kirkbride, A.M., Ed.D., *Director of Activities for Women*
Don Carlos Faith, Ph.D., *Director of Activities for Men; Director of Veterans Education*
Joseph Richard Sizoo, AM., D.D., Litt.D., LL.D., L.H.D., S.T.D., *Director of University Chapel*
Alan Thomas Deibert, A.M., *Adviser to Students from Foreign Countries*
Richard Bernard Castell, A.B., M.D., *Director of Health Administration*
Loretta May Stallings, A.M., *Director of Women's Athletics*
Robert Faris, B.S., *Director of Men's Athletics*
Edward Martin Wall, A.B., LL.B., *Director of Air Science*
John Francis Latimer, Ph.D., *Associate Dean of Faculties; University Marshal*

THE SCHOOL OF MEDICINE AND THE UNIVERSITY HOSPITAL

John Parks, M.S., M.D., *Dean of the School of Medicine; Medical Director, University Hospital*
Angus MacIvor Griffin, Ph.D., *Associate Dean of the School of Medicine*
Alvin Edward Parrish, M.D., *Associate Dean of the School of Medicine*
Victor Frederick Ludewig, B.S., *Administrator of the University Hospital*
Clayton Bernard Ethridge, M.D., *Director of Postgraduate Medical Education*

* For the academic year 1961–62.

THE UNIVERSITY

HISTORY AND ORGANIZATION

The idea of a university in the Capital of the Nation was sponsored by George Washington, who during his public life urged the establishment of such an institution and who in his will left fifty shares of stock in the Potomac (Canal) Company for the endowment of a university to be established in the District of Columbia "to which the youth of fortune and talents from all parts thereof might be sent for the completion of their Education in all the branches of polite literature;—in arts and Sciences,—in acquiring knowledge in the principles of Politics & good Government".

The George Washington University operates under a charter granted by an act of Congress of February 9, 1821, to Columbian College in the District of Columbia. In 1873 the name was changed to "Columbian University" and in 1904 to "The George Washington University".

The University as it is now organized consists of Columbian College of Arts and Sciences, which offers work leading to Associate's, Bachelor's, and Master's degrees; the Graduate Council, which offers work leading to the degree of Doctor of Philosophy; the professional schools, which include Medicine; Law; Engineering; Pharmacy; Education; and Government, Business, and International Affairs; the College of General Studies; the Division of University students; the Division of Special Students; the Division of Air Science; and the Summer Sessions.

The George Washington University is a privately endowed University located on a well planned campus in the center of Washington within a few blocks of the White House. The government and educational management of the University are vested in a self-perpetuating Board of Trustees, with the President of the University serving as an ex officio member of the Board.

ACADEMIC STATUS

The George Washington University is accredited by its regional accrediting agency, the Middle States Association of Colleges and Secondary Schools. This is important to students who wish to transfer credits from one institution to another.

The University is on the approved list of the American Association of University Women and is a member of the College Entrance Examination Board.

The School of Medicine has had continuous approval by the Council on Medical Education of the American Medical Association and the Association of American Medical Colleges. The degree of the School of Medicine is recognized by all State Examining Boards.

LOCATION

The University is in downtown Washington within a few blocks of the White House and the Federal Triangle of Government buildings, which house many of the departments of the Federal Government, and such museums of special interest to medical students as the Smithsonian Institution, the National Museum, and the Botanic Gardens.

THE SCHOOL OF MEDICINE

FACULTY AND STAFF OF INSTRUCTION

EMERITUS FACULTY

CLOYD HECK MARVIN, Ph.D., LL.D., Doctor honoris causa of The George Washington University, *President Emeritus of the University*

ERRETT CYRIL ALBRITTON, A.B., M.D., *Professor Emeritus of Physiology*
RALPH GREGORY BEACHLEY, M.D., Dr. P.H., *Professor Emeritus of Clinical Health Practice*
WALTER ANDREW BLOEDORN, A.M., M.D., Sc.D., *Professor Emeritus of Medicine*
DANIEL LERAY BORDEN, A.M., M.D., *Professor Emeritus of Clinical Surgery*
ROGER MORRISON CHOISSER, B.S., M.D., *Professor Emeritus of Pathology*
HENRY LAURAN DARNER, A.B., M.D., *Professor Emeritus of Clinical Obstetrics and Gynecology*
PAUL FREDERICK DICKENS, M.D., *Professor Emeritus of Clinical Medicine*
CHARLES ROBERT LEE HALLEY, A.B., M.D., *Professor Emeritus of Clinical Medicine*
WILLIAM HERNDON JENKINS, M.D., *Professor Emeritus of Otolaryngology*
EDWARD LEWIS, M.D., *Professor Emeritus of Clinical Pediatrics*
PRESTON ALEXANDER MCLENDON, B.S., M.D., *Professor Emeritus of Pediatrics*
DANIEL BRUCE MOFFETT, M.D., *Professor Emeritus of Otolaryngology*
WINFRED OVERHOLSER, A.B., M.D., Sc.D., L.H.D., LL.D., *Professor Emeritus of Psychiatry*
LELAND WILBUR PARR, Ph.D., *Professor Emeritus of Bacteriology*
FREDERICK A. REUTER, M.D., *Professor Emeritus of Urology*
JOSEPH HYRAM ROE, Ph.D., *Professor Emeritus of Biochemistry*
GEORGE BYRON ROTH, A.B., M.D., *Professor Emeritus of Pharmacology*
THOMAS CARLTON THOMPSON, B.S., M.D., *Professor Emeritus of Clinical Urology*
CHARLES STANLEY WHITE, M.D., Sc.D., *Professor Emeritus of Surgery*

ACTIVE FACULTY AND STAFF OF INSTRUCTION*

THEODORE JUDSON ABERNETHY, B.S., M.D., *Assistant Clinical Professor of Medicine*
JOSEPH ABRAHAMS, M.D., *Assistant Clinical Professor of Psychiatry*
HERBERT ABRAMSON, A.M., M.D., *Associate in Medicine*
JOHN PLETCH ADAMS, B.S., M.D., *Clinical Professor of Orthopedic Surgery*
EDWARD ADELSON, B.S., M.D., *Associate in Medicine*
PAUL CHARLES ADKINS, A.B., M.D., *Associate Professor of Surgery*
SOLOMON NAPHTALI ALBERT, A.B., M.D., *Assistant Clinical Professor of Anesthesiology*
THEODORE CRANDALL ALFORD, A.B., M.D., *Assistant Professor of Surgery*
FRANK DUANE ALLAN, Ph.D., *Associate Professor of Anatomy*
MELVIN GUSTAVUS ALPER, A.B., M.D., *Associate in Ophthalmology*
LOUIS KATZ ALPERT, B.S., M.D., *Professor of Medicine*

* The Staff of Instruction here listed and at the head of each department is for the academic year 1961–62.

Seymour Alpert, A.B., M.D., *Professor of Anesthesiology*
James Francis Ambury, B.S., M.D., *Associate in Medicine*
Harvey Ammerman, B.S., M.D., *Assistant Clinical Professor of Neurological Surgery*
Theodore Herbert Anders, A.B., M.D., *Clinical Instructor in Pediatrics*
Harry Ford Anderson, M.D., *Professor of Dermatology and Syphilology*
Robert Harper Anderson, M.D., *Clinical Instructor in Pediatrics*
William Staton Anderson, A.B., M.D., *Clinical Professor of Pediatrics*
Irwin Ardam, A.B., M.D., *Clinical Instructor in Medicine*
Frank Solomon Bacon, B.S., M.D., *Assistant Clinical Professor of Medicine*
Alfred Baer, A.B., M.D., *Associate in Medicine*
William Eldridge Bageant, M.D., *Clinical Instructor in Anesthesiology*
John Martyn Bailey, Ph.D., *Assistant Professor of Biochemistry*
William Otis Bailey, Jr., M.D., *Assistant Clinical Professor of Medicine*
James Pray Baker, M.S., M.D., *Clinical Instructor in Surgery*
William George Ballinger, A.B., M.D., *Assistant Clinical Professor of Dermatology and Syphilology*
Louis Sol Baron, Ph.D., *Special Lecturer on Microbial Genetics*
Solomon Efrem Barr, A.B., M.D., *Clinical Instructor in Medicine*
Robert Henry Barter, B.S., M.D., *Professor of Obstetrics and Gynecology*
John Charles Bartone, Ph.D., *Assistant Professor of Anatomy*
Jeanne Cecile Bateman, A.B., M.D., *Clinical Instructor in Medicine*
Harry Clark Bates, Jr., B.S., M.D., *Clinical Instructor in Medicine*
Emil Herbert Bauersfeld, A.B., M.D., *Clinical Instructor in Medicine*
Virginia Patterson Beelar, A.B., M.D., *Associate in Medicine*
Joseph Beinstein, A.B., M.D., *Assistant Clinical Professor of Medicine*
Robert Reid Belton, A.B., M.D., *Associate in Medicine*
Ruth Boschwitz Benedict, A.B., M.D., *Assistant Clinical Professor of Medicine*
Maria Henke Benzinger, M.D., *Assistant Professor of Anesthesiology*
Carl Berg, M.D., *Assistant Clinical Professor of Orthopedic Surgery*
Roger Bergstrom, M.D., *Clinical Instructor in Pediatrics*
Robert William Berliner, B.S., M.D., *Special Lecturer on Renal Diseases*
Harry Louis Berman, B.S., M.D., *Assistant Clinical Professor of Radiology*
Sidney Berman, B.S., M.D., *Associate Clinical Professor of Psychiatry*
Solomon Rodney Bersack, B.S., M.D., *Assistant Clinical Professor of Radiology*
Christopher Theodore Bever, A.B., M.D., *Assistant Clinical Professor of Psychiatry*
Roland Essig Bieren, M.D., *Clinical Instructor in Obstetrics and Gynecology*
Catharine Birch, A.B., M.D., *Assistant Clinical Professor of Otolaryngology*
Emilie Annabelle Black, B.S., M.D., *Clinical Instructor in Pediatrics*
Brian Blades, A.B., M.D., *Professor of Surgery*
Baruch Samuel Blumberg, M.D., Ph.D., *Special Lecturer in Anatomy*
Lester Sylvan Blumenthal, A.B., M.D., M.S. in Med., *Associate in Medicine*
John Henry Bouma, A.B., M.D., *Clinical Instructor in Psychiatry*
Maxwell Boverman, A.B., M.D., *Clinical Instructor in Psychiatry*
Thomas Bradley, A.B., M.D., *Assistant Clinical Professor of Surgery*
Eugene Braunwald, A.B., M.D., *Lecturer in Physiology*
James Thomas Brennan, A.B., M.D., *Assistant Clinical Professor of Radiology*
Frances Elizabeth Brennecke, A.B., M.D., *Clinical Instructor in Orthopedic Surgery*

ALEXANDER BRESLOW, M.S., M.D., *Assistant Professor of Pathology*
CRENSHAW DOUGLAS BRIGGS, B.S., M.D., *Clinical Instructor in Surgery*
ALBERT SEYMOUR BRIGHT, A.B., M.D., *Clinical Instructor in Obstetrics and Gynecology*
ALFRED BRIGULIO, M.D., *Assistant Clinical Professor of Medicine; Associate University Physician*
WARREN DANIEL BRILL, B.S., M.D., *Associate in Medicine*
BERNARD BERYL BRODIE, Ph.D., *Professorial Lecturer in Pharmacology*
BROOKS GIDEON BROWN, M.D., *Clinical Instructor in Surgery*
CRAWFORD SOUTHWELL BROWN, A.B., M.D., *Associate in Dermatology and Syphilology*
HALLA BROWN, M.D., *Associate Clinical Professor of Medicine*
JACK HAROLD UPTON BROWN, Ph.D., *Special Lecturer in Physiology*
RAYMOND NATHAN BROWN, M.D., *Clinical Instructor in Anatomy*
THOMAS MCPHERSON BROWN, A.B., M.D., *Eugene Meyer Professor of Medicine*
GEORGE CUMMING BUCHANAN, A.B., M.D., *Clinical Instructor in Medicine*
JAMES THEODORE BURNS, M.D., *Associate in Medicine*
STEWART WILLIAM BUSH, B.S., M.D., *Assistant Professor of Medicine*
CESAR AUGUSTO CACERES, B.S., M.D., *Associate in Medicine*
PAUL CALABRISI, Ph.D., *Professor of Anatomy*
MARGARET ELIZABETH CALLAN, A.B., M.D., *Associate University Physician*
DALE CORBIN CAMERON, A.B., M.D., M.P.H., *Clinical Professor of Psychiatry*
WILLIAM ROBERT CARROLL, Ph.D., *Professorial Lecturer on Proteins*
RICHARD BERNARD CASTELL, A.B., M.D., *Associate in Medicine; University Physician*
WILLIAM PAXSON CHALFANT, JR., M.D., *Associate in Ophthalmology*
FREDERIC DUNBAR CHAPMAN, A.B., M.D., C.M., *Associate in Medicine*
GEORGE ALLYN CHAPMAN, B.S., M.D., *Associate in Medicine*
PAUL CHODOFF, A.B., M.D., *Assistant Clinical Professor of Psychiatry*
JOHN BERT CHRISTENSEN, Ph.D., *Assistant Professor of Anatomy*
LLOYD EUGENE CHURCH, D.D.S., Ph.D., *Clinical Instructor in Anatomy*
HAROLD WILLIAM CLARK, JR., Ph.D., *Associate in Biochemistry*
HUGH GAMBEL CLARK, A.B., M.D., *Associate in Pediatrics*
JAMES CLIFFORD, M.D., *Clinical Instructor in Medicine*
CHARLES SEYMOUR COAKLEY, M.D., *Professor of Anesthesiology*
ROBERT NORWOOD COALE, B.S., M.D., *Associate in Medicine*
GEORGE JOEL COHEN, M.D., *Clinical Instructor in Pediatrics*
VICTOR HUGO COHN, JR., Ph.D., *Assistant Professor of Pharmacology*
ALLAN BERTRAM COLEMAN, M.D., *Assistant Clinical Professor of Pediatrics*
PETER DIACOUMIS COMANDURAS, B.S., M.D, M.S. in Med., *Special Lecturer on Gastroenterology*
JOSEPH FRANCIS CONLON, D.D.S., *Clinical Instructor in Dental Surgery*
AUDREY CONNOR, A.B., M.D., *Clinical Instructor in Medicine*
CHARLES BARRIE COOK, B.S., M.D., *Associate in Pathology*
ROBERT CARTER COOK, *Special Lecturer on Medical Genetics*
CHARLES DAVID COOPER, A.B., M.D., *Associate in Medicine*
WILLIAM HURLBERT COOPER, A.B., M.D., *Clinical Instructor in Obstetrics and Gynecology*
BERNARD ROBERT COOPERMAN, A.B., M.D., *Clinical Instructor in Medicine*
HAROLD CORSON, M.D., *Assistant Clinical Professor of Psychiatry*
ERNEST COTLOVE, B.S., M.D., *Associate in Medicine*

Ronald Atmore Cox, A.B., M.D., *Professor of Ophthalmology; Associate University Physician*
Louis Aleck Craig, Jr., A.B., M.D., *Associate in Medicine*
Elizabeth Amanda Crisp, B.S., M.D., *Clinical Instructor in Obstetrics and Gynecology*
Jeremiah Keith Cromer, M.D., *Assistant Clinical Professor of Obstetrics and Gynecology*
William Holmes Crosby, A.B., M.D., *Special Lecturer on Hematology*
Jack Crowell, B.S., M.D., *Clinical Instructor in Medicine*
John Culberson, A.B., M.D., *Assistant Professor of Pathology*
Leon Richard Culbertson, B.S., M.D., *Clinical Professor of Urology*
Harrison Everett Curtis, B.S., M.D., *Instructor in Anesthesiology*
William John Cushing, B.S., M.D., *Instructor in Surgery*
Gordon Walford Daisley, Jr., A.B., M.D., *Clinical Instructor in Pediatrics*
Abraham Wolffe Danish, A.B., M.D., *Associate in Medicine*
David Stanley Davis, A.B., M.D., *Clinical Instructor in Medicine*
Lee Washington Davis, A.B., M.D., *Clinical Instructor in Obstetrics and Gynecology*
William Joseph Graham Davis, A.B., M.D., *Associate in Ophthalmology*
Clarke Davison, Ph.D., *Associate Professor of Pharmacology*
Robert Day, A.B., M.D., *Associate in Ophthalmology*
Benjamin Franklin Dean, Jr., M.D., M.S., *Assistant Clinical Professor of Surgery; University Surgeon*
Lyle Conway Dearden, Ph.D., *Clinical Instructor in Anatomy*
Stephen William Dejter, A.B., M.D., *Clinical Instructor in Medicine*
Anatole Stephen Dekaban, M.D., Ph.D., *Assistant Clinical Professor of Neurology*
Daniel Deykin, A.B., M.D., *Clinical Instructor in Medicine*
Herbert Harold Diamond, M.D., *Clinical Instructor in Pediatrics*
Friedrich Paul Julius Diecke, Dr. rer. nat., *Associate Professor of Physiology*
Samuel Mayer Dodek, A.M., M.D., *Associate Clinical Professor of Obstetrics and Gynecology*
Charlotte Patricia Donlan, A.B., M.D., *Assistant Clinical Professor of Radiology*
Orville Wright Donnelly, M.S., M.D., *Clinical Instructor in Medicine*
Hamilton Peacock Dorman, B.S., M.D., *Clinical Instructor in Urology*
Robert LeRoy Dow, A.B., M.D., *Clinical Instructor in Orthopedic Surgery*
Alan McCulloch Drummond, A.B., M.D., *Associate in Psychiatry*
John William DuChez, M.D., *Assistant Clinical Professor of Medicine*
Virginia Duggins, A.M., M.D., *Clinical Instructor in Neurology*
Leonard J Duhl, A.B., M.D., *Associate in Psychiatry*
Robert Edward duPrey, B.S., M.D., *Associate in Ophthalmology*
William Rankin Duryee, Ph.D., *Research Professor of Experimental Pathology*
James Albert Dusbabek, M.D., *Assistant Clinical Professor of Obstetrics and Gynecology*
Robert Francis Dyer, A.B., M.D., *Clinical Instructor in Medicine; Associate University Physician*
Henry Dunlop Ecker, B.S., M.D., *Assistant Clinical Professor of Medicine*
George Themistocles Economos, B.S., M.D., *Clinical Instructor in Medicine*
David Eden, A.B., M.D., *Assistant Clinical Professor of Psychiatry*
Wilfred Russell Ehrmantraut, B.S., M.D., *Associate in Medicine*
Joel Elkes, M.B., Ch.B., M.D., *Clinical Professor of Psychiatry*

CHESTER WILSON EMMONS, Ph.D., *Special Lecturer on Medical Mycology*
WILLIAM FRANCIS ENOS, A.B., M.D., *Assistant Clinical Professor of Pathology*
JEROME HAROLD EPSTEIN, A.M., M.D., *Clinical Instructor in Medicine*
JULIUS ROBERT EPSTEIN, M.D., *Clinical Instructor in Obstetrics and Gynecology*
ZEKI ERIM, A.B., M.D., *Clinical Instructor in Radiology*
CLAYTON BERNARD ETHRIDGE, M.D., *Professor of Medicine; Director of Postgraduate Medical Education*
JOHN MCCALLUM EVANS, A.B., M.D., *Professor of Medicine*
THEODORE MYLES FARBER, Ph.D., *Assistant Professor of Pharmacology*
OTIS RHANOR FARLEY, A.B., M.D., *Associate Clinical Professor of Medicine*
JOHN ANTHONY FARRELL, M.D., *Associate in Psychiatry*
HENRY LEON FEFFER, A.B., M.D., *Associate Clinical Professor of Orthopedic Surgery*
JAMES JOSEPH FEFFER, A.B., M.D., *Associate Clinical Professor of Medicine*
ROBERT HANNA FELIX, M.D., M.P.H., *Special Lecturer on Mental Hygiene*
WILLIAM ROBERT FELTS, JR., B.S., M.D., *Assistant Professor of Medicine*
LEON FERBER, A.B., M.D., *Assistant Clinical Professor of Psychiatry*
EDWARD EGNER FERGUSON, M.D., *Clinical Professor of Urology*
GEORGE FIALA, M.D., *Assistant Research Professor of Pharmacology*
HENRY FIELD, JR., B.S., M.D., *Special Lecturer on Internal Medicine*
GERALD JOHN FISHER, A.B., M.D., *Associate in Medicine*
LESTER WALTER FIX, M.D., *Associate in Pathology*
MARVIN PEACE FOOTER, A.B., M.D., *Associate in Obstetrics and Gynecology*
CHARLES WILLIAM FOULKE, A.B., M.D., *Clinical Instructor in Medicine*
RICHARD CROSMAN FOWLER, B.S., M.D., *Assistant Professor of Medicine*
MARY ALICE VANN FOX, A.B., M.D., *Clinical Instructor in Pediatrics*
RANDOLPH ADAMS FRANK, A.B., M.D., *Associate in Psychiatry*
CLARENCE KENDALL FRASER, Ph.B., M.D., *Assistant Clinical Professor of Obstetrics and Gynecology*
DONALD SHARP FREDERICKSON, B.S., M.D., *Special Lecturer on Internal Medicine*
FRITZ ADOLPH FREYHAN, M.D., *Clinical Professor of Psychiatry*
ADOLPH FRIEDMAN, A.B., M.D., *Associate in Medicine*
JOSEPH MARSHALL FRIEDMAN, A.B., M.D., *Clinical Instructor in Obstetrics and Gynecology*
MARVIN FUCHS, B.S., M.D., *Associate in Medicine*
JAMES QUINCY GANT, JR., M.S., M.D., *Assistant Clinical Professor of Dermatology and Syphilology*
ERVING FRANCIS GEEVER, M.D., Ph.D., *Associate Clinical Professor of Pathology*
LEON GERBER, M.D., *Clinical Instructor in Surgery*
SAM THOMPSON GIBSON, B.S., M.D., *Associate in Medicine*
EUGENE SOLOMON GLADSDEN, B.S., M.D., *Assistant Clinical Professor of Medicine*
MILTON SANFORD GLATT, A.B., M.D., *Clinical Instructor in Pediatrics*
WILLIAM BAINBRIDGE GLEW, M.D., M.S., *Clinical Instructor in Ophthalmology*
JAMES LEE GODDARD, M.D., M.P.H., *Special Lecturer on Aviation Medicine*
HERBERT ABRAHAM GOLDBERG, M.B., Ch.B., *Clinical Instructor in Urology*
SEYMOUR ZONALD GOLDBLATT, B.S., M.D., *Clinical Instructor in Pediatrics*
THOMAS ALPHONSE GONDER, B.S., M.D., *Assistant Clinical Professor of Medicine*
REUBEN GOODMAN, M.D., *Associate in Dermatology and Syphilology*
FRANCIS BYRON GORDON, Ph.D., M.D., *Special Lecturer on Virology*

Robert Sirkosky Gordon, Jr., A.B., M.D., *Clinical Instructor in Medicine*
Samuel Chrabolowski Gordon, M.D., *Associate in Psychiatry*
Charles Ernest Goshen, A.B., M.D., *Assistant Clinical Professor of Psychiatry*
Conrad Gossels, M.D., *Associate in Medicine*
Raymond Georges Gottschalk, B.S., M.D., *Associate Clinical Professor of Pathology*
Ernest Alva Gould, B.S., M.D., *Clinical Instructor in Surgery*
Murray Grant, M.D., D.P.H., *Clinical Professor of Community Health*
Irving Gray, Ph.D., *Professorial Lecturer on Isotopes*
Paul Holley Gray, B.S., M.D., *Assistant Clinical Professor of Psychiatry*
Robert Milton Greenberg, A.B., M.D., *Assistant Clinical Professor of Psychiatry*
Angus MacIvor Griffin, Ph.D., *Professor of Microbiology; Associate Dean of the School of Medicine*
Robert Henry Groh, B.S., M.D., *Associate Clinical Professor of Neurology*
Frederick Moulton Gross, M.D., *Associate in Medicine*
Mabel Harlakenden Grosvenor, M.D., *Assistant Clinical Professor of Pediatrics*
Charles Gruenwald, A.B., M.D., *Clinical Instructor in Anesthesiology*
Milton Gusack, A.B., M.D., *Assistant Clinical Professor of Medicine*
Margaret Frances Gutelius, A.B., M.D., *Assistant Clinical Professor of Pediatrics*
John Thomas Hagenbucher, B.S., M.D., *Clinical Instructor in Medicine*
William Donald Hann, M.S., *Associate in Microbiology*
Robert Howe Harmon, A.B., M.D., *Associate University Physician*
Jerome Blaine Harrell, M.D., *Assistant Clinical Professor of Surgery; Associate University Surgeon*
David Warner Harris, A.B., M.D., *Clinical Instructor in Psychiatry*
Forest Klaire Harris II, B.S., M.D., *Clinical Instructor in Medicine*
Isabella Harrison, A.B., M.D., *Associate in Surgery*
Clarence Richard Hartman, A.B., M.D., *Associate Professor of Medicine*
Thomas Lees Hartman, A.M., M.D., *Associate in Medicine*
George Joseph Hayes, B.S., M.D., *Assistant Clinical Professor of Neurological Surgery*
Murdock Head, M.D., D.D.S., LL.B., *Assistant Clinical Professor of Surgery; Professorial Lecturer in Forensic Medicine*
Elson Bowman Helwig, B.S., M.D., *Special Lecturer in Pathology*
Joseph Franklin Henderson, Ph.D., *Assistant Research Professor of Pharmacology*
Roy Hertz, Ph.D., M.D., *Special Lecturer on Endocrinology*
George Alfred Higgins, Jr., B.S., M.D., *Clinical Professor of Surgery*
Elizabeth Harman Hill, M.D., *Assistant Clinical Professor of Medicine*
Cornelia Hoch-Ligeti, M.D., *Assistant Clinical Professor of Pathology*
Leroy Edward Hoeck, M.D., *Clinical Professor of Pediatrics*
Joseph Frederick Hoffman, Ph.D., *Lecturer in Physiology*
Ariel Cahill Hollinshead, Ph.D., *Assistant Research Professor of Medicine (Pharmacology)*
Pearl Holly, M.S., M.D., *Associate Clinical Professor of Medicine*
Alec Horwitz, M.S., M.D., *Clinical Professor of Surgery*
David Horwitz, M.D., *Assistant Clinical Professor of Medicine*
Norman Harold Horwitz, A.B., M.D., *Clinical Instructor in Neurological Surgery*
Hugh Oscood House, A.B., M.D., *Associate University Physician*

ROBERT LYNWOOD HOWARD, A.B., M.D., *Clinical Instructor in Medicine*
WILLIAM ALLEN HOWARD, A.B., M.D., *Clinical Professor of Pediatrics*
JOHN STEWART HOWE, A.B., M.D., *Associate Clinical Professor of Pathology*
JOHN DECATOR HOYLE, B.S., M.D., *Clinical Instructor in Surgery*
KENNETH ANDREW HUBEL, A.B., M.D., *Associate in Physiology*
RUDOLPH HUGH, Ph.D., *Associate Professor of Microbiology*
ARTHUR PROCTOR HUSTEAD, M.D., *Clinical Instructor in Neurological Surgery*
VINCENT MICHAEL IOVINE, B.S., M.D., *Clinical Professor of Surgery*
NORMAN HARRY ISAACSON, A.B., M.D., *Clinical Instructor in Surgery*
JOHN ALEXANDER ISHERWOOD, Ph.B., M.D., *Assistant Clinical Professor of Radiology*
CAROLINE JACKSON, A.M., M.D., *Assistant Clinical Professor of Obstetrics and Gynecology*
LEON JACOBS, Ph.D., *Special Lecturer on Medical Parasitology*
MARSHALL HANNIS JACOBSON, A.B., M.D., *Assistant Professor of Medicine*
RUTH ELIZABETH KERR JAKOBY, A.B., M.D., *Clinical Instructor in Neurological Surgery*
WILLIAM DABNEY JARMAN, B.S., M.D., *Associate Clinical Professor of Urology*
LENT CLIFTON JOHNSON, B.S., M.D., *Special Lecturer in Pathology*
THOMAS NICK JOHNSON, Ph.D., *Associate Professor of Anatomy*
WARREN CHARLES JOHNSON, B.S., M.D., *Associate in Psychiatry*
BEN CALLOWAY JONES, JR., B.S., M.D., *Assistant Clinical Professor of Medicine*
CHARLES WILSON JONES, A.B., M.D., *Assistant Clinical Professor of Medicine*
PAULA REINES KAISER, M.B., Ch.B., M.D., *Assistant Professor of Anesthesiology*
SOL KATZ, B.S., M.D., *Special Lecturer on Pulmonary Disease*
MORTON SELWYN KAUFMAN, A.B., M.D., *Associate in Obstetrics and Gynecology*
CHARLES KECK, A.B., M.D., *Associate in Orthopedic Surgery*
WILMER DEAVER KEHNE, A.B., M.D., *Associate in Psychiatry*
EMMETT LEROY KEHOE, B.S., M.D., *Assistant Clinical Professor of Medicine*
GEORGE ARCHIBALD KELSER, JR., B.S., M.D., *Assistant Professor of Medicine*
MARVIN HAYNE KENDRICK, A.B., M.D., *Clinical Instructor in Surgery*
JOHN KENEALY, A.B., M.D., *Clinical Instructor in Urology*
THOMAS JAMES KENNEDY, JR., B.S., M.D., *Associate in Medicine*
IRVIN KERLAN, B.S., M.D., C.P.H., *Associate in Medicine*
JOHN MARK KESHISHIAN, M.D., *Clinical Instructor in Surgery*
ISRAEL KESSLER, M.S., M.D., *Associate in Medicine*
HARRY JAY KICHERER, M.D., *Assistant Clinical Professor of Radiology*
ELMER RICHARD KING, A.B., M.D., *Assistant Clinical Professor of Radiology*
ARTHUR HIRAM KIRAGOFE, JR., A.M., M.D., *Clinical Instructor in Psychiatry*
HAYDEN KIRBY-SMITH, B.S., M.D., *Assistant Clinical Professor of Dermatology and Syphilology*
STANLEY WILLIAM KIRSTEIN, A.B., M.D., *Associate in Medicine*
ALBERT DAVID KISTIN, A.M., M.D., *Special Lecturer on Cardiology*
JACK KLEH, A.B., M.D., *Assistant Clinical Professor of Medicine*
MORRIS KLEINERMAN, B.S., M.D., *Associate Clinical Professor of Psychiatry*
CALVIN TREXLER KLOPP, A.B., M.D., *Warwick Professor of Surgery (Cancer)*
ALVIN BERNT CLIFFORD KNUDSON, B.S., M.D., *Associate in Physical Medicine and Rehabilitation*
MARVIN CURTIS KORENGOLD, D.D.S., B.S., M.D., *Clinical Instructor in Neurology*
NORMAN CLIFFORD KRAMER, M.S., M.D., *Instructor in Medicine*
MORRIS EDWARD KRUCOFF, B.S., M.D., *Associate in Otolaryngology*

WALTER KURLAND, B.S., M.D., *Clinical Instructor in Medicine*
WILLIAM THURSTON LADY, M.D., *Associate in Obstetrics and Gynecology*
MANUEL LANDMAN, B.S., M.D., *Clinical Instructor in Dermatology and Syphilology*
JOHN WILMER LATIMER, JR., M.D., *Assistant Clinical Professor of Medicine*
HENRY PRATHER LAUGHLIN, B.S., M.D., *Associate Clinical Professor of Psychiatry*
CHARLES EDWARD LAW, M.D., *Associate in Medicine*
ARNOLD ALBERT LEAR, M.D., *Clinical Instructor in Medicine*
CHESTER ELWOOD LEESE, Ph.D., *Fry Professor of Physiology*
HAROLD BERNARD LEHRMAN, A.B., M.D., *Associate in Psychiatry*
SANFORD LEON LEIKIN, M.D., *Associate in Pediatrics*
MORRIS CECIL LEIKIND, M.S., *Special Lecturer on the History of Microbiology*
EDWARD JOSEPH LEONARD, M.D., *Clinical Instructor in Medicine*
THOMAS MILES LEONARD, Ph.B., M.D., *Assistant Clinical Professor of Obstetrics and Gynecology*
GORDON SPARKS LETTERMAN, B.S., M.D., *Clinical Professor of Surgery*
ARTHUR JEROME LEVENS, B.S., M.D., *Associate in Neurology*
SIDNEY LEVIN, M.S., M.D., *Clinical Instructor in Pediatrics*
JACK LOUIS LEVINE, M.D., *Assistant Clinical Professor of Otolaryngology*
WILLIAM LEWIS, M.D., *Clinical Instructor in Medicine*
LEON MCNEELY LIVERETT, B.S., M.D., *Clinical Instructor in Obstetrics and Gynecology*
JEAN DOUGLAS LOCKHART, A.B., M.D., *Clinical Instructor in Pediatrics*
JOHN HAYES LODGE, A.B., M.D., *Clinical Instructor in Ophthalmology*
JAMES WALLING LONG, M.D., *Associate in Medicine*
JOHN THOMAS LORD, A.B., M.D., C.M., *Clinical Instructor in Neurological Surgery*
SAMUEL DENNIS LOUBE, A.B., M.D., *Associate in Medicine*
REGINALD SPENCER LOURIE, B.S., M.D., Med. Sc.D., *Associate Clinical Professor of Pediatric Psychiatry*
VICTOR FREDERICK LUDEWIG, B.S., *Administrator of the University Hospital*
CUNNINGHAM RAMSEY MACCORDY, M.D., *Associate Professor of Anesthesiology*
GORDON RHODES MACDONALD, B.S., M.D., *Associate in Urology*
THAYER MILLS MACKENZIE, B.S., M.D., *Clinical Instructor in Psychiatry*
JOHN DUNCAN MACLENNON, M.B., M.D., *Special Lecturer in Microbiology*
ARCHIBALD RICH MACPHERSON, A.B., M.D., *Associate in Pediatrics*
HAROLD JOSEPH MAGNUSON, A.B., M.D., M.P.H., *Special Lecturer on Occupational Health*
ELEANOR LEWIS MAKEL, B.S., M.D., *Associate in Medicine*
GEORGE MAKSIM, M.D., M.S. in Ped., *Assistant Clinical Professor of Pediatrics*
BENJAMIN MANCHESTER, M.D., *Assistant Clinical Professor of Medicine*
HAROLD GEORGE MANDEL, Ph.D., *Professor of Pharmacology*
JAMES CHARLES MANDES, A.B., M.D., *Clinical Instructor in Medicine*
RICHARD FRANK MANEGOLD, M.D., *Assistant Clinical Professor of Medicine*
JAMES PACKARD MANN, M.D., *Associate in Medicine*
JOHN BAYNE MARBURY, M.D., *Associate in Medicine*
COSIMO AJMONE MARSAN, M.D., *Associate in Neurology*
WILLIAM LAVERNE MARSH, B.S., M.D., *Associate Professor of Pathology*
ROBERT EDWARD MARTIN, M.D., *Assistant Clinical Professor of Pediatrics*
SHIRLEY SUE MARTIN, A.B., M.D., *Associate in Obstetrics and Gynecology*
RASHID MASSUMI, M.D., *Assistant Clinical Professor of Medicine*

PAUL MAZEL, Ph.D., *Assistant Professor of Pharmacology*
MARGRET KATHERINA MCCABE, M.D., *Clinical Instructor in Medicine*
DENNIS PARFREMENT MCCARTY, M.D., *Clinical Instructor in Surgery*
RUTH MCCLINTOCK, Ph.D., *Assistant Professor of Physiology*
WILLIAM STANLEY MCCUNE, A.B., M.D., *Clinical Professor of Surgery*
JAMES JERRY MCFARLAND, JR., B.S., M.D., *Associate Clinical Professor of Otolaryngology*
THOMAS HODGE MCGAVACK, A.B., M.D., *Special Lecturer on Metabolic Disease*
LAWRENCE CHESTER MCHENRY, JR., A.B., M.D., *Clinical Instructor in Neurology*
WILLIAM PRENTISS MCKELWAY, A.B., M.D., *Assistant Professor of Obstetrics and Gynecology*
JOHN WILLIAM MCTIGUE, A.B., M.D., *Clinical Instructor in Ophthalmology*
WILLIAM CAREY MELOY, M.D., M.S. in Med., *Associate in Surgery*
ROBERT ALLEN MENDELSOHN, M.D., *Clinical Instructor in Neurological Surgery*
JEAN HUGUES MENETREZ, A.B., M.D., *Clinical Instructor in Psychiatry*
MAURICE MENSH, M.D., *Assistant Clinical Professor of Medicine*
GEORGE WILCOX METCALF, M.D., *Clinical Instructor in Psychiatry*
HERMAN ARNOLD MEYERSBURG, B.S., M.D., *Associate in Psychiatry*
FRANK NELSON MILLER, JR., B.S., M.D., *Associate Professor of Pathology*
RALPH BRETNEY MILLER, A.B., M.D., *Associate in Medicine*
JERE HOLLOWAY MITCHELL, B.S., M.D., *Associate in Physiology*
REGINALD HENRY MITCHELL, M.D., *Clinical Instructor in Pediatrics*
WILLIAM ROSS MORRIS, M.D., *Associate in Surgery*
WILLIAM FITZGERALD MORRISSEY, A.B., M.D., *Instructor in Medicine*
HERBERT ALAN MOSKOVITZ, B.S., M.D., *Clinical Instructor in Medicine*
HOWARD OTIS MOTT, A.B., M.D., *Associate in Medicine*
BERNARD WILLIAM MURPHY, M.B., Ch.B., *Clinical Instructor in Psychiatry*
CORNELIUS FRANCIS MURPHY, B.S., M.D., *Instructor in Radiology*
JAMES PETER MURPHY, B.S., M.D., *Assistant Clinical Professor of Neurological Surgery*
FRANCIS JAMES MURRAY, B.S., M.D., *Assistant Clinical Professor of Medicine*
WALTER KENDALL MYERS, B.S., M.D., *Special Lecturer on Internal Medicine*
NTINOS MYRIANTHOPOULOS, Ph.D., *Clinical Instructor in Neurology*
WALTER LEWIS NALLS, M.D., *Special Lecturer on Pulmonary Disease*
JOHN PETER NASOU, A.B., M.D., *Assistant Clinical Professor of Medicine*
BERTLE NELSON, A.B., M.D., *Associate in Medicine*
PHILLIP GILLARD NELSON, M.D., Ph.D., *Associate in Physiology*
JULIUS SALEM NEVIASER, A.B., M.D., *Assistant Clinical Professor of Orthopedic Surgery*
WILLIAM NEWMAN, A.B., M.D., *Associate Professor of Pathology*
JOSEPH NEY, B.S., M.D., *Assistant Clinical Professor of Medicine*
MARGARET MARY NICHOLSON, A.B., M.D., *Clinical Professor of Pediatrics*
AARON NIMETZ, A.B., M.D., *Assistant Clinical Professor of Pediatrics*
GEORGE NORDLINGER, A.B., M.D., *Clinical Professor of Obstetrics and Gynecology*
WILLIAM DAVID OLDHAM, B.S., M.D., *Clinical Instructor in Urology*
BENNETT OLSHAKER, A.B., M.D., *Clinical Instructor in Pediatric Psychiatry*
JACK ORLOFF, M.D., *Associate in Medicine*
HAROLD HEACOCK ORVIS, B.S., M.D., *Assistant Professor of Medicine*
BERNARD HOWARD OSTROW, A.B., M.D., *Associate in Medicine*
GILBERT OTTENBERG, A.M., M.D., *Assistant Clinical Professor of Urology*

Russel Smith Page, Jr., A.B., M.D., *Associate in Otolaryngology; Medical Consultant to the Speech Clinic*
Helen Pallister, Ph.D., *Assistant Clinical Professor of Psychiatry (Psychology)*
Richard Emery Palmer, A.B., M.D., *Assistant Clinical Professor of Pathology*
Edwin Pearson Parker III, B.S., M.D., *Assistant Clinical Professor of Medicine*
Dee Rich Parkinson, M.D., *Clinical Instructor in Pathology*
John Parks, M.S., M.D., *Professor of Obstetrics and Gynecology; Dean of the School of Medicine; Medical Director, University Hospital*
Robert Carleton Parlett, M.D., Ph.D., *Professor of Microbiology*
Alvin Edward Parrish, M.D., *Associate Professor of Medicine; Associate Dean of the School of Medicine*
Robert Harold Parrott, M.D., *Clinical Professor of Pediatrics*
Sam Chapman Pascoe, A.B., M.D., *Associate in Medicine*
Harold Irwin Passes, Med.B., B.Surg., *Clinical Instructor in Medicine*
John Frederick Pauly, M.D., *Clinical Instructor in Obstetrics and Gynecology*
John Howell Peacock, Jr., B.S., M.D., *Associate in Pediatrics*
Helen Glick Pearcy, A.B., M.S.W., *Associate in Psychiatry (Social Work)*
Jed Williams Pearson, Jr., A.B., M.D., *Associate in Obstetrics and Gynecology*
William Jackson Peeples, B.S., M.D., M.P.H., *Special Lecturer on Public Health Practice*
Thomas Martin Peery, A.B., M.D., *Professor of Pathology*
George Bernard Pelleu, Jr., M.S., *Associate in Microbiology*
Louis Robert Perna, A.B., M.D., *Clinical Instructor in Surgery*
James Hutcheon Pert, A.B., M.D., *Associate in Medicine*
Leonard Theodore Peterson, B.S., M.D., *Assistant Clinical Professor of Orthopedic Surgery*
George Otis Pierce, M.S., *Special Lecturer on Public Health Engineering*
Howard Clemeth Pierpont, A.B., M.D., *Associate Professor of Surgery*
Lois Irene Platt, A.B., M.D., *Assistant Professor of Pathology (Cytology)*
Harold Plotsky, Ph.B., B.S., M.D., *Clinical Instructor in Pediatric Psychiatry*
George Nicholas Polis, B.S., M.D., *Clinical Instructor in Medicine*
Robert Smallwood Poole, A.B., M.D., *Clinical Instructor in Medicine*
Virginia Pillow Porter, A.B., M.D., *Instructor in Anesthesiology*
Daniel Prager, A.M., M.D., *Clinical Instructor in Psychiatry*
Andrew Gabriel Prandoni, B.S., M.D., *Associate Clinical Professor of Medicine*
Warren Godfrey Preisser, A.B., M.D., *Clinical Instructor in Pediatrics*
Neel Jack Price, B.S., M.D., *Associate in Obstetrics and Gynecology*
Maurice Protas, A.B., M.D., *Associate in Medicine*
Herbert Lamont Pugh, B.S., M.D., *University Physician*
Jose Rafael Puig, M.D., *Clinical Instructor in Pediatrics*
Lawrence Elias Putnam, A.B., M.D., *Assistant Clinical Professor of Medicine*
Boris Rabkin, A.B., M.D., *Associate in Medicine*
David Platt Rall, M.D., Ph.D., *Lecturer in Physiology*
Joseph Edward Rall, M.D., Ph.D., *Assistant Clinical Professor of Medicine*
Joseph Eugene Rankin, B.S., M.D., *Associate Professor of Psychiatry*
Catherine Ray, A.B., M.D., *Clinical Instructor in Medicine*
Edward Luke Rea, A.B., M.D., *Associate in Medicine*
Adrian Recinos, Jr., B.S., M.D., *Associate in Pediatrics*
John Alton Reed, A.B., M.D., *Assistant Clinical Professor of Medicine*
Melvin Reich, Ph.D., *Assistant Research Professor of Pharmacology*

THOMAS ELMER REICHELDERFER, B.S., M.D., M.P.H., *Associate Clinical Professor of Pediatrics*
EUGENE MARSHALL RENKIN, Ph.D., *Professor of Physiology*
FREDERICK TURNER REUTER, M.D., *Assistant Clinical Professor of Urology*
JACK JACOB RHEINGOLD, A.B., M.D., *Assistant Clinical Professor of Medicine*
DUANE CASE RICHTMEYER, A.B., M.D., *Clinical Instructor in Surgery*
BARTON WINTERS RICHWINE, M.D., *Associate in Obstetrics and Gynecology*
NORMAN CHARLES RINTZ, A.B., M.D., *Associate in Psychiatry*
HUGO VICTOR RIZZOLI, A.B., M.D., *Assistant Clinical Professor of Neurological Surgery*
JOHN WHITSON ROARK, B.S., M.D., *Clinical Instructor in Medicine*
MARY LOUISE ROBBINS, Ph.D., *Professor of Microbiology*
ROBERT HOOD ROBERTSON, M.D., *Clinical Instructor in Neurology*
FLOYD STERLING ROGERS, B.S., M.D., *Associate in Obstetrics and Gynecology*
RICHARD ALLAN ROGERS, B.S., M.D., *Associate in Psychiatry*
AUSTIN BERTRAM ROHRBAUGH, JR., A.B., M.D., *Clinical Instructor in Orthopedic Surgery*
RUFUS MARTIN ROLL, A.B., M.D., *Associate in Obstetrics and Gynecology*
MONROE JAMES ROMANSKY, A.B., M.D., *Professor of Medicine*
WALTER JOSEPH ROMEJKO, B.S., M.D., *Associate in Ophthalmology*
HERBERT GERALD ROSE, M.D., *Clinical Instructor in Medicine*
MORTON HAROLD ROSE, M.D., *Associate in Medicine*
ARTHUR ROSENBAUM, B.S., M.D., *Assistant Clinical Professor of Medicine*
MORRIS HIRSH ROSENBERG, A.B., M.D., *Assistant Clinical Professor of Medicine*
LOUIS ROSS, M.D., *Associate in Medicine*
MATHEW ROSS, B.S., M.D., *Special Lecturer in Psychiatry*
IRWIN WINN ROVNER, A.B., M.D., *Clinical Instructor in Obstetrics and Gynecology*
NORMAN HARTLEY RUBENSTEIN, M.D., *Associate in Medicine*
MARSHALL DEGRAFFENRIED RUFFIN, B.S., M.D., *Associate Clinical Professor of Psychiatry*
PATRICIA HOLLY RUSSELL, M.D., *Instructor in Anesthesiology*
JOSEPH AZIZ SABRI, A.B., M.D., *Associate in Otolaryngology*
HAROLD CHARLES SADIN, A.B., M.D., *Clinical Instructor in Medicine*
JOHN HARMER SAGER, A.B., M.D., *Clinical Instructor in Surgery*
ZACK WITTEN SANDERS, A.B., M.D., *Clinical Instructor in Neurology*
MELVIN WESLEY SANDMEYER, JR., A.B., M.D., *Clinical Instructor in Obstetrics and Gynecology*
THOMAS STONE SAPPINGTON, A.B., M.D., *Associate Clinical Professor of Medicine*
STANLEY JAY SARNOFF, A.B., M.D., *Special Lecturer on Cardiovascular Physiology*
MARY KATHERINE LAURENCE SARTWELL, A.B., M.D., *Associate in Pediatrics*
WILLIAM WILFRED SAUNDERS, B.S., M.D., *Assistant Professor of Radiology*
CHARLES JOSEPH SAVARESE, JR., A.B., M.D., *Clinical Instructor in Medicine*
RICHARD SCHAENGOLD, B.S., M.D., *Assistant Clinical Professor of Psychiatry*
LESLIE SCHAFFER, M.B., Ch.B., *Associate in Psychiatry*
WILLIAM JOHN SCHEWE, A.B., M.D., *Associate in Medicine*
CYRIL AUGUSTUS SCHULMAN, B.S., M.D., *Associate in Medicine*
JOHN DUNCAN SCHULTZ, A.B., M.D., *Clinical Professor of Psychiatry*
MAXINE ANN SCHURTER, A.B., M.D., *Associate in Surgery*
ALVIN SELTZER, B.S., M.D., *Associate in Medicine*
GEORGE SHARPE, A.B., M.D., *Clinical Instructor in Medicine*

Samuel Hazen Shea, A.B., M.D., *Clinical Instructor in Obstetrics and Gynecology*
Ernest Alfred Watson Sheppard, M.D., C.M., *Clinical Professor of Ophthalmology*
Max Gimble Sherer, M.S., M.D., *Clinical Instructor in Medicine*
Joseph Lee Sheridan, A.B., M.D., *Associate in Psychiatry*
Harold Martin Silver, A.B., M.D., *Assistant Clinical Professor of Medicine*
Maurice Arthur Sislen, A.B., M.D., *Clinical Instructor in Medicine*
James Glover Sites, M.D., *Assistant Professor of Obstetrics and Gynecology*
Irene I-Lien Hsu Siu, B.S., M.D., *Assistant Professor of Medicine*
Albert Sjoerdsma, Ph.D., M.D., *Special Lecturer on Internal Medicine*
Benjamin Williams Smith, Ph.D., *Associate Professor of Biochemistry*
John Eldrid Smith, A.B., M.D., *Assistant Clinical Professor of Medicine*
Ralph Grafton Smith, M.D., Ph.D., *Clinical Professor of Pharmacology*
Robert Roland Smith, B.S., M.D., *Clinical Instructor in Surgery*
Scott Winfield Smith, Ph.D., *Associate in Radiology*
Nicholas Patrick Dillon Smyth, M.S., M.B., Ch.B., *Assistant Professor of Surgery*
Luther Henry Snyder, A.B., M.D., *Associate in Medicine*
Peter Soyster, M.D., *Clinical Instructor in Obstetrics and Gynecology*
George Warren Sprehn, M.D., *Associate in Psychiatry*
William Woodrow Stanbro, M.D., *Professor of Radiology*
William Stark, A.B., M.D., *Associate in Pediatric Psychiatry*
Harold Stevens, Ph.D., M.D., *Professor of Neurology*
Thomas Dale Stewart, A.B., M.D., *Professorial Lecturer in Anatomy*
Charles Frederick Stiegler, A.B., M.D., *Associate in Pediatrics*
Myer Harold Stolar, B.S., M.D., *Assistant Clinical Professor of Medicine*
William Leete Stone, A.B., M.D., *Associate in Medicine*
Donald Harrison Stubbs, A.M., M.D., *Clinical Professor of Anesthesiology*
Samuel Jacob Nathan Sugar, Phar.G., M.D., *Assistant Clinical Professor of Medicine*
David Chen-Hwa Sun, M.D., Sc.D., *Associate Clinical Professor of Medicine*
Leon Swell, Ph.D., *Associate Professorial Lecturer on Lipids*
Stanley Jerome Talpers, A.B., M.D., *Clinical Instructor in Medicine*
Irene Gorski Tamagna, M.D., *Assistant Clinical Professor of Medicine*
Nelson Monroe Tart, B.S., M.D., *Clinical Instructor in Obstetrics and Gynecology*
Norman Taub, B.S., M.D., *Associate Clinical Professor of Psychiatry*
Robert George Taylor, M.D., *Associate in Medicine*
Ira Rockwood Telford, Ph.D., *Professor of Anatomy*
Sarah Shtoffer Teneblatt, A.B., M.D., *Assistant Clinical Professor of Psychiatry*
James Richard Thistlethwaite, B.S., M.D., *Associate Clinical Professor of Surgery*
Lawrence Jay Thomas, B.S., M.D., *Assistant Clinical Professor of Medicine*
Charles Waters Thompson, M.D., *Assistant Clinical Professor of Medicine*
Howard Erwin Ticktin, A.B., M.D., *Assistant Clinical Professor of Medicine*
Charles Stanley Tidball, Ph.D., M.D., *Assistant Research Professor of Physiology*
Elizabeth Tidball, Ph.D., *Associate in Physiology*
George Tievsky, B.S., M.D., *Clinical Instructor in Radiology*
Anna Coyne Todd, A.B., M.D., *Associate Clinical Professor of Psychiatry*
Aaron Herbert Traum, A.B., M.D., *Clinical Instructor in Preventive Medicine and Community Health*
Janet Travell, A.B., M.D., *Associate Clinical Professor of Medicine*
Carleton Raymond Treadwell, Ph.D., *Professor of Biochemistry*
Howard Pettit Treichler, M.D., *Clinical Instructor in Obstetrics and Gynecology*

JOHN WATKINS TRENIS, A.B., M.D., *Assistant Clinical Professor of Medicine*
WILLIAM MACLOHON TRIBLE, A.B., M.D., M.Med.Sc., *Associate in Otolaryngology*
PIERRE TULOU, M.D., *Special Lecturer on Pulmonary Function*
PINDAROS ROY VAGELOS, A.B., M.D., *Clinical Instructor in Medicine*
GEORGE VARTKES VAHOUNY, Ph.D., *Assistant Professor of Biochemistry*
NAN VAN WAGENEN, B.S., M.D., *Clinical Instructor in Radiology*
FRANCIS NEIL WALDROP, A.B., M.D., *Clinical Instructor in Psychiatry*
JAMES CHRISTOPHER WALSH, A.B., M.D., *Associate in Obstetrics and Gynecology*
JOHN WALSH, B.S., M.D., *Associate in Medicine*
DONALD WALTERS, B.S., M.D., *Clinical Instructor in Obstetrics and Gynecology*
WILLARD BEECHER WALTERS, B.S., M.D., *Associate in Otolaryngology*
ROBERT ORR WARTHEN, M.D., *Clinical Instructor in Pediatrics*
JOHN AUGUSTINE WASHINGTON, B.S., M.D., *Associate Clinical Professor of Pediatrics*
DONALD MORGAN WATKIN, A.B., M.D., *Associate in Medicine*
JOSEPH HICKS WATSON, B.S., M.D., *Associate in Medicine*
JOHN WATT, JR., M.D., *Assistant Professor of Physical Medicine and Rehabilitation*
MARY FALORSI WATT, M.D., *Assistant Professor of Medicine*
JAMES WINSTON WATTS, B.S., M.D., *Professor of Neurological Surgery*
WILLIAM JACK WEAVER, JR., A.B., M.D., *Associate in Medicine*
CHARLES RICHARD WEBB, B.S., M.D., *Associate in Pediatrics*
CHARLES MALCOLM WEBER, M.D., *Clinical Instructor in Radiology*
GEORGE DAVIS WEICKHARDT, M.D., *Associate in Neurology*
JOHN RUSSELL WEIMER, B.S., M.D., *Clinical Instructor in Ophthalmology*
JACOB JOSEPH WEINSTEIN, B.S., Phar.G., M.D., *Associate in Surgery*
DANIEL LEIGH WEISS, A.B., M.D., *Clinical Professor of Pathology*
ARTHUR WEISSBACH, Ph.D., *Professorial Lecturer on Enzymes*
DON WENGER, M.S., M.D., *Associate Clinical Professor of Surgery*
FRANCIS LIELL WENGER, M.D., *Associate in Physical Medicine and Rehabilitation*
SIDNEY LEE WERKMAN, A.B., M.D., *Clinical Instructor in Psychiatry*
HELENE GILLIAERT WERNER, A.B., M.D., *Instructor in Anesthesiology*
MARGARET ELISABETH WESTECKER, Dr. rer. nat., *Associate in Physiology*
DAVID COLWELL WHERRY, A.B., M.D., *Clinical Instructor in Surgery*
CHARLES STANLEY WHITE, JR., B.S., M.D., *Clinical Instructor in Surgery*
WILLIAM WHITMORE, JR., M.D., *Assistant Clinical Professor of Medicine*
ALLEN WIDOME, M.D., *Clinical Instructor in Anesthesiology*
UTHAI VINCENT WILCOX II, M.D., *Clinical Instructor in Radiology*
RICHARD WALLACE WILKINSON, A.B., M.D., M.S. in Med., *Assistant Clinical Professor of Ophthalmology*
WENDELL MELVIN WILLETT, A.B., M.D., *Associate in Dermatology and Syphilology*
JONATHAN MARSHALL WILLIAMS, M.D., *Associate Clinical Professor of Neurological Surgery*
THOMAS ASHTON WILSON, A.B., M.D., *Associate in Obstetrics and Gynecology*
SAUL WINEGRAD, A.B., M.D., *Associate in Physiology*
ALAN WILLIAM WINSHEL, A.B., M.D., *Clinical Instructor in Obstetrics and Gynecology*
CHARLES SAMUEL WISE, B.S., M.D., *Professor of Physical Medicine and Rehabilitation*
HERBERT DEGRANGE WOLFF, JR., M.D., *Clinical Instructor in Urology*
KARL HAYDEN WOOD, Phar.G., D.D.S., *Associate in Dental Surgery*
ROBERT CHARLES WOOD, Ph.D., *Assistant Professor of Microbiology*

William Bainster Wood, B.S., M.D., *Associate in Physiology*
Thomas Mahlon Wright, A.B., M.D., *Clinical Instructor in Surgery*
Alvin Charles Wyman, A.B., M.D., *Associate in Radiology*
Harold Taylor Yates, M.D., *Clinical Instructor in Pediatrics*
Leon Yochelson, A.B., M.D., *Professor of Psychiatry*
Samuel Yochelson, Ph.D., M.D., *Research Professor of Psychiatry*
Lorenz Eugene Zimmerman, A.B., M.D., *Associate in Pathology*

ASSISTANTS

ASSISTANTS IN RESEARCH AND INSTRUCTION

Kristoff Abraham, M.D., *Fellow in Neuropathology*
Concordia Borja, M.S., *University Teaching Fellow in Biochemistry*
Pierre Jean Carpentier, M.D., *Fellow in Medicine (Gastroenterology)*
Mary Ann Flesner, B.S., *Sanders Fellow in Microbiology*
John LeRoy Fox, M.D., *Fellow in Neuropathology*
Ralph Richard Gray, M.S., *Fellow in Biochemistry*
Julian Hoptman, A.M., *Research Fellow in Microbiology*
Jose Alberto Jiminez-Guevara, B.S., M.D., *Fellow in Medicine*
Richard Kaufman, A.B., M.D., *Fellow in Medicine*
Marie-Louise Levy, B.S., M.D., *Fellow in Anesthesiology*
Robert Marx Mayer, A.B., *Sanders Fellow in Biochemistry*
Yutaka Ohsaki, M.D., *Fellow in Medicine (Pulmonary Disease)*
Vincent Pateras, A.B., M.D., C.M., *Fellow in Medicine*
John William Pearson, B.S., *Teaching Fellow in Microbiology*
Alan Lee Pinkerson, A.B., M.D., *Fellow in Medicine (Cardiovascular Disease)*
Stanley Irwin Sherr, M.S., *Sanders Fellow in Biochemistry*
Asakatsu Suzuki, M.D., *Fellow in Anesthesiology*
Andree Raymonde Jeanne-Marie Thomas, P.C.B., M.D., *Fellow in Medicine (Cardiovascular Disease)*
Robert Tomchick, B.S., *Teaching Fellow in Pharmacology*
Edward Winn Walters, B.S. in Ed., M.S., M.D., *Fellow in Medicine (Infectious Disease and Immunology)*
Leslie Wiener, B.S., M.D., *Fellow in Medicine (Cardiology)*
Ramiro Jose Abaunza, B.S., M.D., *Assistant in Obstetrics and Gynecology*
Arsacio Abella, D.M.D., *Assistant in Anesthesiology*
Palma Abraham, M.D., *Assistant in Radiology*
Manuel Angoso-Dufourcq, M.D., *Assistant in Medicine*
Ronald Alan Apter, M.D., *Assistant in Medicine*
William Landon Banfield, A.B., M.D., *Assistant in Surgery*
Samuel Michael Belinsky, A.B., M.D., *Assistant in Obstetrics and Gynecology*
Frank Joseph Borsody, A.B., M.D., *Assistant in Medicine*
Ronald Jack Bortnick, A.B., M.D., *Assistant in Neurological Surgery*
Gloria Godbey Brennan, A.B., M.D., *Assistant in Pathology*
Armon Anthony Cairo, B.S., M.D., *Assistant in Psychiatry*
Don Bruce Cameron, B.S., M.D., *Assistant in Medicine*
David Roland Carlson, B.S., M.D., *Assistant in Obstetrics and Gynecology*
Plja Charif, M.D., *Assistant in Pediatrics*
Attila Sakir Cigtay, A.B., M.D., *Assistant in Radiology*
Steven Joseph Conway, B.S., M.D., *Assistant in Medicine*

Edward Earl Cunningham, M.S., M.D., *Assistant in Obstetrics and Gynecology*
Donald William Datlow, M.S., M.D., *Assistant in Medicine*
Armando Antonio de Moya, B.S., M.D., *Assistant in Surgery*
Fred McEwen Downey, Jr., A.B., M.D., *Assistant in Medicine*
Richard Vernon Erkenbeck, B.S., M.D., *Assistant in Obstetrics and Gynecology*
Michael Anthony Eufemio, A.B., M.D., *Assistant in Medicine*
Jessie Elizabeth Fair, M.C.S.P., R.P.T., *Assistant in Physical Medicine*
Victor Fazekas, B.S., M.D., *Assistant in Pathology*
Leslie Howard Fenton, M.B., B.S., *Assistant in Medicine*
Frederick William Floyd, Jr., A.B., M.D., *Assistant in Pediatrics*
Thomas Lou German, B.S., M.D., *Assistant in Surgery*
Hamit Ziyaattin Gokalp, M.D., *Assistant in Neurological Surgery*
Alden Stanley Gooch, A.B., M.D., *Assistant in Medicine*
William Bark Grine, A.B., M.D., *Assistant in Surgery*
Harold Melton Hagen, A.B., M.D., *Assistant in Radiology*
Donald David Haut, A.B., M.D., *Assistant in Medicine*
Rusi Ardeshir Hilloowala, B.D.S., *Assistant in Anesthesiology*
Albert Bernard Iben, M.D., *Assistant in Surgery*
Kyoko Ishiyama Ikari, B.S., R.P.T., *Assistant in Physical Medicine*
George Gordon Kay, A.B., M.D., *Assistant in Medicine*
James Furman Kemp, A.B., M.D., *Assistant in Surgery*
Tetsuji Kiba, M.D., *Assistant in Anesthesiology*
Chong Jae Kim, M.D., *Assistant in Radiology*
Stanley Martin Kirson, A.B., M.D., *Assistant in Surgery*
Edward Ronald Kolvereid, B.S., M.D., *Assistant in Obstetrics and Gynecology*
Constance Krolcyzik Lapointe, A.B., M.D., *Assistant in Medicine*
German Lasala, B.S., M.D., *Assistant in Pathology*
Gonzalo Lo, M.D., *Assistant in Medicine*
Everett Winslow Lovrien, A.B., M.D., *Assistant in Pediatrics*
Herbert Lubowitz, A.B., M.D., *Assistant in Medicine*
John Romney Marshall, M.D., *Assistant in Obstetrics and Gynecology*
Frederick Meyers, B.S., M.D., *Assistant in Medicine*
Hugh Miller, A.B., M.D., *Assistant in Medicine*
Margaret Elizabeth Mones, B.S., M.D., *Assistant in Radiology*
John Paul Mudry, B.S., M.D., *Assistant in Medicine*
George Henry Myers, Jr., B.S., M.D., *Assistant in Surgery*
Warren James Nelson, B.S., M.D., *Assistant in Radiology*
Hardin Elling Olson, A.B., M.D., *Assistant in Obstetrics and Gynecology*
Leonard Bolton Outlar, A.B., M.D., *Assistant in Obstetrics and Gynecology*
Geraldine Winnie Paul, A.B., M.D., *Assistant in Obstetrics and Gynecology*
Arthur Peschin, B.S. M.D., *Assistant in Anesthesiology*
William Emanuel Roll, M.D., *Assistant in Surgery*
Randi Veie Rosvoll, B.S., M.D., *Assistant in Pathology*
Corazon Santiago, M.D., *Assistant in Anesthesiology*
Henry Schindelar, A.M., M.D., *Assistant in Medicine*
Stanford Joel Silberman, M.D., *Assistant in Surgery*
Carlos Alberto Silva, B.S., M.D., *Assistant in Surgery*
Barbara Solomon, A.M., M.D., *Assistant in Medicine*
Richard Edward Stang, A.B., M.D., *Assistant in Pediatrics*
Eugene Octave Sykes Stevenson, B.S., M.D., *Assistant in Surgery*

Larry Nissen Sweet, M.D., *Assistant in Radiology*
Alberto de Jesus Taboada, B.S., M.D., *Assistant in Anesthesiology*
Bahman Teimourian, B.S., M.D., *Assistant in Surgery*
Jasper Fritz Thompson III, A.B., M.D., *Assistant in Surgery*
Abraham Hirsch Topchik, B.S., M.D., *Assistant in Pediatrics*
Joan Adele Turkus, B.S., M.D., *Assistant in Pathology*
Charles Mathison Tyndal, M.S., M.D., *Assistant in Obstetrics and Gynecology*
George Albert Whipple, A.B., M.D., *Assistant in Surgery*
Mark Frederick Wildemann, B.S., M.D., *Assistant in Medicine*
Wai Tuen Wong, B.S., M.D., *Assistant in Anesthesiology*

TECHNICAL ASSISTANTS

Fred Buttner, *Technician in Physiology*
Robert Watkins Clarke, Jr., *Chief Photographer, Medical School Photographic Laboratory*
Barbara Zelda Farfel, *Technician in Medicine*
Yosif Kadir, B.S., *Technician in Biochemistry*
Sonia Sue Kelley, B.S., *Technician in Microbiology*
Carol Maxine Owen, *Technical Assistant in Microbiology*
Peter Antel Pasztory, *Technician in Pathology*
Jno Deshon Randall, *Technician in Neurology and Neurological Surgery*
Caroline Amelia Woodruff, M.S., *Technician in Anatomy*

Part-time Technical Assistant

Elizabeth Crisp Rea, A.B., M.T., *Technician in Medicine*

SCHOOL OF MEDICINE ADMINISTRATIVE ASSISTANTS

Catherine Breen, *Assistant to the Dean*
Doris Louise Casey, *Secretary, Department of Psychiatry*
Louree Crossfield, A.B., *Assistant to the Associate Dean*
Jean Stewart Duke, *Secretary, Department of Anatomy*
Margaret Hudgins Eady, *Secretary, Office of the Dean*
Vicki Sue Falor, *Secretary, Department of Physiology*
Anne Roberta Ide, *Secretary, Office of the Dean*
Ruth Linson Jackson, *Secretary, Office of the Dean*
Virginia Louise Jones, *Secretary, Department of Obstetrics and Gynecology*
Ruth Karstens, *Departmental Secretary in Pathology*
Helen Marjorie Rhoades, *Departmental Secretary in Medicine*
Virginia Sutton Ringness, *Departmental Secretary in Obstetrics and Gynecology*
Carmel Latell Romeo, *Secretary, Department of Pharmacology*
Dorothy Marie Smith, *Secretary, Office of the Dean*
Javene Annette Spradlin, *Departmental Secretary in Surgery*

Part-time Administrative Assistants

Eva Carli, *Pediatrics*
Rachel Barmen, *Office of the Dean*
Alice Clapp, *Medicine*

MILDRED BERNADINE HANKINS, *Office of the Dean*
MARCIA SUZANNE KIRSCH, *Biochemistry*
VIRGINIA BALL ORNDORFF, *Office of the Dean*
BARBARA DORIS PETERS, *Office of the Dean*
MARGARET MAGEE POGUE, *B.S., Biochemistry*
WINIFRED ROGERS, *Biochemistry*

MEDICAL LIBRARY

ISABELLA FRANCES YOUNG, A.B. in L.S., *Assistant Librarian*
NANCY PAT ALEXANDER, *Assistant in Medical Library*
MARIE NORTON LYNCH, *Clerical Assistant*

THE SCHOOL OF MEDICINE *

THE FACULTY†

John Parks, *Dean;* A. M. Griffin, *Associate Dean;* A. E. Parrish, *Associate Dean;* C. B. Ethridge, *Director of Postgraduate Medical Education*

Professors H. F. Anderson, R. H. Barter, Brian Blades, T. M. Brown, Paul Calabrisi, C. S. Coakley, R. A. Cox, A. M. Griffin, C. E. Leese, H. G. Mandel, John Parks, T. M. Peery, E. M. Renkin, W. W. Stanbro, Harold Stevens, I. R. Telford, C. R. Treadwell, J. W. Watts, C. S. Wise, Leon Yochelson
Clinical Professors W. S. Anderson, L. R. Culbertson, C. B. Ethridge, W. A. Howard, W. S. McCune, E. A. W. Sheppard
Associate Professors F. N. Miller, Jr., A. E. Parrish
Associate Clinical Professor J. J. McFarland, Jr.
Assistant Clinical Professor J. L. Levine
Administrator of the University Hospital V. F. Ludewig

COMMITTEES‡

THE DEAN'S COUNCIL

Brian Blades, T. M. Brown, T. M. Peery, I. R. Telford, J. W. Watts, V. F. Ludewig

COMMITTEE ON ADMISSIONS

Paul Calabrisi, *Chairman*
G. F. Kelser, Ruth McClintock, W. P. McKelway, F. N. Miller, J. E. Rankin

COMMITTEE ON CURRICULUM

T. M. Peery, *Chairman*
E. M. Renkin, M. J. Romansky, J. G. Sites, I. R. Telford, J. R. Thistlethwaite, C. R. Treadwell

---

* Faculty and committee members listed here are for the academic year 1961–62.
† The President of the University, the Dean of Faculties of the University, and the Registrar of the University are members of the Faculty.
‡ The Dean of the School of Medicine and Associate Deans are members ex officio of all committees.

COMMITTEE ON SCHOLARSHIP

I. R. Telford, *Chairman*

Brian Blades, T. M. Brown, H. G. Mandel, F. N. Miller

COMMITTEE ON RESEARCH

C. R. Treadwell, *Chairman*

J. M. Evans, T. N. Johnson, H. G. Mandel, H. C. Pierpont, Harold Stevens

COMMITTEE ON LIBRARY

C. E. Leese, *Chairman*

Mary Robbins, C. S. Wise

COMMITTEE ON GRADUATE AND POSTGRADUATE EDUCATION

C. B. Ethridge, *Chairman*

Seymour Alpert, R. H. Bartar, Brian Blades, Leon Yochelson, V. F. Ludewig

COMMITTEE ON APPOINTMENTS AND PROMOTIONS

Brian Blades, *Chairman*

T. M. Peery, C. R. Treadwell

ADVISORY COMMITTEE ON CANCER RESEARCH

L. K. Alpert, *Chairman*

Frank Allan, J. M. Bailey, C. T. Klopp, W. P. McKelway, William Newman, H. C. Pierpont, Mary Robbins, W. W. Saunders

ADVISORY COMMITTEE ON REHABILITATION

C. S. Wise, *Chairman*

J. P. Adams, T. M. Brown, J. M. Evans, Irene Tamagna, J. R. Thistlethwaite

ADVISORY COMMITTEE ON STUDENT AFFAIRS

F. N. Miller, *Chairman*

Seymour Alpert, J. B. Christensen, Ruth McClintock, H. C. Pierpont

GENERAL INFORMATION

INTRODUCTION

The School of Medicine of The George Washington University was opened in March 1825. Of the medical schools now in existence in the United States, it is the eleventh in chronological order of founding. The University Hospital and Dispensary were established in 1898 as a part of the organization of the School. The present George Washington University Hospital was opened in 1948, and the Helen L. and Mary E. Warwick Memorial Building housing the Cancer Clinic was completed in 1954. Additional clinical facilities are used at the District of Columbia General Hospital, Children's Hospital, St. Elizabeths Hospital, and Mt. Alto Veterans Administration Hospital. The School of Medicine maintains close affiliation not only with the various divisions of the University, but also with the numerous medical research and scientific establishments of the federal government in the Nation's Capital. Washington provides world renowned library facilities, comprehensive museums, and excellent recreational facilities which are available to students.

OBJECTIVES

The purpose of the School of Medicine is to prepare men and women in the art and science of medicine to meet the health needs of a growing, ever changing society. It is the responsibility of the School of Medicine to provide its students with a systematic plan of instruction in the basic medical sciences, with well guided clinical experience, with opportunities for expression in research, and with a philosophy in keeping with the highest ethics of the profession.

To achieve these objectives the School of Medicine has developed a progressive plan of instruction and a balanced, comprehensive curriculum. To carry out the program the University maintains a faculty of adequate size and of outstanding ability and makes use of facilities which provide exceptional opportunities for research and clinical training.

PLAN OF INSTRUCTION

The curriculum is a progressive one, beginning with basic medical science and expanding to include the more complex aspects of the prevention of disease and care of the sick. The teaching program is organized under the various departments of the School of Medicine. (See "Courses of Instruction", pages 39–57.)

The schedule for the first year begins with an orientation week designed to introduce the new students to the Faculty, to the upperclassmen, and to the environment for their medical education. The students meet for informal panel discussions with upperclassmen and members of the Faculty on such subjects as curriculum, medical terminology, use of library facilities, ethics and aims of the medical profession, and student health.

First year instruction is given in anatomy, biochemistry, and physiology using the classroom and laboratory facilities of the School of Medicine. Early in their medical careers students are encouraged to participate in research.

Having completed the preliminary study of structure and function of the normal body, the student progresses in the second year to a consideration of disease processes and mechanisms. The various microbial agents capable of causing disease are studied in the course in microbiology, and the effect of these and other harmful substances upon the body are studied in the course in pathology. The modes of action of various therapeutic agents are considered in the course in pharmacology. Introductory lectures and demonstrations in the clinical sciences are given during the second semester in order to prepare the student for the responsibilities of the following year.

In the third year the student is assigned to the University Hospital and affiliated hospitals for lectures, conferences, and clinical studies. He serves in the various divisions of the hospital assisting in the preparation of clinical records and performing certain clinical laboratory examinations. He learns to apply diagnostic and therapeutic procedures in the care of patients. During this period instruction is individual or in small groups. The instructor reviews the student's observations at the bedside and guides him in the development and application of his knowledge.

During the following summer each fourth year student is required to spend eight weeks in one of the clinical facilities of the School of Medicine. In the fourth year the student's responsibility for inpatient care continues and enlarges, but at least an equal part of his time is spent in the study and care of clinic patients. The University Hospital, the District of Columbia General Hospital, Children's Hospital, Mount Alto Veterans Administration Hospital, and St. Elizabeths Hospital provide the students with experience in many fields. In this final

year of formal medical education stress is placed upon the total patient and his environment so that emotional and economic as well as physical factors may be considered in the restoration of the individual to a state of health and happiness.

Upon satisfactory completion of the four-year course of the School of Medicine, the student is well prepared for graduate training leading to a career in general or specialty practice, research, medical education, or government service.

THE CURRICULUM

First Year

Subject	Lecture	Laboratory or Clerkship	Conference	Total
Anatomy				656
Biochemistry	64	192	32	288
Physiology	64	192	32	288
Disaster Medicine	16	—	—	16
Psychiatry	32	—	—	32
Total				1,280

Second Year

Subject	Lecture	Laboratory or Clerkship	Conference	Total
Microbiology	64	144	16	224
Pathology	64	136	32	232
Pharmacology	40	80	24	144
Physical Diagnosis	16	96	—	112
Psychiatry	32	48	—	80
Clinical Microscopy	16	32	—	48
Medicine	48	—	—	48
Surgery	32	—	—	32
Community Health	32	—	—	32
Pediatrics	32	—	—	32
Neurology	32	—	—	32
Obstetrics and Gynecology	16	—	—	16
Radiology	16	—	—	16
Forensic Pathology and Medical Jurisprudence	16	—	—	16
Dermatology	16	—	—	16
Total	472	536	72	1,080

Third Year

Subject	Lecture, Conference or Clinic	Laboratory or Clerkship	Total
Anesthesiology	16	—	16
Clinical Pathological Conference	16	—	16
Medicine	64	240	304
Medical Laboratory	—	60	60
Neurology	16	60	76
Obstetrics and Gynecology	96	120	216
Ophthalmology	16	—	16
Pediatrics	32	120	152
Physical Medicine	16	—	16
Psychiatry	16	—	16
Radiology	16	—	16
Surgery	112	240	352
Otolaryngology	16	—	16
Admitting and Emergency	—	120	120
Therapeutic Conference	32	—	32
Urology	16	—	16
Total	480	960	1,440

Summer Clerkship

Medicine, Surgery, Obstetrics and Gynecology *or* Pediatrics—eight weeks between third and fourth years.

Fourth Year

Subject	Lecture, Conference or Clinic	Laboratory or Clerkship	Total
Cancer Clinics	—	120	120
Clinical Pathological Conference	28	—	28
Forensic Medicine	12	—	12
Medicine	—	360	360
Obstetrics and Gynecology	—	240	240
Pediatrics	28	240	268
Psychiatry	—	120	120
Public Health Practice	5	—	5
Surgery	—	360	360
Surgical Anatomy	15	—	15
Surgical Pathology	12	—	12
Total	100	1,440	1,540

EQUIPMENT AND FACILITIES

Medical School Building.—The building housing the School of Medicine is a five-story structure with lecture rooms, classrooms, students' rooms, and the following laboratories: anatomy; biochemistry; microbiology; pathology; pharmacology; and physiology.

They are fully equipped to enable students to pursue adequately the laboratory courses and to acquire the technical skill necessary in modern clinical and investigative work.

Research and Administration Building.—The Research Building houses special laboratories for graduate and staff research in the departments of Anatomy; Biochemistry; Microbiology; Pharmacology; and Physiology. Special facilities are provided for the study of radioactive compounds, for tissue-culture techniques, and virologic procedures. Selected students are invited to participate in certain aspects of the research program either on a volunteer basis or with the support of special Research Scholarships.

On the first floor, the west wing is occupied by a modern medical library; the east wing houses the administrative offices of the School of Medicine. Photographic laboratories and other facilities for audiovisual aids to education are on the second floor.

Medical Library.—The Medical Library in well-equipped quarters on the first floor of 1339 H Street NW., contains 24,500 carefully selected volumes, including the new medical works and the principal medical journals.

Interlibrary loan service is maintained with other medical and scientific libraries.

The Medical Library is open from 9:00 A.M. to 10:00 P.M. each class day, Monday through Friday, and from 9:00 A.M. to 5:00 P.M. Saturday.

A branch of the Medical Library is maintained in the University Hospital for the use of the resident physicians, interns, and students. It is open Monday through Friday, 1:00 to 5:00 P.M. and 6:00 to 11:00 P.M. During the academic year the library is also open Saturday and Sunday from 1:00 to 5:00 P.M.

The George Washington University Hospital.—This 425-bed hospital is staffed and directed by the Faculty of The George Washington University School of Medicine. It provides excellent clinical opportunity for the instruction of medical students. Specialties in the fields of medicine and surgery have assigned space and equipment for the diagnosis and care of ambulatory and hospital patients.

Government Museums

The Armed Forces Institute of Pathology, on the grounds of Walter Reed Army Medical Center, affords unexcelled opportunity for study of conditions met in general medicine and surgery as well as those of special military significance. Its collection of anatomical and pathological specimens comprises material received from all areas of the world and is unequaled in this country. The Museum of Hygiene, the National Museum, the Smithsonian Institution, the Botanic Gardens, and the various collections of the Department of Agriculture all afford opportunity for study of materials of special interest in various areas of Medicine and its allied sciences.

CLINICAL FACILITIES

Students at The George Washington University School of Medicine receive clinical training at the University Hospital, at the University Cancer Clinic, and at affiliated hospitals.

The George Washington University Hospital.—The Medical Director and Chiefs of Services are responsible for the supervision of patient care. The individual student has direct responsibility to patients under supervision. Clinical and clinical pathological conferences are held in which the history of patients, laboratory records, and the physical and pathological findings are presented and correlated.

The University Clinics.—The University Clinics have facilities for each Service in the Hospital. Fourth-year students are assigned in rotation by section for instruction in the University Clinics.

The George Washington University Cancer Clinic.—The Helen L. and Mary E. Warwick Memorial Building, opened in 1954, houses the Cancer Detection Clinic and special laboratories for research related to the nature, diagnosis, and treatment of cancer.

The facilities of the Cancer Detection Clinic are used for teaching medical students. The diagnosis and treatment of various forms of neoplasms are presented. The results of treatment are evaluated by follow-up studies.

District of Columbia General Hospital.—The District of Columbia General Hospital, one of the ten largest general hospitals in the country, is a teaching facility for students of the School of Medicine.

The hospital has a bed capacity of approximately 1,400. It is the principal facility for the care of the indigent sick of the community. In 1960 the outpatient department had over 110,000 clinical visits. Approximately 200 patients are registered daily in the admitting and emergency service, of whom from 15 to 20 per cent are admitted to the Hospital. This is the largest emergency service in the District, and a great variety of acute medical problems and surgical cases are examined and treated. From 35 to 40 per cent of the patients are referred to the outpatient clinics for further diagnosis and treatment.

Children's Hospital.—This is one of the largest and best known hospitals for children in the United States. Medical students receive training and clinical experience in pediatrics on both clinic and inpatient services. Special lectures and clinical work in child psychiatry are given in Children's Hospital.

St. Elizabeths Hospital.—Saint Elizabeths Hospital, established by an act of Congress in 1855, is a federal psychiatric hospital administered under the Department of Health, Education, and Welfare. This Hospital provides for the treatment, care, and general well-being of approximately 8,000 patients. The facility includes a completely approved General Hospital to meet the needs for medical and surgical care and which functions with a full-time staff within the Hospital plus attending physicians in various specialties.

The Hospital maintains an up-to-date medical library.

The medical students of The George Washington University utilize the facilities of Saint Elizabeths for clinical psychiatric training.

The opportunities for research are enhanced by a cooperative arrangement with the National Institute of Mental Health of the United States Public Health Service.

Mt. Alto Veterans Administration Hospital.—This 335-bed hospital, commonly referred to as Mount Alto, is predominantly general medical and surgical, although 33 beds are reserved for the care of neurological and psychiatric patients.

The Hospital is equipped and operates with all modern facilities for care and treatment of patients, including a fully equipped medical library. In addition to its medical, surgical, neurological, and psychiatric facilities, the Hospital is desig-

nated to perform specialized treatment in a wide variety of fields. The psychiatric evaluation headquarters staff is located at this Hospital and has as its mission the investigation and evaluation of the psychiatric treatment program in the VA. The Hospital also has personnel assigned to, and cooperates closely with, the Armed Forces Institute of Pathology.

Fairfax Hospital.—This 300-bed suburban hospital which opened February 1961, is a teaching hospital serving an area with an estimated population of 300,000. In addition to its modernly equipped emergency room, outpatient facilities, surgical suites and delivery rooms, and private psychiatric unit, programs are offered for the training of nursing personnel.

ADMISSION

Application for Admission

1. Full directions for application will be furnished on request. The applicant should ask the registrar of each college previously attended to send an official transcript of record to the Director of Admissions, The George Washington University, 2029 G Street NW., Washington 6, D. C. Photostatic copies of credentials without the original signature of the certifying authority are not satisfactory. It is the responsibility of the applicant to see that all credentials are forwarded to the Director of Admissions of the University.

2. Two recent photographs, with signatures, are required of each applicant.

3. Applicants for admission are required to take the Medical College Admission Test, sponsored by the Association of American Medical Colleges, in advance of the academic year for which application is made.

4. A fee of $10 to defray the cost of completing the records for consideration by the Committee on Admissions must accompany each application. This fee applies to students whose premedical training was completed at this University as well as to students who have not previously attended this University.

Entrance Requirements

College Courses

Biology (including 4 hours of laboratory)	8
A course in either general biology or zoology	
Chemistry:	
Inorganic (including 4 hours of laboratory)	8
Qualitative analysis may be counted as part of this requirement.	
Organic (including laboratory)	6-8
The equivalent of a one-year college course	
English Composition and Literature	6
Physics (including at least 2 hours of laboratory)	8

With the exception of these specific requirements applicants are urged to follow their personal interests in developing their premedical courses of study. A well-balanced program, rather than a specific field, is the criterion by which an applicant is judged. It is not advisable to take courses that appear to cover subject matter in the medical program.

While well-qualified candidates are eligible for admission after completing the minimal 90 semester-hour requirement, the majority of applicants are found to be better prepared for the study of medicine after four years of college work.

Advanced Standing

A student who has satisfactorily completed part of the requirements for the degree of Doctor of Medicine may apply for advanced standing if his work has been equivalent to that required by The George Washington University School of Medicine. Before final admission to the third year class, the applicant must have passed Part I of the National Board Examinations.

Selection Procedures

The Committee on Admissions is guided in the selection of students by the applicant's academic ability, the results of the Medical College Admission Test, and personal qualifications as determined by letters of reference and personal interview. Applicants are interviewed on invitation by the Committee.

Each applicant is notified of the Committee's decision as soon as possible.

An applicant who is offered a place in a class is required, within two weeks, to notify the Director of Admissions of his intent to accept the place reserved for him. A deposit of $100 must be remitted not later than January 15th prior to the opening of classes of the academic year for which he applied. This deposit will not be refunded after January 15th. It will be credited toward the tuition for the first semester.

Accompanying the offer of a place in class will be forms for a report on physical condition. This report must be completed and returned to the Director of Admissions by the student's physician within two months of receipt of the letter of acceptance.

REGISTRATION

For the academic year 1962–63, registration will be conducted at the Medical School, 1335 H Street NW., from 10:00 A.M. to 4:00 P.M., September 13. Registration is for a period of one academic year.

FEES AND FINANCIAL REGULATIONS

The following fees have been adopted:

Application fee	$ 10.00
Tuition fee, for each academic year	1,200.00
Fee for special examinations, for each subject	5.00
Residence fee, charged each student granted "leave of absence" status for the academic year in the School of Medicine	50.00
Graduation fee	25.00

Payment of Fees

Fees for the year are $1,200, payable in two installments of $600 each in advance of the beginning of each semester.

All fees are payable at the Office of the Cashier of the University, 725 Twenty-first Street, NW., except as some other arrangement may be announced. Amounts due must be paid on or before registration day for the fall semester and on or before such date as may be announced by the Office of the Treasurer for the spring semester. (See the Calendar.)

Registration in the School of Medicine is *for the full academic year.* After a student has entered the courses of instruction he is obligated for the full tuition.

Acceptance by the School of Medicine of a student's fees does not in any way obligate the School to accept the student for any subsequent year and the right is reserved to require the withdrawal of any student whenever, in the interest of the student or the School, the Faculty deems it advisable to do so.

Credit for work will not be given until, at the completion of a laboratory course, the student has replaced or paid for all articles of equipment or other University property which he has lost, broken, or destroyed.

Cost of Textbooks and Student Equipment

The minimum cost of necessary textbooks and student equipment (microscope, drawing materials, glass slides, clinical thermometer, stethoscope, hemocytometer, uniforms, etc.) is approximately as follows: first year, $600; second year, $275; third year, $150; fourth year, $100; total $1125.

A fee of $1 a semester is charged for the use (optional) of a locker.

SCHOLARSHIPS, PRIZES, FINANCIAL AID

The following scholarships, prizes, and loan funds are limited to students in the School of Medicine. The University offers many others which are open to medical students. A special bulletin containing a complete list and full information may be obtained from the Chairman of the Committee on Scholarships, The George Washington University, Washington 6, D. C.

Scholarships

Scholarships awarded to students in the School of Medicine are credited for the academic year unless otherwise specified. Each holder must carry a full schedule of academic work during the period for which the scholarship is awarded. Applicants must have established an academic record in courses at this institution, and should apply on prescribed forms which must be filed in the Office of the Chairman of the Committee on Scholarships not later than April 1 preceding the academic year for which the scholarship is to be awarded.

Anna Bartsch Hospital Intern Scholarship.—Established in 1946 by Dr. Anna Bartsch-Dunne as a memorial to her mother, Anna Bartsch, and available to a woman intern in The George Washington University Hospital. Award is made upon the recommendation of the Hospital's Internship Committee.

Anna Bartsch Medical Student Scholarship.—Established in 1946 by Dr. Anna Bartsch-Dunne as a memorial to her mother, Anna Bartsch, and available to a woman in the School of Medicine, "of outstanding scholarship, character, and promise, who intends to make the practice of medicine her life profession." The award is made upon the recommendation of the Faculty of the School of Medicine.

Everett Lamont Bradley Scholarship.—Established in 1954 by bequest of Alice R. H. Bradley in memory of her son, Everett Lamont Bradley, and available to a student in the School of Medicine.

Research Scholarships and Traineeships.—For student participation in the research programs of the School of Medicine or special training in research methods. Research scholarships are ordinarily awarded for full-time activity during the summer months; research traineeships support part-time work during the academic year. Scholars are "matched" with members of the faculty in accordance with their mutual interests. Trainees are designated by the departments responsible for the programs. These programs have been sponsored by the National Institutes of Health,

the National Foundation, Lederle Laboratories, and the Tobacco Industry Research Committee.

David Perry Steinman Memorial Scholarship Fund.—Established in 1960 by friends and classmates, and awarded annually to a sophomore in the School of Medicine on the basis of need and academic performance.

University Hospital Scholarships in Medical Technology.—Ten scholarships are available, each to cover the cost of 24 semester hours of the 30 in the last year of the curriculum leading to the degree of Bachelor of Science in Medical Technology.

Prizes

Allie S. Freed Prize.—Established in 1957 by Mrs. Allie S. Freed, and awarded annually to a member of the graduating class in the School of Medicine who has demonstrated exceptional proficiency in the field of Preventive Medicine.

Alec Horwitz Prize.—Established in 1959 by Dr. Alec Horwitz is awarded annually to a member of the senior class who has demonstrated exceptional proficiency in the field of surgery.

Huron W. Lawson Prize.—Established in 1957 by Mrs. Huron W. Lawson in memory of her husband, Dr. Huron W. Lawson, who was a distinguished member of the Medical Staff of The George Washington University, is awarded annually to a member of the graduating class in the School of Medicine who has demonstrated exceptional proficiency in the field of Obstetrics and Gynecology.

Julius S. Neviaser Prize in Orthopedic Surgery.—Established in 1956 by Dr. Julius S. Neviaser, is awarded annually to the student in the junior class of the School of Medicine who scores the highest grade in a written examination in Orthopedics.

John Ordronaux Prize.—Awarded annually to the member of the graduating class of the School of Medicine who has the highest scholastic standing.

Financial Aid

The following loan funds are available to students in the University in accordance with the qualifications placed thereon by the donors. Inquiries should be directed to the Office of the Treasurer.

University Loan Fund.—The Trustees of The George Washington University have made available a fund for short-term loans to students to provide for partial payment of tuition. Applications for these loans must be made three days prior to the dates on which tuition installments are due.

Joseph H. Himes Loan Fund.—This fund contributed by Joseph H. Himes is available for loans to students in the School of Medicine.

Kellogg Medical School Loan Fund.—The W. K. Kellogg Foundation in Battle Creek, Michigan, has established a loan fund for students in the School of Medicine.

School of Medicine Loan Fund.—This fund, largely contributed by medical students, is available for loans to students in the School of Medicine.

National Defense Student Loan Fund.—This fund is available to full-time undergraduate and graduate students who are in need of financial assistance. Priority is given those applicants who express a desire to teach in elementary or secondary schools, and whose academic background indicates a superior capacity or preparation in science, mathematics, engineering, or a modern foreign language. After application for admission to the University has been completed, application on forms pre-

scribed for this loan fund must be filed in the Office of the Treasurer no later than July first for the fall semester, December first for the spring semester, and May first for the Summer Sessions.

Pfizer Medical School Loan Fund.—Chas. Pfizer & Co., Inc., has established a fund for loans to students in the School of Medicine.

Sutherland Medical School Loan Fund.—This fund, established by Mrs. Rose L. Sutherland, is available for loans to students in the School of Medicine.

REGULATIONS

Attendance

A student is not permitted to attend classes until registration has been completed and fees due have been paid. Regular attendance is required.

Grades

A—excellent; *B*—good; *C*—passing; *D*—condition; *F*—failure; *I*—incomplete. The passing grade in each subject is *C* or above.

The symbol *I* indicates that the required work of the course has not been completed for reasons acceptable to the Dean. An "incomplete" must be removed by arrangement with the department concerned before the student may advance to the work of the following year.

A student receiving a grade of *D* or *F* in any subject may not advance to the work of the following year until he has complied with such recommendations by the Committee on Scholarship as are approved by the Faculty.

Quality-Point Index

For purposes of quantitative evaluation of academic performance a "quality-point" index is computed on the basis of *A*, four points; *B*, three points; *C*, two points. If a condition, *D*, is removed one point is assigned. No points are assigned for a condition which is not removed or for a grade of *F*.

Examinations

Examinations, which may be written, oral, or practical, will be held during and at the end of each semester.

All students in the School of Medicine are required to take Part I and Part II of the National Board Examinations.

Graduation

Application for Graduation

Application for a degree should be filed in the Office of the Registrar by February 28 of the senior year.

Presence at Graduation

A candidate is required to be present at the graduation exercises unless written application for graduation *in absentia* is approved by the Dean.

Right to Dismiss Students

The right is reserved by the University to dismiss or exclude any student from the University, or from any class or classes, whenever, in the interest of the student or the University, the University Administration deems it advisable.

THE DEGREE OF DOCTOR OF MEDICINE

Upon the satisfactory completion of the requirements of the School of Medicine, the degree of Doctor of Medicine is conferred.

Combined Arts and Medicine Curriculum

In order to be recommended for the degree of Bachelor of Arts, the candidate must complete at least 90 semester hours of prescribed college work (at least 30 hours and one year of residence must be completed in Columbian College of Arts and Sciences) and the first year of the medical curriculum. Upon satisfactory completion of the fourth year of the medical curriculum the student becomes eligible for the degree of Doctor of Medicine.

REQUIREMENTS FOR THE DEGREE

Every candidate for graduation with the degree of Doctor of Medicine must be at least twenty-one years of age, and free of all indebtedness to the University. He must have completed satisfactorily not less than four academic years of study as a matriculated student in Medicine, completed all required courses, and passed satisfactorily all prescribed examinations.

Honors

A candidate who has completed the four-year medical course with a quality-point index of 3.50 or above, may be recommended by the Faculty for graduation "with distinction."

STUDENT LIFE

HEALTH ADMINISTRATION

The University maintains a health service that is primarily diagnostic in its intent. It also provides first aid in the event of an emergency.

Medical privileges include: (1) physical examination of every student entering from secondary school;* (2) three visits by the University physician or surgeon, office or residence (District of Columbia), in any one illness, exclusive of a specialist, surgical operation, laboratory, or X-ray examination; (3) hospitalization, including board and nursing, in the University Hospital for not more than one week during any twelve-month period—the necessity to be determined by the Director of Health Administration.† All additional hospital charges for operating room, laboratory, anesthetics, X-ray, medications, or any other special service must be paid by the student. The duration of hospitalization period (maximum, one week) is also to be determined by the Director of Health Administration.

This medical benefit applies only to illness or disability incurred while currently enrolled in the University. It does not apply to illness or disability incurred between the last day of examinations for a semester or summer session and completion of registration for the next semester or summer session.

The student is allowed, if he so desires, to engage physicians and nurses of his own choice, but when he does so he will be responsible for the fees charged.

Rules: (1) The Director of Health Administration is empowered to limit or deny the medical benefits where, in his discretion, a student has, by his misconduct or

* A charge for a special physical examination is made by the University if a student fails to appear for a physical examination during the period set for this purpose.

† See Rule (5) for exception.

breach of the rules of the University, made himself ineligible; (2) the Director of Health Administration has authority to determine the necessity and length of hospitalization; (3) a student not currently enrolled or one who has severed his connection with the University is ineligible for medical benefits: (4) a student intending to train for an athletic team is required to pass a thorough examination at the beginning of each semester; (5) hospitalization is not available to those students availing themselves of other hospitalization coverage for the same illness.

The University is not responsible for injuries received in intercollegiate or intramural games, or in any of the activities of the physical education departments.

Physical Examinations

All first-year students are required to have a comprehensive physical examination prior to admission to the School of Medicine. The students are informed of significant findings and advised regarding such measures as will tend to help them maintain a high standard of health.

In addition medical students benefit from the complete Tuberculosis Case Finding Program which the School maintains. Under this program all students receive tuberculin tests, X-ray examinations, and such special attention from chest specialists as is necessary to reduce to a minimum the dangers from tuberculosis. Students are immunized against those diseases for which proven prophylaxis exists.

LIVING ACCOMMODATIONS

The University maintains five residence halls. Meals are served at the Student Union.

Admission to the University does not include a room reservation. A separate application for a room should be made well in advance (for the fall semester by May first, for the spring semester by January first). Forms for application, together with detailed information, may be obtained from the Director of Activities for Women or the Director of Activities for Men.

Information concerning private rooming and boarding facilities near the University, for women students twenty-one years of age or older and for men students, may be obtained at the Housing Office, Lisner Auditorium. The reservation of rooms in private houses must be made by students.

All girls under the age of twenty-one, who are enrolled for twelve or more semester hours of academic work at the University and who are not living with their parents or relatives, may live outside the dormitory only with the permission and approval of the Director of Activities for Women, and upon receipt of written requests from parents. In no case will permission be granted for such girls to be domiciled outside the dormitories except with persons approved by the Director of Activities for Women.

Women Students.—Dolly Madison Hall provides double rooms at $40 a month a person.

Hattie M. Strong Hall provides single rooms at $47.50 a month and double rooms at $40 a month a person.

Men Students.—John Quincy Adams Hall provides double rooms each with study alcove and bath. Rooms rent for $40 a month a person.

Calhoun Hall provides double rooms at $40 a month a person.

Welling Hall provides double rooms at $30 a month a person.

HONOR SOCIETIES

Alpha Omega Alpha.—National Honor Medical Society. Members of the Junior and Senior classes meeting the qualifications specified by the constitution of the Society are eligible for election to membership.

William Beaumont Medical Society.—Medical students showing unusual ability for medical writing and research are elected by the active members of this society.

Howard Kane-A. F. A. King Obstetrical Society.—The fifteen students in the third and fourth year classes who maintain the highest grades in their work in obstetrics are eligible for membership.

Smith-Reed-Russell Society.—Students of the third and fourth years who maintain a scholastic average of 88 per cent are eligible for membership.

RECREATION

The nation's capital provides abundant recreational resources, a large number of which are available at little or no cost. There are numerous art galleries, museums, concert halls, theaters, swimming pools, parks, and places of great historic interest. There are, in addition, the usual commercial recreation facilities found in a large city. Social activities are provided by student organizations of the University, the School of Medicine, and University sponsored programs such as intramural sports, concerts, recitals, and dramatic productions. Almost every religious faith is represented in Washington by one or more churches, and much spiritual, educational, social, and recreational activity is conducted by the various church groups. There are many other cultural and educational facilities in Washington to meet almost any possible individual need or preference of a medical student and his family.

RIGHT TO CHANGE RULES

The University and its various colleges, schools, and divisions reserve the right to modify or change requirements, rules, and fees. Such regulations shall go into force whenever the proper authorities may determine.

THE UNIVERSITY HOSPITAL

The Medical Staff consists of the following groups: Emeritus, Honorary, University, and Courtesy.

Physicians on the faculty and staff of instruction of the School of Medicine are eligible for appointments to the University Hospital staff. The Administrator of the Hospital and the Director of Nursing are ex-officio members.

Office of the Medical Director

John Parks, M.D., *Medical Director*
Alvin Edward Parrish, M.D., *Co-ordinator of Clinical Activities*
Alfred Brigulio, M.D., *Secretary of the Medical Staff*
Clayton Bernard Ethridge, M.D., *Director of Post Graduate Medical Education*
Laura Beasley Brown, *Secretary, Office of the Medical Director*

Departments and Sections

Department of Anesthesiology: Charles Seymour Coakley, M.D., *Chief*
Department of Medicine: Thomas McPherson Brown, A.B., M.D., *Chief*
Section of Allergy: Halla Brown, M.D., *Chairman*
Section of Cardiology: John McCallum Evans, A.B., M.D., *Chairman*
Section of Dermatology: Harry Ford Anderson, M.D., *Chairman*
Section of Gastroenterology: Thomas Stone Sappington, A.B., M.D., *Chairman*
Section of Infectious Diseases: Monroe James Romansky, A.B., M.D., *Chairman*
Section of Internal Medicine: Clarence Richard Hartman, AB., M.D., *Chairman*
Section of Metabolic Diseases: Louis Katz Alpert, M.D., *Chairman*
Section of Pulmonary Diseases: James Joseph Feffer, A.B., M.D., *Chairman*
Department of Neurology and Neurological Surgery: James Winston Watts, M.D., *Chief*
Department of Obstetrics and Gynecology: Robert Henry Barter, B.S., M.D., *Chief*
Department of Ophthalmology: Ronald Atmore Cox, A.B., M.D., *Chief*
Department of Pathology and Clinical Pathology: Thomas Martin Peery, A.B., M.D., *Chief*
Department of Pediatrics: William Allen Howard, A.B., M.D., *Chief*
Department of Physical Medicine and Rehabilitation: Charles Samuel Wise, B.S., M.D., *Chief*
Department of Psychiatry: Leon Yochelson, A.B., M.D., *Chief*
Department of Radiology: William Woodrow Stanbro, M.D., *Chief*
Department of Surgery: Brian Blades, A.B., M.D., *Chief*
Section of General Surgery: Brian Blades, A.B., M.D., *Chairman*
Section of Oral Surgery: Karl Hayden Wood, Phar.G., D.D.S., *Chairman*
Section of Orthopedics: John Pletch Adams, B.S., M.D., *Chairman*
Section of Otorhinolaryngology: James Jerry McFarland, Jr., B.S., M.D., *Chairman*
Section of Plastic Surgery: Gordon Sparks Letterman, B.S., M.D., *Chairman*
Section of Urology: Leon Richard Culbertson, B.S., M.D., *Chairman*
Electroencephalographic Laboratory: Harold Stevens, Ph.D., M.D., *Director*
Heart Station: John McCallum Evans, A.B., M.D., *Director*
Outpatient Department: Clarence Richard Hartman, A.B., M.D., *Director*
Cancer Clinic: Calvin Trexler Klopp, A.B., M.D., *Director*
Cytology Laboratory: Lois Irene Platt, A.B., M.D., *Director*
Nursing: Margaret Emanuel, R.N., M.S., *Director*

THE GEORGE WASHINGTON UNIVERSITY HOSPITAL

The George Washington University Hospital, with a capacity of 427 beds, is a modern teaching facility for students of the School of Medicine and House Staff. Annual admissions number approximately 20,000; clinic visits are about 40,000 a year. The University Hospital is on Pennsylvania Avenue at Washington Circle.

It is fully approved by the American Medical Association, the American Hospital Association, the American College of Surgeons, and the Joint Commission for the Accreditation of Hospitals.

The Council on Medical Education and Hospitals of the American Medical Association and the various specialty boards have approved the University Hospital for residency training in anesthesiology, cardiac disease, internal medicine, neurology, neurological surgery, obstetrics-gynecology, pathology, physical medicine and rehabilitation, plastic surgery, psychiatry, radiology, surgery, and thoracic surgery. In addition, it has mixed internships majoring in medicine, pathology, and surgery.

Junior and senior students of the School of Medicine are assigned to the University Hospital as clinical clerks and in the outpatient department. Regular conferences for students, house staff, and attending physicians are held.

The George Washington University Cancer Clinic, housed in the nearby Helen L. and Mary E. Warwick Memorial Building is part of the University Hospital clinical facilities. Cancer detection and chemotherapeutic and follow-up care, including a supervised home-care program, are among the activities of the Clinic. Approximately 2,500 new patients are seen in the Cancer Clinic each year. Excellent research laboratories form an important part of this facility. The Clinic has been approved by the American College of Surgeons.

Other major teaching activities include a residency program in hospital administration; close affiliation with the University's graduate program in hospital administration; programs in Medical Technology leading to the Bachelor of Science degree as well as to a certificate; and an affiliation for the training of practical nurses.

The Hospital has an excellent branch medical library. The House Staff can also arrange to use libraries of the School of Medicine and the University and the outstanding city and federal libraries and record collections.

INTERN PROGRAMS

For 1962–63, the University Hospital will offer the following internships, classified by the National Intern Matching Program, Inc.: eight straight internships in Internal Medicine, eight mixed internships with Internal Medicine as the major component, twelve mixed internships with Surgery as the major component, and two straight internships in Pathology.

RESIDENT PROGRAMS

Fifty-five approved residencies are offered in anesthesiology, cardiac diseases, internal medicine, neurologic surgery, neurology, obstetrics-gynecology, orthopedic surgery, pathology, physical medicine, plastic surgery, psychiatry, roentgenology, surgery and thoracic surgery. Residency programs are from one to four years in duration, depending upon the service. Residents in the University Hospital also receive appointments as members of the faculty of the School of Medicine with active teaching responsibilities.

FELLOWSHIP PROGRAMS

Fellowships, through the School of Medicine, of one or two years are available in anesthesiology, cardiology, chest diseases, gastroenterology, hematology, infectious diseases, metabolic diseases, outpatient service, physical medicine, renal diseases, rheumatic disease, surgery and thoracic surgery.

All appointments are for one year with the privilege of applying for continuation on the House Staff. In several of the intern, residency, and fellowship programs, excellent affiliations are maintained with local and governmental hospitals. Inquiries and applications for internships and residencies should be addressed to the Chief of the Department or to the Medical Director; the George Washington University Hospital, 901 23rd Street, NW., Washington 7, D. C.

Information relative to fellowships may be obtained from the Chief of the Department concerned or from the Director of Postgraduate Medical Education, in care of the Hospital.

MEDICAL TECHNOLOGY COURSE

This course is open to candidates for the degree of Bachelor of Science in Medical Technology, offered by Columbian College of Arts and Sciences, and to other applicants meeting the requirements of the Registry of Medical Technologists of the American Society of Clinical Pathologists. These requirements, fully satisfied by the Columbian College program, consist of 3 years (90 semester hours or 135 quarter hours) of college work in any college or university accredited by a recognized standardizing association, including certain specific courses in the science field. The specific science requirements are as follows: *Chemistry*—a minimum of 4 semesters or 6 quarters (16 semester hours or 24 quarter hours) of studies acceptable toward a major in chemistry and including lecture and laboratory; *Biologic Sciences*—a minimum of 4 semesters or 6 quarters (16 semester hours or 24 quarter hours) of studies acceptable toward a major in biologic science and including lecture and laboratory; *Mathematics*—a minimum of 3 semester hours or 4 quarter hours of college mathematics.

For students enrolled in Columbian College of Arts and Sciences as candidates for the degree of Bachelor of Science in Medical Technology, the Medical Technology Course constitutes the final (fourth) year of qualification for the degree.

In the case of those who have taken their prerequisite work in some other college or university, satisfactory completion of the Medical Technology Course will not satisfy the requirements for the degree from Columbian College.

The Medical Technology Course consists of 12 months of didactic and practical work in clinical laboratory procedures, offered by the Department of Pathology in the University Hospital. Students ordinarily begin this course with the fall semester, but under exceptional circumstances may begin at other times.

A limited number of scholarships are provided by the University Hospital for students enrolled in the fourth year of the degree program. (See page 30.) All students in this fourth year must provide themselves with uniforms; laundry of uniforms is provided by the University Hospital. A cash allowance of $65 a month is granted during the last 6 months of the fourth year in training.

Upon satisfactory completion of the course a certificate is awarded and the candidate is eligible for the national certifying examination given by the Registry of Medical Technologists.

Enrollment in the Medical Technology Course is strictly limited so that personal instruction can be given. Acceptance to the Columbian College degree program does not necessarily assure acceptance into the Hospital program. Inquiry about this course should be sent directly to the Department of Pathology, The George Washington University Hospital, Washington 7, D. C.

COURSES OF INSTRUCTION

On the following pages of this BULLETIN, are listed the courses of instruction offered by the School of Medicine. The School of Medicine serves other divisions of the University by making available to nonmedical students certain undergraduate and graduate courses in the following fields: Anatomy, Microbiology, Biochemistry, Pathology, Pharmacology, Physical Medicine, and Physiology. The courses listed are subject to some slight change. The University reserves the right to withdraw any course announced.

EXPLANATION OF COURSE NUMBERS AND SYMBOLS

A number in parentheses after the name of a course indicates number of semester hours of credit which may be earned by nonmedical students.

First-year courses are numbered from 101 to 200; second-year courses, from 201 to 300; third-year courses, from 301 to 400; and fourth-year courses, from 401 to 500.

Courses offered in the School of Medicine for nonmedical students.—Courses numbered from 101–200 are planned for upper-division students in undergraduate curricula. They may be credited toward higher degrees only when registration for graduate credit has been approved at the beginning of the course by the dean responsible for the graduate work and by the officer of instruction, and when the completion of additional work has been certified by the officer of instruction. Courses numbered from 201 to 500 are planned for graduate students.

ANATOMY *

Professors I. R. Telford *(Executive Officer)*, Paul Calabrisi
Professorial Lecturer T. D. Stewart
Associate Professors F. D. Allan, T. N. Johnson
Assistant Professors J. B. Christensen, J. C. Bartone
Clinical Instructors R. N. Brown, L. E. Church, L. C. Dearden

---

Special Lecturer B. S. Blumberg

101–2 *Gross Anatomy* — Calabrisi and Staff

Academic year: fall—20 hours a week; spring—3 hours a week. Regional dissection of the human body, supplemented with lectures and quiz sections. Study of X ray anatomy to emphasize the functional aspects of the position, shape, and relation of the viscera and skeletal components.

103 *Human Embryology* — Allan and Staff

Spring—3 hours a week. The origin and development of the human body. Special emphasis on the value of embryology in interpreting anatomical anomalies and variations as seen in gross dissection, surgery, obstetrics, and pathology.

* The Staff of Instruction here listed is for the academic year 1961–62.

104 *Neuroanatomy* — Johnson and Staff

Fall—5½ hours a week. The macroscopic and microscopic study of the central nervous system and the special sense organs. Emphasis on such dynamic aspects as development, pathways, lesions, etc.

105 *Microscopic Anatomy* — Telford and Staff

Fall—9 hours a week. Study of the detailed minute structure of cells, tissues, and organs of the human body, with emphasis on the relation of structure to function. Recognition and interpretation of histological sections tested by practical examinations.

201–2 *Gross Anatomy* (8–2) — Calabrisi and Staff

Academic year—as arranged. For qualified nonmedical graduate students. Same as Anatomy 101–2. Anatomy 201—laboratory fee, $21; Anatomy 202—laboratory fee, $16.

203 *Human Embryology* (2) — Allan and Staff

Spring—as arranged. For qualified nonmedical graduate students. Same as Anatomy 103. Laboratory fee, $8.

204 *Neuroanatomy* (3) — Johnson and Staff

Fall—as arranged. For qualified nonmedical graduate students. Same as Anatomy 104. Laboratory fee, $13.

205 *Microscopic Anatomy* (4) — Telford and Staff

Fall—as arranged. For qualified nonmedical graduate students. Same as Anatomy 105. Laboratory fee, $13.

221–22 *Seminar* (1–1) — Telford and Staff

Academic year: 1 hour a week—as arranged. Research reports and discussions of special topics by the Staff and graduate students. For graduate students. Medical students are encouraged to attend.

249–50 *Introduction to Medical Research** (3–3) — The Staff

Fall—Wed., 1:00 to 6:00 P.M.; spring—Wed., 8:00 A.M. to 2:00 P.M. Primarily for graduate students. A comprehensive introduction to the major medical research techniques—statistical, physical, chemical, electrical, and radioisotopic—as applied to biological materials in the medical sciences. Laboratory fee, $7.50 a semester.

295–96 *Research* (arr.) — The Staff

Academic year—as arranged. Fee to be arranged.

299–300 *Thesis* (3–3) — The Staff

ANESTHESIOLOGY†

Professors C. S. Coakley *(Executive Officer)*, Seymour Alpert
Clinical Professor D. H. Stubbs
Associate Professor C. R. MacCordy
Assistant Professors Paula Kaiser, Maria Benzinger
Assistant Clinical Professor S. N. Albert
Intructors H. E. Curtis, Helene Werner, Patricia Russell, Virginia Porter
Clinical Instructors W. E. Bageant, Allen Widome, Charles Gruenwald

* This is an interdepartmental course. The student should register in the department directing his research.

† The Staff of Instruction here listed is for the academic year 1961–62.

Fellows Marie-Louise Levy, Asakatsu Suzuki
Assistants Arsacio Abella, R. A. Hilloowala, Tetsuji Kiba, Arthur Peschin, Corazon Santiago, A. de J. Taboada, W. T. Wong

320 *Anesthesiology* — The Staff
Spring—1 hour a week. The fundamentals of anesthesia are reviewed and correlated with other medical specialties.

421–22 *Anesthesia Seminar* — The Staff
Academic year—1 hour a week. Students attend anesthesia seminars during their surgical clinical clerkships. University Hospital.

433–34 *Advanced Anesthesiology* — The Staff
Academic year—as arranged. Students are rotated through the work of the department for a period of two weeks and assigned to work in the operating rooms and to attend conferences and seminars. For the more advanced students a three-week elective is offered.

BIOCHEMISTRY*

Professors J. H. Roe *(Emeritus)*, C. R. Treadwell *(Executive Officer)*
Professorial Lecturers W. R. Carroll, Irving Gray, Arthur Weissbach
Associate Professor B. W. Smith
Associate Professorial Lecturer Leon Swell
Assistant Professors G. V. Vahouny, J. M. Bailey
Associate H. W. Clark, Jr.
Fellows Concordia Borja, R. R. Gray, R. M. Mayer, S. I. Sherr

113–14 *Biochemistry* — The Staff
Academic year: lecture (2 hours), conference (1 hour), laboratory (6 hours)—as arranged. Physiological and clinical chemistry. For medical students.

221–22 *Biochemistry* (4–4) — Vahouny
Academic year—Tues. and Thurs., 9:00 to 12:00 A.M. and 1:00 to 2:00 P.M. A lecture and laboratory course for nonmedical students. Prerequisite: Chemistry 22 and 152. Material fee, $15 a semester.

224 *Biochemistry of the Enzymes* (1) — Weissbach
Spring—Mon., 5:00 P.M. Lecture course dealing with the biochemistry of the enzymes and enzyme reactions. Prerequisite: Biochemistry 113 or 221.

225–26 *Biochemical Procedures* (3–3) — Smith and Staff
Academic year—as arranged. A laboratory course. Material fee, $16 a semester.

227–28 *Biochemistry Seminar* (1–1) — The Staff
Academic year—Fri., 4:00 P.M. The current literature in the field of biochemistry, mainly for graduate students, but open to a limited number of specially qualified medical students.

232 *Proteins and Amino Acids* (1) — Carroll
Spring—Wed., 5:00 P.M. A lecture course. Prerequisite: Biochemistry 113 or 221.

241 *Isotopes* (2) — Gray
Fall—Sat., 8:00 A.M. Theoretical characterization of isotopes and their applications in biology. Attention will be given to counting, health physics and radiation safety, autoradiography and chromotography.

* The Staff of Instruction here listed is for the academic year 1961–62.

249–50 *Introduction to Medical Research** (3–3) Bailey
Fall—Wed., 1:00 to 6:00 P.M.; spring—Wed., 8:00 A.M. to 2:00 P.M. Primarily for graduate students. A comprehensive introduction to the major medical research techniques—statistical, physical, chemical, electrical, and radioisotopic—as applied to biological materials in the medical sciences. Laboratory fee, $7.50 a semester.

251 *Carbohydrate Metabolism* (1) Roe
1962–63 and alternate years: Fall—Sat., 9:00 A.M. A lecture course. Prerequisite: Biochemistry 114 or 222.

261 *Biochemistry of the Lipids* (1) Swell, Treadwell
Fall—Sat., 12:00 A.M. A lecture course. Prerequisite: Biochemistry 114 or 222.

295–96 *Research in Biochemistry* (arr.) The Staff
Academic year—as arranged.

299–300 *Thesis* (3–3) The Staff

DERMATOLOGY AND SYPHILOLOGY†

Professor H. F. Anderson *(Executive Officer)*
Assistant Clinical Professors Hayden Kirby-Smith, J. Q. Gant, Jr., W. G. Ballinger
Associates W. M. Willett, Reuben Goodman, C. S. Brown
Clinical Instructor Manuel Landman

214 *Dermatology and Syphilology* The Staff
Spring—1 hour a week. Lectures on diseases of the skin and syphilis.

317–18 *Clinic* Brown
Case demonstrations, diagnosis, and treatment of skin diseases and syphilis. D. C. General Hospital.

407–8 *Clinic* The Staff
Two hours a week as arranged in rotation during academic year. Dermatology and syphilology in infants and children. Children's Hospital.

409–10 *Clinic* The Staff
Two hours a week as arranged in rotation during academic year. Clinical demonstrations, diseases of the skin. University Hospital.

MEDICINE†

Professors T. M. Brown *(Executive Officer)*, M. J. Romansky, L. K. Alpert, J. M. Evans, C. B. Ethridge
Associate Professors A. E. Parrish, C. R. Hartman
Associate Clinical Professors Pearl Holly, J. J. Feffer, A. G. Prandoni, Halla Brown, O. R. Farley, D. C. Sun, Janet Travell, T. S. Sappington
Assistant Professors S. W. Bush, W. R. Felts, Jr., G. A. Kelser, Jr., M. H. Jacobson, H. H. Orvis, Irene Siu, R. C. Fowler, Ariel Hollinshead *(Research)*, Mary Watt

* This is an interdepartmental course. The student should register in the department directing his research.
† The Staff of Instruction here listed is for the academic year 1961–62.

Assistant Clinical Professors J. A. Reed, T. J. Abernethy, Benjamin Manchester, J. E. Smith, J. W. Trenis, L. E. Putnam, Elizabeth Hill, J. E. Rall, L. J. Thomas, M. H. Stolar, Alfred Brigulio, S. J. N. Sugar, Joseph Ney, Joseph Beinstein, F. S. Bacon, H. D. Ecker, J. J. Rheingold, Irene Tamagna, J. W. Latimer, Jr., C. W. Jones, C. W. Thompson, E. S. Gladsden, Maurice Mensh, Arthur Rosenbaum, F. J. Murray, E. P. Parker III, M. H. Rosenberg, J. W. DuChez, W. O. Bailey, Jr., Milton Gusack, Jack Kleh, T. A. Gonder, Rashid Massumi, Ruth Benedict, H. M. Silver, H. E. Ticktin, J. P. Nasou, David Horwitz, B. C. Jones, Jr., E. L. Kehoe, R. F. Manegold, W. H. Whitmore, Jr.

Associates Maurice Protas, R. B. Castell, S. T. Gibson, R. B. Miller, Ernest Cotlove, T. J. Kennedy, Jr., Jack Orloff, J. B. Marbury, Louis Ross, F. D. Chapman, L. H. Snyder, R. G. Taylor, J. W. Long, Irvin Kerlan, Virginia Beelar, L. S. Blumenthal, S. W. Kirstein, J. F. Ambury, R. N. Coale, Israel Kessler, W. D. Brill, Marvin Fuchs, W. J. Weaver, Jr., J. T. Burns, T. L. Hartman, Boris Rabkin, M. H. Rose, C. A. Schulman, L. A. Craig, Jr., A. W. Danish, Adolph Friedman, Alvin Seltzer, S. D. Loube, Alfred Baer, Herbert Abramson, J. H. Pert, John Walsh, C. E. Law, E. L. Rea, J. P. Mann, Conrad Gossels, H. O. Mott, Bertle Nelson, W. J. Schewe, J. H. Watson, N. H. Rubenstein, D. M. Watkin, Edward Adelson, G. J. Fisher, W. L. Stone, B. H. Ostrow, C. D. Cooper, R. R. Belton, S. C. Pascoe, W. R. Ehrmantraut, C. A. Caceres, G. A. Chapman, F. M. Gross, Eleanor Makel

Instructors N. C. Kramer, W. F. Morrissey

Clinical Instructors E. H. Bauersfeld, H. C. Bates, Jr., Jeanne Bateman, George Sharpe, William Lewis, M. A. Sislen, C. J. Savarese, Jr., B. R. Cooperman, M. G. Sherer, J. C. Mandes, R. L. Howard, Walter Kurland, E. J. Leonard, R. S. Gordon, Jr., Jack Crowell, D. S. Davis, J. W. Roark, J. H. Epstein, G. C. Buchanan, F. K. Harris II, Audrey Connor, H. I. Passes, C. W. Foulke, Margaret McCabe, A. A. Lear, O. W. Donnelly, R. F. Dyer, R. S. Poole, P. R. Vagelos, H. C. Sadin, S. J. Talpers, G. T. Economos, Irwin Ardam, S. W. Dejter, S. E. Barr, H. A. Moskovitz, J. T. Hagenbucher, G. N. Polis, J. L. Clifford, Daniel Deykin, Catherine Ray, H. G. Rose

Fellows P. J. Carpentier, J. A. Jiminez-Guevara, Richard Kaufman, Yutaka Ohsaki, Vincent Pateras, A. L. Pinkerson, Andree Thomas, E. W. Walters, Leslie Wiener

Assistants Manuel Angoso-Dufoureq, R. A. Apter, F. J. Borsody, D. B. Cameron, S. J. Conway, D. W. Datlow, F. M. Downey, Jr., M. A. Eufemio, L. H. Fenton, A. S. Gooch, D. D. Haut, G. G Kay, Constance Lapointe, Gonzalo Lo, Herbert Lubowitz, Frederick Meyers, Hugh Miller, J. P. Mudry, Henry Schindelar, Barbara Solomon, M. F. Wildemann

---

Special Lecturers A. D. Kistin, W. K. Myers, Sol Katz, R. W. Berliner, Henry Field, Jr., T. H. McGavack, P. D. Comanduras, W. L. Nalls, Roy Hertz, Albert Sjoerdsma, W. H. Crosby, D. S. Frederickson, Pierre Tulou, J. L. Goddard

106 *Living Anatomy* — The Staff

Spring—1 hour a week. An introduction to physical diagnosis, with special emphasis on topographical anatomy.

236 *Clinical Microscopy* — The Staff

Spring—3 hours a week. Conferences and studies in the clinical application of laboratory examinations of blood, body fluids, exudates, excreta.

242 *Physical Diagnosis* — The Staff
Spring—6 hours a week. Covers not only theoretical but practical application of principles of physical diagnosis as related to examination of patients.

243–44 *Introduction to Medicine* — The Staff
Academic year—2 hours a week. Lectures covering the principles of internal medicine preparatory to clinical studies and training in the inpatient and outpatient services.

325–26 *Clinical Clerkship* — The Staff
Eight weeks as arranged during academic year. Training with bed patients under individual instruction designed to develop ability in examination of patients and case taking as well as practice in clinical microscopy. D. C. General Hospital.

327 *Clinical Pathological Conferences I* — The Staff
Fall—1 hour a week. Conferences are held at the School of Medicine. Case histories are presented and discussed by the students and members of the Staff. Clinical, laboratory, and necropsy findings are compared.

339–40 *Therapeutic Conferences* — Staff of Medicine and Pharmacology
Academic year—1 hour a week. Conferences designed to emphasize the application of pharmacological principles to the problems of clinical medicine. University Hospital.

349–50 *Medical Conferences* — The Staff
Academic year—2 hour a week. D. C. General Hospital.

421–22 *Outpatient Clinics* — The Staff
Six weeks as arranged during academic year. Individual case studies under personal supervision of the Staff. Daily clinics on current medical problems and seminars stressing physiological aspects of diseases. Individual examinations and instruction in medical specialties. University Hospital.

423–24 *Clinical Clerkship* — The Staff
Six weeks as arranged during academic year. University, Mt. Alto, and D. C. General hospitals.

427–28 *Clinical Pathological Conferences II* — The Staff
Academic year—1 hour a week. Continuation of Medicine 327.

429–30 *Clinical Pathological Conferences III* — The Staff
Academic year—1 hour a week. Conferences are held at the University Hospital. Attendance is required of students during their medical clerkships there.

MICROBIOLOGY *

Professors R. G. Beachley *(Emeritus)*, A. M. Griffin, Mary Robbins *(Acting Executive Officer)*, R. C. Parlett
Clinical Professor Murray Grant
Associate Professor Rudolph Hugh
Assistant Professor R. C. Wood
Clinical Instructor A. H. Traum
Associates W. D. Hann, G. B. Pelleu, Jr.
Fellows Mary Flesner, Julian Hoptman, J. W. Pearson

Special Lecturers L. S. Baron, R. C. Cook, C. W. Emmons, F. B. Gordon, Leon

* The Staff of Instruction here listed is for the academic year 1961–62.

Jacobs, M. C. Leikind, J. D. MacLennon, H. J. Magnuson, W. J. Peeples, G. O. Pierce

112 *General Microbiology* (4) — Hugh

Spring—Mon., Wed., and Fri., 9:10 to 12:00 A.M. For nonmedical students. A study of the fundamentals of bacteriology, including hygienic applications. Methods of cultivation and control of several groups of microorganisms are studied in the laboratory. Prerequisite: any biological laboratory science; Chemistry 11–12. Laboratory fee, $13.

209 *Medical Microbiology* (1 to 11) — The Staff

Fall: lecture (4 hours), laboratory (10 hours)—as arranged. Bacteria, rickettsia, viruses, yeasts, molds, protozoa, and metazoa which relate to the health and diseases of man—cultural study of most important forms; methods of diagnosis by microscopic, cultural, immunologic, and animal reactions; theory and methods of immunology; vaccines; serums; antibiotics. Open to suitably prepared graduate students; may be elected as a whole or in part by adding the appropriate letter to the course number, with credit allocated as follows: (a) *Bacteriology*, including rickettsia and viruses—lecture (4), laboratory (3); (b) *Parasitology*, including medical mycology—lecture (2), laboratory (1); (c) *Immunology* (1). May be taken by a limited number of candidates for Master's degrees. Laboratory fee, $4.50 for each semester hour of laboratory work.

210 *Fundamentals of Epidemiology and Preventive Medicine* (2) — Grant

Spring—Mon., 2:00 to 4:00 P.M. Sources, modes, and implications of infection and injury. Consideration also given the problem of accidents and industrial medicine. Open to liberal arts graduate students. Prerequisite: Microbiology 112 or 209.

219–20 *Advanced Microbiology* (arr.) — Hugh and Staff

Academic year—as arranged. Special study of advanced methods and current problems in microbiology for suitably qualified students specializing in microbiology. Prerequisite: Microbiology 112 or 209; Chemistry 151–52 or the equivalent; permission of the instructor. Laboratory fee, $4.50 a semester hour.

225 *Bacterial Chemistry and Physiology* (2) — Wood

1963–64 and alternate years: fall—as arranged. A lecture course in those areas of biochemistry peculiar to Class Schizomycetes, including discussion of the use of bacteria in the elucidation of biochemical problems. Prerequisite: Biochemistry 221–22 or the equivalent. A course in microbiology is recommended but is not essential.

232 *Immunological Methods* (3) — The Staff

1962–63 and alternate years: spring—as arranged. Preparation and testing of serological materials. Demonstration of basic serological phenomena. For graduate students. Prerequisite: Microbiology 112 or 209 and permission of the instructor. Laboratory fee, $11.

234 *Virology* (6) — Robbins

1963–64 and alternate years: spring—as arranged. Study of viruses and rickettsia. Lectures and laboratory exercises. For graduate students. Prerequisite: Microbiology 112 or 209 and permission of the instructor. Laboratory fee, $16.

240 *Advanced Epidemiology* (3) — The Staff

Spring—as arranged. Conferences, readings, and problems for graduate students dealing with specialized and advanced phases of the topics presented in Microbiology 210. Prerequisite: Microbiology 210.

249–50 *Introduction to Medical Research** (3–3) — The Staff

Fall—Wed., 1:00 to 6:00 P.M.; spring—Wed., 8:00 A.M. to 2:00 P.M. Primarily for graduate students. A comprehensive introduction to the major medical research techniques—statistical, physical, chemical, electrical, and radioisotopic—as applied to biological materials in the medical sciences. Laboratory fee, $7.50 a semester.

* This is an interdepartmental course. The student should register in the department directing his research.

293–94 *Staff Seminar* (1–1) — The Staff
Academic year as arranged. For graduate students. Bi-weekly throughout the year.

295–96 *Research in Microbiology* (arr.) — The Staff
Academic year—as arranged.

299–300 *Thesis* (3–3) — The Staff

401 *Public Health Practice* — Beachley and Staff
Fall—1 hour a week for 5 weeks. Study of public health practice at national, state, city, and county levels. Public and private agencies.

NEUROLOGY AND NEUROLOGICAL SURGERY*

Professors J. W. Watts *(Executive Officer)*, Harold Stevens
Associate Clinical Professors R. H. Groh, J. M. Williams
Assistant Clinical Professors J. P. Murphy, H. V. Rizzoli, A. S. Dekaban, Harvey Ammerman, G. J. Hayes
Associates G. D. Weickhardt, C. A. Marsan, A. J. Levens
Clinical Instructors M. C. Korengold, J. T. Lord, N. H. Horwitz, Z. W. Sanders, Ntinos Myrianthopoulos, R. H. Robertson, R. A. Mendelsohn, Ruth Jakoby, Virginia Duggins, L. C. McHenry, Jr., A. P. Hustead
Fellows Kristoff Abraham, J. L. Fox
Assistants R. J. Bortnick, H. Z. Gokalp

249 *Neurology: Basic* — Stevens, Williams
Fall—1 hour a week. Methods used to study the form and function of the nervous system. Lectures and laboratory demonstrations.

250 *Neurology* — Stevens and Staff
Spring—1 hour a week. Introductory lectures on clinical neurology with specimens, lantern slides, and motion pictures.

331 *Neurology and Neurological Surgery* — Watts, Stevens
Fall—1 hour a week. Clinical lectures and demonstrations.

333–34 *Neurology and Neurological Surgery, Clinical Clerkship* — Stevens, Williams, Ammerman
In conjunction with Neurology 335–36. Two weeks in rotation as arranged during academic year. Instruction in history, physical examination, ordinary clinical procedures. Attendance at neurosurgical operations. Six students in rotation. D. C. General Hospital.

335–36 *Neurosurgical Conferences* — Watts and Staff
Clinical conferences weekly. Six students in rotation. D. C. General Hospital.

431–32 *Neurology and Neurological Surgery Clinic* — Levens, Rizzoli
Two hours a week for three weeks in rotation as arranged during academic year. Neurological outpatient clinic. Consultation of staff on ambulatory cases, demonstration of diagnostic procedures. Six students in rotation. University Hospital.

433–34 *Clinical Neurology* — Groh, Sanders
Two hours a week for three weeks in rotation as arranged during academic year. Neurological inpatient examinations and demonstrations. Six students in rotation. St. Elizabeths Hospital.

* The Staff of Instruction here listed is for the academic year 1961–62.

435–36 *Neurological Surgery (elective)* — The Staff
Academic year—bi-monthly Lectures and motion picture demonstration of neurosurgical problems.

OBSTETRICS AND GYNECOLOGY*

Professors John Parks, R. H. Barter *(Executive Officer)*
Clinical Professor George Nordlinger
Associate Clinical Professor S. M. Dodek
Assistant Professors J. G. Sites, W. P. McKelway
Assistant Clinical Professors J. K. Cromer, J. A. Dusbabek, C. K. Fraser, Caroline Jackson, T. M. Leonard
Associates B. W. Richwine, F. S. Rogers, R. M. Roll, W. T. Lady, J. W. Pearson, Jr., Shirley Martin, N. J. Price, T. A. Wilson, M. S. Kaufman, M. P. Footer, J. C. Walsh
Clinical Instructors J. R. Epstein, S. H. Shea, A. S. Bright, R. E. Bieren, Donald Walters, J. M. Friedman, L. M. Liverett, W. H. Cooper, Peter Soyster, H. P. Treichler, I. W. Rovner, M. W. Sandmeyer, Jr., N. M. Tart, Elizabeth Crisp, L. W. Davis, J. F. Pauly, A. W. Winshel
Assistants R. J. Abaunza, S. M. Belinsky, D. R. Carlson, E. E. Cunningham, R. V. Erkenbeck, E. R. Kolvereid, J. R. Marshall, H. E. Olson, L. B. Outlar, Geraldine Paul, C. M. Tyndal

254 *Introduction to Obstetrics and Gynecology* — Dodek, Fraser
Spring—1 hour a week. Lectures and demonstrations on the development and physiology of the female reproductive system and management of normal pregnancy.

301–2 *Manikin Demonstrations* — Footer, Friedman
One hour a week for six weeks in rotation as arranged during academic year. The mechanism of labor and various types of operative delivery demonstrated to sections of the junior class. D. C. General Hospital.

337–38 *Obstetrics and Gynecology* — Parks, Barter, Sites, McKelway
Academic year—2 hours a week. Lectures and demonstrations on the principles of obstetrics and gynecology.

351–52 *Clinical Clerkship* — The Staff
Four weeks during academic year as arranged. Clerkship with patients, including ward rounds, operating room demonstrations, and weekly clinic. D. C. General Hospital.

441–42 *Clinical Obstetrics* — The Staff
Academic year—as arranged. Students participate in prenatal and postnatal clinic care, observe the course of labor and deliver patients under supervision, attend bi-weekly departmental conferences and daily ward rounds in the University and D. C. General hospitals.

443–44 *Clinical Gynecology* — The Staff
Six weeks in rotation as arranged during academic year. Students observe and participate in the gynecological clinics and operating rooms of the University and D. C. General hospitals.

* The Staff of Instruction here listed is for the academic year 1961-62.

OPHTHALMOLOGY *

Professor R. A. Cox *(Executive Officer)*
Clinical Professor E. A. W. Sheppard
Assistant Clinical Professor R. W. Wilkinson
Associates W. J. Romejko, W. P. Chalfant, Jr., W. J. G. Davis, R. E. duPrey, Robert Day, M. G. Alper
Clinical Instructors J. H. Lodge, W. B. Glew, J. R. Weimer, J. W. McTigue

352 *Ophthalmology* — The Staff
Spring—one hour a week for sixteen weeks as arranged. Lecture course presenting aspects of all the principles of ophthalmology.

447–48 *Clinic* — The Staff
Academic year—as arranged. Each student is given individual instruction in ophthalmological diagnosis.

OTOLARYNGOLOGY*

Associate Clinical Professor J. J. McFarland, Jr. *(Executive Officer)*
Assistant Clinical Professors Catharine Birch, J. L. Levine
Associates M. E. Krucoff, W. B. Walters, R. S. Page, Jr., J. A. Sabri, W. M. Trible

351 *Otolaryngology* — The Staff
Spring—1 hour a week for fourteen weeks. Lectures and demonstrations on anatomy, physiology, and diseases of the ear, nose, and throat.

354 *Bronchoscopy* — The Staff
Spring—1 hour a week for two weeks. A series of lectures on the fundamental principles and the use of instruments, including both the bronchoscope and esophagoscope.

355–56 *Clinic* — The Staff
One and one-half hours a week in rotation as arranged during academic year. Practical and clinical instruction in the diagnosis and treatment of diseases of the ear, nose, and throat. University Hospital.

PATHOLOGY *

Professors T. M. Peery *(Executive Officer)*, W. R. Duryee *(Research)*
Clinical Professor D. L. Weiss
Associate Professors F. N. Miller, Jr., William Newman, W. L. Marsh
Assistant Professors Lois Platt *(Cytology)*, Alexander Breslow, John Culberson

Special Staff for Demonstrations

Associate Clinical Professors J. S. Howe, E. F. Geever, R. G. Gottschalk
Assistant Clinical Professors R. E. Palmer, W. F. Enos, Cornelia Hoch-Ligeti
Associates L. E. Zimmerman, L. W. Fix, C. B. Cook

* The Staff of Instruction here listed is for the academic year 1961–62.

Clinical Instructor D. R. Parkinson
Assistants Gloria Brennan, Victor Fazekas, German Lasala, R. V. Rosvoll, Joan Turkus

---

Special Lecturers E. B. Helwig, L. C. Johnson

115–16 *Introduction to Medical Science* (1–1) — Marsh and Staff
Academic year—1 hour a week. For students in medical technology at the University Hospital. These lectures, based upon physiology, pathology, and medicine, provide a background for the interpretation of laboratory data.

117–18 *Principles in Medical Technology* (4–4) — Marsh and Staff
Academic year—4 hours a week. For students in medical technology at the University Hospital. Theories, principles, and sources of error, of the methods used in clinical chemistry, clinical bacteriology, serology, hematology, and clinical microscopy.

119–20 *Medical Technology Laboratory* (10–10) — Marsh and Staff
30 hours a week for 50 weeks. Practice and experience by rotation through the various divisions of the Pathology laboratories of the University Hospital, as follows: hematology and urinalysis, 12 weeks; chemistry, 12 weeks; bacteriology and parasitology, 10 weeks; blood bank, 8 weeks; serology, 4 weeks; tissue pathology, 4 weeks.

259–60 *Pathology* — Peery, Miller
Fall—9 hours a week; spring—3 hours a week. General pathology of inflammations, degenerations, malformations, and neoplasms. Special pathology of the organs and specific diseases. The laboratory work consists of the gross and microscopic study of diseased tissue. Special emphasis is placed on the functional effects of the various pathologic changes and their correlation with symptoms and physical signs.

261–62 *Necropsy* — The Staff
Academic year—as arranged. Students are required to attend and assist in the performance of necropsies at the University Hospital.

263–64 *Demonstrations in Pathology* — Special Staff
Academic year—1 hour a week. Gross specimens from several hospitals are demonstrated and discussed.

267–68 *Seminars in Pathology* — The Staff
Academic year—as arranged. Advanced lectures are presented as arranged on special topics in pathology.

270 *Forensic Pathology and Medical Jurisprudence* — Miller
Spring—1 hour a week. Forensic pathology, toxicology, chemistry, and immunology. The legal and ethical rights and responsibilities of physicians. Legal problems in medicine.

323–24 *Surgical Pathology I* — Weiss
Academic year—1 hour a week. Weekly conferences are held with the student group assigned to the surgical clerkship, reviewing current surgical specimens.

327 *Clinical Pathological Conferences I* — The Staff
Fall—1 hour a week. Conferences are held at the School of Medicine. Case histories are presented and discussed by the students and members of the Staff. Clinical, laboratory, and necropsy findings are correlated.

427–28 *Clinical Pathological Conferences II* — The Staff
Academic year—1 hour a week. Continuation of Pathology 327.

429–30 *Clinical Pathological Conferences III* — The Staff
Academic year—1 hour a week. Conferences are held at the University Hospital. Attendance is required of students during the medical clerkship there.

492 *Surgical Pathology II* — Newman
Spring—1 hour a week. A systematic study of the gross and microscopic changes in the organs and tissues commonly removed surgically.

493–94 *Pathology Clerkship (elective)* — The Staff

Academic year—as arranged. A limited number of students receive individual training in surgical pathology and necropsies in the laboratories of the University Hospital.

PEDIATRICS *

Clinical Professors Margaret Nicholson, W. S. Anderson, R. H. Parrott, L. E. Hoeck, W. A. Howard *(Executive Officer)*

Associate Clinical Professors J. A. Washington, R. S. Lourie, T. E. Reichelderfer

Assistant Clinical Professors Margaret Gutelius, Mabel Grosvenor, Aaron Nimetz, George Maksim, A. B. Coleman, R. E. Martin

Associates J. H. Peacock, Jr., Mary Startwell, C. F. Stiegler, H. G. Clark, Adrian Recinos, Jr., C. R. Webb, William Stark, A. R. MacPherson, S. L. Leikin

Clinical Instructors H. H. Diamond, R. H. Mitchell, R. O. Warthen, Emilie Black, R. H. Anderson, W. G. Preisser, Bennett Olshaker, H. T. Yates, Roger Bergstrom, G. J. Cohen, M. S. Glatt, Mary Fox, S. Z. Goldblatt, Harold Plotsky, J. R. Puig, Jean Lockhart, G. W. Daisley, Jr., T. H. Anders, Sidney Levin

Assistants F. W. Floyd, Jr., E. W. Lovrien, R. E. Stang, A. H. Topchik, Pija Charif

256 *Pediatrics* — Howard and Staff

Spring—2 hours a week. Lectures on physiology of the newborn, normal behavior, emotional and physical development, infant nutrition, diseases of the newborn, common anomalies and system illnesses of infancy and childhood. Medical School.

355–56 *Pediatrics* — Howard and Staff

Continuation of 256, with increasing emphasis on pathologic disease states, stressing pathophysiology and treatment.

357–58 *Clinical Clerkship: General Pediatrics* — Reichelderfer and Staff

Two weeks as arranged during academic year. Introduction to clinical pediatrics. Emphasis on bedside discussion and group seminars including the newborn. Ward rounds. Five students in rotation. D. C. General Hospital.

359–60 *Clinical Clerkship: Contagious Diseases* — Reichelderfer and Staff

Two weeks as arranged during academic year. Conferences and bedside discussion on contagious and infectious diseases. Prevention and quarantine measures. Five students in rotation. D. C. General Hospital.

361–62 *Clinical Conferences I* — Reichelderfer and Staff

Academic year—1 hour a week. Required. Presentation and discussion by students of current patient problems. D. C. General Hospital.

363–64 *Ward Rounds* — Reichelderfer and Staff

Academic year—as arranged. Bi-weekly ward rounds, with students and Resident Staff. D. C. General Hospital.

365–66 *Pediatric Psychiatry* — Lourie and Staff

Academic year—as arranged. Lectures on neuroses of children and adolescents (in cooperation with the Department of Psychiatry).

457–58 *Clinical Clerkship* — Howard and Staff

Six weeks as arranged during academic year. Full time, including assignment to night and holiday admissions. Case studies on wards under direct Resident supervision. Ward rounds with Staff and Residents. Twelve students. Children's Hospital.

* The Staff of Instruction here listed is for the academic year 1961–62.

459–60 *Outpatient Clinics* — Howard and Staff
Academic year—as arranged. Work in Medical and Specialty clinics including surgery, allergy, X-ray, child welfare, cardiology, dermatology, neurology, and child guidance. Children's Hospital.

461–62 *Clinical Pathological Conferences* — Howard and Staff
Academic year—1 hour a week. Clinical and pathological discussion of recent patient history and laboratory data. Medical School.

463–64 *Teaching Rounds* — Gutelius and Staff
Academic year—three times a week. Discussion of clinical problems of diagnosis and treatment of current patients. Children's Hospital.

465–66 *Section Conferences* — The Staff
Academic year—1 hour a week. Surgical diagnosis, pre- and post-operative management. Children's Hospital.

467–68 *Clinical Conferences II* — Howard and Staff
Academic year—1 hour a week. Required. Staff and student discussion of current problems in pediatrics with review of recent literature. Children's Hospital.

469–70 *Clinical Pediatric Psychiatry* — Lourie and Staff
Academic year—as arranged. Clerkship in fourth year including Well Baby Clinic. Group and class conferences.

PHARMACOLOGY *

Professor H. G. Mandel *(Executive Officer)*
Clinical Professor R. G. Smith
Professorial Lecturer B. B. Brodie
Associate Professor Clarke Davison
Assistant Professors V. H. Cohn, Jr., T. M. Farber, Paul Mazel, Melvin Reich *(Research)*, J. F. Henderson *(Research)*, George Fiala *(Research)*
Teaching Fellow Robert Tomchick

249–50 *Introduction to Medical Research*† (3–3) — The Staff
Fall—Wed., 1:00 to 6:00 P.M.; spring—Wed., 8:00 A.M. to 2:00 P.M. Primarily for graduate students. A comprehensive introduction to the major medical research techniques—statistical, physical, chemical, electrical, and radioisotopic—as applied to biological materials in the medical sciences. Laboratory fee, $7.50 a semester.

261 *Pharmacology* (5) — The Staff
Fall—5 hours a week. Lectures and conferences concerning the interaction of drugs and biological systems as a basis for the rational therapy of disease. Open to qualified nonmedical students.

262 *Pharmacology* (1) — The Staff
Spring—1 hour a week. Continuation of Pharmacology 261. Pharmacological uses of normal body constituents.

263 *Pharmacology Laboratory* (1) — The Staff
Fall—3 hours a week. Laboratory instruction and demonstrations designed to complement Pharmacology 261. Open to qualified nonmedical students.

* The Staff of Instruction here listed is for the academic year 1961–62.
† This is an interdepartmental course. The student should register in the department directing his research.

267–68 *Pharmacological Research* (arr.) — The Staff
Academic year—as arranged. Primarily for those properly qualified graduate and medical students seeking careers in pharmacology.

269–70 *Pharmacology Seminar* (1–1) — The Staff
Academic year—2 hours a week. Recent advances in pharmacology. For those interested in pharmacological research. Open to qualified nonmedical students.

279–80 *Mechanism of Drug Action* (1–1) — The Staff
Academic year—as arranged. A course to familiarize the student with advanced biochemical, microbiological, and physiological methods employed in pharmacological investigations. Open to qualified nonmedical students.

299–300 *Thesis* (3–3) — The Staff
Academic year—as arranged. Required of Master of Arts and Master of Science candidates.

PHYSICAL MEDICINE AND REHABILITATION *

Professor C. S. Wise *(Executive Officer)*
Assistant Professor John Watt, Jr.
Associates A. B. C. Knudson, F. L. Wenger
Assistants Jessie Fair, Kyoko Ikari

150 *Elements of Physical Medicine* — The Staff
Spring—as arranged. In arangement with the Anatomy Department, lectures and demonstrations of the various tests and measurements are employed in the evaluation of physical disability.

352 *Advanced Physical Medicine* — The Staff
Spring—1 hour a week. Lectures and demonstrations concerning the various techniques, clinical applications of physical medicine and rehabilitation to be integrated with the teaching of the associated medical and surgical specialties.

467–68 *Clinical Studies (elective)* — The Staff
Academic year—as arranged. Clinical teaching and demonstration at the University Hospital.

485 *Research* (arr.) — The Staff
Fall—as arranged. Open to medical students and qualified nonmedical students.

PHYSIOLOGY *

Professors C. E. Leese, E. M. Renkin *(Executive Officer)*
Associate Professor F. P. J. Diecke
Assistant Professors Ruth McClintock, C. S. Tidball *(Research)*
Lecturers Eugene Braunwald, J. F. Hoffman, D. P. Rall
Associates Saul Winegrad, Margaret Westecker, Elizabeth Tidball, K. A. Hubel, P. G. Nelson, J. H. Mitchell, W. B. Wood

* The Staff of Instruction here listed is for the academic year 1961–62.

Special Lecturers S. J. Sarnoff, J. H. U. Brown

115 *Physiology* (3) — Leese

Fall: section A—Tues. and Thurs., 8:45 to 10:00 A.M.; section B—Tues. and Thurs., 5:10 to 6:25 P.M. Lectures for nonmedical students covering the fundamentals of physiology in its various subdivisions. Prerequisite: one year of general science or one semester of a biological science. Prerequisites and time subject to change 1961–62.

117 *Experimental Physiology* (1) — The Staff

Fall—Fri., 2:10 to 5:10 P.M. Laboratory exercises in the fundamentals of physiology for nonmedical students. Prerequisite or concurrent registration: Physiology 115; or the equivalent. Material fee, $18. Prerequisites and time subject to change 1961–62.

120 *Physiology of Endocrine Activity* (2)

Not offered 1961–62. For nonmedical students. The circulatory, metabolic, reproductive growth, and other adaptations immediate and long term, accompanying and affecting endocrine activity. Prerequisite: Physiology 115 or the equivalent.

130 *The Psycho-physiology of Personality* (2) — Leese

Spring—Tues. and Thurs., 5:10 P.M. For nonmedical students. Lectures on the genesis and expression of personality, with emphasis on the physiological approach. Prerequisite: Physiology 115 or the equivalent and general psychology.

150 *Medical Physiology* — Renkin and Staff

Spring—18 hours a week. Lectures and laboratory work in all divisions of Physiology. This course is designed for medical students.

211–12 *Problems in Physiology* (arr.) — The Staff

Academic year—as arranged. For nonmedical graduate students. Open to undergraduate students with the approval of the Department. Prerequisite: Physiology 115 and 117, or the equivalent.

221–22 *Physiology Seminar* (1–1) — The Staff

Academic year—1 hour a week, as arranged. For nonmedical students undertaking graduate work in physiology. Prerequisite: Physiology 115 and 117, or the equivalent.

232 *Advanced Physiology* (12) — Renkin and Staff

Spring—18 hours a week, as arranged. Lectures and laboratory work in all divisions of Physiology. For nonmedical graduate students.

249–50 *Introduction to Medical Research** (3–3) — The Staff

Fall—Wed., 1:00 to 6:00 P.M.; spring—Wed., 8:00 A.M. to 2:00 P.M. Primarily for graduate students. A comprehensive introduction to the major medical research techniques—statistical, physical, chemical, electrical, and radioisotopic—as applied to biological materials in the medical sciences. Laboratory fee, $7.50 a semester.

269–70 *Pharmacologic Physiology* (1–1) — The Staff

Academic year—one hour a week, as arranged. Recent advances in physiology and pharmacology for those interested in research. Open to qualified medical and nonmedical students.

279 *Topics in Physiology* (1) — The Staff

Fall—one hour a week, as arranged. Review of the active areas of research. Open to qualified medical and graduate students. Prerequisite: Physiology 150 or 232.

295–96 *Research* (arr.) — The Staff

Academic year—as arranged.

299–300 *Thesis* (3–3) — The Staff

*This is an interdepartmental course. The student should register in the department directing his research.

PSYCHIATRY *

Professors Winfred Overholser *(Emeritus)*, Leon Yochelson *(Executive Officer)*, Samuel Yochelson *(Research)*

Clinical Professors Joel Elkes, J. D. Schultz, D. C. Cameron, F. A. Freyhan

Associate Professor J. E. Rankin

Associate Clinical Professors H. P. Laughlin, M.deG. Ruffin, Sidney Berman, Morris Kleinerman, Anna Todd, Norman Taub

Assistant Clinical Professors Harold Corson, Sarah Tenenblatt, Richard Schaengold, Leon Ferber, P. H. Gray, David Eden, C. T. Bever, C. E. Goshen, Joseph Abrahams, Paul Chodoff, R. M. Greenberg, Helen Pallister

Associates W. C. Johnson, W. D. Kehne, H. A. Meyersburg, R. A. Rogers, J. A. Farrell, S. C. Gordon, H. B. Lehrman, R. A. Frank, Helen Pearcy, A. M. Drummond, G. W. Sprehn, N. C. Rintz, Leslie Schaffer, J. L. Sheridan, L. J Duhl

Clinical Instructors Maxwell Boverman, G. W. Metcalf, S. L. Werkman, D. W. Harris, A. H. Kiracofe, Jr., T. M. Mackenzie, B. W. Murphy, Daniel Prager, F. N. Waldrop, J. H. Bouma, Jean Menetrez

Assistant A. A. Cairo

Special Lecturers R. H. Felix, Mathew Ross

165 *Introductory Medical Psychology* — Berman

Fall—1 hour a week. An orientation course in the anatomical, physiological, and psychological growth and development of personality. Consideration of characteristics of structure, function, and development of the psyche leading to normal behavior as a basis for the study of the pathological. Evaluation of interpersonal relationships.

178 *Psycopathology* — Rankin

Spring—1 hour a week. Manifestations and understanding of various mental mechanisms and abnormal reaction-types, preceded by history of development of psychopathology and illustrated with case material.

266 *Psychiatry* — Yochelson

Spring—1 hour a week. Psychiatry in the practice of Medicine. Techniques of interviewing.

268 *Demonstration Clinics* — The Staff

Spring—3 hours a week. History, etiology, symptoms, course, and treatment of the major psychoses with emphasis on the dynamics involving the person as a whole. Presentation of clinical cases of major mental illnesses and primary behavior disturbances. St. Elizabeths and D. C. General hospitals.

272 *Psychosomatic Aspects of General Medicine* — Ruffin

Spring—1 hour a week. Somatic disorders of psychogenic origin. The role of personality reactions in functional and organic disorders.

324 *Psychoneurosis* — Ferber

Spring—1 hour a week. Etiology, psychopathology, clinical aspects, and treatment of various types of psychoneuroses. Medical Conference Room, D. C. General Hospital.

431–32 *Clinical Clerkship* — The Staff

Three weeks divided service as arranged during academic year. Supervised examination, diagnosis, and treatment of ambulatory cases in University Hospital and hospitalized cases in St. Elizabeths Hospital. Conferences for discussion of cases.

---

* The Staff of Instruction here listed is for the academic year 1961–62.

Clinical application of psychiatric principles to general medical practice is stressed. University Hospital Inpatient and Outpatient Psychiatric clinics and St. Elizabeths Hospital.

RADIOLOGY *

Professor W. W. Stanbro *(Executive Officer)*
Assistant Professor W. W. Saunders
Assistant Clinical Professors Charlotte Donlan, S. R. Bersack, H. J. Kicherer, H. L. Berman, J. A. Isherwood, E. R. King, J. T. Brennan
Associates A. C. Wyman, S. W. Smith
Instructor C. F. Murphy
Clinical Instructors George Tievsky, U. V. Wilcox II, C. M. Weber, Nan Van Wagenen, Zeki Erim
Assistants Palma Abraham, A. S. Cigtay, H. M. Hagen, C. J. Kim, Margaret Mones, W. J. Nelson, L. N. Sweet

115–16 *Anatomy* — The Staff
Academic year—as arranged. Correlation of gross and Roentgen anatomy.

220 *Principles of Radiology* — The Staff
Spring—1 hour a week. Lectures and discussions.

313 *Advanced Radiological Diagnosis* — The Staff
Fall—as arranged. Lectures and discussions.

421–22 *Clinical Studies* — The Staff
Students are assigned to the X-ray Department in rotation on a full-time basis for a specific period.

SURGERY *

Professors Brian Blades *(Executive Officer)*, C. T. Klopp
Clinical Professors W. S. McCune, V. M. Iovine, Alec Horwitz, G. A. Higgins, Jr., J. P. Adams, G. S. Letterman
Associate Professors P. C. Adkins, H. C. Pierpont
Associate Clinical Professors H. L. Feffer, J. R. Thistlethwaite, Don Wenger
Assistant Professor N. P. D. Smyth, T. C. Alford
Assistant Clinical Professors B. F. Dean, Jr., Carl Berg, J. S. Neviaser, J. B. Harrell, L. T. Peterson, Thomas Bradley, Murdock Head
Associates W. R. Morris, J. J. Weinstein, W. C. Meloy, K. H. Wood, Isabella Harrison, Maxine Schurter, Charles Keck
Instructor W. J Cushing
Clinical Instructors C. D. Briggs J. F. Conlon, D. C. Richtmeyer, Leon Gerber, E. A. Gould, A. B. Rohrbaugh, Jr., M. H. Kendrick, B. G. Brown, J. D. Hoyle, R. R. Smith, N. H. Isaacson, C. S. White, Jr., D. P. McCarty, J. M. Keshishian, R. L.

* The Staff of Instruction here listed is for the academic year 1961 62.

THE SCHOOL OF MEDICINE RECORD

1961–62

DEGREES CONFERRED

Doctor of Medicine

June 7, 1961

Mahmmed Akbarian — Iran
A.B. 1957, The George Washington University

Burton Norman Alter — Va.
B.S. 1958, Yale University

Robert Lee Altman — Md.
B.S. 1957, Westminster College

Arthur James Anderson — D.C.

Scott Wayne Ankeny — Md.
A.B. 1954, The George Washington University

Lucy Denise Antoniou — D.C.
A.B. 1958, The George Washington University

Roger Morris Atwood — Minn.
A.B. 1957, Carleton College

Howard Samuel Baer — Conn.
A.B. 1957, Wesleyan University

Robert Miller Barnhart — Md.

Mason Barr, Jr. — D.C.
A.B. 1957, Haverford College

John Albert Beeman — Calif.
A.B. 1958, Occidental College

Dale Roger Bertsch — Va.

Delano Woodrow Bolter — Calif.

Violet Ella Bowen — W.Va.
A.B. 1958, The George Washington University

Robert Camio Calvo — N.J.
B.S. 1956, Rutgers University

Constance Joan Campbell — Va.
A.B. 1958, The George Washington University

Clyde Frank Chambers, Jr.

John Peter Clay — Md.
A.B. 1956, Occidental College

Allan Barry Cohan — Calif.
A.B. 1957, The George Washington University

Thomas Grosvenor Colmey — D.C.
A.B. 1957, Duke University

Justin Lyle Conrad — Ill.
A.B. 1957, Northwestern University

Jack Phillip Covell — N.D.

Irvin Jack Cowley — Ind.

Francis Gene Dahlke — Utah

Jack Tom Dancer — Wis.
B.S. 1957, University of Arizona

Paul Roger DeMordaunt — Ariz.

Robert Arthur Derro — Idaho
A.B. 1957, Harvard University

Vincent Theodore DeVita, Jr. — Mass.
(With distinction)
B.S. 1957, College of William and Mary

John Albert Dolan — N.Y.
B.S. 1957, Georgetown University

Ronald Edward Dunn — Md.
B.S. 1957, University of Idaho

Peter Alan Fleming — Idaho
A.B. 1956, San Diego State College

Morton George Fried — Calif.
(With distinction)
A.B. 1957, New York University

Milton Gallant — N.Y.
A.B. 1957, Rutgers University

Ray Fillmore Garman — N.J.
A.B. 1957, Johns Hopkins University

Francis Kenneth Gates, Jr. — Va.
A.B. 1956, Occidental College

Henry Smither Gering — Calif.
B.S. 1957, The Citadel

Andrew Manuel Giovannini — D.C.
A.B. 1957, University of California

Ronald Milton Graham — Calif.

Thomas Hamlin Gresinger — Wash.
A.B. 1957, Williams College

Carl Richard Guiton — D.C.
A.B. 1957, Columbia University

Clayton Allan Hixson — N.J.
B.S. 1957, Fairmont State College

William Francis Hogan — D.C.
A.B. 1958, The George Washington University

Kin Lincon Hung — Va.
B.S. 1957, University of Maryland

William Clymer James — D.C.
A.B. 1954, Harvard University

John Howard Jennings — D.C.
A.B. 1957, Central College

Bruce McCoy Johnson — Mo.
A.B. 1957, Carleton College

Robert Katz — Ohio

Barry Melvyn Kaufman — D.C.
B.S. 1958, University of Wisconsin

Frank Jay Keefer — N.Y.
A.B. 1957, Washington and Jefferson College

Robert John Kelly — W.Va.
A.B. 1958, University of Missouri

Lois Estelle Knapp — Va.
B.S. 1958, Gustavus Adolphus College

Norman John Knorr — D.C.

Ronald Gordon Latimer — Md.
A.B. 1958, The George Washington University

George Lamoyne Lucas — D.C.
A.B. 1957, Ohio University

Margaret Mary Maggio — Ohio

Robert Powell Majors, Jr. — N.J.
B.S. 1957, Davidson College

John Lloyd Marlow — N.C.
B.S. 1957, Brigham Young University

James Kent Mason — Idaho
A.B. 1959, Montana State University

Jacob Lenhardt Mathis, Jr. — Va.
A.B. 1957, University of California

Samuel Frank Mazella — Calif.

A.B. 1957, Cornell University — N.J.

Francis Donald McGuire — N.J.
A.B. 1957, New York University

Donald McKay — Mass.
(With distinction)
A.B. 1955, Harvard University

Jay Howard Miller, Jr. — Md.
B.S. 1957, The George Washington University

Valery Thornton Miller — D.C.
A.B. 1958, The George Washington University

Allen Mendel Mondzac — Md.
(With distinction)
A.B. 1958, The George Washington University

James Reardon Moore, Jr. — Md.
B.S. 1957, The George Washington University

Thomas Edison Morledge — Mont.

B.S. 1955, University of Arizona — Va.

Charles Nemeth — D.C.

Donald Owen Nutter — N.Y.
A.B. 1957, Johns Hopkins University

Charles Burton Radlauer — Puerto Rico

Fernando Enrique Ramirez — Md.
A.B. 1958, The George Washington University

Richard Curtis Rehmeyer
A.B. 1957, Haverford College

Robert Daniel Rosenberg — N.Y.
Lynn Brockbank Rowe — Utah
Robert Scott Schuh — N.Y.
(With distinction)
A.B. 1957, Tulane University
Wilbur Lowell Secrist — W.Va.
A.B. 1957, West Virginia University
Robert Morris Senior — Va.
(With distinction)
A.B. 1957, Oberlin College
Leon Gilbert Sheer — Md.
A.B. 1958, The George Washington University
William Hart Sheffield — Calif.
A.B. 1957, Yale University
William Charles Silberman — Va.
A.B. 1958, The George Washington University
Hossein Chaharbashi Sobhani — Iran
B.S. 1957, University of Oklahoma
Peggy Ann Stubbs — Va.
A.B. 1958, The George Washington University
Harry Randolph Tate — Va.
A.B. 1957, University of Virginia
Richard Luman Tenny — N.C.
A.B. 1957, Duke University
William Frederick Thompson — Md.
B.S. 1957, The George Washington University
Donald Julius Tucker — Va.
A.B. 1957, Cornell University
Peter Arthur Tyerman — D.C.
A.B. 1957, University of Oregon
Francis Xavier Urbanski — N.J.
B.S. 1957, Dickinson College
William Vernon Van Fleet — D.C.
(With distinction)
A.B. 1957, A.M. 1959, The George Washington University
Hau Ngoc Vu — D.C.
Arthur Andrew Wallman — N.Y.
B.S. 1957, Queens College
Florent Franklin Westfall, Jr. — Md.
(With distinction)
A.B. 1958, West Virginia University
Daniel Britton White — Mich.
A.B. 1957, Dartmouth College
Warren Arthur Wood, Jr. — Va.
B.S. 1957, Hillsdale College
Gary Warren Zelles — N.J.
A.B. 1957, Rutgers University

STUDENTS REGISTERED IN THE SCHOOL OF MEDICINE

1961–62

First Year

Anderson, Anthon A. III — Utah
Anderson, Gregory D. — Utah
B.S. 1958, University of Utah
Bagley, Grant P. — Utah
B.S. 1961, University of Utah
Balsano, Nicholas A. — N.Y.
B.S. 1960, Iona College
Blau, Anthony D. — D.C.
Brady, John W. — Md.
B.S. 1961, Marietta College
Branch, John W. — Md.
B.S. 1961, University of Maryland
Bright, Robert W. — Va.
A.B. 1961, Ohio Wesleyan University
Brinckerhoff, Gilbert D. — Pa.
B.S. 1959, Lafayette College
M.S. 1961, Massachusetts Institute of Technology
Brings, Marlene E. — Md.
Burton, Francis C., Jr. — Utah
B.S. 1959, University of Utah
Byler, Robert E. — Pa.
Byrd, Edward B. — D.C.
Carlisle, Richard W. — Utah
Carlsen, Andrew B. — N.Y.
B.S. 1960, McGill University, Canada
Chervenak, John P. — Pa.
A.B. 1960, University of Pittsburgh
Cilley, Ronald M. — Maine
A.B. 1961, University of Maine
Clarisse, Peter D. T. — N.Y.
A.B. 1961, Harpur College
Clough, John D. — Md.
B.S. 1961, The George Washington University
Conner, Garrett H. — N.J.
A.B. 1958, Waynesburg College
Daines, Sheridan L. — Utah
Davis, Charles Y. — Va.
A.B. 1961, Johns Hopkins University
Davis, William R. — Calif.
A.B. 1960, University of California
Dewey, George, Jr. — D.C.
A.B. 1960, Duke University
Donahoe, Michael T. — Pa.
Ellison, Gerald L. — W.Va.
B.S. 1960, American University
Ettenson, Stephen C. — N.Y.
Farrell, Donald F. — Calif.
Fidler, William J., Jr. — Va.
A.B. 1961, Washington and Lee University
Filpi, Robert G. — Calif.
B.S. 1961, College of the Pacific
Ford, John L. — Md.
B.S. 1961, University of Maryland
Fortune, Ulla K. M. — Calif.
Fortune, William P. — Calif.
B.S. 1953, Springfield College
Freeland, Alan E. — Ohio
A.B. 1961, Johns Hopkins University
Gemmen, Roger J. — Mich.
Goodridge, Thomas H. — Md.
A.B. 1961, Dartmouth College
Goodstein, Richard K. — N.J.
B.S. 1961, Michigan State University of Agriculture and Applied Science
Gould, Barry K. — D.C.
Haffner, William H. J. — N.J.
A.B. 1961, Wesleyan University
Hardy, Kent M. — Utah
Hazelton, Warren C., Sr. — Maine
Herr, John R. — Pa.
B.S. 1961, Juniata College
Herwick, Paul Q. — Pa.
B.S. in Phar. 1960, University of Pittsburgh
Herzinger, Raymond G. — Idaho
B.S. 1961, Brigham Young University
Hicks, John A. — Calif.
A.B. 1960, Occidental College
Hirschberg, Stanley M. — N.J.
A.B. 1961, Rutgers University
Hodgell, Robert D. — Colo.
A.B., B.S. in Med. Tech. 1959, University of Colorado
Jonas, Cecil R. — British Guiana
B.S. 1960, Howard University
Kaplan, Sheldon J. — N.Y.
Kaplan, Stuart L. — D.C.
A.B. 1961, The George Washington University
Kearney, Gary P. — Calif.
A.B. 1961, Northwestern University
Koo, Andrew H. C. — Hong Kong
Kotzen, Stephen A. — Fla.
B.S. 1961, University of Miami
Koval, Norman S. — N.J.
B.S. 1961, The George Washington University
Laughrun, William A., Jr. — N.C.
A.B. 1955, Wake Forrest College
Lopez-Molina, Carmen M. — Puerto Rico
Lorentz, Mary M. — Md.
A.B. 1961, Trinity College
Mast, William C. — Ariz.
B.S. 1961, University of Arizona
Mathios, Anthony J. — Calif.
Mazzuchi, Daniel S. — Md.
B.S. 1961, College of the Holy Cross
McDougal, Bud H. — Idaho
B.S. 1961, University of Idaho
McElhaney, Robert D. — Wyo.
A.B. 1961, Central Washington College of Education
McPhetres, David W. — Alaska
A.B. 1961, Whittier College
Mering, James H. III — Pa.
Miller, Karl S. — N.J.
B.S. 1961, Mount Saint Mary's College
Millward, David K. — N.Y.
B.S. 1961, Tufts University
Mitchell, John H. — D.C.
A.B. 1961, Ohio Wesleyan University
Moesinger, Robert L. — Utah
Moore, Julian P. — Va.
A.B. 1961, University of Notre Dame
Morris, Gerald G. — Va.
Musick, Roy S. — D.C.
B.S. 1961, The American University
Nixon, Maureen K. — N.Y.
A.B. 1961, Catholic University of America
Odenwald, Robert P. — D.C.
B.S. 1961, College of the Holy Cross
O'Neill, Thomas M. — D.C.
A.B. 1961, Catholic University of America
Oxley, David W. — Iowa
A.B. 1961, Drake University
Paolillo, Richard D. — Conn.
B.S. 1961, College of William and Mary
Pazzaglini, Mario P. — N.Y.
A.B. 1961, Harpur College
Politz, Lawrence — D.C.
Pomerantz, Ruth — N.Y.
A.B. 1961, Brooklyn College
Price, Marian G. — S.C.
A.B. 1961, Eastern Nazarene College
Reynard, John S. — Calif.
A.B. 1961, Stanford University

Rogers, Jerry B. Mo.
B.S. 1960, University of Maryland
Runge, Peter J. N.Y.
B.S. 1961, Villanova University
Scheiner, Monroe I. N.Y.
Secrist, Delbert L., Jr. Ariz.
A.B. 1961, Stanford University
Seymour, John C. N.Y.
A.B. 1961, Brown University
Shively, Harold H., Jr. Conn.
A.B. 1959, Wesleyan University
Steinbrenner, Roger W. Calif.
A.B. 1961, University of California
Stemerman, Michael B. N.Y.
A.B. 1961, University of Rochester
Stiber, Andrew J. N.J.
A.B. 1961, University of Michigan
Stonefeld, Donald F. Ohio
B.S. 1961, Ohio State University
Stones, Carl Idaho
Strautz, Robert L. Ill.
Strother, George W. Pa.
B.S. 1960, University of Pittsburgh
Taylor, Paul C. Ohio
A.B. 1961, Miami University
Tegtmeyer, Charles J. Md.
A.B. 1961, Colgate University
Ugel, Arthur R. D.C.
B.S. 1961, The George Washington University
Vanderford, John W. Idaho
B.S. 1955, Utah State University of Agriculture and Applied Science
A.M. 1959, University of California
Vieweg, Walter V. R., Jr. Va.
B.S. 1957, U.S. Naval Academy
Walen, Harry M. Md.
B.S. 1961, University of Maryland
Warden, William B. W.Va.
Webster, Gerald B. Ariz.
A.B. 1961, Arizona State University
White, Allen C. Calif.
A.B. 1961, Occidental College
Wolf, Robert R. N.J.
A.B. 1961, Rutgers University

SECOND YEAR

Anderson, Danny F. Ga.
B.S. 1960, Furman University
Anderson, Harold F. Calif.
A.B. 1960, Los Angeles State College of Applied Arts and Sciences
Anderson, Todd E. Ill.
A.B. 1960, DePauw University
Anderson, William S. Pa.
B.S. in C.E. 1956, Duke University
Barthelmess, Randall A. Mont.
B.S. 1960, Montana State College
Beachy, Lester Pa.
Beisky, Burton L. Pa.
A.B. 1960, University of Pennsylvania
Bessin, Rolf H. Venezuela
A.B. 1960, Johns Hopkins University
Blakesley, Samuel R. Ariz.
B.S. 1959, University of Arizona
Boas, Edward L. Idaho
B.S. 1960, University of Idaho
Brady, John F. R.I.
A.B. 1960, Providence College
Brazinsky, John H. D.C.
B., 1960, University of Notre Dame
Brink, Edward W. Conn.
A.B. 1960, Trinity College
Buchanan, John G. D.C.
A.B. 1960, Amherst College
Burdge, David C. Va.
B.S. 1958, The George Washington University
Carlson, Dwight L. Calif.
Carvalho, Richard S. R.I.
B.S. 1958, University of Rhode Island
Chan, Philip K. Calif.
Cope, John R. Pa.
B.S. in Phar. 1960, University of Pittsburgh
Cottle, Aaron D. W.Va.
Daines, Jonathan H. Utah
Dew, Donald C. Utah
B.S. 1960, Brigham Young University
Ebert, Charles D. W.Va.
A.B. 1960, West Virginia University
Edwards, Charles B. Utah
B.S. 1960, Brigham Young University
Falor, Stanley L. Ohio
B.S. 1958, Ohio State University
Flanagan, William C. N.J.
A.B. 1960, University of Virginia
Frank, William G. Va.
B.M.E. 1949, University of Louisville
B.D. 1952, Virginia Theological Seminary
Gaither, Robert H. Md.
A.B. 1960, Johns Hopkins University
Gardner, Harvey R. Utah
A.B. 1958, University of California
Gelet, Theodore R. Pa.
B.S. 1959, Pennsylvania State University
Gendelman, Seymour Pa.
B.S. Phar. 1953, Temple University
Hallahan, William F. N.Y.
B.S. 1960, Mount Saint Mary's College, Md.
Hansen, Kenneth R. Idaho
B.S. 1959, Utah State University of Agriculture and Applied Science
Hanssen, Carl A. N.Y.
A.B. 1952, Princeton University
Hinz, William M. Wis.
Holmes, John L. Wash.
House, Homer C. D.C.
B.S. 1959, Washington and Lee University
Hunter, Allan A. D.C.
A.B. 1960, The George Washington University
Hurston, Ronald O. D.C.
A.B. 1960, Yale University
Hushaw, John R. Calif.
A.B. 1960, Occidental College
Itscoitz, Samuel B. D.C.
Jacobson, Cecil Bryant Utah
B.S. 1960, University of Utah
Jones, Thomas L., Jr. Va.
Kass, Martin B. D.C.
Kent, Roy D. Calif.
A.B. 1958, San Jose State College
Kindred, Clifford J. Idaho
A.B. 1955, Brigham Young University
Kniep, William M. Fla.
A.B. 1955, University of Florida
Koslow, Joel L. Mass.
A.B. 1960, Harvard College
Kulaga, Stanley F., Jr. Pa.
B.S. 1960, Temple University
Lima, John B. N.Y.
A.B. 1960, New York University
Lobl, Lawrence T. D.C.
A.B. 1960, The George Washington University
Lose, George W. Ohio
Lyle, Jerry M. Pa.
Madsen, George F. Utah
Maoury, Stanley D. N.Y.
Mayersak, Jerome S. Wis.
A.B. 1960, Johns Hopkins University
Milne, Milton J. Calif.
B.S. 1957, University of California
Morales, Braulio A. Costa Rica
A.B. 1960, Lafayette College
Morris, David L. Calif.
A.B. 1958, University of California
Muir, Bruce B. Calif.
A.B. 1960, University of California
Myers, Norman C. Pa.
A.B. 1960, Washington and Jefferson College
Neviaser, Jules S. D.C.
B.S. 1959, Morris Harvey College

Newell, Peter J. N.M.
A.B. 1960, Occidental College
Nicklas, Richard A. D.C.
A.B. 1958, Cornell University
Nintcheff, Peter Ohio
A.B. 1960, Western Reserve University
Norcross, Frederick C. Md.
A.B. 1960, University of Pennsylvania
Patterson, Robert D. Mo.
A.B. 1960, University of Missouri
Perry, James P. Texas
A.B. 1960, Middlebury College
Pick, Ruthann Ill.
A.B. 1959, Boston University
Pozderac, Rodney V. W.Va.
Regan, Robert M. D.C.
A.B. 1957, Hamilton College
Rice, Russell R. N.J.
A.B. 1960, University of Virginia
Rose, Leslie I. D.C.
A.B. 1960, The George Washington University
Sanchez-Raffucci, Luis A. Puerto Rico
B.S. 1960, Georgetown University
Singer, Karl L. Wash.
B.S. 1959, Washington State University
Stearman, Mandell D. D.C.
Streubert, George E. N.J.
B.S. 1960, Moravian College
Suesserman, Herbert I. N.Y.
B.S. 1960, Long Island University
Takaki, Richard W. Calif.
A.B. 1960, Stanford University
Tarasuk, Albert P. N.Y.
A.B. 1960, The George Washington University
Triggs, Richard A Calif.
B.S. 1959, Long Beach State College
Tyson, Roger I. Idaho
B.S. 1959, University of Idaho
Veverbrants, Egils N.H.
B.S. 1957, University of New Hampshire
Wartofsky, Leonard D.C.
B.S. 1959, The George Washington University
Webster, Thomas M. Va.
A.B. 1960, University of Virginia
White, Gary B. Utah
A.B. 1960, Brigham Young University
White, Gilbert L. Calif.
A.B. 1958, Stanford University
Wierer, Charles R. Md.
B.S. 1960, American University
Yourchek, Walter S., Jr. Calif.
A.B. 1960, Stanford University
Zappia, Robert J. N.Y.
A.B. 1956, University of Rochester
Zeveney, Dennis J. Pa.
B.S. 1960, Kings College
Zimmerman, Jack F. Pa.
B.S. 1960, University of Maryland

THIRD YEAR

Barclay, William A. Pa.
Beaver, Harry C. Pa.
B.S. 1959, Wheaton College
Bradley, Fenwick P. Wash.
Brown, Joel D. Md.
Bruner, Blackwell S. D.C.
Buckingham, Frank M. N.J.
A.B. 1959, University of Nebraska
Bucknell, Thomas E. Calif.
B.S. 1958, San Diego State College
Butler, James S. N.J.
B.S. 1959, Juniata College
Bystrom, John T. Calif.
A.B. 1959, Stanford University
Cohen, Allen B. D.C.
A.B. 1960, The George Washington University
Cohen, Paul G. N.Y.
A.B. 1959, University of Buffalo
Colella, Michael E. N.Y.
A.B. 1959, Hamilton College
Cutshall, Quay B. Wash.
B.S. 1959, Washington State College
Daltorio, Ronald A. Pa.
A.B. 1959, Washington and Jefferson College
Dear, Steven R. Calif.
A.B. 1959, University of California
Denaro, Frank N.Y.
B.S. 1959, College of William and Mary
Denison, Edward K. W.Va.
Dermody, William H. Pa.
B.S. 1959, University of Scranton
Diaz-Granados, Esteban Colombia
B.S. 1959, Fordham University
Dornfeld, Leslie N.J.
A.B. 1959, Rutgers University
A.B. 1959, LaSalle College
Fagan, Walter J. Pa.
Finn, Richard S. N.J.
B.S. 1954, Rutgers University
Fleischner, Gerald M. N.Y.
A.B. 1959, Lafayette College
Foer, Warren H. D.C.
Goodman, David H. D.C.
A.B. 1959, University of Pennsylvania
Greenberg, Peter L. D.C.
A.B. 1959, Johns Hopkins University
Hair, Carolyn J. N.C.
A.B. 1959, Woman's College of the University of North Carolina
Harvey, Jack W. W.Va.
B.S. 1959, The George Washington University
Higgins, Robert M. Ill.
Hobson, Robert W. Va.
B.S. 1959, The George Washington University
Hoffman, Charles J. D.C.
B.S. 1959, The George Washington University
Horowitz, Martin I. N.J.
A.B. 1959, Rutgers University
Hovey, Leslie M. Calif.
A.B. 1959, University of California
Huffman, Stanley R. Ky.
B.S. 1959, University of Kentucky
Hutton, John E. N.J.
A.B. 1953, Wesleyan University
Judd, Howard L. Calif.
Kadell, Barbara M. N.Y.
A.B. 1958, University of Michigan
King, Jerome S. Ohio
A.B. 1959, University of Virginia
Koldinger, Ralph E. Calif.
A.B. 1959, Stanford University
Kruse, John C. Ohio
A.B. 1959, Duke University
Kuhlman, James M. Mich.
A.B. 1959, University of Michigan
Lao, Anita I. Switzerland
Lazarus, Gerald S. N.Y.
A.B. 1959, Colby College
Lewis, Walter J. Ala.
A.B. 1955, Birmingham Southern College
Lyle, Sanford P. N.Y.
A.B. 1959, University of Rochester
McBride, Albert N.M.
Meade, William S. D.C.
B.S. 1957, The George Washington University
Merrill, Keith W. Canada
Michelis, Michael F. N.Y.
A.B. 1959, Columbia University
Miller, Meredith H. N.Y.
A.B. 1959, Johns Hopkins University
Minas, Thomas F. Ariz.
A.B. 1956, University of Arizona
Modlin, Barry D.C.
B.S. 1958, M.S. 1959, The George Washington University

Moede, Austin L. Calif.
A.B. 1959, University of California
Mrkich, Robert Pa.
Murray, Robert O. Utah
A.B. 1959, University of Utah
Peabody, Robert R. Calif.
A.B. 1958, Stanford University
Polidoro, Joseph R. Conn.
A.B. 1959, Rutgers University
Pou, Jose M. Puerto Rico
B.S. 1959, Catholic University of Puerto Rico
Purcell, Lawrence T. N.J.
A.B. 1959, Dartmouth College
Purpura, Anthony G. N.Y.
Rabbitt, Robert W. Md.
A.B. 1959, Catholic University of America
Reed, James W. Md.
Reister, Henry C. D.C.
A.B. 1954, Princeton University
Richardson, Eugene L. Mont.
B.S. 1959, Montana State College
Secks, Richard P. D.C.
A.B. 1959, Bucknell University
Saunders, Barney S. D.C.
A.B. 1959, University of Colorado
Schemmer, Kenneth E. D.C.
B.S. 1959, Purdue University
Sedgewick, Lloyd E. Va.
A.B. 1959, University of Virginia
Shaw, James T. Idaho
B.S. 1959, Brigham Young University
Shepard, Dennis D. Oreg.
B.S. 1959, Oregon State College
Skelly, Thomas D. Pa.
Slichter, Sherrill J. Wash.
A.B. 1959, Washington State College
Smith, Mark A. Va.
A.B. 1959, Virginia Military Institute
Suescum, Rafael A. Panama
Sullivan, Eugene H. N.Y.
A.B. 1957, Williams College
Svoboda, Joseph R. Mont.
Taber, David O. N.Y.
Taggart, Dennis D. Utah
Tomar, Russell H. D.C.
A.B. 1959, The George Washington University
Toomy, William N. N.J.
Trout, Eugene R. Calif.
A.B. 1959, University of California
Ward, George W. D.C.
B.S. 1956, U. S. Military Academy
Ward, Neil O. Ariz.
B.S. 1956, University of Arizona
White, Jerald D. Wyo.
B.S. 1959, Brigham Young University
Wong, Michael J. Calif.
A.B. 1959, Stanford University
Wootton, Devere G. Utah
B.S. 1959, Brigham Young University
Young, Elizabeth Bush Ill.
B.S. 1959, Purdue University

FOURTH YEAR

Allen, George R. Idaho
B.S. 1958, College of Idaho
Anderson, Kathryn A. Md.
Apfelbaum, Herman B. N.Y.
A.B. 1958, Dartmouth College
Asimont, Donna J. D.C.
Asimont, Lee A. Calif.
A.B. 1955, Pacific Union College
Barrett, James E. Mass.
Bedeau, Grover W. Calif.
A.B. 1958, College of the Pacific
Bell, Clyde L. D.C.
Bendler, Benne G. Ind.
Bohan, Michael E. Del.
A.B. 1958, LaSalle College
Brie, Carol R. D.C.
B.S. 1958, University of Richmond
Brunt, Alfred W. Idaho
Buerger, George F. Pa.
B.S. in Phar. 1957, University of Pittsburgh
Buscemi, Michael F. N.J.
B.S. 1957, Georgetown University
Buxton, Terry M. Idaho
B.S. 1959, University of Utah
Carrell, William D. Ariz.
A.B. 1957, Stanford University
Chin, Joyce A. Calif.
A.B. 1958, University of California
Choolitch, Melvin P. Pa.
Clothier, Walter J. Wis.
B.S. 1957, Carroll College
Crandall, Peter L. Calif.
A.B. 1958, San Jose State College
Crown, Ronald F. D.C.
B.S. 1958, American University
Eisenbaum, Sidney L. N.Y.
A.B. 1958, Tulane University
Fogel, Michael R. N.Y.
A.B. 1958, Haverford College
Ganz, Joel N.Y.
Griffiths, Charles W. Calif.
Griffiths, Harold M. Calif.
Guandolo, Vincent L. Md.
A.B. 1953, Kenyon College
Gulak, Hubert M. Pa.
B.S. 1958, Duquesne University
Gwinn, Byron C. D.C
A.B. 1955, Duke University
Hanache, Jeanne A. N.Y.
A.B. 1958, College of New Rochelle
Haney, Leland F. Idaho
B.S. 1958, University of Idaho
Henderson, Robert M. N.M.
Hiebert, Talmage G. D.C.
A.B. 1950, University of Kansas
A.M. 1954, Ph.D. 1956, The George Washington University
Hoexter, Barton Ohio
A.B. 1958, Kenyon College
Hoffman, Michael G. Ariz.
B.S. 1958, University of Arizona
Huffman, Ray T. Ohio
B.S. 1956, Bowling Green State College
Hurt, Arthur C. Calif.
A.B. 1958, Stanford University
Huster, Richard H. Fla.
A.B. 1958, Duke University
Jackson, Mary M. Alaska
A.B. 1950, Montana State University
Janon, Edward A. N.Y.
A.B. 1958, University of Pennsylvania
Jardee, James J. Oreg.
Jones, Lawrence A. Va.
Kachmarick, John A. Pa.
Kauffman, Allan L. N.Y.
B.S. 1958, Wagner Lutheran College
Kundin, Jack E. N.Y.
Lanham, John M. Idaho
B.S. 1952, College of Idaho
Lapiana, Francis G. Calif.
Leake, Francis M. Calif.
A.B. 1958, University of California
Liebler, Fred B. Pa.
B.S. 1958, University of Pittsburgh
Liebler, George A. Pa.
B.S. 1958, University of Pittsburgh
Loop, Floyd D Ind.
B.S. 1958, Purdue University
Loscher, William R. Calif.
B.S. 1958, Washington State College
Lundie, William M. N.Y.
A.B. 1958, New York University
Luthringer, David G. D.C.
A.B. 1958, Princeton University
Marshall, John H. D.C.
B.S. 1958, University of Maryland
Mason, John K. Mont.
B.S. 1954, Rocky Mountain College
Matan, Joseph A. Md.

Mayson, Preston B. S.C.
B.S. 1955, U. S. Military Academy
McBeath, Jo K. Nev
B.S. 1957, Idaho State College
McCreedy, James E. Pa.
B.S. 1958, Westminster College
Meymandi-Nejad, Assadullah Iran
Micale, Joseph N. N.J.
B.S. 1957, Rutgers University
Mihalakis, Isidore Pa.
B.S. 1958, Moravian College
Morrell, Robert H. Idaho
B.S. 1958, University of Oregon
Mullen, Ronald E. Ill.
A.B. 1950, Marion College
B.D. 1956, Northern Baptist Theological Seminary
Nelson, Manfred R. Va.
Nickerson, Richard G. N.Y.
A.B. 1958, New York University
Oberg, Darrell K. N.J.
A.B. 1958, University of Pennsylvania
O'Malley, Donald F. Pa.
Ostler, Richard E. Idaho
B.S. in Phar. 1950, Idaho State College
Patti, Joseph C. N.J.
A.B. 1958, Rutgers University
Peterson, David N. Minn.
B.S. 1958, Brigham Young University
Pfister, Alfred K. W.Va.
A.B. 1958, Washington and Jefferson College
Raphling, David L. Va.
A.B. 1959, The George Washington University
Ricks, David R. Idaho
Roberge, Richard T. Md.
B.S. 1958, University of Idaho
Roberts, Bobbie L. Va.
Rundle, Herman L. Calif.
A.B. 1958, University of California at Los Angeles
Seeman, Kenneth R. N.Y.
A.B. 1958, Franklin and Marshall College
Severino, Lawrence J. N.Y.
A.B. 1958, Cornell University
Sheldon, Frank C. N.J.
A.B. 1958, Rutgers University
Shifrin, Harris D. D.C.
B.S. 1958, The George Washington University
Smith, Robert V. Calif.
Sommerstein, Adam Pa.
Sterling, James A. Md.
A.B. 1958, Williams College
Suescum, Alfredo T. Panama
Swenson, Vernon L. Utah
Weiss, Lowell M. N.J.
B.S. 1957, Rutgers University
Whiting, Edward G. Calif.
A.B. 1958, Stanford University
Whyte, Thomas R. D.C.
B.S. 1958, The George Washington University
Wilner, Elliot C. D.C.
A.B. 1958, Columbia University
Wing, George L. Mass.
A.B. 1958, Harvard University
Wolcott, George J. Nebr.
A.B. 1958, Dartmouth College
Young, Lawrence I. Ohio
A.B. 1958, Stanford University
Young, Stanley B. Ind.
B.S. 1958, Purdue University

SUMMARIES OF REGISTRATION

1961–62

Number of Registrants

Class entering September 1961	104
Class entering September 1960	92
Class entering September 1959	87
Class entering September 1958	96
Total	379

Geographical Distribution of Students

Alabama	1	New York	43

VOLUME LXII SEPTEMBER 1962 NUMBER 1

PREFATORY NOTE

This number of the UNIVERSITY BULLETIN contains summaries of the dissertations which have been accepted during 1962, in partial satisfaction of the requirements for the degrees of Doctor of Philosophy, Doctor of Juridical Science, Doctor of Science, and Doctor of Education at The George Washington University.

AVAILABILITY OF DISSERTATIONS

The dissertations in typescript form are filed in the University Library, where they may be consulted by students interested in examining the complete texts.

Information about interlibrary loans of dissertations listed in this or earlier issues may be obtained from the University Librarian.

Information about microfilm or photoprint copies of specific items may be obtained from the Photoduplication Service of the Library of Congress, Washington 25, D. C.

THE GENUS MELOCHIA IN AMERICA

by AARON GOLDBERG*

Melochia is a genus of the family Sterculiaceae, tribe Hermannieae, subtribe Melochinae. The genus was validated by Linnaeus in the first edition of his *Species Plantarum*, and the fifth edition of his *Genera Plantarum* established *Melochia corchorifolia* L. as the type.

The genus occurs in tropical and subtropical regions between approximately 33° N. and 33° S. latitudes. In America it extends from the southern United States to northern Argentina and Uruguay. It occurs also in the West Indies. The greatest number of species is found in northern South America. Typically they are savanna plants, but species also occur in thickets, fields, or woods, sometimes on hillsides, and usually in the sun. Many species live in dry habitats, several in wet areas. Some species grow in soil derived from igneous rocks, others in soil derived from limestone, or serpentine, and some grow among rocks. They are found at elevations of 0-3,150 meters.

The genus has no outstanding economic importance. Some species have fine silky fibers which are used locally. Some occur in pastures. A few are weeds. Some are used locally as a demulcent in enteritis. The flowers are a source of food for honey-bees. One species is planted as a shade tree.

None of the earlier treatments of the genus in America accounts for more than half of the taxa known at present, and many contain erroneous nomenclature, misinterpretations of taxa, and other inaccuracies. Diagnostic characters are frequently not given and descriptions are very incomplete. Approximately 300 names and combinations have been used to describe the types of *Melochia* in America.

I have examined about 2,500 specimens from 20 American and European herbaria. The specimens are cited under the pertinent species and the distribution of the species, by countries, is given in an appendix. From them I have prepared a map of the geographical distribution of the genus in America. I have made more than 30,000 observations, about half of them measurements under the dissecting microscope, of characters in the genus. Thus, I have supplied much of the information lacking in the earlier descriptions. As a result of my studies, I consider 55 taxa adequate to describe the American types in the genus as now known. The genus is represented in America by 42 species, several of which contain varieties. Two species and two varieties are described as new. Several new combinations and other corrections in nomenclature have been made. Keys to the sections, species, and varieties have been prepared.

* A.B. 1939, Brooklyn College; M.S. 1954, DePaul University; Ph.D. conferred February 22, 1962. Director of research: Lyman Bradford Smith, *Professorial Lecturer on Plant Taxonomy; Curator, Division of Phanerogams, Department of Botany, Smithsonian Institution; Research Consultant in Taxonomy, The Graduate Council.*

The American species of the genus had previously been grouped in three sections. I have emended the descriptions of the sections and changed their nomenclature, where necessary, to conform with the present International Code of Botanical Nomenclature. I have added a fourth section, *Physodium*.

Species of *Melochia* in America are primarily shrubs or subshrubs, sometimes herbs or small trees, 0.08-10.0 meters high. They are mostly perennial and often have a woody taproot. They are subglabrous to densely tomentose, sericeous, velutinous or lanate and canescent, cinereous, or brownish. The hairs are stellate and few- to many-rayed, forked, simple, or glandular, the last consisting of a column of cells with the distal one enlarged. They are 1.0-4.0 mm long. The young stems sometimes have a large pith or are hollow. The internodes are 0.2-11.0 cm long.

The leaves are simple and alternate. The stipules are 1.5-10.3 mm long and 0.2-5.0 mm wide, deltoid-acuminate or -acute, lanceolate, or linear. The petiole is 0.07-8.0 cm long. The lamina is 0.6-22 cm long and 0.2-11.5 cm wide, ovate, lanceolate, linear, oblong-ovate, or suborbicular. In a few species one side is larger than the other. The base is usually rounded to cordate, sometimes truncate, cuneate, or oblique. The apex is usually acute to acuminate, sometimes rounded. The margin is usually crenate-serrate, the serrations being 0.3-12.0 mm wide and 0.2-3.6 mm high. There are 4-15 pairs of primary veins, usually two being basal. The veins are usually impressed above and prominent beneath.

The inflorescences are axillary, terminal, leaf-opposed, or 90° from the leaf. They are cymose and umbellate, subcapitate, paniculate, spicate, or corymbiform and 0.6-34 cm long. The peduncle is 0-8.5 cm long. Sometimes it has a primary branch 0.2-3.5 cm long, rarely a secondary one up to 1.5 cm long, and a tertiary one up to 0.7 cm long. The pedicel is 0-19 mm long. The bracts are 0.5-12 mm long and 0.1-4.8 mm wide. Sometimes 2-3 immediately subtend each flower whereas in some species they are at the base of the pedicels. Sometimes 2-3 are united part way. They are similar in shape to the stipules.

The flowers are polypetalous, actinomorphic, perfect, hypogynous, and usually dimorphic. There are five antepetalous stamens. The filaments are partially or completely attached to one another. Staminodes are usually absent. Sometimes there are five, 0.1-1.2 mm long, alternate with the fertile stamens. They are usually dentiform, sometimes elongated. The anthers are dithecous, extrorse, attached to the filaments at the middle, 0.4-2.6 mm long, 0.3-1.2 mm wide, oblong, and emarginate at both ends, sometimes nearly to the middle from the apex. The pollen is smooth, usually globular and 34-49 μ in diameter, sometimes subprolate and 51 μ long and 44 μ wide. There are five, rarely six to eight, antepetalous carpels. The styles are filiform, and sometimes slightly clavate at the apex. The placentation is axile, the ovules being attached ¼-⅓ the way up from the base of the carpel. There are 2 ovules per carpel, superposed and close to one another. They are anatropous, the funicle ascending on the adaxial surface of the ovule. The calyx is quinquefid, valvate in aestivation, persistent, usually green, sometimes rose, rose-purple, or yellow. Sometimes it is membranous. It is 1.4-15.0 mm long and 2.1-8.5 mm wide, with teeth 0.4-7.8 mm long and 0.2-5.5 mm wide. Sometimes it is accrescent, becoming up to 36 mm long and 19 mm wide, with teeth up to 12 mm long and 10 mm wide. The teeth are usually deltoid-acute or -acuminate, sometimes nearly linear.

The sinus is usually acute, sometimes rounded to truncate. Sometimes there is glandular tissue between the calyx and the corolla and between the bases of the petals. There are 5 petals, which are flat, veined, convolute in aestivation, and often marcescent. They are purple, pink, purple distally and yellow or orange proximally, yellow, orange, white, blue, red, or violet. They are 2.7-17.4 mm long and 0.8-9.5 mm wide, usually obovate or oblanceolate, sometimes obdeltoid or obovate-oblong. The base is cuneate or spatulate, free from the staminal tube or attached to it for 0.3-5.0 mm. The claw is 0-6.5 mm long. Sometimes there are a few hairs on the petals or at the base of the staminal tube.

In the longistylous form of the flower, the stamens are 2.4-9.0 mm long. The filaments are united up to the anthers or free for 0.4-3.0 mm. The pistil is 2.6-12 mm long. The styles are free for 1.2-6.7 mm. They are free to the ovary or united for 0.3-4.0 mm. They are papillose at the apex for 0.5-2.5 mm. In the brevistylous form, the stamens are 2.8-11.3 mm long. The filaments are free for 0.5-7.5 mm. The pistil is 2.3-8.0 mm long. The styles are free for 0.8-5.3 mm. They are free to the ovary or united for 0.2-3.0 mm. They are papillose for 0.3-1.0 mm at the apex. The flowers of several species in the section *Melochia* are not dimorphic. The stamens and pistils are 1.7-3.2 mm long. The filaments are free for 0-1.2 mm. The styles are free for 0.6-1.2 mm. They are free to the ovary or united for 0.1-0.3 mm.

The fruit is a schizocarp or capsule 2.4-12 mm long and 2.9-22 mm wide. It is subglobular and pentagonal or pyramidal and pentapterous. The sulci between the carpels are shallow to deep, extending 1/5-1/2 the way to the center of the fruit. The stipe is 0-6.7 mm long. Dehiscence is (1) septicidal into cocci with a narrow ventral slit, (2) loculicidal all along the ventral suture, the cells gaping ventrally, and 1/5-1/2 the way along the dorsal suture, and sometimes eventually septicidal, or (3) first loculicidal all along the dorsal suture and then often septicidal. The seeds are 1.4-3.9 mm long and 0.9-2.5 mm wide. They are usually trigonal, the dorsal surface being rounded and the sides flat. Rarely the chalazal end of the testa is loosened, membranous, and almost wing-like for 0.1-0.3 mm. The seeds are brown to black. There are 1-2 per cell. The embryo is straight, 1.5-2.7 mm long and embedded in fleshy endosperm. The cotyledons are 0.7-1.7 mm in diameter, flattened, suborbicular, subcordate at the base, and rounded at the apex. The radicle is inferior, terete, 0.7-1.1 mm long and 0.25-0.5 mm. wide. The plumule is not evident at this stage. Venkata Rao studied the early stages in the development of the embryo of *M. corchorifolia*.

Cristóbal studied the chromosomes of two species of *Melochia*. In both the diploid number was 18.

The flowering and fruiting periods are usually extended, continuing sometimes throughout the year. The flowers are sometimes matutinal, fragrant, and visited by honey-bees.

Evolution and relationships in the genus are discussed. The genus probably originated in America at a time when warm, moist conditions prevailed. The great majority of species occur in America and the characters of some species found there are as primitive as those of the species occurring elsewhere. Species of *Melochia* are mostly perennial subshrubs or shrubs, but toward the extremes of the

range of the genus they have become herbs, and a few are annuals, which avoid the rigors of a cold season. Other species have become adapted to withstand moisture stress by means of a dense indument and increased thickness of the leaves. Stellate hairs occur most commonly in the sections *Pyramis* and *Physodium*, whereas simple ones are most common in the sections *Melochia* and *Mougeotia*. Moisture is also conserved by those species with small leaves and short internodes in the vegetative stems and inflorescences. In some species of the section *Melochia* the internodes between the bracts have become reduced so that the latter immediately subtend the flowers, and in some species the bracts are enlarged, closely invest the flowers, and take over the protective function of the calyx. The stipe is well developed in the section *Physodium* but it is much reduced or absent in species of the other sections. The general trend is from loose to compact types of inflorescences. In the latter the flowers have become reduced in size. Reduction has occurred particularly in the calyx and it is most pronounced in the section *Melochia*. Reduction has also occurred in the essential organs. Staminodes, the vestiges of one of the cycles of stamens, are elongated and most evident in some species of the section *Physodium*. In several species, particularly those of the other sections, they are merely dentiform or entirely absent. The fertile stamens show a trend toward the loss of connective between the anther sacs, so that the species advanced in this respect have deeply emarginate anthers and divergent anther sacs. This is especially the case in the sections *Mougeotia* and *Melochia*. The number of carpels is commonly five, but species primitive in this regard frequently have six to eight. There are two ovules in each carpel, but in many species one aborts and but one seed develops.

The organs of the flower are homologous with leaves and, like the latter, in the primitive condition are separate. In some species of the section *Melochia* two or three of the bracts may be partially united. In the section *Pyramis* the petals are attached to the staminal tube at the base. In some species of the sections *Mougeotia* and *Melochia* the petals are free of the staminal tube; in others they are attached to it at the base. In the sections *Melochia* and *Mougeotia* the filaments in the longistylous form of the flower are usually united up to the anthers. They are united to a lesser extent in the other sections. In the section *Physodium* the styles are free to the ovary, in the section *Mougeotia* they are usually free to the ovary, and in the section *Melochia*, often so, whereas in the section *Pyramis* they are united at the base. The cells of the fruit vary in the extent to which they are united in the different species. In species of the section *Melochia* they are usually united for a greater distance along their sides than they are in species of the other sections.

The fruits of some species of the section *Mougeotia* dehisce in the most primitive manner, along the ventral suture, the site along which union occurred by infolding of the carpel phyllomes. In some species of this section it is also septicidal, along the union between carpels. In the other sections dehiscence is first loculicidal along the dorsal suture, the most advanced means of dehiscence in the genus, and in a few species of the section *Melochia* it is no longer also septicidal.

Taking into account the evolutionary changes discussed above, geographical distribution, and the genetic principle that similarity of structure among species of the same genus is primarily indicative of genetic relationship, I have arranged the American species of *Melochia* according to my understanding of their relationships.

STUDIES ON THE RELATIONSHIP OF DELAYED HYPERSENSITIVITY TO IMMUNITY IN TULAREMIA

by MILTON GORDON*

The relationship between delayed hypersensitivity and resistance to infectious organisms has never been clearly defined. It is held by some that the inflammation consequent to the allergic reaction is generally helpful in impeding the spread of microorganisms through the body. Others view the inflammatory reaction as a serious liability because of the destruction of tissue that occurs. If the hypersensitive state is regarded as an asset, does a correlation exist between delayed hypersensitivity and immunity? Can one infer from the existence of a delayed hypersensitive state an immune state also? This dissertation presents evidence that in tularemic infection in guinea pigs no positive correlation exists between delayed hypersensitivity and immunity.

Tularemia is primarily a disease of rodents, rabbits, hares, and birds. It is transmitted in nature by flies, fleas, lice, and ticks. Man is an accidental host. Tularemia in man is an acute, moderately severe febrile disease with a tendency to pneumonic complications. Although an attack of tularemia usually confers a lasting immunity, reinfections have been reported. Nonviable vaccines have been available for years, but are of limited value. The disease evokes a hypersensitive state; an intradermal test has served as a diagnostic aid for many years.

Hypersensitivity reactions are broadly categorized into immediate and delayed types. Delayed hypersensitivity has been defined as an increased, unfavorable tissue reactivity of an individual toward a specific substance, usually resulting from prior experience with the same or chemically related substance. It is the latter type, the tuberculin type or so-called allergy of infection, that is of concern in this study.

The approach taken to resolve the relationship between the phenomena of delayed hypersensitivity and immunity was to induce these manifestations in guinea pigs by various procedures and under special conditions to determine whether a parallelism of the responses existed.

Guinea pigs were selected as the animal of choice because of their ability to develop delayed hypersensitivity similar to that in man. Two attenuated strains of *Pasteurella tularensis*, designated Jap and LVS, were used to induce infection and acquired resistance. A highly virulent strain, Schu S4, was used for challenge.

The material used for skin testing was a saline suspension of heat-killed Schu

* A.B. 1950, University of California at Los Angeles; M.S. 1955, The George Washington University; Ph.D. conferred February 22, 1962. Director of research: George Green Wright, *Chief, Immunology Branch, Fort Detrick; Research Consultant in Immunology, The Graduate Council.* Co-director of research: Angus MacIvor Grillin, *Professor of Microbiology.*

S4 strain organisms, injected intradermally in 0.1 ml amounts into the flank of the animal. Measurement of the dermal response was made 24 hours after testing. The greatest right angle diameters were measured with calipers, and the area of reaction was estimated as the product of the two dimensions.

Immunity was calculated as the difference between the average day of death of experimental and control groups of animals. The observation period was 21 days.

Immunization of guinea pigs with viable attenuated organisms induced a marked degree of delayed hypersensitivity and an appreciable level of immunity in one month. Over a three-month period the courses of both responses appeared to be parallel; there was no indication that the phenomena were separable.

The effect of desensitization upon immunity was investigated. Hypersensitive, immune guinea pigs were desensitized with daily injections of heat-killed Schu S4 strain organisms for 21 days. The delayed hypersensitive response was reduced markedly, but the immune response remained unchanged. Withdrawal of the desensitizing injections resulted in a return of dermal reactivity. The experiment demonstrated that guinea pigs can possess appreciable immunity in the absence of any substantial delayed hypersensitive response.

Injection of animals with heat-killed organisms in incomplete Freund adjuvant elicited a moderate degree of delayed hypersensitivity and only a minimal level of resistance in approximately three weeks.

Induction of delayed hypersensitivity was attempted with immune complex—specific antibody adsorbed to killed Schu S4 strain organisms. Injection of this complex, emulsified in incomplete Freund adjuvant, evoked a moderate degree of delayed hypersensitivity and a minimal level of resistance in six days. This experiment and the one just previously described showed that the parallelism of responses noted after immunization with viable organisms did not exist after immunization with nonviable preparations.

Two other approaches were taken to determine if hypersensitivity could be demonstrated in essentially nonimmune animals. The first of these approaches was based on the phenomenon of immunologic unresponsiveness. Guinea pigs 6 to 10 hours old were exposed to heat-killed organisms and, as they approached maturity, were subsequently immunized with viable attenuated *Past. tularensis*. Delayed hypersensitivity, comparable to that of control animals not exposed to antigen at birth, was demonstrated one month after immunization. Although the animals exhibited an immune response, it was significantly lower than that of control animals. Only a partial suppression of immunity was achieved in adult guinea pigs exposed at birth to nonviable organisms.

The second approach was an attempt to demonstrate hypersensitivity in animals showing a suppressed immune response as a result of X-irradiation. Groups of guinea pigs were irradiated with graded dosages of X-rays from zero to 140 r (the $LD_{50/30}$ dose is approximately 250 r with the machine used), and infected with viable attenuated organisms 48 hours later. There appeared to be no distinct effect of irradiation upon the delayed response nor upon acquired resistance approximately one month after infection. Irradiation with dosages up to 220 r resulted in a high

proportion of deaths within two weeks as a result of the combined effects of irradiation and superimposed infectious processes.

The results of this research have shown that immunization with viable attenuated organisms evoked both delayed hypersensitivity and immunity. Although a parallelism in the responses during the first three months of infection seemed to indicate that an apparent positive relationship existed between the phenomena, successful desensitization of these animals demonstrated that immunity can exist in the absence of any appreciable level of delayed hypersensitivity.

The interpretation that delayed hypersensitivity and immunity are independent phenomena was strengthened by the fact that immunization with nonviable preparations resulted in elicitation of moderate levels of hypersensitivity with minimal levels of acquired resistance.

The partial success obtained in the experiment based on immunologic unresponsiveness does not detract from the conclusion that the phenomena are independent. The results of this experiment are interpreted to indicate that the immunological mechanisms of the guinea pig mature rapidly after birth. The guinea pig may have been an unfortunate choice of animal for this particular phase of the work.

Delayed hypersensitivity and immunity of X-irradiated animals one month after infection appeared to be unaffected by the irradiation. These responses were not determined at other intervals. It is possible that the leukopenia and tissue cell destruction caused by irradiation provide an environment for increased vaccine potential.

Whether delayed hypersensitivity and immunity are consequences of stimulation by one antigen or by two different antigens is not known. The antigen associated with protective immunity has not been defined or isolated.

If one antigen is concerned in the two responses we can postulate a single mechanism in which the immunological manifestations are the results of various degrees of antigenic stimulation. An initial, moderate stimulation (or alteration) of a host cell induces delayed hypersensitivity. A further, more intense stimulation induces cellular resistance.

If two different antigens are responsible for each of the manifestations we can imagine that viable organisms contain both an immunizing antigen and a sensitizing antigen. Nonviable preparations may have lost the immunizing antigen during manipulation. The lack of purified antigens with protective activity points up the limitations of this study, and prevents firmer conclusions at this time.

In extrapolating the results of this research to man, we can infer that similar mechanisms are operative here. The existence of a delayed hypersensitive state in man is usually interpreted to indicate past or current exposure to the infectious organism. But just as under special conditions a lack of correlation between delayed hypersensitivity and immunity was demonstrated in guinea pigs, one should consider that a similar lack of correlation may exist in man.

STUDIES ON CATECHOLAMINES IN NERVOUS TISSUE

by RONALD GROVER KUNTZMAN*

The work presented here has dealt with some aspects of the biosynthesis, storage, and metabolism of norepinephrine, dopamine, and serotonin. Since recent evidence suggests that these amines have a regulatory role in the central nervous system, a study designed to relate the biochemistry of these amines in the central nervous system to their function was undertaken.

To make this approach possible, methods were developed to measure in extremely small amounts of tissue the levels of serotonin and norepinephrine, as well as some of the enzymes involved in their synthesis and metabolism.

A new method, ten times more sensitive than the usual manometric procedures, was developed to assay *in vitro* DOPA decarboxylase activity by measuring the formation of dopamine in as little as 20 mg of nerve tissue. An additional advantage of this new method is its specificity, for the rate of decarboxylation of DOPA can be measured in the presence of other substrates of this enzyme.

The sensitivity of the method for the determination of 5-hydroxytryptophan decarboxylase activity has been increased to make possible the assay of this enzyme in 20 mg of tissue. Modifications of the fluorometric methods for the estimation of norepinephrine and serotonin have been presented which make possible the determination of these amines in amounts of tissue containing as little as 0.04 micrograms of norepinephrine or 0.200 micrograms of serotonin. These modifications increased by about ten times the sensitivity of previously published fluorometric methods. Thus, the method for norepinephrine analysis is now comparable to the usual bioassay procedure, which is less precise and specific.

A new method has been presented which measures the relative inhibition of monoamine oxidase *in vivo*. This method is of importance in view of the finding that the determination of monoamine oxidase activity *in vitro* may give results which cannot be interpreted. For example, as presented in this dissertation, a 95 per cent inhibition of monoamine oxidase activity measured *in vitro* was not sufficient to impair serotonin metabolism *in vivo*.

With the use of these methods the distribution in brain of norepinephrine, serotonin, DOPA decarboxylase, and 5-hydroxytryptophan decarboxylase has been studied.

The activity of DOPA decarboxylase roughly parallels the level of norepinephrine in different parts of the brain except in the caudate nucleus. This structure contains little norepinephrine, but has an extremely high DOPA decarboxylase activ-

---

* B.S. 1955, Brooklyn College; M.S. 1957, The George Washington University; Ph.D. conferred February 22, 1962. ity and a high level of dopamine about 5.0 γ/g. Although there is a positive relationship between the levels of norepinephrine and DOPA decarboxylase activity, a better relationship might exist between the levels of norepinephrine and the hydroxylase which converts dopamine to norepinephrine, since, as suggested in this dissertation, this enzyme is probably the rate-limiting step in the synthesis of norepinephrine.

In all the brain areas studied a constant ratio between the activities of DOPA and 5-hydroxytrytophan decarboxylase was found suggesting that the same enzyme is responsible for the decarboxylation of both amino acids. The implications of this finding are important when studying the biochemical and physiological effects of injected precursors; for example, serotonin will be formed from 5-hydroxytryptophan not only in places where it is normally synthesized and released but also in neurons which normally contain catecholamines. The lack of specificity of the decarboxylase makes it difficult to use injections of biological precursors to study the action of these amines normally formed at their biosynthetic sites.

A detailed mapping of DOPA-5-hydroxytryptophan decarboxylase activity has shown that this enzyme is concentrated in the brainstem reticular formation, hypothalamus, basal and intralaminar portions of the thalamus, and several structures of the limbic system. In other words, the enzyme is localized in those areas which coordinate behavioral, autonomic, and somatic activity. The level of the decarboxylase was low in other parts of the brain including white matter, cerebellum, and cortex. Of particular significance was the finding that the nuclei of specific sensory pathways contain little enzyme activity even when these areas are located near structures that have high enzyme content.

A comparison of serotonin and norepinephrine levels showed that in general the two amines are present in the same parts of the brain, particularly in the hypothalamus; however, in some areas a preponderence of serotonin in relation to norepinephrine was found. Such areas include the hypnogenic zone of Hess, the amygdala, and the pyriform cortex.

These studies of the distribution of norepinephrine and serotonin suggest that the amines act mainly in subcortical brain areas, but with the exception of the few instances cited above there was no discrete separation of the regions that contain each amine.

A somewhat simpler system than the brain in which the function of norepinephrine could be studied was at peripheral sympathetic ganglia. Since both these ganglia and the central nervous system are derived from the same embryologic tissue, a study of the role of norepinephrine in these ganglia might provide a clue to the action of this amine in the central nervous system.

Depletion of ganglionic norepinephrine by means of reserpine caused a facilitation of transmission. Contrastingly, when a high level of free norepinephrine in ganglia was produced by administration of reserpine after pretreatment with a monoamine oxidase inhibitor, a suppression of synaptic transmission occurred. In addition, large doses of adrenergic blocking agents and Bretyllium, a compound shown to inhibit the release of norepinephrine, also caused a facilitation of ganglionic transmission. These results are in accord with the view that norepinephrine modulates synaptic transmission and suggested that norepinephrine exerts an in-

hibitory influence in sympathetic ganglia by modulating the effects of the primary neurohormone acetylcholine. A question of perhaps greater significance is whether norepinephrine and serotonin in the brain also serve as modulators of synaptic transmission.

Available evidence indicates that catechol o-methyltransferase is the enzyme mainly responsible for the metabolism of circulating catecholamines. Experiments reported in this dissertation support the view that monoamine oxidase is the enzyme mainly responsible for the inactivation of norepinephrine and serotonin in nerve tissue. This was shown by the rise in ganglionic and brain norepinephrine and brain serotonin caused by the administration of a monamine oxidase inhibitor and by the inhibition of the metabolism of the amines released from ganglia and brain by reserpine administered to animals pretreated with a monoamine oxidase inhibitor. In contrast, pyrogallol, a catechol o-methyltransferase inhibitor, neither prevented the metabolism of brain norepinephrine released by reserpine nor caused an increase in the level of this amine in brain.

Studies were carried out on the rate of synthesis of brain norepinephrine and serotonin, in various species, as reflected by the rapidity with which a monoamine oxidase inhibitor caused an increase in the brain levels of these amines. Serotonin was synthesized rapidly in all the species studied; whereas norepinephrine biosynthesis in various animals is variable and lies in the following order: rat > rabbit > dog and cat. Since dopamine, the precursor of norepinephrine, increased rapidly in all the species studied, the rate-limiting step in the formation of norepinephrine is its conversion from dopamine.

Binding of norepinephrine and serotonin by nerve tissue can be considered the final step in their biosynthesis, since it is necessary for their stabilization in cells. Previous studies have shown that serotonin is released from platelets and brain by reserpine which interferes with its storage. In the present study, reserpine has been shown to also impair the capacity of the brain to store dopamine.

The importance of storage mechanisms for amines was suggested by studies which showed that the brain levels of norepinephrine and serotonin in newborn rats, born with poorly defined behavioral patterns, were only a fraction of the levels in adult animals. In contrast, guinea pigs, born with highly developed behavioral patterns had brain amine levels almost equal to those of mature animals. The following data support the view that the low amine levels in newborn rats is due to a deficiency in the storage mechanisms for these amines.

1. The low levels of brain monoamines in newborn rats did not arise from a low activity of DOPA-5-hydroxytryptophan decarboxylase, since in the brain of the newborn this enzyme is as active as in the adult.

2. The monoamine oxidase activity in the brain of newborn rats was only 30 per cent of that of adults. The low amine levels in newborn rats could not be explained by this lower activity of monoamine oxidase.

3. The administration of a monoamine oxidase inhibitor caused the brain levels of norepinephrine and serotonin to increase at the same rate in both newborn and adult rats; but the absolute increase was smaller in the newborn. These results suggest that the amines were rapidly formed in the newborn but that the young lacked an efficient storage mechanism.

CHARACTERISTICS OF VARIOLA VIRUS IN TISSUE CULTURE

by JAMES BRYAN PIRSCH*

Because of marked similarities between certain members of the Poxvirus group, it is tempting to extrapolate from various physical, cytopathological, and developmental characteristics of other poxviruses to variola virus. Such data have not always been corroborated by parallel studies with the more virulent virus, which is a distinct biological entity. Tissue culture methods offered the opportunity to demonstrate new characteristics of variola virus and to investigate basic host-variola virus interactions at a cellular level. It remained an ancillary objective to determine, if possible, the cellular bases for those properties already established in the intact animal host.

A number of cell lines, grown in both monolayer and suspended cell cultures, were examined for their capacity to support the growth of variola virus. All cell lines tested were found to be susceptible to infection, although to varying degrees. No correlation could be made between the capacity of a cell line to produce virus and its animal origin or cell type. It was found, generally, that the maximal titers obtained were proportional to the inoculated dose of variola virus. It was suggested that secondary cycles of infection were not occurring, perhaps owing to the presence of interfering substance(s), or to the presence of a noninfectious interfering virus particle. A possible third explanation was based on the aging of the host cell culture which lessened the susceptibility of uninfected cells. Definitive data were not offered.

A high dose (10^6 PFU per ml) always produced a cytopathogenic effect. A lower inoculum (10^4 PFU per ml) had an equivocal effect at best. Only the Maben cell line and primary cultures of adult hamster kidney responded to the lower inoculum. There was no correlation between the cell's sensitivity to a cytopathogenic effect and its capacity to produce maximal amounts of infectious virus. The formation of hyperplastic foci, first seen in monolayer cultures of porcine kidney cells and later in HeLa cells, was considered to be an unusual expression of cytopathology.

Based upon an enumeration of the hyperplastic foci formed in monolayer cultures of infected HeLa cells a new tissue culture assay for variola virus has been developed. Heating the virus suspension at 56 C for 30 min decreased by 99 per cent the number of foci formed by the unheated sample. Similarly, contact with immune serum effected a 90 per cent reduction in the number of foci. A straight line

* A.B. 1949, University of Minnesota; M.S. 1952, St. Louis University; Ph.D. conferred February 22, 1962. Director of research: Arthur Brown, *Chief, Branch II, Virus and Rickettsia Division, Fort Detrick; Research Consultant in Virology, The Graduate Council.* Co-director of research: Mary Louise Robbins, *Professor of Microbiology*).

relationship was demonstrated between the number of foci formed and the concentration of variola virus present in the suspension being assayed. The precision and the sensitivity of the tissue culture technique and the classical pock assay procedure utilizing the chorioallantoic membranes of embryonated chicken eggs. The sensitivity of the tissue culture assay was approximately four times greater than that of the egg procedure, since the mean count of hyperplastic foci (233) exceeded the mean pock count (53) by this value. In addition, statistical analysis established the greater precision of the tissue culture assay.

The adsorption of variola virus to monolayer cultures of HeLa cells or guinea pig lung cells required approximately 4 hr at 35 C. This value was obtained by measuring the increasing amounts of virus found associated with susceptible guinea pig lung cells at short time intervals after their infection. A similar adsorption time was demonstrated by following at close intervals after infection the increasing amounts of variola virus which resisted washing from monolayer cultures of HeLa cells. Cell-associated virus went on to form hyperplastic foci which were easily counted.

Intracellular replication of variola virus began after 8-12 hr of infection and progressed logarithmically until maximal intracellular concentrations of virus were achieved, about the 24th hr of infection. Growth curve studies with infected HeLa cell cultures demonstrated that concentrations of variola virus which appeared in the extracellular medium ranged from only 1:100 to 1:1000 of those found intracellularly. With the guinea pig lung cell line, however, after the 72d hr of infection, equivalent amounts of variola virus were detected both intra- and extracellularly.

The development of variola virus inclusion bodies within infected HeLa cells coincided with the quantitative formation of infectious virus. The first inclusions were seen at a time (8 hr after infection) when viral replication was first detected. After 12 hr of infection, these inclusions were more frequently detected. Observations of multiple inclusions within a single cell and of localized foci of infected cells were made midway (16 hr after infection) through the logarithmic phase of viral multiplication. By the 24th hr of infection, inclusion bodies were of frequent occurrence; some forms then appeared irregular in formation and less homogeneous in composition.

One of the distinguishing traits of variola virus, which has assumed diagnostic significance, is the inability of this virus to survive serial passage in laboratory animals. It seemed appropriate, therefore, to attempt the passage of this virus in tissue culture systems to re-examine the phenomenon at a cellular level, taking advantage of concurrent experiments detailing kinetic aspects of viral adsorption, replication, and release.

Increasing amounts of virus had been demonstrated in the supernatant culture fluids of guinea pig lung cells three days after their infection with variola virus. Although advantage was taken of this timing, supernatant fluids from infected cultures failed to promote the serial passage of variola virus. Passages of infected supernatant fluids diluted 1:10 and 1:300 were also attempted, but, while the activity of classical interferon, or other interfering substances, should have been diminished, successful passage of variola virus was not achieved.

Suspensions of variola virus prepared by disrupting infected cells with sonic

energy have served very well to perpetuate the course of the viral infection. The most obvious explanation for this success was that greater yields of virus were able to be obtained from within infected cells than from the infected culture fluid. The behavior of intracellular virus populations after brief storage in the frozen state, and the finding that intracellular virus could initiate a successful passage series even after extensive dilution suggested that qualitative differences might exist between intracellular and extracellular viral populations. Limited attempts to demonstrate some factor within cells which would account for the apparent qualitative difference were unrewarding.

SOME RESULTS IN LIFE TESTING BASED ON HYPERCENSORED SAMPLES FROM AN EXPONENTIAL DISTRIBUTION

by HOWARD RICHARD ROBERTS*

Employing the concept of a singly censored sample as one of known size n for which all variate values $X_i > X_c$ are unknown and all $X_i \leq X_c$ are known (single censorship on the right), the concept of a singly censored sample is generalized to that of what the author terms a hypercensored sample. A hypercensored sample is defined as one of known size n for which some (a known number) of the variate values in each of several intervals have unknown values. Three types of hypercensored samples arising in life testing experiments are pointed out: (1) those in which a fixed number of test items $k_1, k_2, \text{—}, k_r$ are withdrawn from the life test at successive failure times $X_1, X_2, \text{—}, X_r$, respectively; (2) those in which a fixed number of items $k_1, k_2, \text{—}, k_s$ are withdrawn from the life test at successive fixed times $t_1, t_2, \text{—}, t_s$, respectively; and (3) those in which withdrawals occur completely randomly according to some probability density function $g(X', \Phi)$. The only previous work in this area is due to Herd, Sampford, and Hartley, all of whom consider the problem of estimating the population parameters. These authors have treated various parts of the hypercensorship estimation problem under the terms "multiple censorship," "partial truncation," and "incomplete data."

In this dissertation, the standard types of life tests, treated in a logical sequence,

* B.S. 1935, M.S. 1957, The George Washington University; Ph.D. conferred February 22, 1962. Director of research: Frank Mark Weida, *Professor Emeritus of Statistics in Residence.*

are generalized from the single censorship case to the hypercensorship case, using as a basis for the generalization the type (1) hypercensorship case. The underlying distribution of failure times is assumed to be given by the exponential probability density function, $f(X) = (1/\theta)\exp(-X/\theta)$, and simple and composite hypotheses concerning the parameter θ (the mean life) are treated along with various other test characteristics. For each type of test considered the results derived for the hypercensorship case are compared with those for the single censorship case and numerical examples are given. Results in the single censorship case are due mainly to Epstein and Sobel.

For the life test in which testing is terminated after a fixed number of failures, r, have occurred the maximum likelihood estimate of the mean life, $\hat{\theta}$, is derived. It is then shown that $2r\hat{\theta}/\theta$ is distributed as a Chi-square variate with 2r degrees of freedom. The best critical region (in the Neyman-Pearson sense) for the test H_0: $\theta = \theta_0$ against H_1: $\theta < \theta_0$ is derived and the operating characteristic function is determined.

The distribution of the rth out of n failure times, $g(X_{r,n})$ is shown and the expected value, $E_{\theta}(X_{r,n})$ is derived. An approximation equation for $E_{\theta}(X_{r,n})$ is also given. These results are extended to the test of H_0: $\theta = \theta_0$, H_1: $\theta = \theta_1$ (θ_1 a specified value less than θ_0) and required values of r along with appropriate critical regions are tabulated for various values of α, β, and θ_0/θ_1.

It is noted that in the maximum likelihood estimate of θ the rth failure time, $X_{r,n}$, is weighted more heavily than smaller failure times. This suggests the possibility of a test of H_0: $\theta = \theta_0$, H_1: $\theta = \theta_1$ based on $X_{r,n}$ only. An exact test of this form based on $g(X_{r,n})$ is derived but is shown to be computationally difficult. Consideration is also given to an approximate test based on the unbiased estimate of θ, $\rho X_{r,n}$, where $\rho = \theta/E_{\theta}(X_{r,n})$. However, this estimate is shown to be relatively inefficient.

The test based on $X_{r,n}$ only has an acceptance region of the form $X_{r,n} > C$. Thus if the rth failure has not occurred by time C the test is terminated with acceptance of H_0 at time C. Termination of the test at the a priori time C leads to the development of the so-called "time truncated" test in which testing is terminated at $\min(X_{r_0}, T_0)$, with acceptance of H_0: $\theta = \theta_0$ if $\min(X_{r_0}, T_0) = T_0$, and with rejection of H_0 if $\min(X_{r_0}, T_0) = X_{r_0}$, where r_0 and T_0 are preassigned constants. The difficulties associated with the test based on $X_{r,n}$ only are shown to persist here but can be resolved easily in the special case where failures and withdrawals are replaced. The expected number of failures required to reach a decision, $E_{\theta}(r)$, and the expected waiting time to reach a decision, $E_{\theta}(T)$, are derived for this special case. Appropriate values of r_0 and n for various values of α, β, θ_0/θ_1 and T_0/θ_0 are tabulated.

The fact that the life test can be terminated at the preassigned time T_0 (with acceptance of H_0: $\theta = \theta_0$) leads to a modification of the test based on the first r failures whereby an acceptance decision can be made between failure times and always before $X_{r,n}$. This modification results in a test based on the total item life

accumulated up to time t, T(t). Results are obtainable in a straightforward manner in the hypercensorship case for the critical region, the expected number of failures required to reach a decision, $E_{\theta}(r)$; the expected waiting time to reach a decision, $E_{\theta}(T)$; and the operating characteristic function, $L(\theta)$.

For the sequential life test, it is pointed out that Wald's results are immediately applicable to the variable of interest (the time to failure of an item). However, the sequential life test is formulated in a so-called "semicontinuous" form to take advantage of the ordered nature of the failure times. In this context, the sequential test of H_0: $\theta = \theta_0$ against H_1: $\theta = \theta_1$ consists of placing n items on life test and making a decision to accept H_0, accept H_1, or continue the life test continually as time passes. These decisions are shown to be dependent on the accumulated item life T(t), the sequential life test being essentially an extension of the modified test based on the first r out of n failures. The usual characteristics of a sequential test are shown to be obtainable in a straightforward manner. Test characteristics include the sequential probability ratio, the operating characteristic function, and the average sample number function. In addition, the expected total item life required to reach a decision $E_{\theta}[T(t)]$ is derived and an approximation equation for the expected waiting time to reach a decision $E_{\theta}(t)$ is developed. Truncation of the sequential test after a specified number of failures, r_0; a specified amount of total test time, T_0; and a combination of r_0 and T_0 are also considered and upper bounds for the resulting modified error probabilities are derived.

As areas for further research, the type (2) and type (3) forms of hypercensorship are emphasized and certain preliminary results and suggested approaches are given. The need for further research in the hypercensorship case for other lifetime distributions such as the Weibull and normal distributions is cited. It is pointed out that multiparameter distributions under various forms of censorship usually require iterative methods for the solution of the maximum likelihood equations, and little is known about the small sample distribution of the resulting estimates. Other hypothesis testing situations ranging from the equality of two population mean lifetimes to factorial experiments in life testing situations are pointed out. Goodness-of-fit tests concerning the assumption of the underlying distribution are mentioned and finally the use of nonparametric methods is pointed out.

STUDIES ON THE REACTION OF BIS-B-CHLOROETHYL SULFIDE WITH PURINES, PYRIMIDINES, AND POLYNUCLEOTIDES

by ROBERT SANFORD ROZMAN*

The mechanisms by which foreign substances act on living cells are of interest from both theoretical and practical standpoints. The gross effects of mustard gas have been known for years, and a number of theories have been advanced to account for these. Some of the early theories, such as action via either hydrochloric acid or sulfone formation, were soon abandoned. Other theories, such as attack by mustard gas on proteins and nucleic acids, have been advanced and aspects of them subjected to experimental analysis. The research reported here was carried out in order to characterize compounds formed by the attack of mustard gas upon nucleic acid purines and pyrimidines.

Preliminary research was performed on the reaction of mustard gas with the five major purine and pyrimidine bases *in vitro*. These bases were incubated with sulfur mustard in varying proportions and the resultant compounds were separated utilizing two-dimensional paper chromatography. Visualization of the spots was accomplished by means of radioautography and/or ultra-violet photography. After reaction at least 7, 3, 6, 5, and 2 alkylated products could be demonstrated for guanine, adenine, cytosine, uracil, and thymine, respectively. It is believed that some of these compounds were oxidation products of compounds formed by the original reactions. The instability of some of these products is shown by the ready formation of additional compounds not found in the original mixture after treatment with Dowex 50 resin. The large number of products obtained again emphasized the strong reactivity of mustard gas toward the purines and pyrimidines.

Attention was then given to the effects of sulfur mustard on tumor cells. It was shown that mustard gas in the concentrations used did not destroy Ehrlich ascites cells when incubation was carried out for 20 minutes *in vitro*. After mustard gas treatment in an artificial medium metabolic incorporation of both a protein and a pyrimidine precursor, however, was approximately 50 per cent of that observed in the absence of sulfur mustard.

After *in vitro* incubation of sulfur mustard-S^{35} with the ascites cells, radioactivity was found in all of the chemical fractions isolated—acid soluble (50 per cent), lipid (15 per cent), nucleic acid (11 per cent), and protein (24 per cent). Of the mustard gas associated with the nucleic acid fraction, approximately 35 residues were calculated to be attached per molecule of DNA with only 3 of these residues calculated to be firmly attached to the purine and pyrimidine moieties.

* B.S. 1955, M.S. 1958, The George Washington University; Ph.D. conferred February 22, 1962. Director of research: Clarke Davison, *Associate Professor of Pharmacology*.

Sulfur mustard-S^{35} was incubated with commercial nucleic acid, and ascites cells both *in vitro* and *in vivo*. Both DNA and RNA were isolated, the RNA being separated from the DNA of the cells by means of alkaline hydrolysis. Both the DNA and the ribonucleotides were subsequently hydrolyzed with perchloric acid, and the resulting purines and pyrimidines and their alkylated products were partially purified by adsorption to and elution from charcoal. The compounds present were separated by two-dimensional paper chromatography. Radioautography revealed the presence of the same 4 major alkylated products from both the DNA and RNA of all the sources used. Isotope dilution techniques demonstrated that 3 of these compounds, representing 60 per cent of the total, were guanine derivatives. The remaining compound was a cytosine derivative.

Chromatographic and ultra-violet spectrographic data indicated that all of the guanine derivatives were alkylated at position 7. It was demonstrated that all of the alkylated guanine could be attributed to either 7-(β-hydroxyethylthioethyl) guanine or its degradation—probably oxidation—products.

The cytosine derivative was purified chromatographically, and a series of chemical and physical investigations was carried out. Elemental analysis yielded a nitrogen to sulfur ratio of approximately 3 to 1, indicating one sulfur mustard residue per cytosine nucleus. Ultra-violet spectrographic data eliminated carbons 4 and 5 and the amine group as the site of alkyl attachment. Infrared spectrographic data ruled out nitrogen 1 and the carbonyl group, as well as the amine group, as the site of attachment. Chemical studies also tended to eliminate nitrogen 1 and the amine group. The infrared spectra also lent positive support to the assignment of nitrogen 3 as the position of alkylation. The compound was assigned the structure 3-(β-hydroxyethylthioethyl) cytosine.

It was concluded that the formation of these two alkylated bases *in vivo* could account for the mutagenic, carcinogenic, and carcinostatic properties of mustard gas.

FORGING DEMOCRACY IN MALAYA

by ARCHIBALD JOHNSON SAMPSON*

The main purpose of this study is to consider the principal strengths and weaknesses of parliamentary democracy in the Federation of Malaya, to determine its applicability to a nonwestern society faced with extensive political, economic, and social change, and to express some evaluated opinion on the durability of democracy in Malaya.

* A.B. 1935, Stanford University; A.M. 1946, University of California at Los Angeles; Ph.D. conferred February 22, 1962. Director of research: Wolfgang Herbert Kraus, *Professor of Political Science.*

The writer characterizes the majority party in Parliament, the Alliance, and the parties in opposition. The noncommunal, national nature of the Alliance is emphasized in contrast with the more limited appeal of the opposition parties which in general can not but be described as communal oriented. The program and leadership of each party is described.

A special section is devoted to the Malayan Communist Party, although it is an illegal party with little strength, in order to show how it has been against Malaya's interests ever since it was formed in the 1920's.

The chapter concludes with an explanation of why the political party system might be described as a developing two-party system, and a discussion of the need for an organized opposition in Parliament.

The writer believes that the Federation's political system provides the people with enough power to be able to control the government, elect an organized opposition, and to express either consent to or dissent from the policies of the government.

The writer then, in describing the sources of strength in Malaya's parliamentary democracy, explains how certain executive, legislative, and judicial functions increase the chances for the success of democratic government in the Federation.

Among the particular subjects discussed as powers of the people or government are: registration, voting, particular powers of the Paramount Ruler which ensure democratic and controlled executive procedures, the purpose and powers of the Cabinet, passage of legislation, constitutional amendments, the advisory and review role of the Supreme Court, and the special constitutional authority for the federal government to have particular powers concerning land and development plans.

The chapter concludes with an enumeration of the fundamental liberties guaranteed to citizens by the constitution, but the writer contends that these are meaningless unless citizens carry out their duties and obligations through their power to participate in government.

The government of the Federation engages in economic planning. In the past, it has had the assistance of the International Bank for Reconstruction and Development, and it is expected that its assistance will be available in the future. The chapter outlines the generalities of the first five-year plan, and comments on the preliminary planning of the second five-year plan. In order that the extent of planning has some meaning to the reader, the first part of the chapter provides a general description of the economy of Malaya.

The chapter concludes with an explanation of initial developments in the industrial sector, the first steps that are being taken to develop the rural economy, the requirements for transportation, power, and communications to be effective, and finally how the Federation is acquiring both a sufficient number of persons with technical skills and also capital to finance economic development.

The last substantive chapter is an examination of those social services which are considered necessary by citizens and are accepted activities for modern governments. It discusses public health and medical care, social welfare, social security, housing, labor, and education. One of the most important conclusions reached is that non-governmental organizations have an effective and responsible

role in seeking to advance the position of the less fortunate members of society. Through actions such as these, parliamentary democracy is strengthened.

In conclusion, Chapter IX, the writer makes several observations on the basic strengths of parliamentary democracy in the Federation:

The form of government in Malaya has been well adapted to local traditions; and, as a result, the Federation may be better able to vindicate democracy than can any other Southeast Asian nation.

Although communal interest groups in Malaya are strong, conditions do exist that offer excellent opportunities to reduce their importance.

The methods to moderate and minimize the numbers of active political parties do exist; and, as a result, the political party system in Malaya has a better opportunity to develop into a two-party system than do the party systems elsewhere in Southeast Asia.

Federal power is sufficient to enable parliamentary government to be effective.

It is believed, also, that the present government has accepted its economic and social responsibilities in a manner which is conducive to success.

Finally, the writer believes that democratic government in Malaya meets the criteria for democracy sufficiently well so that it can be expected that parliamentary democracy in Malaya has a chance to succeed.

ABNORMAL DEVELOPMENT OF THE EARLY CHICK EMBRYO DUE TO INFLUENZA A VIRUS: AN HISTOCHEMICAL ANALYSIS

by JAMES BLAKE THOMAS*

It has been well established that a variety of specific agents are capable of inducing abnormal development when administered at critical periods of embryogenesis. Some of these agents, such as the alkylating agents and the antimetabolites, are known to alter cell reproduction and cell metabolism, but at present there is no acceptable theory to explain the basic mechanisms of abnormal development. This dissertation has presented an histochemical approach to one specific case of abnormal development in an attempt to elicit data which might offer a basis for such a theory.

* A.B. 1952, Wabash College; M.S. 1958, The George Washington University; Ph.D. conferred February 22, 1962. Director of research: Frank Duane Allan, *Associate Professor of Anatomy.*

On the basis of the experimental data it has been suggested that in the chick all tissues and organs undergoing rapid development at the time of insult are adversely effected by exposure to the influenza A virus with resulting retardation of development or abnormal developmental patterns. Also, under the conditions of this experiment there is no obvious quantitative change of DNA, RNA, alkaline phosphatase, or nonspecific esterase associated with the observed abnormal development; and if abnormal development is dependent wholly or partially on altered enzyme patterns or alterations of DNA and or RNA, then alkaline phosphatase and the esterase do not seem to be involved in this particular case and any alteration of DNA or RNA must be qualitative or quantitative at a very low level.

Finally, interpretations of possible mechanisms of abnormal development have been presented with the suggestion that:

1. The virus may grow extra-embryonically and so compete with the developing embryo for substrate.

2. The virus or some by-product of the virus may be directly toxic to the developing cells.

3. The virus invades the developing cell and then either competes with developing proteins for substrate or acts as a foreign molecule of RNA thus initiating the production of abnormal cell constituents including enzymes.

Support has been gvien for the latter hypothesis and a discussion of the present investigation, as well as earlier investigations, has been given within the framework of this hypothesis.

SOME BIOCHEMICAL STUDIES OF THE FIRST COMPONENT OF COMPLEMENT

by GEORGE HENRY WIRTZ*

Complement is a group of substances found in serum which take part in various immunological reactions and with the appropriate antibodies will kill certain susceptible bacteria and protozoa, lyse erythrocytes, immobilize treponemes, and promote phagocytosis. For many years it has been known that complement (C′) consists of at least four components: C′1, C′2, C′3, and C′4. More recently others have been found.

* B.S. 1953, M.S. 1956, University of Wisconsin; Ph.D. conferred February 22, 1962. Director of research: William Robert Carroll, *Professorial Lecturer on Proteins;* Co-Director: Joseph Hyram Roe, *Professor Emeritus of Biochemistry in Residence.*

The reaction of complement with erythrocytes sensitized with hemolytic antibody leads to cellular damage and the release of hemoglobin. The sequence of reaction of the components of complement with the sensitized erythrocytes is the following: C'1, C'4, C'2, C'3. The reaction of erythrocytes with antibody and then with complement to yield hemolysis has been assigned the term immune hemolysis. Immune hemolysis possesses certain similarities to the allergic reaction at the cellular level. The latter consists of an antigen-antibody reaction on tissue cells which leads to cell damage and the release of histamine and other pharmacologically active materials which may be responsible for the symptoms of allergy. Because of these similarities the system comprising sensitized erythrocytes (EA) and complement has been chosen as a model for a biochemical study of the mechanisms of allergy. In the present work studies on the EA-C'1 bond are reported, together with a method for partial purification of C'1.

The properties of the linkage between guinea pig C'1 and the sensitized sheep red cell were approached in two ways: (1) by means of the susceptibility of the linkage to aliphatic diamines and (2) by virtue of the fact that Ca^{++} is intimately associated with the bond. The study of diamines stemmed from a previous observation that L-lysine ethyl ester will inhibit the action of complement. In this work it is shown that L-lysine ethyl ester acts specifically to break the EA-C'1 bond or prevent its formation; further investigation revealed that the structural components responsible for this activity were the two free amino groups. The role of divalent cations such as Ca^{++} was studied because it has long been known that they are necessary for the interaction of complement with sensitized red cells.

When red cells sensitized with hemolytic antibody are treated with complement in the cold, only components C'1, C'4, and C'2 are fixed and lysis does not occur. If L-lysine ethyl ester is present during the reaction the fixation of all three components is inhibited. But if sensitized cells possessing these three components (EAC'142) are first prepared and then treated with L-lysine ethyl ester, C'1 is removed from the complex but not C'4 or C'2. Several diamines were also found capable of this selective removal of C'1. When EAC'1 cells were treated with diamines with carbon chain lengths varying from 2 to 8 carbons (with the amino groups on the terminal carbons) the 3 to 8 carbon compounds removed C'1 with about equal facility. The 2 carbon diamine was less than half as active as the others. When monoamines were compared to diamines of the same carbon chain length they were found to be only one third as active.

It had been observed previously that the ethylenediaminetetraacetic acid (EDTA) would remove C'1 from sensitized cells possessing C'1 and C'4 (EAC'14) and this C'1 could be recovered from the solution in an activated state (C'1a) possessing esterase activity. In the present work a similar finding was made using butanediamine. The rate of removal of C'1 from EAC'1 by butanediamine was such that in the first ten minutes the removal was rapid, after which it slowed down and followed first order kinetics.

By a method analogous to that introduced by Lineweaver and Burk for studying enzyme kinetics evidence was obtained suggesting that C'1 and butanediamine compete for the same site on EA. This was done by treating EA with various levels

of C'1a in the presence and absence of diamine and showing by graphical means that all the diamine would probably be displaced at a C'1a concentration of infinity.

EAC'1 cells were usually studied in a buffer containing 1.5×10^{-4} M Ca^{++}. When the Ca^{++} concentration was raised to 1.1×10^{-3} M the ability of butanediamine to remove C'1 was very much reduced. This result is in accord with earlier work which suggested that Ca^{++} is required for the binding of C'1 to the cell. To further test this hypothesis EAC'1 cells were exposed to buffer which contained no divalent cations. It was found that the C'1 content of the cells dropped. This decrease in C'1 could be brought to an immediate halt by restoring divalent cations. The ability of various divalent cations to maintain the C'1 level of EAC'1 cells was compared. Of those tested, Ca^{++} was the most effective. Zn^{++}, Sr^{++}, Cd^{++}, and Mg^{++} also maintained the C'1 activity to a greater or lesser extent. Ni^{++}, Co^{++}, and Ba^{++} did not maintain it and even caused it to decrease.

On the basis of this the following picture of the EA-C'1 linkage is tentatively suggested. The reactive sites of both EA and C'1 possess a constellation of negative charges and these two sites are held in close proximity by means of calcium ions which possess two positive charges each. The suggested picture is: EA$--+$ Ca $+-$C'1.

This is probably the simplest picture that can be formulated to account for the observations summarized above. At the pH of the reactions (about 7.3) butanediamine is positively charged ($+NH_3-R-NH_3+$). This accounts for the ability of the diamine to compete with C'1 (in the presence of excess calcium) for the site on EA. Since diamines can cause the removal of C'1 from EA, it seems reasonable to assume that the EA$-$C'1 bond is dissociable and in the presence of diamine, C'1 is prevented from reassociating with EA. The fact that diamines are more effective than monoamines in removing C'1 from EA might indicate that the loci of negative charges on EA occur in pairs, and inhibition is more efficient when both areas of negative charge are neutralized simultaneously.

The intimate role of Ca^{++} in the EA$-$C'1 bond is suggested by the observations (1) the C'1 activity of EAC'1 is diminished in the absence of Ca^{++} and (2) an increase in Ca^{++} concentration decreases the effectiveness of diamines in removing C'1 from EAC'1.

In order to extend the study of the interaction of C'1 with EA, it would be advantageous to have C'1 free of the other factors in serum. For this reason an attempt was made to purify C'1 from guinea pig serum. A method was developed for the partial purification of C'1 which consisted of making an ethanol precipitate of serum, suspending the precipitate in buffer and passing over a DEAE-cellulose ion exchange column, and making an ethanol precipitate of a fraction of the column eluate. A recovery of 25 per cent C'1 was obtained by this method and a purification of 50 fold. The partially purified C'1 contained only a small amount of C'4 and no detectable C'2 or C'3. When subjected to starch gel electrophoresis two bands resulted. Paper electrophoresis revealed only one band, and the C'1 activity was found associated with that band.

During passage over the DEAE column there was reason to think that nonideal ion exchange chromatography was taking place. One reason for suspecting this was

that the chromatographic run was very rapid, being complete in ten minutes or less. (This rapidity was necessary to avoid loss of C'1 activity on the column.) The non-ideal nature of the chromatography was further suggested by the following experiment. A DEAE chromatographic run was carried out as usual. Such a run resulted in a spread of C'1 activity over a fairly wide ionic strength range. Several C'1 fractions of this run were isolated and rechromatographed under the same conditions as the original run. It is probably significant that each of the C'1 fractions yielded essentially the same pattern on rechromatography, suggesting that the C'1 did not vary qualitatively from one fraction to another. Thus conditions were such that what was probably a single species of C'1 failed to come out in a narrow ionic strength range as would be expected under ideal ion-exchange conditions.

FACILITATION AND INTERFERENCE IN CONCEPT FORMATION

by BERTIE HAROLD REGINALD WOOLF*

A study was made of the process of concept formation, as inferred from the measurement of verbal problem-solving behavior. A set of postulates was formulated in order to account for the process in terms of a mediation theory of concept learning.

An experiment was performed in order to examine the predictive and explanatory value of the postulates and also to obtain further information concerning the characteristics of the process of concept formation as it evolves through time.

A set of 24 perceptually similar anagrams with unequivocal solutions was constructed so that each of four sets of six anagrams exemplified a discrete verbal category or 'concept.' The anagrams, printed on 3 X 5 stimulus cards, were presented one at a time in counterbalanced order, and the time for solution was recorded. A limit of 150 seconds per anagram was imposed. Concept formation was inferred from the speed of solution; interference, or 'set,' was inferred upon a slow-down in solution-time.

Ss were volunteer college students, 48 of each sex, who were unaware of the purpose of the experiment; the only requirement was ability to solve anagrams. A questionnaire was administered at the completion of the examination.

* A.B. 1955, A.M. 1957, The George Washington University; Ph.D. conferred February 22, 1962. Director of research: Thelma Hunt, *Professor of Psychology*.

The results of the experiment were graphically displayed. The distributions of solution-time scores were observed to be positively skewed. The data was considered representative of the process of concept formation: specific components of the process were subjected to tests of statistical significance. Positive results of the tests supported the verification of the following set of four general hypotheses:

1. Concept formation can be measured reliably in units of time in association with units of related performance.

2. A stable and distinctive curve of concept formation can be derived, reflecting the following characteristics: (a) the process will form at a relatively slow rate, (b) the rate will increase rapidly as cue-acceptance takes place, (c) the rate will tend to approach a limit as the concept is attained.

3. The isolation of the concept will result in a temporary 'mental set', causing interference in the establishment of a competing concept.

4. The process will commence anew as the competing concept achieves perceptual dominance.

Specific results of the experiment included the following:

1. A functional relationship was obtained between the order of presentation of an anagram and the time required for solution.

2. The rate of the time required for solution of an anagram was shown to increase as the number of instances of the concept increased.

3. The rate tended to approach a limit as the number of instances increased.

4. Significant differences were shown to exist between median solution-times according to their position in the order of presentation of stimuli.

5. The anagrams and concepts were ranked according to their difficulty value.

6. Two sets of measures were derived from the solution-time scores: (a) total number of failures per subject and (b) total quartile score per subject. A high positive correlation was shown to exist between the two measures.

It was concluded that within the limits of proof imposed by a theory of concept formation, evidence had been obtained in support of the set of four general hypotheses and for the postulates from which they were derived.

Evidence was also obtained concerning other hypotheses suggested by the results of previous studies:

1. A significant difference was shown to exist between sexes with respect to the solution of anagrams: on the average, females failed more anagrams than males.

2. A hypothesis that an observed relationship between sets of concepts will result in a gradual decrease in 'set' was not confirmed within the limits of the study.

3. A hypothesis that the process varies according to such group characteristics as amount and type of previous training was also examined but not confirmed within the limits of the study.

An interpretation of the results of the experiment was made in terms of the reduction of 'uncertainty.'

Further implications for theory and suggestions for future research were discussed.

A final discussion considered the implications of the results, and suggestions were made concerning possible future research.

STUDIES ON DOPAMINE-B-OXIDASE

by CYRUS ROBBINS CREVELING*

The major biosynthetic pathway for the formation of the adrenergic transmitter, norepinephrine, from its ultimate precursor, tyrosine, has been demonstrated by radioactive tracer techniques. This pathway involves three steps, the last of which, the introduction of a hydroxyl group on the *beta* carbon of 3, 4-dihydroxyphenethylamine, is catalyzed by the enzyme, dopamine-β-oxidase. Previously, the formation of norepinephrine catalyzed by this enzyme had been demonstrated in tissue preparations of the adrenal medulla and sympathetic nerves and ganglia. Studies with a partially purified preparation of dopamine-β-oxidase had established that the formation of norepinephrine requires stoichiometric amounts of molecular oxygen and ascorbic acid and that ascorbic acid is converted to dehydroascorbic acid during the reaction.

Studies on the localization of dopamine-β-oxidase indicated that it is also present in the central nervous system, in the caudate nucleus, and hypothalamus. A study of the intracellular localization of the enzyme in the adrenal medulla indicated that it is closely associated with the chromaffin granule fraction. The measurement of enzyme activity in crude homogenates was shown to be complicated by the presence of an endogenous inhibitor. Studies on the nature of this inhibitor indicated that it is dialysable and extremely labile in the absence of tissue protein. The possible role of such an agent in the physiological control of the rate of norepinephrine biosynthesis was discussed.

The formation of norsynephrine, a pharmacologically active amine previously found in the salivary gland of the octopus and called octopamine, was demonstrated in tissue preparations which have dopamine-β-oxidase activity. Studies with a purified preparation of dopamine-β-oxidase demonstrated that this enzyme is identical with the enzyme which catalyzes the *beta*-hydroxylation of tyramine to form norsynephrine. Further studies on substrate specificity indicated that this enzyme can catalyze the *beta*-hydroxylation of not only dopamine and tyramine but of many primary and secondary amines possessing the basic phenethylamine structure.

The demonstration of the nonspecific character of this enzyme has many implications concerning the biosynthesis and metabolism of normally occurring amines. Since tyramine was as good a substrate for dopamine-β-oxidase as dopamine, itself, it was postulated that tyramine is also a precursor of norsynephrine *in vivo*. In addition, it appeared conceivable that *meta*-hydroxylation of norsynephrine might occur, resulting in the formation of norepinephrine. Parental administration of iso-

* B.S. 1953, M.S. 1955, The George Washington University; Ph.D., conferred June 6, 1962. Director of research: Sidney Udenfriend, *Chief, Laboratory of Clinical Biochemistry, National Heart Institute; Research Consultant in Amino Acid Metabolism; Neurohormones, The Graduate Council.* Co-director of research: Harold George Mandel, *Professor of Pharmacology.*

topically labeled tyramine and norsynephrine to the rat resulted in the excretion of isotopically labeled norepinephrine, normetanephrine, and N-methylnorsynephrine. Based on these findings and supporting evidence indicating the presence of tyramine and norsynephrine in tissues, an alternate pathway for the biosynthesis of norepinephrine from tyramine through the intermediate formation of norsynephrine was proposed.

The demonstration that 3-methoxydopamine was converted to normetanephrine *in vitro* suggested that if 3-methoxydopamine was present in tissues its *beta*-hydroxylation might substantially contribute to the excretion of normetanephrine. This suggestion is supported by the recent finding that 3-methoxydopamine is excreted in human urine.

Many well known sympathomimetic drugs were shown to be excellent substrates of dopamine-β-oxidase. This finding is of pharmacological interest since in some instances the resultant product is a known drug with greater pharmacological activity. It was suggested that some of the pharmacological properties of the parent drug may be due in part to the formation of the oxidized product *in vivo*. The conversion *in vivo* of α-methyl-m-tyramine to the *beta*-hydroxylated product, aramine, supports this suggestion since much of the pharmacological action of α-methyl-m-tyramine is due to its conversion *in vivo* to the more active drug, aramine.

Many drugs implicated in the pharmacology of the sympathetic nervous system were previously thought to act by inhibiting the *beta*-hydroxylation step in the biosynthesis of norepinephrine. Studies with the purified enzyme demonstrated that compounds such as choline-2, 6-xylylether, Guanethidine, Bretylium, or Imipramine produced little, if any, inhibition of the enzyme. Therefore, it is questionable whether the pharmacological actions *in vivo* of such drugs are due to the inhibition of dopamine-β-oxidase unless an inhibitor is formed *in vivo* through metabolism of the drug.

A compound which could block the biosynthesis of norepinephrine *in vivo* would be a valuable pharmacological tool as well as of being of possible therapeutic value. Studies based on the structure-activity relationship of substrates of dopamine-β-oxidase demonstrated that compounds whose structural configuration was isosteric with phenethylamine and in which the *alpha* carbon was replaced by either nitrogen or oxygen were potent inhibitors of the enzyme. Furthermore, the inhibition was shown to be due to a competitive, irreversible binding of the inhibitor to the enzyme. Preliminary investigations indicated that these agents may be active *in vivo*.

To gain some understanding of the reaction mechanism of dopamine-β-oxidase the fate of the hydrogen atoms on the *beta* carbon of the substrate was determined. This was accomplished by using as substrates, dopamine and tyramine specifically labeled with tritium on the *beta* carbon. The results of these studies indicated that one of the *beta*-tritium atoms is released in the *beta*-hydroxylation reaction, the other tritium atom remaining on the benzyl carbon of the product. These findings allow the exclusion of some proposed mechanisms which involve a dehydrogenation of the side chain. In addition, it was demonstrated in experiments utilizing oxygen^{18} labeled water that the *beta*-hydroxy group of norsynephrine undergoes an exchange with the medium. A possible experimental approach for the determination of the source of the oxygen in the *beta*-hydroxy group was discussed.

FUNCTIONAL JOB ANALYSIS AS A METHOD OF INDIRECT VALIDATION: A STUDY IN SYNTHETIC VALIDITY

by SIDNEY ALBERT FINE*

INTRODUCTION

In recent years there has developed considerable dissatisfaction with empirical validation procedures for arriving at appropriate tests as predictors in the selection of suitable workers for jobs. The reasons for this dissatisfaction are two-fold: practical and theoretical. The practical reasons are concerned with the time and costliness of the empirical validation procedures which often, where only a few workers are being hired from time to time, makes it prohibitive to undertake. This is further complicated by the fact that the validity coefficients for the same test for a particular job are often inconsistent, contradictory, or even inexplicable. Thus, from a practical standpoint it would be desirable to have available another method of validation which could be used where empirical validation was out of the question.

The theoretical dissatisfaction comes from the fact that empirical validation procedures very often do not attempt to understand beforehand why the particular worker characteristics being measured should be selective of suitable workers and what weight they should have in relation to all the other characteristics the individual brings to the job. A battery of tests is simply given on a "try all and see" basis, the results correlated with the criterion, and statistical analysis applied to the results. This procedure has been criticized on the grounds that true scientific procedure requires a theoretical postulation of what an empirical validation will uncover so that (1) an understanding is available in advance from the current "state of the art" concerning what is being done and (2) the empirical validation is in effect a test of the psychological thinking that brought the test developer to that point.

BACKGROUND

Study of the literature indicated that the problem outlined above has been a central one since the beginning of the aptitude testing movement shortly after the First World War. The strictly empirical approach that made little systematic use of job analysis concentrated on developing tests of traits, obtaining measures of these traits on working populations, and relating them to some over-all rating or quantitative criterion of performance. However, right from the start the weaknesses of this approach were described by such men as Viteles who urged the importance

* B.S. in S.S. 1936, M.S. in Ed. 1941, College of the City of New York; Ph.D. conferred June 6, 1962. Director of research: James Norman Mosel, *Associate Professor of Psychology*.

of prior job analysis and some formulation of all traits relevant in human performance. Some workers in the field have felt that the best analysis of the job from the standpoint of worker qualifications was to give a battery of tests that presumed to measure all relevant traits and to note the difference in patterns of traits between (1) workers in different occupations and (2) the best and poorest workers in a given occupation. Paterson and associates at Minnesota and more recently Cattell at Illinois have pursued this line.

On the other hand, others have pursued an analytical approach seeking first to understand the job through some careful means of observation or description. Since the Second World War, there has been some improvement in old job analysis techniques and the development of some new ones such as critical incident, check list, and functional approaches. Since straightforward empirical validation procedure, which made only superficial use of job analysis, has been discouraging in the results it has produced for use in industrial and counseling psychology for predictive purposes, there has been greater interest in "rational" approaches that make use of job analysis for the purpose of predicting empirical validities. The purpose of job analysis to select predictors is essentially to use it to hypothesize the nature and requirements of human functioning in work situations followed by the use of tests to verify these hypotheses.

PROBLEM

The problem to which this investigation has addressed itself is the use of job analysis, specifically Functional Job Analysis (FJA), as a rationale for the selection of test predictors of suitability for employment. More specifically, it examines the technical problem of whether estimates of trait validities generated by FJA can be used to reproduce and replace the results obtained by the more expensive and time consuming methods of empirical test validation. This technical problem was defined as *synthetic validity*. Both industrial and counseling psychologists base some of their most crucial decisions on test validities and have been vitally concerned with this problem. Empirical validities, developed by traditional methods, have demonstrated definite inadequacies and limited usefulness in prediction situations. The major source of the difficulties, it has been suggested, has been inadequate use of job analysis in the initial stages of developing the predictor, namely, in the formulation of hypotheses as to why a certain amount of a trait measured by a test was necessary and what its relative importance was in relation to other traits conceived as making up the range of total performance. This dissertation proposed that Functional Job Analysis be used as a rationale to formulate such hypotheses.

FUNCTIONAL JOB ANALYSIS

Functional Job Analysis is an outgrowth of United States Employment Service efforts at developing a worker oriented (rather than technology oriented) occupational classification system. It is a job analysis approach that systematically analyzes work performed and worker trait requirements in terms of eight components. The language of these components, the definitions of factors included in each, and the methods of using them are carefully controlled. The analytical data produced by the eight components give a fairly complete picture of what workers do and how they function on a job.

Four thousand jobs have been analyzed according to these eight components, and this analysis has resulted in the development of a functional occupational classification structure that reflects a quite systematic relationship between what workers do and their estimated trait requirements. The classification structure and the worker function component and weighting scheme associated with it provide the basis for a rationale for determining the relative importance of various traits. The manual for the aptitude component provides bench mark situations from job descriptions for rating various degrees of each of the aptitude traits. The Functional Job Analysis rationale was developed on the basis of these components and the classification structure to predict the traits primary for success (norms) and their amounts on the basis of either observations or descriptive material. Previous studies had indicated that the estimating method was reliable. In one study the functional approach used informally was also successful in predicting the aptitudes that would be selected as norms by empirical validation. The present study incorporates functional techniques into a Functional Job Analysis rationale to test the validity of the method in predicting empirical aptitude test results, that is, to test its use in synthetic validity.

PROCEDURE

Functional Job Analysis was used (1) to estimate the amount of nine aptitudes required for average successful performance in each of eighty-five jobs and (2) to predict the few aptitudes (3, 4, or 5) that would be significant for selection, that is, would be selected as norm aptitudes by the empirical validation process.

The nine aptitudes are those measured by the General Aptitude Test Battery of the United States Employment Service. The eighty-five jobs were selected from about two hundred and eighty-five for which both empirical test data and estimates made from job definitions were available. A subsidiary problem investigated was whether estimates of amount and selection of norm aptitudes would more closely approach empirical validities if the material from which inferences were made were actual descriptions of the jobs on which tests were being validated rather than brief job definitions.

Two raters were used, one each in two different United States Employment Service offices. The purpose of two raters was to make another reliability check on the Functional Job Analysis procedure. A third rater, the author, followed the same procedure for ten jobs for which current (at the time this study was initiated) validation studies were being conducted. The purpose was to make both a quantitative and qualitative analysis of the Functional Job Analysis procedure in a predictive, as well as, concurrent situation.

A sample of eighty-five jobs was analyzed on a three-way basis; that is, comparison of aptitude estimates made from job descriptions, with estimates from job definitions and with test results. Slightly more than two-thirds of the jobs are in the skilled and semi-skilled industrial area and somewhat less than 10 per cent in the unskilled labor, service, and outdoor areas. The remainder of the jobs, about a fourth, are clerical and professional.

THE HYPOTHESES AND RESULTS

Six hypotheses were explored with the following results:

Hypothesis 1.—"Estimates of amount of aptitude made independently by two raters following the same technique from the same job descriptions will be closely similar and better than chance, confirming the reliability of the procedure."

The two raters overlapped with each other far better than would be expected by chance (median overlap 62 per cent, chance 20 per cent). The indications are that the raters consistently operated according to the rules provided and that the ratings are reliable. Hypothesis 1 was confirmed. However, the limitations of chance as a reference base for interpreting the results means that they must be accepted with caution. On a judgmental basis they do appear to be acceptable.

Hypothesis 2.—"Estimates of amount of aptitude made from job descriptions will be closer to test results than those made from job definitions but probably more like those made from job definitions than those made from test results." The two raters making estimates from job descriptions agree both with the raters making estimates from job definitions (median per cent overlap for Rater A was 71 per cent, for Rater B, 61 per cent) and with empirical results from test validation (median per cent overlap for Rater A was 60 per cent, for Rater B, 55 per cent) thus, the two raters' estimates were closer to the estimates made from job definitions. However, only Rater A's estimates from job descriptions were closer to the empirical validities (median per cent overlap for A was 60 per cent, for the estimates from definitions, 57 per cent, for Rater B, 55 per cent. This hypothesis was only partly confirmed.

Hypothesis 3.—"There will be no significant difference between estimates of amount made from job descriptions and empirical results." This hypothesis was confirmed at .05 level of confidence indicating that the Functional Job Analysis predictions of amount have an appreciable promise of synthetic validity.

Hypothesis 4.—"There will be no significant difference between the norm aptitudes selected by the FJA rationale and those developed by empirical validation. Actual differences will be small and within the limits of random error." This hypothesis was confirmed. All differences of observed results from those expected by chance were significant at the .01 level of confidence for both Raters A and B.

Hypothesis 5.—"Norm aptitudes selected from job descriptions will be more like the norm aptitudes of empirical validation than those selected from job definitions." Although Rater A's selections from job descriptions came closer to those developed by empirical validation than those made from job definitions, this did not occur for Rater B. Thus, hypothesis 5 was not confirmed.

Hypothesis 6.—For the most part Rater C will select the norm aptitudes emerging from empirical validation. This hypothesis related to the prediction study on ten jobs in which aptitude estimates were made before the processing of data from empirical studies. Rater C selected twenty out of the thirty (67 per cent) norm aptitudes selected by empirical validation. This was considered a confirmation of hypothesis 6 on judgmental grounds.

A qualitative analysis of the FJA rationale as a rule system indicated that it could be improved by more definitive programming. When this was done and com-

pared with the rule system implicit in empirical validating, it was found that there were fifty-nine out of ninety possible agreements between the two methods in the selection and nonselection of norm aptitudes. In short, the improved FJA rationale on judgmental grounds indicated further potential for synthetic validity.

SUMMARY OF DISCUSSION

1. Estimates of aptitudes from job descriptions or job definitions, made according to a formal procedure, tend to agree with each other and underestimate test results. It is likely that this agreement is due to the fact that when ratings are made of specific, well defined, but nonobservable parameters (in effect, concepts) supposedly present in a total situation like a job, it is the mediating verbalization associated with the concept that is rated rather than the situational detail which is observed or read about. The underestimating is probably due to (a) the estimation technique considering total population as a base whereas the base for empirical norms is the working population; (b) the possibility that samples in low-level jobs particularly, have more of an aptitude than is required by a job; and (c) the effects of the rules for estimating which must reflect situational content and, hence, would rate very low those aptitudes showing up in empirical norms but not reflected in definitions or descriptions.

2. Raters selecting three or four aptitudes out of nine as norms for selection purposes can approach the results of empirical validation significantly better than by chance, although chance is not a good base for establishing the significance of these results. Job descriptions appear to be helpful to the discriminating rater in making these selections.

3. The FJA rationale rates functional performance, that is, Thing, Data, People behaviors, and tends to minimize preparation for a job and general personality factors not directly related to functional behavior. Here it is necessary to allow for certain biasing effects when comparing FJA rationale selections with those made by empirical validation. (a) The more education, particularly high school or higher that is involved in or required by a job, the more the norm aptitudes will tend toward intelligence, numerical, verbal, spatial, and clerical factors and away from form perception, dexterity and coordination factors regardless of degree of involvement of these latter aptitudes. (b) The more the sample tends to satisfy certain minimal educational requirements, high school or higher regardless of type of job, empirical studies will tend to produce aptitude norms that include intelligence, verbal, numerical, spatial, and clerical factors and away from form perception, dexterity and coordination factors. (c) The above will also tend to be true if the criteria are school grades and supervisory ratings of a general nature.

4. The FJA rationale used for this study proved more effective than might be expected in predicting aptitude norms of validation studies. However, it can be expanded on an aptitude-by-aptitude basis to more carefully reflect the interaction on aptitudes of other components such as general educational development, interests, temperaments, and physical capacities. The resulting aptitude-by-aptitude program is not linear (straight line) but rather presents a number of specific criteria requiring simultaneous consideration (scanning) and a decision in terms of preponder-

ance of evidence. In other words, the selection of norm aptitudes is not a mechanical operation but rather in the final analysis a judgmental operation attempting to make use of all relevant data and their interaction effects. The initial use of the expanded rationale in this manner resulted in its selection of norm aptitudes with the same degree of consistency (on a judgmental basis) as with empirical validation.

5. Further research using the FJA rationale should not only apply the expanded programs but should also take some of the biasing effects of estimation and empirical validation into consideration.

6. In general, this study provides evidence for the usefulness of the FJA rationale as a means for arriving at synthetic validity, that is, predicting empirical validities. The predictions of FJA should probably be given as much consideration as the statistical criteria combined in arriving at final norms.

THE INFLUENCE OF ETHYL N,N-di-n-PROPYLTHIOLCARBAMATE (EPTC) ON WAX FORMATION IN CABBAGE

by WALTER ANDREW GENTNER*

Quantitative determinations show that ethyl N,N-di-n-propylthiolcarbamate (EPTC) inhibits the deposition of external foliar wax of cabbage. The amount of wax inhibition is correlated directly with the rate of application of EPTC. Differential inhibition of wax deposition served as a tool to show the importance of foliar waxes in inhibiting the absorption and penetration of pesticidal materials. When foliar waxes are inhibited, cabbage becomes more susceptible to treatments of the alkanolamine salts of 4,6-dinitro-o-sec-butylphenol (DNBP), a contact herbicide. It has been established that certain plants can be chemically preconditioned so that they are more susceptible to subsequently applied herbicidal sprays.

When EPTC is applied as a spray, only those leaves in the bud are affected. Leaf primordia developed after spray application are not affected. Granular applications of EPTC extend the period during which the formation of external foliar wax is inhibited.

* A.B. 1952, A.M. 1956, The George Washington University; Ph.D. conferred June 6, 1962. Director of research: Loran Leroy Danielson, *Plant Physiologist and Leader of Weed Investigations—Horticulture Crops, Agricultural Research Service, Department of Agriculture; Research Consultant in Plant Physiology, The Graduate Council.* Co-director of research: Lawson Edwin Yocum, *Professor Emeritus of Botany.*

The reduction of foliar wax results in an increase in spray retention and a decrease in the contact angle of spray droplets. Both of these factors at least partially explain the increase of susceptibility of cabbage plants preconditioned with EPTC to subsequently applied DNBP sprays.

The influence of EPTC in inhibiting foliar wax or its influence on physical-chemical properties of the cuticle results in an increase in the transpiration rate which is correlated to the rate of application of EPTC.

Cabbage leaves with reduced wax appear more susceptible to invasion by Rhizopus stolonifer.

AN INVESTIGATION OF RELATIONSHIPS BETWEEN COLLEGE AND SENIOR STUDENT CHARACTERISTICS AND PERFORMANCE ON THE APTITUDE AND AREA TESTS OF THE GRADUATE RECORD EXAMINATION AT THE GEORGE WASHINGTON UNIVERSITY

by JANET WILDMAN JOHNSON*

The purpose of this study was to investigate possible relationships between variables relating to The George Washington University (G.W.U.) college and senior student characteristics and the performance of these students on the Aptitude and Area Tests of the Graduate Record Examination (GRE). In order to fully utilize these tests as independent measures of educational outcomes and as adjuncts to student counseling, some knowledge of factors affecting performance which may be relatively independent of educational experience is needed. Such factors investigated in this study were age, sex, full- or part-time attendance, continuous or non-continuous periods of study, and extent of participation in student activities. Other factors which might influence educational experiences and outcomes were also to be compared with GRE performance. These were previous educational (high school rank, previous college training at another institution), senior class (testing period), college or school attended, major field of study, and earning of honors. In addition, the relation between educational outcomes as measured by these tests and outcomes

* A.B. 1951, A.M. 1956, The George Washington University; Ph.D. conferred June 6, 1962. Director of research: James Norman Morsel, *Associate Professor of Psychology*.

as measured by the University (over-all and major grade point averages) were to be investigated. For this purpose an over-all grade point average was computed for each student covering his entire undergraduate period of study at G.W.U., and a major grade point average determined for the portion of course work required by his specialty.

The students studied were seniors in Columbian College and the School of Government from December 1954, to April 1960, who took the Aptitude and Area Tests of the Graduate Record Examination in compliance with the requirement for graduation. Also included were College of General Studies seniors from 1956 through 1960, who were required to take this test.

For the total sample of 2,323 students, Ns, means, and standard deviations were found for each of the five GRE scores for senior class, college, and major. For the purpose of analysis, Columbian College was treated as two colleges, depending upon whether an A.B. or B.S. degree was to be granted. For each of these divisions, tests of significance of the mean difference for each GRE section score were done. For those analyses of variance for which F was significant at or beyond the .05 or .01 level, t-tests were done. On testing date, separate analyses were done including and excluding College of General Studies (C.G.S.) data, as this data did not extend over the same period of time as the data for the other colleges. Thus, mean differences were compared for each of the five tests on twelve testing dates, four colleges, and twenty-one majors. Tests of significance of mean differences were also done for each test for sex.

On the subsample of 1,013 students, tests of significance of mean differences were done for each of the three Area Tests for full- versus part-time students, continuous versus readmitted students, completely G.W.U. trained students versus transfer students, honors versus nonhonors students, and among groups of students with different degrees of activity in campus activities. For each major group, correlations between each of the Area Test scores and the following data were obtained: age, high school rank, amount of advanced standing, extent of participation in activities, over-all grade point average, major grade point average, and intercorrelations among the Area Tests.

Local norms in terms of cumulative percentiles were compiled.

Performance scores on the Area Tests were not independent. Results of this study indicated Social Science (SS) correlated with Humanities (H) .65, SS correlated with Natural Science (NS) .55, and H correlated with NS .55. These intercorrelations were similar to those reported by the Educational Testing Service (ETS) but in general higher than those found by ETS. Correlations of these tests with the Verbal Section of the Aptitude Test as reported by ETS are from .50 to .76, and the results of earlier factor analyses would indicate that much of the shared variance involves a largely verbal or reading comprehension factor.

Analysis of the relationships between individual variables and test scores indicated that in general age was not a significant variable in score interpretation and use, but that sex differences found in other studies were also found here. The very significant ($p<.01$) differences found on each test between mean performance by sex in the group as a whole were however minimized when performance of men and women was compared in the context of the major area of concentration. Results in-

dicated that although men in general are better scorers on Quantitative (Q), SS, and NS and women better scorers on Verbal (V) and H, women who have chosen one of the Q, SS, and NS types of major fields tend to perform about the same as the men. Men who have chosen a verbal or humanities major also tend to perform as well as or better than the women. The actual mean performances of the various groups (regardless of sex) were quite different, so that, if members of specialized groups are compared, sex differences may be quite small, but if members of several such groups are to be compared to the combined group, differences may be large.

Measures of previous educational experience such as high school rank and number of hours of acceptable transfer college credit were not, in most cases, significantly related to Area Test performance. Average correlation between high school rank and SS was .15, H .21, and NS .11. Average correlation of number of hours of transfer credit with SS was .08, with H .10, and with NS .07. Tests of significance between mean differences (t) for transfer versus nontransfer student Area Test performance were not significant.

Analyses using present educational experience variables involved tests of significance of mean differences on all tests for the various colleges and majors. F-tests were significant at beyond the .01 level for all tests for colleges and for majors. The science students excelled the other colleges in the quantitative and scientific areas. (Q means: B.S. 567, A.B. 464, Columbian; A.B. in Govt. 501, Government; and A.B. 543, General Studies). (NS means: B.S. 615, A.B. 476, Columbian; A.B. in Govt. 441, Government; and A.B. 493, General Studies). Both groups of liberal arts college students (A.B. and B.S. Columbian College) were superior to the other colleges on Humanities (means: A.B. 529, B.S. 500, Columbian; A.B. in Govt. 456, Government; and A.B. 459, General Studies) and on Verbal Aptitude (A.B. 545, B.S. 539, Columbian; A.B. in Govt. 502, Government; and A.B. 506, General Studies). For the Social Science test, with the exception of the B.S. students (mean 496) who fell below the other groups, there were no significant differences in mean performance (A.B., Columbian 529; A.B. in Govt., Government 525; and A.B., General Studies 519). These results seem to reflect in part the different objectives of the colleges. Columbian College aims stress liberal arts education, and these students in general tend to perform better on the various tests. Although these A.B. students are highest on three of the five tests, they are below the scaled score mean of 500 on both quantitative and scientific material. The College of General Studies results involved two separate programs, and the students tested are almost entirely military personnel, being assisted in obtaining schooling by the services. Background and experience may be a factor in the higher quantitative and science performance than shown by other A.B. students. The School of Government aims are primarily toward education in the social sciences and performance on this Area Test is equivalent to that of the Columbian A.B. group. On H and NS, performance is decidedly lower and probably reflects the lack of stated requirements in these areas as well as the limited elective program in general.

Within the colleges, by major group, there were also vast differences in performance on the tests. There was a tendency for each major group to do best on its own Area Test, but not to the same extent. Physics students earned highest mean scores on both the Quantitative and the Natural Science tests. The sciences

were consistently best on the Natural Science test; three of the sciences and accounting were high on Q; governmental, economics, and history types of majors did best on the Social Science Area test. On H, however, one of the humanities (English) groups earned the highest mean score, but the three other high groups were social science majors. As a group the humanities majors were the least consistent, with relative performance on the various tests varying widely. Of the major groups, only three science majors (physics, chemistry, and mathematics) had mean scores at or above the 500 mean on all sections of the Graduate Record Examination. One social science, psychology, was above 500 on four of the five tests, scoring 494 on Q. Only one major, speech, a humanities major, failed to exceed a mean score of 500 on any section.

Variations in mean performance over time were found. Changes showed an improvement in performance on H and NS during the last three to four years of the study. With C.G.S. students excluded, no changes were observed on the mathematical and social science sections. One class appeared to be quite superior to the majority of the classes on Verbal performance. Apparently, however, with the exception of this 1959 class, aptitude or general ability was fairly constant over the period.

No significant differences in mean performance were found between full- and part-time students. On H and NS, no significant differences were found between continuously attending students and those who had interrupted and reentered college. On SS, however, a mean difference significant at beyond the .01 level in favor of readmitted students was found. Possibly this is a reflection of the more general nature of the Social Science Area tests, dependent on general knowledge rather than specific course work.

Students who were extensively active in activities differed from both those with no activities and those who participated to a lesser extent. These students, generally the campus leaders, were for the most part significantly better in mean GRE area performance. However, those students with medium participation tended to show poorer performance. Few significant differences with other degrees of participation occurred. Patterns of activities differed somewhat by major, with the majority of students not participating in any manner. For more homogeneous groups (majors), correlations between degree of participation and test scores indicated no significant relation between these variables. Average correlations were between participation and SS −.04, and H .02, and NS .01.

Honor students were significantly better on all parts of the Area Tests than nonhonor students ($p<.01$).

Over-all grade point average (GPA) was more closely related to SS ($r=.33$) and H ($r=.36$) performance than to NS ($r=.20$) performance. Within the majors, over-all GPA varied (from 2.61 for Business to 3.18 for C.G.S.), and so did degree of relationship. Where scores on one or two tests were significantly correlated with grade average, in general the test reflecting the major area was involved. Degree of relationship for SS varied from .16 to .53, for H from .15 to .54, and for NS from −.13 to .54.

Major grade point average correlated .32 with SS, .30 with H, and .21 with NS, being similar to the average correlations for over-all GPA. Within major fields va-

riations in major grades were significantly related to differences in test performance for at least one test for all but five majors. Although there was a tendency for one of the significant relationships to be on the test covering the major area, this was not consistently true. Major grade averages varied from 2.80 (physics) to 3.50 (French). Correlations for major average with SS varied from .05 to .57, for H from .09 to .56, and for NS from —.03 to .49. It was noted that in several instances, the major students earning the lowest average grade points also earned high mean Area Test scores in their areas, or conversely, that some major groups with high major grade point averages earned relatively low Area Test scores in their area of concentration. It would appear that major grade point averages are not directly comparable.

Comparison of the test results for the G.W.U. sample with the ETS basic reference group was made. The reference group is not claimed to be a representative sample of typical college seniors, and use of these standards should be based on the extent to which a college feels the group comparable to its student body. Using the sex norms, it was found that the G.W.U. was decidedly above the reference group on V and SS, and about the same on Q (with the men slightly higher). On H and NS, results of the comparisons differed for men and women. On H, the G.W.U. men were close to the reference group mean score; the G.W.U. women, however, were much higher in mean score than the reference group (536 to 513). On NS, the women were approximately the same, but the G.W.U. men were decidedly lower than the reference group men (489 to 516). For combined groups the reference group averaged 480 as to the G.W.U. average of 488 on Q: reference group averaged 492 on V as opposed to the G.W.U. average of 529: SS average for the reference group was 489, G.W.U. average 525; reference group H average was 494, G.W.U. average 500; and for NS the reference group mean score was 487 as opposed to 477 for G.W.U.

If the G.W.U. were divided into the area of social science, humanities, and natural science majors, the G.W.U. group mean scores are above the reference group majors mean scores on all tests for all major groups, with the exception of the G.W.U. humanities majors on the science Area Test, who are eight points below the reference group humanities majors on this test.

Several problems arise with the establishment of a senior testing program. Among those discussed were the lack of motivation on the part of the students, largely through lack of information on why the requirement exists and because graduation is not dependent on score; the problem of the establishment of a baseline against which to view the results so that some indication of initial ability level in the various groups would be available in comparing performance on the achievement tests; the need for more appropriate norms for similar institutions with which to compare the local senior classes; and the need to consider the test results in the light of the aims and objectives of the various colleges involved.

Recommendations for possible improvements in the present program included more adequate dissemination of information on purposes and results to both the faculty and the student body, continuing evaluation and review of local norms, and development of comparable norms based on similar institutions.

In conclusion, it is clear that area of concentration and college within which

work is taken are important variables having to do with differences in performance on these tests. The various colleges and majors differ in terms of goals and aims, major concentration, elective patterns, and required general education courses. Other variables to be considered in interpreting and using GRE scores, particularly locally, would include sex (unless comparing students with others within a major group), senior class (changes over time), and local measures of evaluation.

The tests themselves are intercorrelated with from 30 to 42 per cent of the variance shared. This would reduce their use for individual differential prediction, but does not appear to be so high as to invalidate them as group measures of outcomes.

Even in the absence of major changes in admission policy and curricular outline, changes in level of performance result over periods of time. In this study, this was particularly true with regard to the humanities (modified curriculum change) and natural science (no stated change) and was apparently not a factor for quantitative and social science results.

Results consistent with area of concentration were found for NS and SS, but not for H. On SS, however, some indication that some type of noneducational factor may be involved in performance (such as general knowledge rather than specialized course work) may be indicated by differences found in favor of readmission over continuous students.

In general, factors which apparently may be minimized in comparing students on the GRE include age, previous college training, high school rank, attendance status, and activities status. Sex differences, which were minimized by comparing students within the same field, were apparent in the total group. Some relation between local indices of evaluation and Social Science and Humanities scores was found, but little relation was found for the group as a whole and the Natural Science test.

A factor for which only limited data was available was some measure of quality of incoming student body. High school rank, not available in all cases, was the only measure used. Comparisons between groups, therefore, was made without a comparison of initial ability level. Future studies will have College Entrance Examination Board data as a control on this factor.

STUDIES OF HEMAGGLUTINATION BY ENTEROVIRUSES

by JEROME KERN*

Some of the biological and physico-chemical properties of enterovirus-associated hemagglutinins were investigated and several of the factors that influence the demonstration of hemagglutination by enteroviruses were elucidated. Prototypic and non-prototypic strains of fifteen hemagglutinating enteroviruses of human origin and three new serotypes were subjected to more detailed study, although representative strains of all known non-hemagglutinating serotypes of human origin were surveyed for hemagglutinative capacity. Hemagglutination by three enteroviruses of non-human origin and by encephalomyocarditis virus was studied for comparative purposes.

Hemagglutinating enteroviruses of human origin could be separated into three groups based upon the maximal hemagglutinin titers obtained when human erythrocytes were allowed to settle at 4 C or 37 C. Hemagglutination was best demonstrated with human red cells, although the erythrocytes of the chimpanzee and of several species of monkeys also were agglutinated by some serotypes.

Higher hemagglutinin titers for only ECHO virus types 13 and 20, Coxsackie A-24 virus and Coxsackie B virus types 1, 3 and 5 were obtained with the erythrocytes of newborn infants (cord cells) than with adult red cells.

The hydrogen ion concentration of the diluent altered the hemagglutinin titers obtained only with ECHO virus types 11, 19, 20 and 21, with Coxsackie B virus types 1, 3 and 5 and with JV-9 and Frater viruses.

Hemagglutination by Frater virus and by ECHO 24 virus was described for the first time. The maximal hemagglutinin titer for Frater virus was obtained in phosphate-buffered saline of pH 5.8 when cord or adult erythrocytes were allowed to sediment at 37 C. For ECHO 24 virus, highest hemagglutinin titers were obtained with cord cells at the same pH and temperature.

Detailed studies of hemagglutination by only Coxsackie B-3 and JV-9 viruses revealed that, with the former virus, complete instead of partial hemagglutination patterns resulted when phosphate-buffered saline of pH 5.8 was used as diluent in place of unbuffered saline. However, the hemagglutinin titer obtained either with cord or adult erythrocytes remained unchanged. With JV-9 virus, it was shown that low pH, and not molarity of the buffer component, was responsible for enhanced hemagglutinating activity.

The addition of calcium but not of magnesium ions to unbuffered saline diluents affected the hemagglutinating activity of only the bovine enterovirus, while replace-

* B.S. 1950, Brooklyn College; M.S. 1953, Ohio State University; Ph.D. conferred June 6, 1962. Director of research: Mary Louise Robbins, *Professor of Microbiology*.

ment of sodium by potassium ions affected only EMC virus hemagglutination.

The complex relationships between the hydrogen ion concentrations of diluents, the temperature at which erythrocytes are allowed to sediment and the sensitivity of human adult and human cord erythrocytes on the one hand, and the maximal hemagglutinin titers obtained with the various enteroviruses on the other, may possibly be explained by the reactions characteristic of protein molecules.

The relationship between the formation of hemagglutinins by six enterovirus serotypes and the progression of the cytopathic effect showed that maximal or near-maximal hemagglutinin titers were obtained prior to that time in viral multiplication when all tissue cells showed signs of infection. A decrease in titer upon prolonged incubation of cultures was somewhat reflected by the sensitivity of the preformed hemagglutinins to 37 C temperature. The deterioration of hemagglutinating activity which was observed at even higher temperatures may be a reflection of protein denaturation processes. The hemagglutinating principle was quite stable at the various cold storage temperatures tested.

Comparable yields of hemagglutinins were obtained with all serotypes in rhesus kidney tissue cultures maintained with Medium 199, Eagle's basal medium and Hanks' balanced salt solution with 0.5% lactalbumin hydrolysate. Inhibition of the growth and hemagglutinin formation of ECHO 20 virus was observed when pooled bovine amniotic fluid was used as maintenance medium, although this medium compared favorably with Medium 199, Eagle's medium and Hanks' salt solution-lactalbumin hydrolysate for hemagglutinin formation by the other viruses tested.

Exposure of tissue culture fluids of several non-hemagglutinating serotypes to ultrasonic vibration did not reveal hemagglutination due to deaggregation and numerical increase in active particles. Concentration by high speed centrifugation increased the initially low hemagglutinin titers of culture fluids of known hemagglutinating serotypes, but no activity could be detected with similarly treated culture fluids of non-hemagglutinating serotypes. Alternate adsorption and elution cycles with human erythrocytes and culture fluids of non-hemagglutinating serotypes failed to indicate the selection of hemagglutinating particles in tissue culture passages of eluates.

STUDIES ON THE ENZYMATIC DECARBOXYLATION OF AROMATIC AMINO ACIDS

by WALTER McKAY LOVENBERG*

The biosynthesis of pharmacologically active amines by enzymatic decarboxylation of the corresponding aromatic amino acids has been investigated in both mammalian tissues and microorganisms. Aromatic *L* amino acid decarboxylase in mammalian tissues has been found to catalyze the decarboxylation of 5 hydroxytrytophan (5HTP), 3, 4, dihydroxyphenylalanine (DOPA), tryptophan, phenylalanine, tyrosine, and histidine. A decarboxylase specific for histidine was also found in mouse mast cell tumors. Streptococcus faecalis was found to possess an enzyme which catalyzed the decarboxylation of tyrosine, DOPA, phenylalanine, and tryptophan.

In order to study the decarboxylation of aromatic amino acids in mammals, rapid, sensitive, and specific assays were developed for each substrate. The decarboxylation reaction was assayed in each case by measuring the rate of amine formation in incubation mixtures containing amino acid, pyridoxal phosphate, buffer, an inhibitor of monoamine oxidase, and the enzyme source. The amines were separated from the parent amino acids by small columns of ion exchange resins, and were determined either fluorometrically or colorimetrically.

Guinea pig kidney was found to have the most decarboxylase activity of any mammalian tissues. The enzyme from this tissue was used for most of the studies and was purified 50 to 100 fold by ammonium sulfate fractionation, adsorption and elution from alumina C γ gel, and chromatography on diethylaminoethyl cellulose columns. Although tryptophan, phenylalanine, tyrosine, and histidine are decarboxylated at considerably slower rates than 5HTP or DOPA, the purification of each activity was nearly identical. Using partially purified enzyme preparations, it was found that the pH optima of all the substrates were about 9 with the exception of DOPA. The pH optimum for DOPA was about 6.8 to 7. This lower pH optimum may be due to the fact that DOPA and its decarboxylation product are unstable at pH values above neutrality.

The Michaelis constants have been determined for each substrate. The relatively high K_m values found for tryptophan, phenylalanine, tyrosine, and histidine indicated that substrate concentrations could not be employed to give maximal rates of reaction under practical assay conditions.

Although earlier work indicated that a divalent metal ion was required for 5HTP decarboxylation by guinea pig kidney, no metal requirement could now be demonstrated when the enzyme was assayed under optimal conditions. Ethylenedi-

* B.S. 1956, M.S. 1958, Rutgers University; Ph.D. conferred June 6, 1962. Director of research: Sidney Udenfriend, *Chief, Laboratory of Clinical Biochemistry, National Heart Institute; Research Consultant in Amino Acid Metabolism, Neurohormones, The Graduate Council.* Co-director of research: Carleton Raymond Treadwell, *Professor of Biochemistry.*

aminetetraacetate was found not to inhibit the enzyme and no stimulation was observed by the addition of $MgCl_2$. A requirement for pyridoxal phosphate as the coenzyme could be demonstrated either by omitting it from the reaction mixture or by adding reagents which react with the carbonyl group.

Another interesting property of this enzyme was that the decarboxylation of the less active substrates, tryptophan, phenylalanine, tyrosine, and histidine was stimulated by the inclusion of benzene in the incubation media. The mechanism of this stimulation, however, remains unexplained.

The various natural substrates were found to competitively inhibit each others decarboxylation providing further evidence supporting the concept of a single enzyme for the decarboxylation of aromatic amino acids. As might be expected, the greatest amount of inhibition was exerted by the substrate which had the lowest K_m. 5HTP.

The decarboxylation of DOPA by mammalian tissues had been shown earlier to be inhibited by α methylDOPA. In the present study, this compound was found to strongly inhibit the decarboxylation of all the natural substrates. Other α methylamino acids such as α methyl 5HTP, α methyl meta tyrosine, and α methyltryptophan also exerted significant inhibition. The addition of pyridoxal phosphate to the incubation media resulted in a partial reversal of the inhibition by the α methylamino acids. This observation would indicate that the α methylamino acids are inhibiting by simply inactivating the coenzyme. While reaction with the coenzyme undoubtedly plays a role in inhibition, a number of observations indicated that interaction of the α methylamino acids with the enzyme is extremely important. Only the *L* isomer of α methylDOPA was found to be an inhibitor of the enzyme whereas both the *D* and *L* isomers would be expected to react with the coenzyme. α MethylDOPA did not inhibit tyrosine decarboxylation in Streptococcus faecalis which also requires pyridoxal phosphate as a coenzyme. Furthermore, kinetic studies indicated that α methylDOPA was acting as a competitive inhibitor which is not surprising since the α methylamino acids were also found to be substrates for the enzyme.

A number of studies were done concerning the specificity of aromatic *L* amino acid decarboxylase. In each case where the *D* and the *L* isomers of the amino acids were available, only the *L* form was found to be reactive. Several of the α methylamino acids were found to be decarboxylated at a rate several hundred times slower than the desmethyl analogue. The finding that α methylamino acids are decarboxylated indicates that the α hydrogen of the amino acid is not necessary for decarboxylation, and is probably not labilized during the decarboxylation of natural amino acids. Almost no decarboxylation of α methylamino acids occurred when pyridoxal phosphate was omitted from the incubation mixture. This finding together with the observation that there was a greater degree of inhibition by α methylamino acids in the absence of pyridoxal phosphate suggested that perhaps pyridoxal phosphate is required for dissociation of α methylDOPA or its decarboxylation product from the enzyme.

No decarboxylation of leucine or serine could be detected by these enzyme preparations, however, kynurenine was found to be decarboxylated nearly as rapidly as histidine under optimal conditions. The occurrence of this reaction provides a

link for a new minor pathway of tryptophan metabolism since the product, kynuramine, has recently been shown to be a good substrate for monoamine oxidase. The aldehyde formed in this oxidation is rapidly condensed to form 4 hydroxyquinoline.

In this study mouse mast cell tumors which contained large amounts of histamine were found to have an enzyme which is specific for the decarboxylation of histidine. Although histidine is also a substrate for aromatic *L* amino acid decarboxylase, the properties of the enzyme in mast cell tumors are considerably different. The pH optimum of this enzyme was found to be about 6.0 and the Michaelis constant about 100 times lower than the enzyme of guinea pig kidney. Histidine decarboxylation in guinea pig kidney is strongly inhibited by α methylamino acids and 5HTP, whereas these amino acids do not affect histidine decarboxylation in the mast cell tumors. A further point of differentiation is the lack of stimulation of histidine decarboxylation by benzene in this tumor tissue. A histidine decarboxylating enzyme was also found in rat stomach resembling the mouse mast cell enzyme. The possible physiologic importance of a specific histidine decarboxylase in mammals has been discussed.

Streptococcus faecalis has also been found to possess an enzyme which like aromatic *L* amino acid decarboxylase will decarboxylate several aromatic amino acids. This enzyme has been partially purified and its properties studied. Substrate competition studies indicated that a single enzyme in these microorganisms is responsible for the decarboxylation of tyrosine, DOPA, phenylalanine, and tryptophan. The specificity of this enzyme, however, is quite different from aromatic *L* amino acid decarboxylase. Tyrosine was found to be the best substrate for the bacterial enzyme while 5HTP and histidine which are substrates for the mammalian enzyme do not appear to be decarboxylated.

INVESTIGATIONS ON THE MECHANISM OF ACTION AND INHIBITION OF MONOAMINE OXIDASE

by THOMAS ELIJAH SMITH*

The mechanism of the deamination of N,N-dimethylamines by monoamine oxidase and the mechanism of inhibition of this enzyme by 1-isonicotinyl-2-isopropylhydrazine (iproniazid) were investigated.

* B.S. 1953, Benedict College; M.S. 1959, The George Washington University; Ph.D. conferred June 6, 1962. Director of research, Sidney Udenfriend, *Chief, Laboratory of Clinical Biochemistry, National Heart Institute; Research Consultant in Amino Acid Metabolism; Neurohormones, The Graduate Council.* Co-director of research, Carleton Raymond Treadwell, *Professor of Biochemistry.*

In preliminary studies with various substrates for this enzyme, it was observed that the aldehyde produced from kynuramine by the action of monoamine oxidase spontaneously condensed to 4-hydroxyquinoline with a spectrum completely different from that of kynuramine. This observation led to the development of a rapid and sensitive spectrophotometric assay for this enzyme depending on the disappearance of kynuramine, and likewise, absorbancy at 360 mu.

The enzyme preparation used in most of these studies was obtained by differential extraction of guinea pig liver mitochondria with digitonin. This procedure gave a ten-fold purified enzyme which was stable to dialysis at pH 6 and 4° for twenty-four hours and was not sedimented by centrifugation at 100,000 times gravity for two hours. Further purification of this preparation could be obtained by chromatography on diethylaminoethyl (DEAE) cellulose columns.

The mechanism proposed for the deamination of amines such as hordenine by monoamine oxidase involves a dehydrogenation of the protonated form of the amines to imino compounds which, in the presence of water, are hydrolyzed to aldehydes and dimethylamine. The metabolism of N,N-dimethylamines was reinvestigated and the possibility that these amines are deaminated by a direct oxygenation involving N-oxides as intermediates was explored.

The purified monoamine oxidase preparation, as has been reported for crude tissue preparations, was found to deaminate the N,N-dimethyl derivatives of amines. The N,N-dimethyl derivatives of tyramine, tryptamine, and benzylamine were found to be oxidized at rates of up to 46 percent of that of the unsubstituted amines. The stoichiometry of the reaction with dimethyltryptamine, as has been shown for hordenine, was found to be one mole of dimethylamine and aldehyde formed for each mole of amine disappearing.

The N-oxides of the amines listed above were found to be metabolized by monoamine oxidase as judged by the following criteria: The metabolism of these compounds was inhibited by several structurally different compounds, hydrazines and nonhydrazines, which are known to inhibit monoamine oxidase activity. Tyramine, a substrate of monoamine oxidase, also inhibited the metabolism of the N-oxides, presumably, by competition. Isoniazid and cyanide, which do not inhibit monoamine oxidase activity, were both ineffective. The ratios of the rates of deamination of dimethyltryptamine and its N-oxide were found to be the same in different enzyme preparations with different protein concentrations and enzyme activities. The rate of deamination of N,N-dimethyltryptamine-N-oxide was found to be dependent on both enzyme concentration and on N-oxide concentration.

The slow rate of metabolism of the N-oxide did not permit an evaluation of the stoichiometry of the reaction, however, an aldehyde and dimethylamine appeared to be formed. When aldehyde dehydrogenase was denatured by heating or when oxidized diphosophopyridine nucleotide (DPN) was omitted, the formation of indoleacetic acid from N,N-dimethyltryptamine was almost completely abolished. The 2,4-dinitrophenyl derivative of the small amount of volatile amine formed had spectrophotometric characteristics similar to that of dimethylamine.

When the N-oxides were incubated under anaerobiosis, in direct contrast to other substrates for monoamine oxidase, they were found to be metabolized at a faster rate than in air. A more careful evaluation of the metabolism of these N-

oxides revealed that small amounts of oxygen are required for maximum activity. This amount of oxygen was found to be approximately 0.1 percent. The metabolism of the N-oxides was shown to be inhibited by monoamine oxidase inhibitors under anaerobic conditions as well as under aerobic conditions. The above mentioned characteristics, which were observed for the metabolism of the N-oxides by guinea pig liver preparations, were found to be true for monoamine oxidase prepared from other sources.

The deamination reaction was investigated further by the use of isotopes. When tryptamine and N,N-dimethyltryptamine were incubated in H_2O^{18} with monoamine oxidase, aldehyde dehydrogenase, and DPN, two equivalents of O^{18} were incorporated from water into the indoleacetic acid formed. Control experiments with indoleacetaldehyde, aldehyde dehydrogenase, and DPN, and with tryptophan and *L*-amino acid oxidase showed that about one equivalent of O^{18} from water was incorporated into the final product, indoleacetic acid for the former reaction and indolepyruvic acid for the latter reaction. These experiments indicate that the oxygen in the aldehyde formed from the action of monoamine oxidase on amines, as with *L*-amino acid oxidase, is derived from water. If N-oxides were intermediates in this reaction, in contrast to the observed data, the oxygen in the initial step would have been expected to come from molecular oxygen.

More direct evidence indicating that N-oxides are not intermediates in the deamination of N,N-dimethylamines by monoamine oxidase was obtained by the use of tritium labeled N,N-dimethyltryptamine. Incubation of the labeled N,N-dimethyltryptamine with monoamine oxidase and non-labeled N,N-dimethyltryptamine-N-oxide as carrier did not result in the incorporation of label into the N-oxide, thus, indicating that no free N-oxide was formed and that these compounds are not free intermediates in the deamination of N,N-dimethylamines by monoamine oxidase.

It is proposed instead, that the deamination of these amines occurs by removal of a hydride ion, or its equivalent, from the alpha carbon atom (or alternately, a hydrogen atom from this carbon atom and an electron from the nitrogen) resulting in an imino compound which is hydrolyzed to an aldehyde and an amine.

In an attempt to gain more information on the dehydrogenation process, the reduction of several artificial electron acceptors was tested in the monoamine oxidase system. Of these compounds, cytochrome c, phenazine methosulfate, potassium ferricyanide, phenolindophenol, and methylene blue were not reduced when any substrate was used. Tetrazolium blue, nitrobluetetrazolium, triphenyltetrazolium chloride, bromophenolindophenol, and 2,6-dichlorophenolindophenol were found to be reduced when tryptamine was the substrate. The nitrobluetetrazolium and 2,6-dichlorophenolindophenol were reduced when tyramine was the substrate. The observations, however, that the reduction of these compounds was inhibited by high concentrations of semicarbazide, but the oxidation of the amines was not affected, and that these acceptors were not reduced when kynuramine or isoamylamine was the substrate, indicated that the observed reduction was not directly due to monoamine oxidase, but to further (non-enzymatic) oxidation of the aldehyde produced by the action of monoamine oxidase on the amine substrates.

Monoamine oxidase activity was found to be partially inhibited by metal chelating agents such as 8-hydroxyquinoline, o-phenanthroline, 2,2′-dipyridyl, and diethyl-

dithiocarbamate, indicating that a metal may be involved in the reaction. Dialysis of the enzyme against 8-hydroxyquinoline at pH 6, 7, and 8 against 2,2′-dipyridyl, however, did not result in a metal requirement for enzyme activity.

Studies were conducted on the mechanism of inhibition of monoamine oxidase by 1-isonicotinyl-2-(2-C^{14}-isopropyl)hydrazine (iproniazid). This compound was shown to be cleaved to both acetone and isopropylhydrazine. The cleavage of the iproniazid molecule was found to require oxygen and to be accelerated in the presence of cyanide. The suggestion has been advanced that free isopropylhydrazine is the active inhibitor of monoamine oxidase and that the required preincubation of this compound with monoamine oxidase in oxygen is necessary to convert (non-enzymatically) iproniazid to isopropylhydrazine.

The stability of the iproniazid-monoamine oxidase complex and the specificity of the binding of iproniazid to this enzyme allowed an estimation of the ratio of catalytic sites to enzyme activity. From this data, the turnover rate was estimated to be 172 moles per minute per mole equivalent of enzyme for kynuramine as substrate at 37° and at pH 8. A more exact turnover rate, as with other properties of this enzyme, must await further purification of the enzyme or the use of an inhibitor molecule containing more radioactivity and one that is more stable than iproniazid.

DEGREE OF DOCTOR OF JURIDICAL SCIENCE

THE EVOLUTION OF FIRST AMENDMENT DOCTRINES IN THE SUPREME COURT: AN HISTORICAL STUDY OF CASES ON FREEDOM OF EXPRESSION

by EDWARD GERARD HUDON*

In 1921, during the course of a lecture on "The Nature of the Judicial Process", Benjamin Nathan Cardozo, then a member of the Court of Appeals of the State of New York, spoke as follows:

> The great generalities of the Constitution have a content and a significance that vary from age to age.[1]

He could, however, very well have extended his statement to some of the specific—particularly to the prohibition of the First Amendment concerning speech and press. Couched though this is in terms that are anything but general, its meaning has varied from age to age and even from decade to decade. The Amendment was adopted to end uncertainty, yet from the beginning the meaning of the words "Congress shall make no law . . . abridging the freedom of speech or of the press" has followed a vacillating course that has led now to one theory and then to another.

As it was presented to the states for adoption, the Constitution contained no bill of rights which expressly set forth and enumerated rights that were generally considered "natural". Widespread objection followed that even threatened its rejection, and this persisted even though there was reassurance by some of the leaders of the Constitutional Convention that the Constitution itself was a bill of rights. To allay the fears of the people at large, the First Ten Amendments to the Constitution were adopted by the First Congress and ratified by the states. In these, the means were set forth to fulfill the Natural Rights tradition of the Declaration of Independence and its doctrine of "unalienable rights".

The First of the Ten Amendments, the prohibition as to speech and press, was the result of bitter memories of the English law of speech and press under which the Colonists had lived and against which they had rebelled. Based as this law was on theories of law and sovereignty that treated the authority of government as supreme, irresistible, and absolute, it considered any criticism of the government and of its officials as a danger that had to be suppressed by every possible means and with the least possible delay. The theory of the First Amendment was to expressly reject all of this and to assure that it would not survive in this country.

[1] Cardozo, *The Nature of the Judicial Process*. *See* Hall, editor, *Selected Writings of Benjamin Nathan Cardozo* (1947), p. 111.

The faith of the Founding Fathers was deep rooted enough in Natural Rights, the secularized doctrine of Natural Law which had been fundamental to the struggle against arbitrary government, that it survived in this country long after it had been set to one side in Europe. It served as the basis for the American system of judicial review and as the principle with which to interpret the ambiguities of the Fourteenth Amendment. Its omnipresence can be felt even today not only as it continues to serve as the basis for declarations of rights in the constitutions of new states as they enter the union,[2] but also as present-day presidents refer to our government as one "based upon liberty and the God-given rights of man" [3] and reaffirm "the belief that the rights of man come not from the generosity of the state, but from the hand of God." [4] But however much that may be true, and although Natural Law and Natural Rights served as the basis for the Constitution and the Bill of Rights, this did not long survive in the area of speech and press. Less than ten years after the First Congress had done its work, the Alien and Sedition Acts became law.[5] The acts themselves and the trials that took place under them represented an attempt to return to the old English common law with its theories of law and sovereignty. Again it was fear of adverse criticism by those in power, as it had been earlier in England, that engendered a desire to protect those in authority from the supposed evil effects of this criticism. Once more resentment was immediate, the Kentucky and Virginia Resolutions were written by Madison and Jefferson, and the latter was provided with an issue for the election of 1800.

In our own century, the twentieth, there has been an ever increasing number of speech and press cases since the prohibition of the First Amendment was extended to the states through the Fourteenth. This has meant continued experimentation with the law of speech and press as the quest for its true meaning goes on and one theory follows another. The first of these theories was "use-abuse" or "liberty versus license" which represented an attempt to draw a sharp line between speech and press that was considered right and speech and press that was considered wrong. The idea was to place liberty on one side and licentiousness or abuse on the other. This theory served in the World War I Espionage Act cases which were concerned either with pamphlets or foreign and English-language newspapers that were critical of the war effort. The same theory served in the State Criminal Syndicalism Act cases of the 1920's.

But even as "use-abuse" or "liberty versus license" held sway, Mr. Justice Holmes' celebrated "clear and present danger" test was being developed. Although this first gained exposition in an opinion for a unanimous Court, it was in the minority and concurring opinions of Justices Holmes and Brandeis in the Espionage Act and the State Criminal Syndicalism Act cases that it took shape and was made ready for a later date. However, before this later date could come to pass there was to be an interval of obscurity, and even of eclipse, for the test. This interval was the

period from 1930 to 1940 when Charles Evans Hughes presided over the Court as Chief Justice. The major contribution of this era to the law of speech and press was to revitalize the old English concept of "prior restraint" and make a "trump card" of it that has served the Court well ever since when nothing else has seemed applicable.

The decade from 1940 to 1950 was the decade of "clear and present danger" during which civil liberties were said to occupy a "preferred position". The test that Holmes and Brandeis had used only in cases involving national security was now extended to picketing as this became a legitimate form of expression, to municipal ordinances and statutes designed to regulate the activities of Jehovah's Witnesses, to contempt of court cases, both state and federal, arising from out-of-court publications concerning pending cases, and even to enforce the right of an individual to make a provocative, challenging speech in an atmosphere of turbulence, disorder, and animosity. But even as this took place there was one voice that was consistent in dissent. In case after case Mr. Justice Frankfurter objected to what he believed to be a misconception of the origin and the purpose of "clear and present danger". He insisted that it "was a literary phrase not to be distorted by being taken from its context",[6] and that Mr. Justice Holmes had never used it "to express a technical legal doctrine or to convey a formula for adjudicating cases." [7] Soon, with a change in the personnel of the Court and the advent of another decade Mr. Justice Frankfurter was destined to have his way.

By 1950 there were indications that "clear and present danger" was about to go the way of its predecessors. As the Court upheld the non-Communist affidavit requirement of the Labor-Management Relations Act it commented on the inappropriateness of the test as a mechanical one to be used in every First Amendment case.[8] One year later the Court made its most recent pronouncement in terms of the test in *Dennis* v. *United States* [9] when it upheld the convictions of the top Communists in this country. A majority was nowhere to be found that would agree on an opinion that could be considered the opinion of the Court. Although seven of the eight Justices who participated in the case subscribed to "clear and present danger" in principle, only six thought that even in principle it should be applied here, and of the six no more than four were with the majority. These four were together in a plurality opinion that reshaped the test and substituted "gravity of the 'evil,' discounted by its improbability" [10] for the traditional view of immediacy. The other two dissented in terms of the traditional Holmes-Brandeis exposition. It was now evident that the test could no longer serve as a rule of decision.

Since *Dennis*, the Court has entertained very much the same type of cases that it did during the prior decade—picketing, municipal ordinance, and soliciting cases; Jehovah's Witness, censorship, and Smith Act cases—in all of which "clear and present danger" had played so prominent a part earlier. However, the historic test

has not been heard of except to be expressly rejected as not worthy of consideration when an attempt was made to apply it to libelous utterances and obscenity. "Previous restraint" has been used on a few occasions, but not to the extent that it can be said to have become a prevailing doctrine, and there are indications that even this time-worn doctrine may be in the process of being supplanted by a new idea of "balancing of interests", public versus private, as the Court again emerges from one decade to another. But although the history of this new idea is short, it has already encountered formidable opposition and its future is uncertain. Furthermore, there appears to be a trend to "tone down" First Amendment issues and even to set them to one side, if need be, to muster a majority and reach a decision. One interesting development that started by way of dicta in 1957 has been an attempt to proclaim a kinship at both the state and federal levels between First Amendment prohibitions (applied to the states through the Fourteenth) and the power of the legislative body to investigate. But by 1961 this had been reduced to no more than a "threat" as the Court has appeared to have drawn away from and distinguished its earlier pronouncement.

Thus, from the beginning the story of the law of speech and press has, in this country, been one of vacillation. To a considerable extent, this has been due to the lack of a basic philosophy to serve as a stabilizing influence in the interpretation of the First Amendment. The premise is that this has not been caused by ". . . insufficient data by which to determine the interests entitled to protection under it," [11] but by a neglect of the data that is at hand—by a neglect of the Natural Law environment from which both the Constitution and the Amendment arose. And this has been true even though a Natural Law process served to incorporate the First Amendment into the Fourteenth, along with several of the other original Ten Amendments that comprise the Bill of Rights. On occasion, this neglect has been an express rejection as when Mr. Justice Black bluntly declared in a Fifth Amendment case that an earlier decision and the Natural Law theory of the Constitution upon which it relied "degrade[d] the Constitutional safeguards of the Bill of Rights . . ." [12] It has also been on a more scholarly and restrained basis as when Judge Learned Hand assumed *arguendo* "that the Constitution and the 'Bill of Rights' neither proceed from, nor have any warrant in, the Divine Will, either as St. Thomas or Jefferson believed." [13]

No one can dispute that "there is no agreement as to the standards by which to measure the scope of the first amendment." [14] None of the tests that have prevailed at different periods in the history of the Amendment has outlasted a decade. It has also been asserted that the several tests are not as different from one another as they appear to be on the surface—that the difference between "liberty versus license", "clear and present danger", and the current "balancing of interests" test is more semantical than real and that they all involve some sort of "balancing".

This has been said even of such widely separated views as Mr. Justice Holmes' "fire in a crowded theatre" [15] statement and Mr. Justice Black's application of his "plain-language-complete-incorporation" doctrine.[16] But even if this is admitted for the sake of argument, the different tests have nevertheless varied considerably in the amount of freedom that has been permitted under each and in their degree of flexibility.

"Liberty versus license" was quite inflexible and restrictive of speech and press while it held sway, and that eventually caused its downfall. "Clear and present danger" was more flexible, and while it prevailed the conduct of individuals could generally be fitted within its framework if the interest to be protected was private. In most of the cases in which this was done, the question was whether an individual or a group should go to jail for committing some minor offense as violating a state anti-picketing law, accosting a person on the street, and playing a phonograph record that attacked this person's religious faith, school children refusing to salute the flag as required by state law, publishing editorials or cartoons that offended judges, some of whom were perhaps oversensitive, soliciting in areas where soliciting was not particularly welcome, or even insisting on the right to address a hostile audience in a manner that was both offensive and in bad taste. In these cases the issues were of great concern to the individuals or the groups—no one particularly wants to spend time in jail—but in none was there any great national interest present. "Clear and present danger" served as a good measure with which to assess the effect of the conduct of these individuals, many of whom acted in good faith and got into trouble either because their religious beliefs differed from those of the majority, because they suffered from some supposed or actual wrong, or because they encountered some overzealous local law enforcement officer. Fortunately, a liberal application of the tests as it was then phrased kept most of these people out of jail. However, when it became a question of the amount of leeway to be permitted one whose primary interest was to promote the interests of world communism, especially in a time of crisis as in 1951, "clear and present danger" broke down. This became evident when no more than a plurality of four of a majority of six would take a chance on it even if it was rephrased to substitute "probability" for "remoteness".

"Balancing of interests" toward which the Court had started to veer even before "clear and present danger" passed from the scene, has been described by Mr. Justice Douglas as rendering the commands of the First Amendment as "no more than admonitions of moderation".[17] Mr. Justice Black has been no less adamant in his criticism of what he has described as "the freedom-destroying nature" of this current test.[18] Its flexibility is such that it reduces speech and press to the level of every other interest and it is made to compete with these on equal terms. Moreover, it has a tendency to tip the scales against the individual—particularly in con-

Dixon, Jr.'s, comment that Justices Black and Douglas' absolutist approach to First Amendment issues "reflects a feeling that these freedoms are too intrinsic to democracy to be subjected to the erosion of plausible exceptions." 9 *Journal of Public Law* 214, 220 (1960).

[18] *Scales* v. *United States*, 367 U. S. 203, 259, 261 (1961).

tempt of Congress cases when the Court balances "the security of the nation against the freedom of the individual litigant".[19] "Balancing" recognizes no limits except its own self-restraint; it can stop anywhere or nowhere at all. As a result, a "right" originally intended to secure that even a minority should have the privilege of making itself heard becomes no more than a "permission". Whether this "right" is granted or denied is now made to depend on he who controls the "balance".[20]

To date, the "balancing" test has never commanded the support of more than five of the nine members of the Court with one, Mr. Justice Stewart, acting as the "swing" man. Its status is, to say the least, quite precarious. The first change in the composition of the Court could spell its doom. In fact, it was set to one side in a 1961 contempt of Congress case.[21] Justice Stewart deserted the "balancers" and joined those who oppose "balancing" to form a new majority which appears to resolve its differences by "toning down" First Amendment issues whenever possible and by treating them as questions of evidence. This "toning down" process may be gaining favor. Evidence of this appears in *Garner* v. *Louisiana*, decided December 11, 1961,[22] a "sit-in" case in which the petitioners, all arrested because they insisted on being served contrary to a segregation policy at a lunch counter, raised First and Fourteenth Amendment objections. Rather than decide the case on constitutional grounds, the Court chose to base its decision on whether the convictions rested on evidence "which would support a finding that the petitioners' acts caused a disturbance of the peace."[23] The decision to reverse was unanimous with three judges concurring.

It might be that even the secularized version of the Natural Law that Jefferson and the others believed in could not provide the answer. It could, however, provide a stabilizing influence and place the First and the other amendments that comprise the Bill of Rights in their proper setting and environment. For this, one need not necessarily subscribe to this eighteenth century doctrine any more than one need approve of the contents of legislative materials that are now so often searched to find Congressional intent. In either instance, the objective is to find the meaning of words. In the case of the First Amendment, its authors had something very definite in mind when they chose absolute terms to assure the rights of speech and press. While in the broad sense these rights must be admitted to be qualified, in the narrow sense they must encompass an area in which they were intended to be absolute. To discover the limits of this area one must consult the only data available—that which surrounded and motivated the adoption of the rights.

As the data that is available is examined, whether or not St. Thomas, the other doctors and fathers of the Church, and even Suarez, are included as a part of the

line of development that extended from Zeno to Locke depends very much on the religious preference of the individual, or the lack of one, and even on environment. But whatever the position may be that is assumed in this respect, a decision for or against the early philosophers of the Church is really not as crucial as it might at first appear to be. Even among the colonists themselves opinion was anything but unanimous as to the source of the higher law that they all invoked.[24] There were those like James Otis who thought that the law of Nature was the "unchangeable will of God, the author of nature, whose laws never vary"; [25] and along with these there were the revolutionary preachers who expounded from the pulpit that government was "both the ordinance of God, and the ordinance of man: of God, in respect to his original plan, and universal providence; of man, as it is immediately the result of human prudence, wisdom concert." [26] There were also the others like John Adams and Jefferson who, while they admitted that God or a god had set things in motion, nevertheless preferred the secular doctrine of Cicero and Grotius that depended on reason rather than revelation to keep things going once they had started. But, it must be remembered, Grotius had borrowed heavily from the Scholastics and he acknowledged this debt by paying homage to the Vittoria, Suarez, and others.[27] It must also be noted that Adams, Jefferson, and the others always were careful to include a reference to God in their scheme of things as they straddled and invoked both God and nature. But whatever either group might consider as the source of Natural Law and Natural Rights, they all subscribed to certain basic rules of human behavior capable, it was said, of being discovered through reason, experience, and revelation. These rules were the same as Justinian's "immutable laws of good and evil" that the colonists restated as the Golden Rule that we know today. The objective was life, liberty, and the pursuit of happiness with an emphasis on property. Positive law, that which man subjected himself to when he abandoned his idyllic state of nature in his search for society, had to conform to this inherited sense of right and wrong or be considered unnatural and not law at all.

However indefinite or vague this may seem today, it served both as a fighting faith for a successful revolution against arbitrary government and as the basis for a new experiment in government that sought to assure the rights of the individual. As it did the latter it set out areas with, it was assumed, well defined limits within which these rights that were considered "natural" and "inalienable" could not be interfered with. In so far as we are concerned today, what these limits are depends on the criterion applied: St. Thomas' admonition that man has a right to live as a human person, to perfect his moral nature, and live as a free and intelligent individual; Justinian's "immutable laws of good and evil"; the Golden Rule; or

simply life, liberty, and the pursuit of happiness. In final analysis, they all resemble one another since they are all concerned with the welfare of the individual. More significant than their contents is the idea that their authors intended to set up areas within the limits of which rights were considered absolute and beyond the power of the state. As to speech and press, it is only in the definition of areas that the absolutes of the Natural Law approach differs from the absolutist ideas of Justices Black and Douglas, particularly the former. In the 1960 James Madison Lecture that he delivered at the New York University Law Center Justice Black restated his belief ". . . that one of the primary purposes of the Constitution with its amendments was to withdraw from the Government *all* power to act in certain areas—*whatever the scope of these areas may be.*" [28] He left the "scope," i.e., the limits, of the areas uncertain and it is this uncertainty that has been used to accuse him of some sort of "balancing" without which, his accusers say, he could not put his doctrine into practice.[29]

As a practical matter, it is perhaps inevitable that the meaning of liberty of speech and press should change from one point to another in the manner of a pendulum which, to quote Mr. Justice Cardozo out of context, "has swung back and forth a good many times." [30] That is the unavoidable path that the collective opinion of a panel of nine men must follow as its composition varies and as it meets diverse situations. There is no danger so long as the pendulum remains suspended from a fixed point and the movement of the prohibition of the First Amendment as to speech and press is regulated by the criteria that surrounded its adoption. There is danger if the pendulum is detached from its fixed point, the Natural Law criteria that motivated the adoption of the First Amendment are ignored, and the meaning of liberty of speech and press is permitted to depend on the whims of the majority to the detriment of the minority whose rights it was intended to protect. There is also danger if the law of speech and press is artificially frozen in an inflexible position as it was for so long from the early law of seditious libel in England until even after the adoption of the First Amendment in this country.

Black, Jr., "Mr. Justice Black, the Supreme Court, and the Bill of Rights," *Harpers*, February, 1961, pp. 63, 65; Mendelson, *Justices Black and Frankfurter: Conflict in the Court* (1961). The entire tenor of Professor Mendelson's book appears to be an indictment of Mr. Justice Black and a glorification of Mr. Justice Frankfurter. One should not read the book without also reading James Clayton's book review of it that appeared in *The Washington Post* for January 15, 1961. Mr. Clayton not only makes the point that the treatment accorded Mr. Justice Black's judicial philosophy is lopsided and unfair while Mr. Justice Frankfurter's philosophy is depicted as so perfect that no one should question it but he also asserts that it might have been worthwhile for the publisher to make the reader aware of the fact that Mr. Mendelson once worked for Mr. Justice Frankfurter in Washington. He could have noted this, wrote Mr. Clayton, in the descriptive material about Mendelson. For a different type review of the book see that by Professor Dixon, 30 *Fordham Law Review* 214 (1961), in which Professor Mendelson's reaction is said to be "both sharp and profound" and the result "a powerful work."

NATO "FAIR TRIAL" SAFEGUARDS: PRECURSOR TO AN INTERNATIONAL BILL OF PROCEDURAL RIGHTS

by ROBERT B. ELLERT*

World War II and its aftermath demonstrated the futility of planning military defense in terms of an individual country. The Western world needed a new approach to preserve its security. In March 1946 Winston Churchill in a speech at Fulton, Missouri, made a proposal for a defensive alliance to protect the West in the cold war.

In succeeding years the United States recognized the necessity for such a defensive alliance and that the survival of the United States and of the other free nations of the North Atlantic Community depended on collective security. Truly, as was stated by Secretary of State Dulles, independence today could only be achieved by interdependence.

On April 4, 1949, the desire of the United States, Canada, Belgium, France, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, and the United Kingdom to share the problem of mutual defense was formalized by the North Atlantic Treaty. In 1952 Greece and Turkey joined NATO and in 1955 so did the Federal Republic of Germany. This agreement was a partnership of politically free and economically stable nations joined together for the purpose of exercising those political, economic, and military sanctions necessary to defend against communist aggression and expansion.

This all important defensive alliance contemplated an unprecedented peacetime stationing of the forces of one party in the territory of another. What, however, was to be the status of such visiting forces? Decision makers could not justify to their peoples the need for according to visiting forces in peacetime the sweeping immunities from local law which were granted to them *in extremis* during World War II. Yet, the forces of a sending state, even in peacetime, needed certain functional immunities from local law in order to properly carry out the mutual defense requirements of NATO. Consequently, it was necessary to negotiate a balanced agreement based upon reciprocity which more or less precisely defined the rights, duties, and obligations of a visiting force while stationed in the host state.

On June 19, 1951, the *Agreement Between the Parties to the North Atlantic Treaty Regarding the Status of their Forces* was signed in London and eventually ratified by 13 nations. This agreement sets out the rights, obligations, and duties of the signatories in several areas of importance, including such matters as pass-

* A.B. 1947, B.C.L. 1949, College of William and Mary; Postgraduate Diploma in Law 1956, Kings College, University of London, England, S.J.D. conferred June 6, 1962. Professor in charge of research: William Thomas Mallison, Jr., *Professor of Law*.

port and visa regulations; identity cards, movement orders, and expulsion of undesirables; drivers licenses; procurement of goods, services, facilities, and labor: criminal jurisdiction; duty free imports; and foreign exchange regulations.

The criminal jurisdictional provision is the heart of the agreement. It is an integral segment of the give and take scheme of mutual defense which is the keystone of NATO. This provision sets out a formula which resolves the sensitive issue of the exercise of criminal jurisdiction over members of a force who commit offenses in the host country over which there is concurrent jurisdiction by the sending and receiving states.

The agreement also balances the interests of the signatories by providing that a member of a visiting force is entitled to certain "fair trial" safeguards when prosecuted by a receiving state. This provision insures that a member of a visiting force will have the right to certain minimum procedural safeguards even though tried by a receiving state whose system of law might be different from that of a sending state. These safeguards are set out in paragraph 9 of Article VII, NATO SOF Agreement, as follows:

1. To a prompt and speedy trial
2. To be informed, in advance of trial, of the specific charge or charges made against him
3. To be confronted with the witnesses against him
4. To have compulsory process for obtaining witnesses in his favour, if they are within the jurisdiction of the receiving state
5. To have legal representation of his own choice for his defense or to have free or assisted legal representation under the conditions prevailing for the time being in the receiving state
6. If he considers it necessary, to have the services of a competent interpreter
7. To communicate with a representative of the government of the sending state and, when the rules of the court permit, to have such a representative present at his trial

Based on the precedent of the NATO SOF Agreement these procedural safeguards were also incorporated into bilateral status of forces agreements between the United States and Japan, Pakistan, Nicaragua, Libya, Iceland, the West Indies, and Australia (Nauru Islands).

The inclusion of these "fair trial" safeguards in the NATO and other SOF agreements and their day-to-day application in different legal systems in literally thousands of cases each year represents a unique breakthrough in the implementation of human rights. It has been because of a lack of such implementation that the purpose of the United Nations, as set out in the Universal Declaration of Human Rights, with regard to the promotion and observance of human rights has been largely unfulfilled. Besides numerous political points which have created areas of disagreement among nations, such as the right of petition by individuals, the preparation of a Bill of Rights converting the Declaration of Human Rights into a body of binding obligations has been complicated by the fact that the concepts underlying basic civil liberties and safeguards are so general in character that they are subject to diverse interpretations, not just in the different major legal systems but also in different states belonging to the same major legal system.

The main purpose of this inquiry is to suggest an informal approach whereby the extensive practice of the United States, the NATO nations, and other nations during the past eight years in the implementation of the "fair trial" safeguards contained in the various status of forces agreements in different systems of law may be utilized to achieve in one small area of individual rights where there is disagreement among nations an orderly modification of international law which would lead ultimately to universal acceptance of such rights in an international Bill of Procedural Rights.

The area chosen comprises the minimum procedural safeguards to be accorded an alien prosecuted by a host country. It will be demonstrated that there is a definite dichotomy between two groups of nations as to the criteria to be applied in determining the minimum procedural safeguards which a state must accord in the prosecution of an alien in order to avoid international responsibility for a denial thereof.

A subordinate purpose of this inquiry is to consider the remedies a United States serviceman would have under international law and United States domestic law in the event he were denied one of the "fair trial" safeguards set out in paragraph 9 of Article VII of the NATO SOF Agreement.

The method of inquiry will be largely empirical. It will emphasize the development of international law as a decision making process in which the decision makers of the various nations are influenced by many variables; as a flow of decisions in which community prescriptions are formulated, invoked, and in fact applied in the promotion of community policies. In assessing the validity of legal doctrines not only the structures and processes of formal authority but also those of effective power and of their interrelations will be considered. Specifically, the practice of the United States and other nations during the past eight years in the implementation of the NATO "fair trial" safeguards in the several thousand cases involving United States servicemen will be studied and evaluated in the context of how such practice may have been influenced by the mutual defense goal of the countries concerned.

In Chapter II, *Minimum Procedural Safeguards and Customary International Law*, the existing practice of states was examined in order to determine whether or not there is a rule of customary international law which prescribes the procedural safeguards to which an alien is entitled if prosecuted by a host state.

Conflicting community goals and aspirations on the part of weak and strong states resulted in the decision makers of such states espousing two divergent theories regarding the standard of the procedural safeguards which a host country must accord in the prosecution of an alien. On the one hand, the less developed and weaker states, whose legal systems fell below the norms of the more sophisticated and stronger states, insisted that an alien was entitled only to the procedural safeguards accorded by the domestic law of the host state to its own nationals. These states resented and regarded as unwarranted interference the contention of the more developed and stronger states that their nationals engaged in commerce abroad were entitled, when prosecuted by a host state, to the procedural safeguards set out in a universal minimum standard of justice for all aliens. These theories are known respectively as the "national treatment" theory and the "minimum standard" theory.

Each theory is now supported by a substantial body of "policy oriented" legal doctrines and rules.

An examination of this large body of legal doctrine and rules discloses a substantial number of states and prominent publicists adhering to each theory.

In view of this dichotomy, it cannot be said that there is evidence of a constant and uniform practice upon which could be predicated the positive requirements of a rule of customary international law. The most that can be claimed from the practice of states on this subject is that there exists a regional rule of customary international law in the Latin-American states as to the "national treatment" theory.

Accordingly, there is no rule of customary international law which establishes the minimum procedural safeguards to which an alien is entitled if prosecuted by a host state. Notwithstanding the existence of a general principle of customary international law pertaining to state responsibility when an alien has suffered injury or damage by an act or omission attributable to a state which is contrary or wrongful under international law, the home state of the alien cannot demonstrate that any denial of a procedural safeguard by a host state to an alien was contrary to or wrongful under international law.

In Chapter III, *Application of SOF "Fair Trial" Safeguards*, it was stated that the inclusion of explicit "fair trial" safeguards in the 13 nation NATO SOF Agreement and in seven bilateral status of forces agreements is a tacit but massive recognition by the United States and the other states concerned of the truth of the conclusions of Chapter II: that customary international law contains no demonstrable standards, no reliable criteria, for determination of what are the minimum procedural safeguards international law is said to require host states to accord aliens.

Since the ratification of the NATO SOF Agreement by the United States on July 25, 1953, there have been over 30,000 cases involving United States servicemen, civilian employees of the armed forces, and their dependents over which NATO countries, whose legal systems are different in whole or in part from that of the United States, had the primary right to exercise criminal jurisdiction under the formula set out in paragraph 3 of Article VII of this agreement. Of this number, over 4,000 cases were actually tried by such foreign countries. The purpose of Chapter III was to determine whether any differences of interpretation as to the application and meaning of these safeguards have arisen in their day-to-day implementation in the trials of thousands of United States servicemen under legal systems different from the United States and, if so, to isolate the manner in which these differences were accommodated. The analysis of these cases was largely empirical and was evaluated in the context of how the mutual defense goals and community interests of the countries concerned may have influenced their interpretation of the "fair trial" safeguards.

It was concluded that in the more than 4,000 cases of United States personnel tried by the tribunals of civil law countries during the past eight years there have been no major differences between the United States and such countries as to the application and interpretation of the NATO "fair trial" safeguards, except for the safeguard pertaining to "confrontation". The United States, however, has accepted the practice of civil law countries that confrontation includes only the right of the accused to be physically present when an adverse witness testified and has not objected

that it does not include the common law right of direct cross-examination by the accused. Further, during this period in only one case, the Baldwin case, has there been diplomatic intervention by the United States because of a denial of a safeguard under the procedure set forth in paragraph 4 of the Senate Resolution which was enacted at the time the Senate advised and consented to the ratification of the NATO SOF Agreement.

The favorable experience in the implementation of the NATO "fair trial" safeguards enjoyed by the United States and those NATO nations whose systems of law are different in whole or in part from that of the United States has been largely the result of their accommodation of each other's interests.

Some instances of this accommodation on the part of the authorities of NATO countries are their accelerating the trials of United States servicemen, their permitting a serviceman to promptly communicate with a representative of the United States upon his arrest, and their admitting a United States observer to sessions of a trial of a United States serviceman from which the public are excluded. Adjunctively, the military authorities of the United States have viewed foreign legal systems different from their own with sympathy and understanding and have cooperated with foreign authorities in the administration of justice in cases involving United States personnel.

The absence of any major controversy between the United States and these NATO countries illustrates how nations having different legal systems and cultures may, through a "back door" approach, interact with and upon each other in a social process to shape desirable community prescriptions which will promote a common goal. The common goal in this instance is the advancement of national self-defense by interdependence with other nations. Without this mutuality of interest, it is probable that overemphasis by the participating countries on technical rules and legal norms in the implementation of the NATO "fair trial" safeguards might have reaped dissension and contumely.

Chapter IV, *Denial of "Fair Trial" Safeguards and United States Forces*, considered the remedies a United States serviceman may have under international law and United States domestic law if he is denied a "fair trial" safeguard by a NATO country.

It was concluded that although a United States serviceman possessed an international personality to the extent of having been accorded a right to the safeguards set out in paragraph 9 of Article VII, of the NATO SOF Agreement, he does not possess the procedural capacity under international law to enforce this right by himself directly against the host country. Consequently, under international law he is not able to take any action against a host state because of its denial of a safeguard provided the serviceman by paragraph 9 of Article VII of the NATO SOF Agreement.

In the event of a denial of a procedural safeguard provided by the NATO SOF Agreement a United States serviceman under international law must rely on the United States to intervene with the host state to protect his right. Further, under United States domestic law, if the Secretary of State refuses to so intervene, the federal courts would probably not compel such intervention, as negotiation with a

foreign state is not a ministerial duty. Consequently, he possesses at most a passive or inchoate right to the safeguards set out in paragraph 9 of Article VII, *supra.*

In Chapter V, *Minimum Standard of Procedural Justice*, it is demonstrated how the experience of the NATO countries in successfully implementing the NATO "fair trial" safeguards in thousands of cases among different systems of law during the past eight years may be utilized to achieve a minimum standard of procedural justice for all aliens, and, ultimately, for all persons.

It was illustrated that because of the dichotomy among nations as to the "national treatment" theory and the "minimum standard" theory there exists no customary rule of international law which prescribes the procedural safeguards a host country must accord in the prosecution of an alien. Further, even if there were such a rule, an alien under traditional international law has no way of personally securing redress against a host state for its violation of the rule as the alien lacks an international personality.

It was concluded that there must be formulated a new basis for a minimum standard of procedural justice which is specific as to content and acceptable to all major legal systems in order to allay any suspicion on the part of weaker nations that it would be a vehicle for unlimited interference with their internal affairs. Once such a mutual basis is formulated, an appropriate vehicle to obtain its acceptance by states would be a universal multilateral convention.

In setting out these criteria should they be drafted as rights of the alien's home state, which would be consistent with traditional international law, or as direct rights of the alien?

After careful examination it was determined that it was juridically and philosophically unsound to continue to evade the reality that where a procedural safeguard is denied an alien by a host state it is the alien who should be directly protected rather than his state. Accordingly, the fiction of the injury to the state through the injury to its national should be abandoned. The minimum procedural safeguards for the protection of an alien who is prosecuted by a host state should be set out in a multilateral convention as direct rights of the alien together with provisions establishing procedures whereby an alien may secure vindication of his rights in the event of a denial thereof.

The minimum procedural safeguards contained in the NATO and other status of forces agreements are clear, are already familiar to a considerable number of states, and are likely to be acceptable to countries of all of the major legal systems of the world. Consequently, after appropriate amplification and refinement, they should be the basis of the procedural safeguards contained in the proposed multilateral convention.

Appendix 4 sets forth a draft article containing the minimum procedural safeguards to be included in the proposed multilateral convention.

Appendix 5 sets forth a draft article containing the procedures an alien may take in the event he is denied a procedural safeguard by a host state.

The draft multilateral convention proposed above is a means of resolving the existing controversy in international law as to the minimum procedural safeguards a host country must accord in the prosecution of an alien. Once the agreement of states has been obtained to such a convention there should emerge eventually from

the interaction of states, each upon the other, in the reciprocal implementation of these safeguards a common denominator as to their meaning. This decision making process should be accelerated by the fact that peoples everywhere are interdependent with respect to major values. In recent decades tremendous and sweeping changes in technology, transportation, population growth and movement, educational opportunities, economic development, and world organization have combined to alter the status of the nations of the world from one of comparative independence to one of ever increasing interdependence. This interdependence and the ever increasing acceptance of common community economic goals should encourage a nation signatory to the multilateral convention to accord in the prosecution of an alien the minimum procedural safeguards contained therein in the expectation that such procedure will maximize the opportunity for reciprocal treatment of its nationals abroad. Thus, through this informal approach there should be, even among nations having different legal systems and cultures, mutual agreement as to the meaning of the safeguards to be accorded aliens under the proposed multilateral convention.

At this time these procedural safeguards will be ripe for codification into a binding and enforceable bill of procedural rights, not just for aliens, but for all mankind.

The proposed convention, if adopted, would truly represent a pragmatic step in the realm of reality toward the achievement of a common standard in the area of minimum procedural rights "for all people of all nations" as contemplated by the abstract ideals of the *Universal Declaration of Human Rights.*

EXTRAORDINARY CONTRACTUAL AUTHORITY IN GOVERNMENT DEFENSE PROCUREMENT

by CECIL THOMAS LAKES*

On December 16, 1950, the President of the United States issued a proclamation declaring a national emergency. The proclamation of the national emergency was predicated on the fact that the United States and the other countries of the Free World were threatened by an aggressive and hostile ideology represented by Soviet Russia and her allies. That proclamation is still in effect. Recent international developments indicate that the proclamation will continue in effect for the foreseeable future.

* A.B. 1948, LL.B. 1950, University of Cincinnati; LL.M. 1960, The George Washington University; S.J.D. conferred June 6, 1962. Professor in charge of research: Ralph Clarke Nash, Jr., *Associate Professor of Law.*

During the emergency our national policy is one of military preparedness with the dual objective of preventing a war and, failing this, of winning any war that is thrust upon us or our allies. The national policy of military preparedness requires the maintenance of a large military establishment. The maintenance of a large, modern, and effective military establishment, in turn, requires the procurement of vast quantities of supplies and services. The military departments spend over twenty-five billion dollars annually in defense procurement. This, however, does not represent the annual total amount of defense procurement since many of the civilian departments and agencies of the Government spend part of their annual appropriations for supplies and services for defense purposes.

In order to provide the Executive Branch of the Government with sufficient power to effectively carry out our large annual procurement program, Congress enacted, and on August 28, 1958, the President approved Public Law 85-804. Public Law 85-804 provides that "the President may authorize any department or agency of the Government which exercises functions in connection with the national defense . . . to enter into contracts or into amendments or modifications of contracts heretofore or hereafter made, and to make advance payments thereon, without regard to other provisions of law relating to the making, performance, amendment, or modification of contracts, whenever he deems that such action would facilitate the national defense." Public Law 85-804 states that it will be effective during a national emergency declared by Congress or the President, and it is presently effective under the presidential proclamation of December 16, 1950. The legislation embodied in Public Law 85-804 is not new. This law had its origin in and is in effect a continuation of Title II, First War Powers Act, which was enacted at the start of World War II. The substantive provisions of Public Law 85-804 are substantially similar to those contained in Title II, First War Powers Act. Title II, First War Powers Act, was reactivated during the Korean War and extended on various occasions until June 30, 1958. The powers conferred on the President by Title II, First War Powers Act and now under Public Law 85-804 may best be described as extraordinary. This is an apt description for under such powers the federal departments and agencies, to which the President delegates the authority, may enter into, amend, and modify defense contracts, and make advance payments thereon even though such actions are in direct contravention and violation of statutory or common law pertaining to these matters. Lessons learned during World War I, World War II, and the Korean War, revealed that these extraordinary powers were necessary if the Government was to effectively procure the vast quantities of supplies and services needed during such wars. While the ordinary powers possessed by the Executive Branch of the Government may be adequate for peace time procurement, they are, however, too rigid and inflexible to support the large procurement programs necessitated by a war. These extraordinary powers are now needed because defense procurement during the present national emergency is approaching the magnitude of war time procurement.

On November 14, 1958, the President, acting pursuant to the authority conferred on him by Public Law 85-804, issued regulations in implementation thereof and delegated the powers thereunder to the Secretary of Defense, the Secretaries of

the Army, Navy, and Air Force, and to the following civilian departments and agencies:

Department of the Treasury
Department of the Interior
Department of Agriculture
Department of Commerce
Atomic Energy Commission
General Services Administration
Office of Civil and Defense Mobilization
National Aeronautics and Space Administration
Federal Aviation Agency
Tennessee Valley Authority
Government Printing Office

Since the military departments are the departments primarily concerned with the national defense it was obvious that they would be the primary users of Public Law 85-804 and for this reason the President specified that the regulations issued by the civilian departments and agencies in implementation of Public Law 85-804 were to be uniform to the extent practicable with those issued by the Secretary of Defense. On January 5, 1959, the Secretary of Defense issued regulations in implementation of Public Law 85-804. These regulations are contained in Section XVII of the Armed Services Procurement Regulation which are entitled "Extraordinary Contractual Actions to Facilitate the National Defense." The National Aeronautics and Space Administration has issued regulations substantially similar to the Department of Defense regulations and the General Services Administration will shortly issue regulations applicable to the other civilian departments and agencies which, likewise, will be substantially similar to the Department of Defense regulations.

Public Law 85-804 and the implementing presidential regulations are general in scope and do not prescribe standards or guides under which the powers conferred by the Act are to be exercised. Standards or guides, however, are set forth in the Department of Defense regulations and the regulations of the civilian departments and agencies. These regulations divide the authority of Public Law 85-804 into three categories, viz., contractual adjustments, residual powers, and advance payments, and spell out, in somewhat general terms, standards and guides under which these actions may be accomplished.

The types of contractual adjustments authorized by the regulations are amendments without consideration, correction of mistakes, and formalization of informal commitments. Contracts may be amended without consideration in two types of cases. One type of case is commonly referred to as essentiality and the other is commonly referred to as government action.

The validity and interpretation of government contracts are in general governed by legal principles applicable to contracts between private individuals. These principles, however, are found in the federal common law and not state law. Therefore, as in private contract law consideration is required for a valid government contract. Unlike the rule obtaining in private contract law, however, the consideration moving to the government must be adequate and proportional. Thus, it may be stated that

under the federal common law rule a valid government contract or an amendment of a government contract must be supported by adequate and proportional consideration moving to the Government.

Notwithstanding the federal common law rule pertaining to consideration, a government contract may be amended without consideration under Public Law 85-804 on the basis of essentiality and government action. Relative to essentiality the regulations provide that "where an actual or threatened loss under a defense contract, however caused, will impair the productive ability of a contractor whose continued performance on any defense contracts or whose continued operation as a source of supply is found to be essential to the national defense, the contract may be adjusted but only to the extent necessary to avoid such impairment to the contractor's productive ability." In general, it may be stated that the basis for a finding of essentiality is whether the contractor is producing an item that cannot be procured from another source in time to meet an urgent government requirement for such item.

In addition to the essentiality test a government contract may be amended without consideration under Public Law 85-804 on the basis of government action. In this regard the regulations provide that an adjustment may be made in a contract by way of an amendment thereof without consideration where government action, although not creating any legal liability on the part of the Government, has caused a loss or the incurrence of increased costs in performing the contract. Although the Government may be sued under the Tucker Act on its express and implied contracts, it may not, however, under federal common law principles, be sued under such act where the obstruction to performance of the contract resulted from action by the Government in its sovereign capacity. The Contract Adjustment Boards, which have been established to decide requests for contractual adjustments, follow the federal common law rule and do not grant relief where sovereign action of the Government has caused the loss. The Boards possess the authority to grant relief under this circumstance but do not do so primarily because it would be giving the government contractor an advantage over other firms which do not hold a government contract but which are similarly affected by the sovereign act of the Government.

In the event the loss to the contractor was caused by the Government in its capacity as the other contracting party, relief will be granted the contractor if in the terminology of the regulations "considerations of fairness . . . make appropriate some adjustment in the contract." In other words the Contract Adjustment Boards apply, generally, equitable principles in determining whether relief should be granted under the government action test.

In the area of mistakes in contracts the government contractor may obtain relief in the federal courts and also from the General Accounting Office. In addition, the contractor may obtain relief relative to a mistake in its contract under Public Law 85-804. The Contract Adjustment Boards, in general, apply the same legal principles that are applied by the courts and the General Accounting Office in correcting mistakes in contracts.

The third type of contractual adjustment that is authorized to be made under Public Law 85-804 is formalization of informal commitments. In transactions between private individuals the acts of an agent may bind the principal even though

the agent entering into the contract acts beyond or outside the scope of his actual authority. If the principal so conducts himself as to give the agent the appearance of authority the principal may be bound to any third party who relies in good faith on such appearance of authority. The principle that is invoked to hold the principal in this situation is that of apparent authority or estoppel. However, in the law of government contracts it is a well-established common law principle that the doctrine of apparent authority or estoppel is not applicable against the Government with the consequence that the Government is not bound by the acts of its agents unless they act within the scope of their actual authority. Although an individual may not obtain relief from the courts or the General Accounting Office on the basis of apparent authority or estoppel such relief is available, however, under Public Law 85-804. This relief is referred to by the regulations as the formalization of an informal commitment. The regulations provide that an informal commitment may be formalized to permit payment to persons who, in reliance in good faith on the apparent authority of a government agent, have furnished or have arranged to furnish supplies or services to the Government. In formalizing informal commitments the Contract Adjustment Boards generally apply legal principles applicable to apparent authority. Public Law 85-804 places a limitation on the formalization of an informal commitment for it states that such commitment shall not be formalized unless it is found that at the time the commitment was made it was impracticable to use normal procurement procedures. Since informal commitments often result from mistake of fact or ignorance of applicable laws and regulations on the part of government agents, the question arose as to whether the limitation of the statute prohibited the formalization of an informal commitment made under such circumstances. The Army Contract Adjustment Board decided that the limitation did not apply to informal commitments made through error or mistake but only to those where the commitment was deliberately made as a means of evading normal procurement procedures.

Various problems and questions have arisen relative to contractual adjustments. A problem that arose under Reactivated Title II was whether relief should be granted contractors by amendments without consideration on the basis of financial hardships incurred as a result of a loss under a government contract. The Senate Select Committee on Small Business held an investigation relative to the administration of Reactivated Title II and concluded as a result thereof that relief should be granted on such basis. The Secretary of Defense refused to amend the implementing regulations to provide for relief on the basis of financial hardship, because the only benefit accruing to the national defense therefrom would be the over-all benefit to the national economy, a proposition which was felt to be so broad that it should only be accomplished under specific legislation. Although various bills were introduced in Congress which would have authorized amendments of contracts without consideration on the basis of financial hardship all such bills failed of passage. Thus, it may be safely concluded that a contractor may obtain relief under Public Law 85-804 by way of an amendment of its contract without consideration only on the basis of essentiality or government action.

The question of the timeliness of an application for a contractual adjustment has been the source of some difficulty. This is true not so much in the area of in-

formal commitments as in the areas of amendments without consideration and mistakes. In order for an application for the formalization of an informal commitment to be timely it must be filed, according to the regulations, within six months after furnishing or making arrangements to furnish supplies or services to the Government. Relative to amendments without consideration and mistakes, the regulations are not this explicit for they provide that relief shall not be granted by an amendment without consideration unless the application therefor was filed before final payment and before all obligations were discharged under the contract. Before final payment all obligations obviously would not be discharged under a government contract, and after final payment there may still be obligations outstanding under the contract. Although the regulations are ambiguous, they have been interpreted to mean that an application is timely if filed while any obligation is outstanding under the contract. If the application is filed after the contract is fully executed on both sides relief may still be granted a contractor, not by way of amendment of the nonexistent contract, but by a new contract. However, the contractor's possibility of relief would be enhanced by a timely application.

While the question has arisen as to whether relief could be made available to a subcontractor under Public Law 85-804, the answer now, however, appears quite clear that in appropriate cases relief may be made available to subcontractors. Another question or problem has been the extent of relief that may be granted to a contractor by way of a contractual adjustment under Public Law 85-804. The problem stems from the fact that the Comptroller General, in correcting mistakes in contracts, will not grant relief to an extent that will increase the contract price above the next low bid or proposal. On analysis it is quite clear as to the authority of the Contract Adjustment Boards in this regard, but notwithstanding, this has been an area of much confusion. In short, it may be stated that there are no legal, policy, or other reasons that would preclude the granting of relief in essentiality and government action cases to an extent that would increase the contract price in excess of the next low bid or proposal. Although the Boards have the power to do so, they do not, however, based on policy considerations, normally grant relief in mistake cases in excess of the next low bid or proposal.

One other area that has caused misunderstanding among government contractors is that relating to the required finding of the facilitation of the national defense in every action taken under Public Law 85-804. If a Contract Adjustment Board finds that a contractor is essential in an essentiality case it will, without more, find that the granting of relief will facilitate the national defense. If the Board finds in a government action case that considerations of fairness warrant relief it will likewise, without more, find that the granting of relief will facilitate the national defense. In the areas of mistakes and informal commitments the regulations contain so-called "automatic" or "built-in" findings to the effect that the granting of relief in these cases will normally facilitate the national defense by assuring persons that they will be dealt with fairly and paid expeditiously in such cases.

On several occasions contractors having had their requests for contractual adjustments denied by the Contract Adjustment Boards have sought judicial review of such decisions in the Court of Claims. The Court of Claims has refused to upset these decisions. However, the court has stated by way of *dicta* that it would review

and upset a decision if it were arbitrary, capricious, or so grossly erroneous as to imply bad faith. These *dicta* are inconsistent with a great number of Supreme Court cases which hold that the exercise of discretionary acts on the part of administrative officials is not subject to judicial review even if such acts are an abuse of discretion. Some support can be found, however, for the *dicta* of the Court of Claims since the Supreme Court has on some occasions granted judicial review on the basis of an abuse of discretion. In view of these inconsistent decisions of the Supreme Court it would be difficult to predict whether an action under Public Law 85-804 would be subject to judicial review on the basis of an abuse of discretion. Although the Court of Claims indicated by way of *dicta* that it would review an action on this basis there is, however, no square holding to this effect.

The regulations implementing Public Law 85-804 state that the term "residual powers" covers all authority under the Act except contractual adjustments and advance payments. A precise definition of what the term residual powers include would be difficult to formulate due to the breadth of actions that may be taken under such powers. In this regard it may be stated that any action may be taken in the procurement field under such powers provided that the action is not prohibited by the Act and the presidential regulations, and provided further that it is determined that the action will facilitate the national defense. The residual powers have been used as the authority for a multitude of purposes, however, the most frequent use of such powers has been for the sale or other disposition of government property and for the inclusion of indemnity provisions in extra-hazardous contractual undertakings where the contractors could not obtain commercial insurance.

Advance payments, which are loans to enable government contractors to perform their contracts, are specifically authorized by Public Law 85-804. In the absence of specific statutory provisions, advance payments could not be made in view of a statute which prohibits such payments except when "authorized by the appropriation concerned or other law." In addition to Public Law 85-804 advance payments are authorized by 10 U.S.C. § 2307. Although the authority of Public Law 85-804 is much broader than 10 U.S.C. § 2307 the regulations, however, place the same limitations and restrictions on advance payments regardless of which law is being utilized. In view thereof, and a requirement in the regulations that Public Law 85-804 may not be used if other adequate authority is available within the department, advance payments are now being made under 10 U.S.C. § 2307 and not under Public Law 85-804. The broader authority of Public Law 85-804 is available and may be used for making advance payments if at any time the Secretary of Defense should determine that 10 U.S.C. § 2307 is inadequate for such payments.

The United States is spending a major part of its tax dollar in defense procurement in order to carry out our national policy of military preparedness. Over twenty-five billion dollars is spent each year in defense procurement. In a procurement program of this magnitude things can go wrong: mistakes are made, informal commitments are undertaken, and losses are incurred in performing government contracts. The normal powers possessed by the Executive Branch of the Government are not adequate to cope with the many problems that arise in this area. These problems are now being resolved in the interest of the national defense under the extraordinary powers conferred on the Executive Branch of the Government by Pub-

lic Law 85-804. There has been criticism of the administration of this law and its need has been questioned. The Congress and the President believe that this law is necessary in the interest of national defense and this appears to be the generally accepted view. Thus, as long as defense procurement continues at its present pace it may be expected that the Government will exercise extraordinary contractual authority to insure that such procurement is accomplished effectively and expeditiously in the interest of the national defense.

MANUFACTURERS' EXCISE TAXES

by SHERWIN CARL PELTIN*

I. GENERAL CONSIDERATIONS

1. "Indirect taxes", excises or occupation taxes, affect rights or privileges. "Manufacturers' excise taxes" tax manufacturers' sales and equivalent circumstances.

2. As trade increased, tolls, collected in earliest feudalism, produced major revenues. Authorities oppressively taxed necessities during the 1600's. English opposition expanded and French and American excises contributed to revolutions.

After 1700, more uniform luxury taxation eliminated unrest. Collectors began to receive fixed salaries. Taxation at manufacturing or wholesaling levels was introduced.

One unpopular excise produced the 1791 "Whiskey Rebellion". The 1794 act taxed carriages, liquor, snuff, sugar, and auctions. Following Jefferson's election, most excises were abolished.

Customs supplied revenues except during the 1812 War when familiar excises were required. In 1862, decreased customs and increased expenditures required excises on beer, tobacco, luxuries, and manufactures, among others. In 1864 rates were increased and taxes expanded.

From 1866 through 1870, rates were reduced and taxes removed. By 1890, remaining liquor and tobacco taxes, from 1868 to 1898, produced 41 per cent of revenues. War required stamp and occupational taxes. By 1903, remaining liquor and tobacco taxes produced 45 per cent.

During World War I, manufacturers' taxes affected matches, automobiles, sporting goods, instruments, phonographs, records, cameras, flour, coin machines, candy,

* B.B.A. 1950, LL.B. 1952, University of Wisconsin; LL.M. 1955, New York University; S.J.D. conferred June 6, 1962. Professor in charge of research: James Forrester Davison, *Professor of Law.*

and soft drinks. Although collections quadrupled between 1914 and 1919, excise revenues fell from 46 to 28 per cent.

After the War, rates were reduced and taxes removed. Tobacco taxes became the principal excise. Depression depleted income taxes from 70 per cent of revenues to 36. The resulting 1932 act included most current manufacturers' excises. From 1930 to 1935, excises increased from 16 to 47 per cent of revenues.

In 1942 rates were raised and new items taxed. Nevertheless, excise revenues from 1940 to 1944 fell from 50 to 11 per cent. 1945 and 1948 acts postponed reductions. The 1951 act adjusted rates, deleted some sporting goods, and added appliances, fuels, pens, pencils, and lighters. Annual acts through 1959 postponed reduction.

3. Taxes are on income: (a) in production (business and occupation, business property); (b) distributed (income); (c) consumed (excises or duties); and (d) saved (transfer, gift, or successions). A less theoretical classification characterizes the individual affected: (a) property owner; (b) businessman; (c) consumer; and (d) income recipient.

Consumption taxes are directly collected from consumers and indirectly collected from vendors. A broad classification is on products taxed: (a) necessities; (b) semi-luxuries; (c) luxuries; and (d) harmful products.

Present selective excises include: (a) sumptuary (liquor and tobacco); (b) retailers' (jewelry, furs, cosmetics, luggage); (c) manufacturers' (outlined herein); (d) facilities and services (communications, transportation, admissions, dues); (e) documentary stamp taxes, and (f) miscellaneous.

Sumptuary excises, producing half of excise collections, represent public moral judgment. Luxury excises, producing a quarter, supplement progressive income taxes. "Benefit" excises, producing one-sixth, tax products promoting government expenditures. Miscellaneous excises, producing one-twelfth, meet revenue needs.

4.a. One excise advantage is yield stability. Progressive income taxes resist stable yields. Income tax collections rise or fall along with incomes. *Ad valorem* collections change proportionately to taxable product values. Unitary collections are less changeable. Excises on products with relatively inelastic demands produce constant revenues. Non-necessity excises decline in depression.

b. Excises tax income otherwise exempt. Exclusions, deductions, and exemptions erode the income tax base. Excises are generally unavoidable.

c. Another advantage is collection convenience. The few tax-reporting units already maintain necessary records.

d. Low excises could ease high income taxes. Excessive income rates encourage specific relief, inhibiting maximum application, and purportedly, reduce incentives.

5.a. A major disadvantage is "pyramiding". A manufacturers' excise on end products would increase manufacturers', wholesalers', and retailers' costs of plant, equipment, fixtures, parts, tools, furniture, and supplies by the tax and increased distributors' expenses, as well as property taxes, insurance premiums, repairs, and depreciation. Ultimate price increases, sufficient to recover costs, would greatly exceed the tax.

b. The outstanding objection is regressivity: proportionately greater impact on lower incomes. Percentage expenditures for consumption decline as income increases. Lowest and highest income groups are principally affected. Sales taxes bear disproportionately on the lowest brackets. Other taxes are also regressive and income taxes not sufficiently progressive.

c. Regressivity reduces consumer spending power. Pyramided excises reduce real incomes of persons spending all. As purchases contract, sales and profits decline, turnover slows, production slackens, labor demands fall, wages are depressed, all depleting income taxes. For consumers without rigid savings patterns, excises discourage spending. Those with savings patterns must reduce spending, both decreasing consumption and production.

d. About two-thirds of the selective excise burden falls on consumers. Unshifted burden decreases funds, expansion incentives, business activity, profits, and incomes.

6. Excises accomplished nonrevenue purposes. Considered anti-inflationary during World War II, excises diverted income from bidding up prices. High taxes penalize deleterious activities and products. Lesser public disapproval and regulatory purposes are reflected in sumptuary taxation. Excises penalize "luxury" commodities.

II. 'MANUFACTURER' DEFINED

1. "Manufacturing" makes raw materials usable. Taxable manufacturers ordering work may neither employ workers nor own a factory or materials. "Manufacturers" produce taxable articles from scrap or new material, by processing, combining, or changing form. Attaching trade names to nonexclusive purchases is not manufacturing.

2. A 1952 policy reversed an exclusion of custom-made seat covers as automobile accessories. Trial courts generally sympathized, but not appellate courts. Neither administration nor legislation supports custom seat-cover makers.

Although contending it merely services, this operation is indistinguishable from manufacturing stock covers. Differences are in quality, service, and price. Tax relief would discriminate against stock cover dealers. Tax-paid prices diverted no appreciable business.

3. "Manufacturing" includes "rebuilding", but not reconditioning and repairing. Mere disassembling, cleaning, and reassembling is reconditioning. "Rebuilding" includes rebabbitting connecting rods, resurfacing clutch plates, rewinding armatures, and reboring motors, for sale. "Repairing" is performed upon customers' parts.

Distinguishing rebuilding from reconditioning evades solution. Replacing battery cells or plates, or assembling from salvaged components is manufacturing, but not replacing incidental separators or casings. Resurfaced clutch plates are tax-free if parts are purchased tax-paid. Reassembled transmissions are taxed on parts machined.

Before 1951, rebuilders were taxed on both work and "exchange" value. This presented a difficult valuation problem and was inequitable duplicated taxation. Added value alone was manufacturing. Used parts relating to specific sales, like

the rebuilt parts for which exchanged, are not excluded. Nonautomotive rebuilding is inconsistently not taxed. Tardy enforcement or policy change could produce retroactive assessments. Taxing rebuilding causes disproportionate collection cost.

Rebuilders include assembly-line factories meriting no tax advantage. Removing the tax would discriminate against new parts manufacturers.

4. Petroleum re-refiners reclaim waste oils by processes identical to crude refining. In 1955, the Treasury reversed earlier rulings holding re-refining taxable.

Used oil being valueless, only manufacturing was taxed. Both re-refiners and refiners are "cleaning". Re-refiners argue irrelevantly and unconvincingly that re-refining conserves oil and prevents air and stream pollution, and fires. *Ad valorem* taxation would avoid industry destruction. Taxpayers have no rights in erroneous nontaxability.

Refiners must buy or produce materials. Re-refiners' taxpaid prices should be lower.

Both re-refining and parts rebuilding reprocess used items to compete with new. Inconsistent treatment cannot logically reflect Congressional intent.

5. Persons working materials not owned may not be taxed. Contractors who can not use or resell merely contract to work. Hiring employees, agents, or subcontractors is indistinguishable. Patent holders ordering patented items at specified prices are manufacturers.

III. POINT WHERE TAX ATTACHES

1. Manufacturers' excises attach on sales when title passes, based on intention, determined from the contract, attendant circumstances, and local presumptions. Manufacturers incur tax, although receiving partial or no payment.

Articles undelivered, or shipped on bills of lading with draft attached, unpaid, before the effective date of the tax, are taxed on subsequent delivery. Where paid, title had previously passed.

Passage of title upon delivery to carriers is taxable. No subsequent damage or destruction affects liability. Indemnifications are not sales. If title passes on delivery to purchasers, property destroyed in transit is not taxed. Reduced prices of damaged articles are taxed. Transfer to carriers for salvage is not taxable; carriers are taxable on resale above scrap value. Gasoline tax is refunded for casualty in transit or while held for resale.

2. Under the 1939 Code, leases were taxed at the effective rate at execution with tax apportioned to lease payments. Renewals were taxable. 1954 Code clarifications equated renewals, extensions, and "subsequent leases", apparently "tacking" leases, repudiating contrary authority.

P.L. 85-859 limited tax on leases to "total tax" on the constructive fair market price on retail sales when first leased, providing lessors also sold. Sales after "total tax" payment are tax-free, and sales preceding are taxed at the effective rate. The tax is limited to that on retail sales.

3. On other leases, installment, conditional, and chattel mortgage sales, tax is proportionate with each installment. Except for leases, payments eventually cease and subsequent resales are not taxable.

4. Manufacturers' use of their products is taxed at the normal selling price.

Use of taxable articles, except tires, as components or materials in other taxable items is taxable. Manufacturers' use of tires, tubes, automobile radios and television sets as automobile parts is taxable. Auto parts, radio and television components, or camera lenses used as components or materials in *any* article are not taxable. Radio and television used in commercial, military, or marine devices for governmental use are excluded. Incidental manufacture for personal use is not taxed.

5. Persons acquiring taxable items in nontaxable transactions or by operation of law are taxed on sale, lease, or use. Examples are receivers, assignees for creditors, trustees in bankruptcy, successor partnerships, consolidated corporations, and stockholders continuing dissolved businesses.

IV. TAXABLE SALES PRICE

1. Price includes charges of readying for shipment, including shipping room labor, overhead, containers or coverings. Separate billings or refund agreements are immaterial. Refunds of tax on containers returned are permitted.

2. Costs after packing ready for shipment are excluded; e.g. transportation, delivery, insurance, and installation. Shipment costs to or between warehouses are not excludable except in filling sales or to meet quantity requirements. Items "packed ready for shipment" are ready for delivery from warehouses.

3. Price adjustments to manufacturers' vendees, including quantity bonuses or rebates, warrant tax credits.

4. Articles returned for refund are tax-free. On exchange of new taxable articles, only cash paid is taxed. Noncash exchanges are not taxable. Tax applies to "trade-ins" and cash.

5. The statute excludes narrowly-defined charges for other than manufacturing, selling, or readying articles for shipment. Advertising is included in "price".

6. Early rulings excluded separate guarantee charges, not exceeding service value, and included uniform charges covering future warranty costs.

The Court of Claims twice held a mandatory repair charge collected from all purchasers not detachable. It was in the cost when packed ready for shipment. However, costs of fulfilling warranties were allowances.

The Court admitted error: the charges were for a nontaxable agreement as previously contended. Reasonable charges were excludable. One-year "free" warranty costs were nonexcludable costs of items as originally expected.

In 1958, the Court cited distinguishing evidence: warranties were customary, separate charges merely dividing the price. Required fees are part of purchase prices, at least for customary service. Costs of fulfilling warranties are not allowances.

7. On consignment sales, fair market price is taxed. The Commissioner determines price in sales below fair market price, not at arm's length.

Manufacturers' retail sales are taxed on average prices for the smallest wholesale lots. Retail prices are discounted by standard industry markups. If none, prices are estimated. Taxpayers have no recourse and rarely know the method.

Sales to subsidiaries avoids discrimination on sales to retailers. Being not at

arm's length, fair wholesale prices are determined. This procedure exists by Service sufferance. Elimination of competitive disadvantages is rarely communicated to competitors, creating new discriminations. Subsidiaries created to combat taxes are undesirable. Inability to create subsidiaries causes discrimination.

Following a 1955 Congressional Subcommittee recommendation, manufacturers regularly selling at wholesale and at arm's length at retail, not the industry method, are taxed on their highest wholesale prices.

V. ITEMS SUBJECT TO TAX

1. Sales of chassis and bodies of automobiles, trucks, highway tractors, busses, trailers, included parts or accessories are taxable.

Vehicles used around factories, depots, and airports, farm equipment, housetrailers, toys, racers, construction equipment, nonhighway trailers, and self-propelled snowplows are excluded.

2. Automobile parts or accessories, except tires, tubes, automobile radio and television sets, are taxable, including spark plugs, batteries, leaf springs, coils, timers, and chains.

Taxable articles primarily used to improve, repair, or become components include parts for engines, transmissions, brakes, bumpers, differentials, speedometers, batteries, wipers, radiators, axles, and steering mechanisms.

Taxable articles designed to increase utility or ornamentation include air conditioners, floor mats, license frames, lights, tanks, truck racks and tops, antennae, safety belts, signals, window devices and clocks.

Taxable nonessential articles primarily used with vehicles include baby equipment, lighters, lighter outlet appliances, hoppers, jacks, visor attachments, tire pumps, taximeters, and tools.

Excluded items generally usable elsewhere include bearings, bushings, nuts and bolts. Excluded items installed in repair services are glass and top covers. Excluded raw materials include uncut brake lining and unfitted piston castings. Excluded items for testing or repairing are brake testers, grease guns, and tire gauges. Also excluded are burglar systems, emblems, and taxicab signs.

3. Manufacturers' sales of tires, tubes, and tread rubber usable in transporting persons or burdens are taxed. Tires not exceeding 20 inches in diameter and 1¾ inches in cross section, and extruded tires with internal wire fasteners are excluded. Tires on motor scooters, trailers, racers, industrial trucks, and wheelbarrows are taxed.

4. Gasoline sales are taxed "per gallon". Aviation gasoline and engine distillate are taxable. Benzol, benzene, or other liquid fuels for propulsion are taxed at retail. Kerosene and fuel oils not for propulsion are excluded.

5. "Cutting" and "lubricating" oils are taxed "per gallon". "Cutting oils" are used in metal cutting, machining, forging, drawing, stamping, drilling, and turning. "Lubricating oils" are oils sold, or suitable, for lubricating. Oil for flushing crankcases is taxable if parts are moving. Sweeping compounds, petrolatum, solvents, and "white oil" are not taxable.

6. Manufacturers' sales of household refrigerators, freezers, and self-contained

air conditioners operated by electricity, gas, kerosene, or gasoline are taxed. "Household refrigerators" not exceeding 14 cubic feet, are designed for domestic use, providing refrigerated food storage or making ice cubes. Household freezers, not exceeding 25 cubic feet, are used domestically, including in trailers.

Air-conditioners requiring frozen substances are not taxable. Taxable units are installed in or near windows, move, dehumidify, and circulate room air, and have less than one horsepower.

7. Manufacturers' sales of electric, gas, and oil household appliances, including incinerators, door chimes, garbage disposals, dryers, flatirons, and mangles are taxed. Omitted are vacuum cleaners, floor polishers, and washers.

Household "belt-driven" fans have blade diameter under 40 inches, unless otherwise designed. Intended design of "motor-driven" fans controls. Humidifier, air purifier, or furnace fans are excluded.

Taxable household appliances to cook or keep warm food or beverages include coffeemakers, ranges, roasters, toasters, waffle irons, and griddles. Institutional dishwashers, large coffee urns, combination gas and wood ranges, charcoal igniters, and hand dryers are not taxed.

Household water heaters do not exceed 7,500 watts or 50,000 b.t.u.'s per hour. Power lawn mowers, including rider-operated, under 24 inches cutting width are taxable "household type" unless otherwise designed.

8. Manufacturers' sales of light bulbs and tubes are taxed, including religious glow-lamps, miniature Christmas bulbs, night and sickroom lights, and neon tubing. Bulbs for blueprinting, copy work, projectors, or laboratory instruments are not taxable.

9. Manufacturers' sales of radios, television sets, combinations, components, phonographs, and records are taxed.

Taxable components are cabinets, chassis, tubes, speakers, amplifiers, power supply units, built-in antennae, phonograph mechanisms, and record players.

Nontaxable are bezels, escutcheons, oscilloscope analyzers, detection receivers, photophone systems, individual listening devices, paging systems, unlisted parts, movie or radio transcriptions, and V.H.F. converters.

10. Manufacturers' sales of all musical instruments and essential included components are taxable, including chimes with keyboards, maracas, bongos, castanets, and claves. Toy plastic guitars, ukeleles, flutes, and slide whistles are not taxable.

11. Manufacturers' sales of enumerated sporting goods are taxed, including badminton, squash, table tennis, tennis, golf, bowling, fishing, pool, and croquet equipment. Unfinished poles, toy golf or ski equipment, and archery, hunting, riding, boxing, wrestling, baseball, basketball, football, water-skiing, and skin-diving equipment are not taxable.

12. Manufacturers' sales of cameras, lenses, film, household projectors, and included parts or accessories are taxed. X-ray and cameras exceeding four pounds, lenses exceeding 30 millimeters, X-ray film, perforated microfilm, film exceeding 150 feet, or 25 feet long and 20 millimeters wide, "adapters" for holding film, and print copiers are excluded.

13. Manufacturers' sales of pistols, revolvers, other firearms, shells, and cart-

ridges are taxed. Machine guns and short-barrelled firearms are excluded. Interchangeable parts are not taxed. Kits, containing essential parts, are taxable.

14. Manufacturers' sales of listed business machines and included accessories are taxed. Cash registers, miniature adding machines, music typewriters, nonnumbering and nonperforating cancelling or dating machines, electronic computers, pocket pencil sharpeners, cases, vending machines, supplies, and stands are excluded. Machines for perforating; fastening paper: dating and numbering; numbering film negatives; mailing and sealing; sharpening pencils; and recording dictation are taxable.

15. Manufacturers' sales of lighters, mechanical pencils, fountain, and ballpoint pens are taxed. Ball pens without nonessential parts are taxable. Lighter mechanisms and felt-tipped marking pens are excluded.

16. Manufacturers' sales of matches are taxed.

VI. EXEMPTIONS FROM TAX

1. Selective excises tax only enumerated items. "Exemptions" allow tax-free sales of taxable items. "General exemptions" apply generally, and "special exemptions" to specific items.

2. Exemptions are obtainable by refunds. Besides general refund requirements, special requirements concern excises. Taxpayers must establish that the tax was (a) never collected; (b) repaid to the ultimate purchaser or seller; or (c) collected from the ultimate purchaser who consented to refund. "Ultimate purchasers" purchase for consumption or use.

3. Exemptions are obtainable by tax-free sales. Tax-free sales require advance registration by manufacturer and purchaser. The Commissioner may cancel registrations to protect the revenues. Registration, applicable to general exemptions, may be extended to certain specific exemptions.

Tax-free sales to governmental units without registration require (a) manufacturers' knowledge of such expected purchase and (b) exemption certificates. Also excepted are export sales to foreign purchasers. Federal instrumentalities may purchase and sell for exempt purposes without registration. Registration will not apply to proved export of mechanical pencils and pens.

4. Exemption of sales of, or sale for resale for, further manufacture prevents taxing sales both to and by manufacturers.

"For further manufacture" means as material in manufacture or as components of another taxable article, becoming a tangible part thereof, except radio and television components and lenses. Materials consumed in production are not components. Items maintaining form and substance are used in further manufacture. Gasoline and oil remaining in manufactured automobiles is exempt. Bulbs for incorporation into nontaxable sub-assemblies are not exempt, but bulbs are exempt for use in taxable radios.

Purchasers buying for further manufacture are taxed alternatively on selling or purchase price unadjusted.

5. Sales for, or for resale for, export including shipment to possessions, are exempt, if proved within six months. Advance knowledge of destination is required

for vehicles, refrigerators, air conditioners, appliances, radios, television, phonographs, and records.

"Exportation" includes delivery of foreign orders to the dock for export, sales to Americans overseas for eventual disposal abroad, and automobiles driven abroad directly from the factory. Automobiles sold for domestic use are not for export although the foreign buyers intend taking the automobiles abroad.

Sale for consumption aboard ship is not for export.

6. Supplies, stores, or equipment on ocean-going vessels, including aircraft, are exempt. Supplies sold to ocean vessels are exempt, although later diverted. Supplies furnished to coastal vessels are not exempt although diverted to foreign trade. Sales for use in company aircraft for transportation to company foreign properties are not exempt.

7. Sales to states, or political subdivisions, for their exclusive use are exempt. Sales to the following are exempt: counties; municipalities; humane societies; local redevelopment agencies; schools; volunteer fire departments and rescue squads; irrigation, power, and recreation districts; flood control commissions. The following are not: self-help associations, private hospitals, electric cooperatives.

Sales not exempt include sales to municipalities for nongovernmental uses or for resale.

8. Sales to nonprofit educational organizations for their exclusive use are exempt. Their primary function is formal instruction at one place where they normally maintain a faculty, curriculum, and enrolled students.

9. Manufacturers' sales to representatives of foreign governments, their families, households, and staffs of their countries' missions, but not American employees or permanent residents, agents or commissioners, are exempt.

Also exempt are articles (a) subject to retailers' jewelry tax, except clocks, watches, or parts sold as parts or accessories; (b) manufactured by Indians under government jurisdiction.

10. Specially exempt are manufacturers' sales for resale: (a) bodies to vehicle manufacturers; (b) gasoline to producers; and (c) lubricating oils to producers. Purchasing manufacturers are ultimately taxed on items purchased for re-sale.

11. Partial refunds are allowed to gasoline purchasers for nonhighway uses or for federal vehicles used off highways. Exempt uses are: nonhighway conveyances, stationary machinery, and burning.

Transit systems deriving 60 per cent of passenger revenue from scheduled routes, free of transportation tax, are allowed partial refunds.

Full refunds are allowed for gasoline used on farms, including cropdusting or spraying orchards, but not spraying lawns or transporting produce on roads. Nurseries and livestock feed-lots are farms.

12. Also exempt are (a) automobile parts for farm equipment, except spark plugs and batteries; (b) tread rubber not for recapping tires; (c) musical instruments to religious institutions for exclusively religious purposes; and (d) firearms and ammunition for federal military uses.

SUMMARY OF DISSERTATION
SUBMITTED FOR
THE DEGREE OF DOCTOR OF SCIENCE

ON SOME PHENOMENA OF INTERACTION OF ELECTROMAGNETIC FIELDS WITH MOVING ELECTRICALLY CONDUCTING FLUIDS WITH APPLICATION TO BIOLOGICAL FLOWMETRY: A CRITICAL STUDY

by CLIFFORD DURAS FERRIS*

I. INTRODUCTION

A currently important medical and physiological problem is the accurate measurement of blood velocity and blood volume flow rate within human and animal blood vessels. Ability to make such measurements has increased in importance with the development and use of artificial organs as a relatively routine surgical procedure. A human life can depend upon the accuracy with which blood flow through an artificial organ is controlled and measured. Until recently, blood flow velocity determinations depended upon rather crude mechanical devices. Measurement was a slow process and could be dangerous to the patient or bring about undesirable metabolic changes. Direct mechanical measuring techniques invariably required severing of a blood vessel and insertion of a cannula or other device in order to attach the flow measuring instrument. Such processes grossly disturb the hydrodynamic system represented by the network of veins and arteries filled with flowing blood. Measurement accuracy was frequently marginal.

It was not until 1935 that indirect techniques evolved. Wetterer in Germany, and Kolin in the United States independently made use of a physical law—Faraday's Law—to develop an electrically based instrument designed to give a direct indication of *in vivo* blood flow velocity. The device which they developed still required surgical exposure of a blood vessel but removed the necessity of severing an artery or vein.

During the twenty years which followed Wetterer's and Kolin's initial experimentation, two other promising devices evolved for blood flow measurement. In the 1940's, the ultrasonic flowmeter appeared, developed by Kalmus, and in the 1950's, Singer published an account of a nuclear magnetic resonance device for measuring blood flow.

The advantage of these three devices lies in their operation. They are electrically operated and may be used with intact blood vessels. In addition, the nuclear magnetic device may be operated without the need to expose a blood vessel. By 1960, these three devices had been used experimentally for blood flow measurements,

---

* B.S. in E.E. 1957, M.S. in E.E. 1958, University of Pennsylvania; D.Sc. conferred February 22, 1962. Professor in charge of research: Nelson Thomas Grisamore, *Professor of Electrical Engineering.*

but none had been adopted for routine use. Difficulties existed with respect to calibration, drift of zero reference, and repeatability of measurement. These various difficulties resolved themselves into one fact. No clear physical theory had been presented for any of the instruments. In certain cases, theory had been woven to fit experimental observations. Various theories existed but in many cases, they were incomplete, inconsistent, or inaccurate. Definitive error analyses were entirely lacking. Little attempt was made to examine the effect of a given device upon the biological system to which it was attached.

The work reported here presents the complete physical theory for each of the three devices and, in addition, two new instruments are presented. While the new devices are not appropriate for accurate blood flow measurement, one provides a means for observing directly a dipole orientation phenomenon which in the past has been detected by indirect means only. In addition, a detailed error anlaysis is carried out for each device from a physical standpoint as well as the effect of the device upon an associated biological system.

II. THEORY

One may postulate the requirements which a clinically useful blood flowmeter must meet as follows: (1) use of the flowmeter must not be detected by the metabolism of the animal or human to which the flowmeter is applied; (2) use of the device should in no way disturb normal blood flow; (3) it must be convenient to use, portable, and not require continued balancing for zero drift or calibration; (4) it must be capable either of measuring volume flow directly in cubic centimeters per second or of measuring fluid velocities in the range from 1 cm/sec to 100 cm/sec; and (5) the cost of the device should be minimal.

Based upon the five criteria set forth above, one may eliminate mechanical, thermal, optical, and radioactive-tracer flowmeter techniques. Electromagnetic and electroacoustic techniques remain. In order to understand the problems involved in designing a flowmeter based upon electromagnetic or acoustic phenomena, it is first necessary to examine the nature of blood flow in the circulatory system of an animal. Various experiments have been carried out which indicate that laminar flow occurs in human and animal aortae. One may then make theoretical extensions from this result to show that laminar flow may be assumed for the circulatory system as a whole.

Blood circulation may be characterized hydrodynamically as pulsatile flow of a nonideal fluid through distensible tubes. The pulsatile nature of the flow is brought about by the pumping action of the heart. Blood vessels possess elastomeric walls which expand with each pressure pulse and contract after its passage. If a blood vessel is constrained mechanically, various hydrodynamic complications may occur. Hence one must examine the effects of inserting cannulas into blood vessels or constraining them by ligatures. In addition to the various properties of the blood vessels, it is necessary to examine blood itself. Blood is a nonideal fluid. It is composed primarily of erythrocytes (red blood cells) suspended in a fluid serum. The red cells are bi-concave discoidal particles which are not uniformly distributed throughout the suspending fluid. The density of blood is substantially less at the vessel walls than its value at the center of a vessel. This distribution of the red

cells produces some definite electrical and electroacoustic properties of the blood as well as some peculiar hydrodynamic properties. All of these properties must be considered in the design of a flow measuring instrument.

III. ELECTROACOUSTIC FLOWMETER

It is possible to build a device to measure blood flow which operates on an acoustic principle. If one clamps two piezoelectric transducers, separated by a short distance, to the outside of a tube which carries a moving fluid, then the velocity of the fluid may be determined by measuring the time required for a sonic pulse to travel between the two transducers under two conditions: (1) the sonic pulse moves with the flow and (2) the sonic pulse moves against the flow. The accuracy of the velocity determination is improved as the separation of the transducers is increased. Other limitations, however, are imposed in biological systems which require the transducers to be placed relatively close together. Two such limitations are physical length of blood vessels and absorption of acoustic energy by blood. When low fluid velocities exist within the tube, these limitations impose the necessity for measuring very small transit time differences. Some instruments are designed to measure time difference in terms of electrical phase shift. In either case, ultrasonic flowmeters are limited for biological use to the measurement of flow velocities above 10 cm/sec. The time differences which occur for lower flow velocities are too small to be measured accurately with currently available techniques. This is a serious limitation upon the device. In addition, nearly all ultrasonic flowmeters require the use of a cannula, which means that a vessel must be severed so that the cannula may be inserted. Insertion of a cannula disturbs the biological system as well as the hydrodynamic processes involved.

IV. ELECTROMAGNETIC FLOWMETER

This device is based upon Faraday's Law which states that an electromotive force may be produced in a conductor which is moved relative to a magnetic field. It can be shown that the emf is proportional to the velocity of the conductor. Since blood is electrically conducting, one may use blood flowing in a vessel as the moving conductor. If the blood vessel is located in a magnetic field, then an emf which is proportional to blood velocity may be detected by placing electrodes on either side of the blood vessel. The correct theory for the operation of the device is based upon Maxwell's curl equations for the relativistic condition of a conducting medium in motion relative to a spatially fixed magnetic field. In this manner, an expression is developed for the measured emf in terms of the velocity and the electrical properties of the blood. Earlier theories employed a simplified form of Maxwell's equations which produced an expression for emf which was independent of the electrical properties of blood. This led to the inconsistency that a perfect insulator should produce the same potential as a perfect conductor.

Electrode polarization phenomena are examined with respect to the emf pickup electrodes and the voltage sensing circuits connected to them. Additional effects are considered such as transverse magnetohydrodynamic waves initiated by the conducting fluid (blood) moving relative to a high-field-strength magnetic field. MHD waves destroy the axial symmetry of the assumed laminar flow. This has a marked effect

upon the sensitivity and accuracy of electromagnetic flowmeters as the electric potential distribution within the fluid is distorted.

V. NUCLEAR MAGNETIC RESONANCE FLOWMETER

Nuclear magnetic resonance may be used as a technique for measuring blood flow. The hydrogen nuclei of the water component of whole blood are the observed quantities. Nuclear magnetic resonance can be observed in a material which is placed in a crossed radio-frequency and magnetic field. If the frequency of the r-f energy is adjusted to equal the Larmor frequency for the hydrogen nuclei at a given magnetic field strength, then magnetic resonance occurs. Resonance may be detected as a sharp rise in the absorption of r-f energy by the sample. A finite time is required for the nuclei to change from a nonexcited to resonance condition. The amplitude of the r-f absorption is proportional to the quantity of nuclei which have been excited to resonance. If the sample is in motion, such as flowing blood, the amplitude of the r-f absorption curve will change in a manner proportional to the fluid velocity. In this manner a very accurate flowmeter may be developed.

The possibility of magnetohydrodynamic waves again exists, but such waves do not seriously affect the accuracy of the instrument. Nuclear magnetic resonance flowmeters produce an output signal which is proportional to the volume concentration of excited nuclei. This signal is not strongly dependent upon the velocity profile of the fluid flow.

A more sensitive indication of resonance absorption is provided by the use of electron paramagnetic resonance. EPR, however, occurs for most samples in the kilomegacycle range while NMR occurs in the 1 — 40 mc range. The instrumentation required for EPR determinations is extremely complex in comparison to that which is suitable for NMR measurements. For this reason, blood flowmeters utilize the NMR principle even though signal-to-noise ratios are lower than those obtainable with EPR.

It is possible to measure volume blood flow by NMR techniques without exposing a blood vessel. This is a distinct advantage over all other techniques. One first determines absorption in a finger, for example, in which blood flow has been momentarily halted by means of a tourniquet. Normal blood flow is then restored and the absorption remeasured. The difference in the two absorption readings can be used to determine the volume blood flow. At present, this method yields low accuracy but holds promise for the future.

VI. DIELECTRIC INCREMENT FLOWMETER

Two other electrical phenomena are examined for possible application to flowmetry. It is known that when a dielectric is moved relative to a magnetic field an emf appears across the dielectric. It would seem possible that a flowmeter could be constructed using this principle. Although blood is an electrolyte, it possesses strong dielectric qualities. It is shown, however, that the polarization current effect is too small to be measured.

Another effect is dipole orientation in a high frequency electric field. The dielectric constant of a fluid will change slightly as a function of the volume concentration of oriented dipoles, provided that the fluid contains polar molecules or

particles into which a dipole moment may be induced. Blood is such a fluid. It should then be possible to build a flowmeter which is somewhat analogous to the nuclear magnetic resonance flowmeter, but which operates on the absorption of electromagnetic energy as a function of the dielectric constant of the fluid. The volume concentration of oriented dipoles should change with changes in fluid velocity. Such a device was constructed. The indicated effect was observable, but was so small that it was almost buried in system noise. One is thus forced to conclude that it is not practical to build a flowmeter based on this phenomenon. Difficulty was also experienced with air bubbles in the fluid stream. Even a few minute air bubbles were capable of changing the permittivity of the sample sufficiently such that the orientation effect was completely masked.

Although the experiment did not lead to a practical device, it is interesting to note that this was the first time that the orientation was observed by a direct method. Usual techniques postulate the orientation based upon the behavior of the relative permittivity and conductivity of an electrolyte as a function of frequency.

VII. DISCUSSION AND CONCLUSIONS

The theory of operation of several blood flowmeters is developed based upon the physical, hydrodynamic, and biological principles involved. Since the devices depend upon the interaction of a moving conducting fluid and electric, magnetic, or acoustic fields, detailed examination of the pertinent properties of the fluid must be undertaken. In addition one must study the mechanism of interaction of an electrolyte in motion relative to various crossed field configurations. Such a study leads to some particularly interesting results, such as the initiation of magnetohydrodynamic waves, which one is inclined to overlook in the development of a simple device or a simplified theory.

In view of the five operating criteria set forth for blood flowmeters, it can be stated that the nuclear magnetic resonance device alone is satisfactory. It is by no means the ideal instrument, but it holds definite promise. The theory of operation of the device appears firmly established. Technological refinements are required and the author is currently continuing this work.

It should be observed that, while the discussion in this dissertation pertains to blood flow measurements explicitly, the techniques involved may be used for any conducting fluid and, in the case of the ultrasonic flowmeter, for any fluid which has a velocity greater than 10 cm/sec. Electromagnetic flowmeters have been used to measure the flow of liquid sodium in nuclear reactors.

CHANGING EXPECTATIONS FOR THE AMERICAN ELEMENTARY SCHOOL TEACHER: SELECTED TEACHING ABILITY REQUIREMENTS AS REVEALED BY AN ANALYSIS OF STATE COURSES OF STUDY, 1930-1961

by ROBERT EDWARD BAKER*

PURPOSES

This study was made in an attempt to identify changes which have taken place since 1930 in expectations for the American elementary school teacher in selected areas of teaching ability, by analyzing the stated and implied requirements of state courses of study. The study was designed to make a contribution to the continuing chain of attempts to pursue teacher excellence through increasing the effectiveness of teacher education which have marked the history of teacher education in the United States of America.

Specifically, it sought to gather information which might be helpful to teacher educators in answering the question, "What do American elementary school teachers need to be able to do?" To this end, the study proposed to analyze the elementary school courses of study which have been in use in each of the United States of America for the greatest number of years during the periods 1930–1939, 1940–1949, and 1950–1961 in search of answers to the following questions:

1. What are the subject-matter areas which the American elementary school teachers have most often been expected to teach?
2. In these subject-matter areas, what have been some of the most commonly stated or implied expectations for teachers in the content of the courses of study?
3. Have there been changes in these expectations in the period 1930–1961, implying the necessity for changes in the curricula for teacher education?
4. What are some of the implications for current teacher education in the United States from state courses of study in use at the present time?

METHODS OF PROCEDURE

This study involved bibliographic research, primarily. The chief elements of concern, therefore, were attainment of as complete a coverage of available sources as possible, application of consistent and reasonable methods of analysis, and judicious interpretation of facts revealed. The solution to these problems was approached through the following procedures:

* B.S. in Ed. 1939, State University of New York, College of Education at Buffalo; A.M. 1954, Catholic University of America; A.M. in Ed. 1956, The George Washington University; Ed.D. conferred February 22, 1962. Professor in charge of research: Anthony Charles LaBue, *Professor of Education*.

1. The courses of study in reading, arithmetic, social studies, language, spelling, and handwriting which were in use in each of the states for the greatest number of years during each of the periods 1930–1939, 1940–1949, and 1950–1961 were identified by (1) direct inquiry of the chief state school officers, (2) inquiry of the state representatives to the Board of Directors of the Association for Supervision and Curriculum Development, and (3) examination of the course of study collections in the United States Office of Education Library, the Library of Congress, and the National Education Association Library. Seven hundred and twenty-six courses of study were identified by these methods.

2. An attempt was made to obtain as many as possible of the identified courses of study for analysis, by using the following resources in the order cited: (1) the United States Office of Education Library, (2) other local library sources, (3) loans from the Departments of Education in certain states, and (4) loans from members of the teaching profession in certain states who were located through the Association for Supervision and Curriculum Development. Seven hundred and eleven courses of study, 97.9 per cent of those identified, were obtained.

3. The courses of study thus obtained which contained information concerning the complete elementary school program of studies being carried on in their state at the time of publication were analyzed to determine (1) the number of subjects and (2) the specific subjects which elementary school teachers were expected to be prepared to teach. This information was further analyzed to reveal (1) the average number of subjects an elementary school teacher was expected to teach in each period, (2) the per cent of teachers serving under the courses of study analyzed who were expected to be able to teach each subject, and (3) the specific subjects an elementary school teacher was most likely to be required to teach in a given period.

4. All of the courses of study obtained were examined, and, for each, the following information was reported on index cards: (1) the number of stated purposes for instruction which were identified as falling in each of the following selected categories: skills or abilities; habits; understandings or concepts; knowledge, facts, and experiences; and attitudes, appreciations, and interests and (2) a brief descriptive statement concerning the stated or implied expectation for the teacher in each of the selected instructional areas of planning, class organization, teaching methods, and evaluation.

5. The information thus recorded was checked, and consolidated when similar expectations were identified in two or more states during the same period.

6. From the recorded data, the following computations were made in each subject matter area, for each period: (1) the average number of stated instructional purposes per teacher serving under analyzed courses of study in each period which were identified in each selected category, (2) the per cent of all purposes falling in each category, (3) the per cent of teachers having each identified expectation for planning, class organization, teaching methods, and evaluation.

7. The resulting figures were tabulated and studied to attempt to identify changes in expectations for elementary school teachers which have taken place

since 1930 and current conditions which affect the majority of teachers.

8. Implications for present and future teacher education were projected from the identified changes and expectations most commonly found in the courses of study which are in use at the present time.

REVIEW OF THE LITERATURE

The literature pertinent to this dissertation is that dealing with teacher *competencies*, the ability of teachers to do things, rather than the broader field of teacher *competence*, the effectiveness of teachers, of which it is a part. A careful and intensive search failed to disclose any previous study which was similar in specific purpose, content, or approach. The results of a 1953 questionnaire study emphasized the pertinence of curriculum trends in the elementary schools to programs for the preparation of teachers.

There have been four major studies in the general area of teacher competency. The Commonwealth Teacher Training Study, 1929, compiled a list of specific teacher activities running to 12,000 items. A. S. Barr, in 1948, summarized 32 studies and identified 4 roles of the teacher and 18 teacher competencies with which they dealt. The Commission on Teacher Education of the California Teachers Association, through interviews and study groups, formulated a definition of teacher competence in terms of 6 roles of the teacher, each explained by behavioral descriptions of what the teacher should be able to do. This has come to be the most generally accepted basic definition of teacher competencies. This group published reports in 1952 and 1957. The National Commission on Teacher Education and Professional Standards of the National Education Association adopted the definition of the California Commission and continued to refine it in terms of more exact behavioral descriptions through study groups throughout the country and meetings at three national conferences. Reports were published in 1953, 1954, and 1955.

The latest reviews of literature in this area are found in the *Encyclopedia of Educational Research* and the June 1960 *Review of Educational Research*.

Two important studies which have pertinence to the subject are being carried on by departments of the National Education Association and published results are expected in the near future.

THE FINDINGS

Purposes.—The analysis of categories of purposes within each subject-matter field yielded the following information:

1. Large numbers of purposes, varying from an average of 53.07 to an average of 127.72 per teacher, were stated in courses of study for reading, arithmetic, social studies, and language. In reading and arithmetic the number has remained about the same through the time of the study. In social studies there has been a small net decrease. In language there has been a large net increase.

2. Small numbers of fairly definite purposes, from 8.42 to 15.57 on the average, have been stated in courses of study in spelling and handwriting. In each instance, there has been a net increase in the number of purposes since 1930.

3. In reading, arithmetic, language, spelling, and handwriting at least a majority of all stated purposes have been skills. In reading and language this emphasis has tended to increase over the thirty year period. The emphasis has remained about the same in arithmetic and spelling. There has been a slight decrease in the emphasis upon skills in handwriting.

4. In social studies, the major emphasis is about equally divided between knowledge and understandings in the current period. This reflects an increase in the first category and a decrease in the second over the years of the study.

5. An important growth in emphasis upon concepts in arithmetic was noted.

6. Over the years covered by the study, there has been a continuous decrease in emphasis upon habit formations, except in handwriting, in which habits are an important and growing category of purposes.

Major expectations.—The study revealed relatively few expectations which have applied to more than 50 per cent of teachers working under the state courses of study for the 1950–1961 period which were obtained and analyzed. These were:

1. Elementary school teachers were expected to plan work for the accomplishment of specific attainments listed in courses of study in reading, arithmetic, and language.

2. A basal reading series was to be used as the organizing center for planning and methods in reading.

3. Unit planning was expected in the social studies.

4. Teachers were to use the course of study as a source of help in planning for teaching social studies.

5. Cooperative planning with the children for teaching social studies was an expectation for a majority of teachers.

6. The textbook was to be the basis for the planning of the teaching of spelling.

7. Intra-class grouping was the expected organization for instruction in reading, arithmetic, social studies, and language. There was also the possibility that it might be employed by a majority of teachers in spelling and handwriting if those permitted choices of grouping by their courses of study elected to use this organization.

8. In handwriting, individualized instruction was expected.

9. A majority of teachers were expected to teach phonics as a part of their reading instruction.

10. The course of study was an important source of help in teaching methods in arithmetic, social studies, language, spelling, and handwriting.

11. The basic expected method for social studies and language teaching was the guidance of pupil activities.

12. A formal, direct approach was expected in handwriting.

13. The ability to use standardized testing was expected in reading, arithmetic, and handwriting.

Consistent trends.—A number of consistent trends were noted, which, although they have not yet become expectations for a majority of teachers, have implications for teacher education, since they will soon attain this position of major importance if the observed rate of growth continues. They are:

1. Teachers are coming to be expected to plan with attention to the needs of children in all six of the subject matter areas studied.

2. The importance of the textbook is declining in all of the subject fields, although it is still of major importance in reading and spelling.

3. Courses of study are giving up the inclusion of a detailed outline of content to be covered, in all of the subject matter fields.

4. Greater numbers of different evaluation techniques are being expected in all of the subject matter fields.

5. There is a trend toward expecting that teachers will guide their children in self-evaluation in reading, arithmetic, social studies, language, and handwriting. This expectation has increased in spelling since 1930, but there has been a decrease from 1940–1949 to 1950–1961.

6. More and more teachers are being expected to develop individual word lists from the writing needs of their children as a supplement to a basic required list in their teaching of spelling.

7. There is a trend toward diversity of expectations for spelling methods.

8. There is a divided trend in the area of testing. Fewer teachers are being expected to use testing as a part of their evaluation in reading, social studies, spelling, and handwriting, although testing is still important in reading and handwriting. In arithmetic and language an increased expectation for testing was noted.

Freedom of choice.—The judgments concerning degree of freedom of choice given in planning and methods disclosed the following trends and present conditions:

1. A definite trend over the thirty-year period toward increased freedom of choice in both planning and methods was found in all six of the subject matter fields studied.

2. A rather pronounced trend toward giving only partial freedom instead of great freedom in arithmetic methods was noted.

3. A condition of partial freedom of choice, in which choices were allowed among a number of specified planning forms or teaching methods, or in which other requirements of the courses of study placed limitations upon the teacher's freedom of choice, existed for a majority of teachers in planning for reading, arithmetic, social studies, and language, and in teaching methods in arithmetic, social studies, and language.

4. Little freedom was given a majority of teachers in methods of teaching reading and handwriting, the basal reader approach and direct, formal teaching in handwriting usually being required.

5. In planning for spelling and handwriting, approximately equal minority groups were given partial and great freedom of choice.

6. In methods of teaching spelling, approximately equal minority groups were given partial and little freedom of choice.

Amount of help.—The judgments concerning the amount of help given teachers in planning and methods revealed the following trends and conditions existing in the 1950–1961 period:

1. There was an identified trend toward the expectation that teachers would

have to draw upon personal professional resources in both planning and teaching methods, since state courses of study gave little or only partial help in these responsibilities, in all six of the subject matter fields studied.

2. A majority of teachers in the 1950–1961 period served under language courses of study which gave little help in planning, few or no suggestions being made in the course of study, and no references being made to sources of outside help.

3. Partial help, with suggestions or referrals in the course of study expected to be augmented by the personal resources of the teachers, was given a majority of teachers in planning for arithmetic, social studies, spelling, and handwriting, and in methods in social studies and language.

4. 1950–1961 courses of study supplied a majority of teachers with much help in methods of teaching arithmetic and handwriting, giving rather exact explanations of how the material in these fields was to be taught.

5. Approximately equal minority groups were given little and partial help in planning for reading and methods of teaching spelling.

6. Approximately equal minority groups were given partial and much help in reading methods.

IMPLICATIONS FOR TEACHER EDUCATION

In the light of the summarized findings, it seems justified to propose the following implications for teacher education:

1. State courses of study should be considered as one important source of possible purposes by those planning curricula for teacher education.

2. Teacher education institutions should reflect in their programs the fact that the major instructional role of the elementary school teacher is that of a developer of skills and abilities.

3. In preparation for teaching the social studies, teacher education institutions should strive to awaken their students to the realization of a dual responsibility in this field: (1) the need to teach thoroughly a body of social studies knowledge—facts and information—in such a way that it will be retained and applied, and (2) the need to develop comprehension of a body of understandings and concepts concerning man in relation to his physical and social environment.

4. In preparing students for teaching arithmetic, increasing attention should be paid to concept formation as an integral part of the learning in this field.

5. Teacher educators should accept the responsibility of providing programs which will prepare beginning teachers to meet the relatively few specific major expectations identified by this study.

6. Expectations which have been identified as consistent trends should be observed closely by teacher education planners, and the desirability of making provision for them should be considered as curriculum development proceeds.

7. The consistent trend toward increased freedom of choice in planning and teaching methods implies that teacher education should have a major concern for the development of a thinking professional individual, whose unique pattern

of aptitudes can be utilized in the most effective manner for meeting the needs of individuals and of society.

8. The consistent trend toward reduced amounts of help in planning and methods in courses of study, combined with the large number of purposes which it is expected that teachers will meet, demonstrates the necessity that teacher education continue to maintain and improve programs of professional education.

9. The findings that the usual situation for teachers is one in which partial freedom and help are given in planning and methods, and the occasional condition of little help being afforded, suggest the implication that teacher education institutions should prepare their graduates efficiently to utilize the direction and assistance which is available to them in courses of study and other professional materials to amplify their own abilities in terms of the needs of their situation.

AN EVALUATION OF SUPERVISION OF VOLUNTEER LEADERS IN TENNESSEE 4-H CLUB WORK

by GEORGE SAMUEL FOSTER*

THE PROBLEM

The purpose of this study was to obtain information that might lead to improved supervision of volunteer leaders in Tennessee 4-H Club work. Specifically, the study sought answers to the following broad questions: (1) to what extent has participation in the program, "Tennessee 4-H Club Leadership in Depth", affected the time devoted by county extension agents to volunteer 4-H Club leaders and agents' effectiveness in both 4-H Club and other extension work? (2) what supervisory functions are performed by county extension agents? (3) what difficulties do extension agents face in carrying out the phase of their assignment that relates to the supervision of volunteer 4-H Club leaders? (4) what preparation have extension agents had for the phase of their present assignments relating to the supervision of volunteer 4-H Club leaders? (5) what are acceptable criteria for supervision of volunteer leaders in 4-H Club work? (6) to what extent have supervisory practices sat-

* B.S. in Agr. Ed. 1943, University of Tennessee; A.M. in Ed. 1948, The George Washington University; Ed.D. conferred February 22, 1962. Professor in charge of research: James Harold Fox, *Professor of Education*.

isfied the criteria of good supervision? (7) how can supervision of volunteer leaders be improved?

Supervision, as the term is used in this study, is a process by which volunteer leaders are helped to greater competency and growth as individuals and as educational leaders.

PROCEDURE

An original draft of criteria and practices was developed from the literature. The following list of criteria was submitted for validation to a panel of federal extension and state 4-H Club personnel with special competencies in this area.

1. Supervision is a *purposeful* activity.
2. Supervision *organizes* human activity efficiently.
3. Supervision is an *individualized* activity.
4. Supervision is a *cooperative* activity.
5. Supervision is concerned with the *self-directed improvement* of leaders.
6. Supervision is a self-directed *growth-like* process.
7. Supervision is an *evaluative* activity.
8. Supervision is a *learning* process.
9. Supervision demonstrates a desire to be of assistance to the leader *personally* and *in his leader role.*

All nine criteria were accepted by more than three-fourths of the panel members. A questionnaire, containing the list of practices, based on criteria was prepared and sent to the panel members who were asked to rate the supervisory practices as to importance. Fifty-six practices were rated very important by more than half of the panel members and were therefore retained in the study.

Performance data were collected by mail questionnaire from all extension agents in Tennessee with three or more years of county extension experience prior to July 1, 1961. The questionnaires used in the study consisted of two parts. Form 1 asked for background information on the agents. Form 2 consisted of the list of supervisory practices. These statewide data were summarized to indicate the current supervisory situation as county extension agents see it. Further analyses were made comparing agents' rating by categories based on their participation in "Agent Training and Refresher Conferences in Leadership in Depth", and panel rating of the importance of the 56 supervisory practices. The training and refresher conferences were in-service education methods by which professional extension agents were prepared to train and supervise volunteer 4-H Club leaders. The number of such conferences in which agents had participated varied from a minimum of none to a maximum of three per agent.

REVIEW OF THE LITERATURE

The literature was carefully reviewed as a source of information related to criteria and practices of supervision of volunteer leaders. Three sources proved most helpful: (1) literature related to volunteer 4-H Club leaders, (2) writings on supervision of volunteers in other organizations, (3) relevant material dealing with supervision of professional staff of extension and other related groups such as teachers.

The literature and correspondence with national professional workers in organi-

zations and agencies which rely on volunteers revealed much interest in the subject and a considerable body of related information.

RESULTS OF THE STUDY

The results of this study may be summarized as follows: Tennessee county extension agents' performance does not measure up to their knowledge of effective supervisory practices. All categories of agents accepted the nine criteria of effective supervision of leaders. In general, they concurred with panel members' judgment as to the most important supervisory practices. A majority of the agents performed every practice validated by the panel and considered all but two of "average" importance or "very" important. However, their own judgment of their performance indicates that their achievement fell short of their aspirations.

An analysis, based on participation in "Leadership in Depth" conferences, of the agent's evaluation showed that:

1. More than half of the agents who did not attend a training conference, in counties not involved in the program, considered their performance of only eight of the practices wholly or partially adequate. However, *no* practice was used to this extent by 75 per cent or more of these agents. Conversely, 22 practices were used to "some" degree or "adequately" by less than 25 per cent of the agents in this group.

2. A majority of the agents, attending no training conference, in counties involved in "Leadership in Depth" performed *no* practice to "some" degree or "adequately". At the opposite end of the spectrum, *41* practices were used to "some" degree or "adequately" by less than 25 per cent of the agents in this group.

3. Only *one* practice was performed to "some" degree or "adequately" by 75 per cent or more of the agents, attending one training conference, in counties involved in "Leadership in Depth". On the other hand, *six* practices were used to "some" degree or "adequately" by less than 25 per cent of the agents in this group.

4. *Eight* practices were performed to "some" degree or "adequately" by 75 per cent or more of the agents, attending two training conferences, in counties involved in "Leadership in Depth." *Five* practices were used to "some" degree or "adequately" by less than 25 per cent of these agents.

5. *Twenty* practices were performed to "some" degree or "adequately" by 75 per cent or more of the agents, attending three training conferences, in counties involved in "Leadership in Depth". On the other hand, only *four* practices were performed to "some" degree or "adequately" by less than 25 per cent of the agents in this group.

CONCLUSIONS

The findings of the study imply the following conclusions:

1. The time agents devote to leaders varies widely. It has increased since "Leadership in Depth" was initiated, and the increase has been greater among agents attending more "Training and Refresher Conferences". "Leadership in Depth" increased agent effectiveness in both 4-H Club and other extension work.

2. The majority of Tennessee agents feel a professional responsibility for a broad range of functions related to 4-H leaders. They perform all functions to

"some" extent; but they did not feel any specific function was of much importance in their work.

3. No problems related to leaders are considered very difficult to solve by a majority of Tennessee agents. Apparently many agents haven't found the problems difficult because they haven't tried to solve them. The two problems viewed as most difficult to solve may be overcome by continual, systematic agent training in and increased time devoted to leader supervision.

4. Most agents have done some graduate work and participated in a wide variety of other in-service education activities. However, a minority of agents considered most in-service education activities "very" helpful; but those agents who had participated in two "Leadership in Depth" activities considered them of much help.

5. The same general criteria are acceptable for leader supervision as for supervision of agents. There was general acceptance of all nine criteria by both the panel and agents. The closest agreement on criteria existed between the panel and those agents with the most experience in "Training and Refresher Conferences" and in helping to conduct basic courses in "Leadership in Depth."

6. All the practices validated by the panel were performed by most agents. The adequacy of the performance of most agents leaves much room for improvement. However, the adequacy of performance seems to increase with increased training and refresher experiences related to leader supervision.

7. There is room for improvement in supervisory practices related to each criterion. Improvement of practices is accomplished by continued, specific, systematic training of agents and more time devoted to leader supervision. Most agents who use follow-up methods recommended in "Leadership in Depth" have found them useful.

IMPLICATIONS FOR ACTION

1. Leader effectiveness would be increased if agents devoted more time to training. On the whole, agents reporting the greatest increase in time devoted to leaders also reported the greatest increase in effectiveness. Most agents devoted considerably less time to leaders than was given by agents in the most effective category. The agents in the most effective category reported only 11-60 days each of their 280 work days devoted to leaders during the year.

Participating in "Training and Refresher Conferences" and helping in conducting basic leader courses have been the most helpful in-service education activities to date for those agents devoting the most time to leaders and indicating greatest effectiveness in their work. Therefore, continued emphasis on these two annual activities for all agents expected to devote any time to leaders seems justified. The findings also suggest the need for careful planning of subsequent conferences to meet the changing needs of agents.

2. Continuing attention to the following points is needed: (1) detailed job descriptions for each agent's work in leader supervision, prepared jointly by agents and their supervisors; (2) clarification of the functions of each agent in leader supervision as related to other agents in the county. This process should clarify shared responsibilities which have seemed to cause some confusion in the past.

3. As increased time and attention is given to leader supervision, and as functions are clarified, more rather than fewer difficulties may be recognized. Continual, specific, systematic training and refresher experiences for both agents and leaders appear to offer the best means to cope with new problems that are recognized as 4-H Club programs come to grips with more fundamental concerns of people.

4. There is a need for: (1) including in the present in-service training activities more specific preparation for leader supervision and/or making new activities of this type available; (2) encouraging agents to avail themselves of more opportunities for professional improvement provided by other organizations and agencies in the field of leadership training and supervision; and (3) providing the opportunity for all agents expected to train and supervise leaders to participate in regular training and refresher conferences, help conduct regular training and refresher experiences for leaders, and receive individual help as needed.

5. The concept of basing leader supervision on basic criteria of effective supervision provides agents with a new approach to the job of supervisor. These criteria provide agents a basis for planning, executing, and evaluating their supervisory programs. If the agent can be given regular, systematic training and refresher experiences designed to meet changing demands of the job, he should get a clearer concept of accepted criteria and the appropriate place of leader supervision in his work. As a result he should be able to apply his limited time more effectively.

6. The results of this study suggest action is needed to: (1) provide opportunity for all agents, expected to supervise leaders, to become more familiar with all the "very important" practices; (2) help agents discriminate between the practices related to each function which are of "some" importance and those of most importance; (3) help agents develop realistic standards of performance as a basis for measuring the adequacy of their performance; and (4) continue exploration of other practices needed.

7. In addition to the implications discussed in connection with other findings, the following are suggested: (1) encourage agents to continually evaluate their progress and programs; (2) emphasize in agent training the "why" as well as the "how" of practices; (3) provide regular, specific, and systematic basic training for new leaders coupled with follow-up and refresher experiences for experienced leaders in each county; and (4) continue experimentation with new practices which seem promising, based on research and experience.

FURTHER RESEARCH

As this study was conducted, a number of other needs for studies emerged. Some of the areas in which research appears to be most needed are:

1. Objective studies to determine the effectiveness of volunteer leaders who have been trained and supervised by agents who use the practices advocated in this study.

2. Periodical evaluations similar to the present one.

3. Research to compare the concepts of extension supervisors with those of local agents.

CONCLUDING STATEMENT

This study attempted to answer some questions concerning the supervision of 4-H Club voluntary lay leaders. Some of these questions have been conclusively answered as far as the State of Tennessee is concerned; others have not. It is hoped that this study marks some progress in our understanding of how to use lay leaders effectively.

THE PARENT-TEACHER CONFERENCE: AN ANALYSIS OF SELECTED CONFERENCE PROBLEMS

by MARCELLA SIEGEL BERNSTEIN*

THE PROBLEM

Professional literature abounds with material which indicates the desirability of affirmative home-school relationships. Scientific study of child development has placed new and complex responsibilities on parents, teachers, and community services. However, despite abundant affirmation of the need for productive home-school relationships one of the principal devices for exchange between the home and school —the parent-teacher conference—has received very little specific study.

The purpose of this study was to attempt to learn as precisely as possible what teachers in Montgomery County say are their problems with relation to parent-teacher conferences and to relate what they say to selected factors such as grade assignment, experience, age, sex, marital status, education, the teacher's self image, and number of conferences held in the past year.

The study directs attention to problems related to: (1) interview skills, (2) skills which are outgrowths of personal maturity, and (3) skills which would reflect the teacher's professional training.

PROCEDURE

The study population was made up of 1,700 elementary school teachers in Montgomery County, all of whom were invited to participate in a survey on Parent-Teacher Conferences; 1,250 responded, a return of 73 per cent. The survey was a

* B.S. in Ed. 1934, Johns Hopkins University; A.M. 1949, American University; Ed.D. conferred June 6, 1962. Professor in charge of research: Anthony Charles LaBue, *Professor of Education.*

two-part questionnaire including a background factor sheet which elicited personal data and a questionnaire which required the teacher to rate as "no problem," "mildly difficult," or "very difficult" 54 items which make up the conference complex. These items were identified by asking many teachers what they thought were important factors in the parent-teacher conference and by reviewing the literature.

Participation in the study was voluntary and anonymity of responses was safeguarded. Principals of schools were informed of the survey but had no part in the distribution or collection of the material.

Analysis of the data included the following steps:

1. Items on the conference questionnaire were classified, with the help of a jury, into three categories, those requiring interview skills, personal maturity, or professional competence.

2. For each item of background data, "Age," "Experience," and the like, responses to each of the three categories, Interview Skills, Personal Maturity, and Professional Competence were analyzed. Each respondent was given a score for each answer; "zero" for the rating of "No Problem" and a score of "one" for the rating of "Mildly Difficult" or "Very Difficult." Scores for each subsection were added to secure totals. Low scores indicate less problem. High scores mean that teachers considered the items in the subsection "Mildly Difficult" or "Very Difficult."

3. Scores were added and averaged in order to compare mean scores among criterion groups which were sub-groups of teachers classified by education, experience, sex, grade assignment, and the like.

4. Items which make up the conference complex were arranged in rank order of difficulty for each of the subsections, Interview Skills, Personal Maturity, and Professional Competence.

5. Items judged "Very Difficult" by most teachers were analyzed in terms of relevant background factors.

6. An attempt was made to show how selected background factors like "number of conferences held" and "grade assignment" were related to one another.

REVIEW OF THE LITERATURE

Search of the literature in education revealed little pertinent material on the parent-teacher conference. There are perhaps a dozen books and several score of articles of significance. Statements which encourage good home-school relationships are to be found in the literature on Administration, on Guidance, and in current professional and popular periodicals. However, these sources do not address themselves to the technical aspects of the teacher's role in the interview and do not consider with any specificity the teacher's problems with regard to the entire conference constellation.

For these reasons, literature of Social Work and Psychiatry was explored, a literature deeply concerned with the nature of relationship and, by implication, with the interview which is the setting for the development of the relationship.

Writers in the fields of education, psychology, and social work agree that although the purposes for which interviews are conducted vary from obtaining information to modifying behavior, the central issue remains: the interview must be seen

as a process of interaction between persons. The goal of this process is the establishment of a useful relationship between the participants. Repeatedly stressed is the importance of the relationship for it is in this relationship between two persons that things happen.

Literature which relates to major aspects of the parent-teacher conference was reviewed. These aspects were: (1) development of the concept of the parent-teacher conference, (2) need for conferences, (3) how parents and teachers view one another, and (4) the art of interviewing. Material from the disciplines of psychology and social work suggests that the nature of the interaction between the participants in the interview is central.

Fundamental problems include the difference between what the interviewer means and what his respondent hears, distortions motivated by conscious processes, and limitations of skill in observation and communication. Successful interviewers must appreciate and control their own biases. Frank sincerity is to be preferred over clever manipulation. A comfortable and sound relationship must be established between the two participants if progress is to be made toward the solution of any mutually agreed-upon problem.

Writers who have considered the problem agree that the focus of the parent-teacher conference is not the problems of the family, not the neurotic behavior of any family member, but singly and signally, the school work of the child.

SUMMARY OF THE FINDINGS

The Sample.—Questionnaries were distributed to 1,709 teachers of all grades in 96 elementary schools in Montgomery County. Returns were received from 1,250 or 73 per cent. Fifty responses were discarded, leaving a sample of 1,200.

Among the respondents:

Teaching experience ranged from one to more than 21 years.

93 per cent were women.

76 per cent were under 50 years of age.

75 per cent were married.

54 per cent were parents themselves.

75 per cent considered themselves fairly easygoing.

Response to items in the questionnaire.—All items in the questionnaire elicited responses. The one item which was answered by the entire sample was the one which asked the respondent's sex, and only one teacher failed to answer the item which asked about "getting a conference started." The most omitted items in the conference complex were, in rank order.

1. "The teacher dislikes the child," omitted by 66 (5 per cent) of the teachers.

2. "The teacher is much younger than the parents," omitted by 31 (3 per cent) of the teachers.

3. "The teacher is angry at the child," omitted by 27 (2 per cent) of the teachers.

4. "Ability to interpret a changing curriculum" omitted by 20 (2 per cent) of the teachers.

5. "The teacher must disappoint parents who have college expectations for a child of limited ability," omitted by 20 (2 per cent) of the teachers.

For the first and third items in the list, teachers wrote comments stating that they never dislike a child or are never angry. Among those who did answer, 40 per cent indicate "no problem" with being angry. Such a self image is hardly realistic and suggests a denial of hostility in order to present oneself as totally benign, composed, and loving.

Items judged "Very Difficult".—Each of the items was judged very difficult by some respondents. Five teachers considered "getting a conference started" difficult although this skill was rated as "no problem" by 88 per cent of the respondents. The following in rank order are the items considered "Very Difficult" by most teachers:

1. Handling negative comments so parents will not feel criticized was judged "very difficult" by 497 (41 per cent) of the teachers.

2. Disappointing parents who have college expectations for a child of limited ability was judged "very difficult" by 465 (39 per cent) of the respondents.

3. Holding a conference with parents whose child needs to be cleaner was judged "very difficult" by 415 (35 per cent) of the respondents; with parents of a child who takes others' pencils, money, lunch, was so judged by 392 (33 per cent).

4. The parent takes no responsibility for the child's behavior or attitude toward school was judged "very difficult" by 374 (31 per cent).

5. When one parent blames the other for the child's difficulty, it was considered "very difficult" by 355 (30 per cent) of the respondents.

Interrelationship of background factors.—More than half of the new teachers in the sample had, during their training, no courses in guidance, mental health, group dynamics, counseling, or interviewing. All newly employed teachers in Montgomery County in 1961 were required to have at least a Bachelor's degree. Thus, one finds over 50 per cent of the County's "fully qualified" teachers coming to their jobs with no background specifically directed to training them as professional persons in interpersonal relationships.

Largest number of parent conferences were held by kindergarten teachers who, in Montgomery County, are allowed two days at mid year for these conferences. However, despite official encouragement and released time, 37 per cent of kindergarten teachers had less than 30 parent conferences during the previous school year.

Teachers in suburban schools hold about twice as many parent conferences as do teachers in rural schools.

Scores for total sample.—The mean total score for the 1,200 respondents was 29.90 of a possible 54. A score of 27 or more was made by 65 per cent of the total group, indicating that 780 teachers judge that they would experience difficulty with at least half of the items in the questionnaire. Lowest mean scores (9.50) were made on personal maturity skills; interview skills ranked second (9.94); and highest were the scores on items which were classified under professional competence (10.45).

Scores for criterion groups.—Kindergarten teachers made the lowest mean scores in the over-all conference complex. First grade teachers and teachers for nongraded classes were more comfortable than teachers of other grades. Teachers who hold conferences for all children report less difficulty than those who focus on problems only.

Criterion groups most at risk in parent conferences were:

1. Beginning teachers
2. Teachers on intermediate grades
3. Teachers who consider themselves inclined to worry
4. Nondegree teachers
5. Teachers who have conferences only for problem children

CONCLUSIONS

The findings of the study suggest that high percentages of teachers find many elements of the conference complex difficult to handle. The teacher, as the professional member of the conference, is required to meet a level of confidence that is far beyond the usual social demands. This confidence is not easily achieved; it has to be won. Despite some responses which suggest denial of feeling, teachers' survey judgments make it clear that they appreciate many of the demands of the interview. They recognize that an interview implies not only the physical proximity of two or more persons, but that it requires that all normal channels of communication be open to use. The participants must be able not only to see but to perceive one another, to hear the quality of each other's voices, to understand each other's language.

There is a body of knowledge in psychology and in social casework which could enrich the teacher's preparation, knowledge which would help the teacher understand the conflicting emotions that parents may bring to the interview with the teacher. Teachers can learn that parents can not be open to influence from them in any positive manner until they have expressed their own feelings, that communication is not achieved until an exchange of ideas is made possible.

Although theoretical insights are necessary and could be gained from enriched educational experience, actual conference experience is difficult to achieve during a teacher's training. Consequently, school systems which want their teachers to conduct parent conferences and hope that these interviews will prove useful to children, parents, and teachers *may wish to explore ways and means of providing in-service training for their teachers.*

Many teachers in the sample seem to be unable to acknowledge their own negative feelings of anger, resentment, or dislike. Authorities unanimously agree that such a denial is conducive neither to mental health nor to emotional stability. This was repeatedly emphasized in the literature reviewed. Those teachers who *can* face their own hostility admit that it is most difficult to handle in parent-teacher conferences. Until such time as their training—and the school milieu—insures more realistic percepts and less rigid self-expectations, teachers will be dependent upon others in the professional setting for psychological insights and emotional support. *Some way should be found to offer them such support in a comfortable and dependable fashion.*

Teachers rate as "difficult" items with which they have first-hand experience but which do not reflect on them, items like "The child needs to be cleaner." It is interesting that the lowest scores, indicating *least* problem, were made on the personal maturity items despite the fact that each such item contained an open or implied threat to the teacher. One can hardly escape the conclusion that denial is operating here also when large numbers of teachers allege that it would be "no problem" if

the parent dislikes the teacher. Only mischief can ensue from such denial and pretense of invulnerability. *Teachers need help so that they will be able to acknowledge their fears and negative feelings.* Such acknowledgement enables the teacher to be the master rather than the victim of the feelings and as a consequence enables him to be direct and candid with parents rather than defensive, stilted, and artificial.

Since kindergarten teachers made the lowest scores, scores which indicate the least problem, several conclusions suggest themselves. First, the training of kindergarten teachers may have elements which give these teachers more insights and security. Second, parents may be more accepting of their children's performance in kindergarten and, third, kindergarten teachers report appreciably *more* conferences than other groups of teachers. Furthermore, first grade teachers and teachers of ungraded classes also indicate less difficulty and also have more conferences than most other groups. Is the repeated conference experience itself perhaps the significant factor? *Do these teachers indeed learn by doing?*

FURTHER RESEARCH

The findings of the study suggest that:

1. It would be useful to survey teacher training institutions to determine the course content which is focused on helping the student teacher gain skills and insights in the dynamics of relationship.

2. Pilot programs of interdisciplinary seeding of theoretical concepts could well be undertaken in universities which offer training for teachers, social workers, psychiatrists, and anthropologists. Evaluation of such programs, including provision for follow-up of teachers for several years after their assignment to schools, should be most helpful to schools of education in planning curricula.

3. School systems could plan a variety of approaches to in-service training for parent-teacher conferences and evaluate them over a period of years to determine which is most effective.

4. It would be enlightening to address a similar study to parents.

ORGANIZATION AND FUNCTIONS OF THE CENTRAL STAFF OF THE OFFICE OF THE SUPERINTENDENT IN SUBURBAN SCHOOL DISTRICTS WITH POPULATIONS OF 10,000 TO 100,000

by JOHN MORRISON KING*

PURPOSES OF THE STUDY

The purposes of the study were to discover (1) the organization, functions, and size of central administrative staffs; (2) any relationships existing between the staff organization and the size of the school district population; and (3) any relationships between staff organization and the instructional cost per pupil.

PROCEDURES

The first step was to review and interpret the literature related to the organization, size, and functions of the central staff of the office of the superintendent of schools. The literature was analyzed according to (1) studies related to administrative staff size, organization, and functions; (2) the line-and-staff concept in relation to administrative organization; (3) responsibilities of the superintendent in relation to staff organization and functions; (4) the business manager and the administrative assistant in relation to staff organization; (5) grade organizational patterns in relation to staff organization; and (6) size, functions, and organization of the central administrative staff as related to district populations and to annual pupil costs.

The second step was the formulation of a status questionnaire and the completion of a survey to ascertain the organization, size, and functions of the central administrative staff of the office of the superintendent of 262 suburban school systems within the 10,000 to 100,000 district population range. The questionnaire yielded data concerning the following background factors of the school systems involved in the study: (1) title of the school district political unit, (2) school district area, (3) school district population, (4) average daily attendance in school systems, (5) elementary and secondary grade organization, (6) annual per pupil cost, (7) annual cost for central office administration, (8) annual rate of growth of average daily attendance, (9) number of teachers in the system, (10) annual rate of teacher turnover, (11) status of the superintendent, (12) housing arrangement for the central office staff, and (13) policies for the selection of administrative staff members. The questionnaire also yielded data concerning the administrative organization and functions of the central office in relation to the staff positions of assistant superintendent,

* A.B. 1929, Central State College, Oklahoma; A.M. 1935, University of Oklahoma; Ed.D. conferred June 6, 1962. Professor in charge of research: James Harold Fox, *Professor of Education*.

director, administrative assistant, business manager, and elementary and secondary general supervisors.

The third step was to analyze the data in terms of relationships between administrative staff organization and (1) the size of school district populations and (2) the annual instructional cost per pupil. The methods used in the analysis of the data were, for the most part, the computation of averages and percentages.

FINDINGS

1. The superintendent is directly responsible for the program of instruction and the department of personnel in the majority of the school systems: he delegates responsibility more frequently in the larger systems and in the systems where pupil costs are higher.

2. The superintendent is directly responsible for public relations in the large majority of the school systems; he delegates the responsibility more frequently in the larger systems. Higher pupil costs do not appear to be a significant factor in the delegation of responsibility for public relations.

3. The superintendent is directly responsible for research in all but sixteen of the larger systems. Pupil costs do not appear to be a significant factor in the delegation of this responsibility.

4. In four-fifths of the systems all administrators, including the business manager, are directly responsible to the superintendent. In some of the smaller systems, and in some systems where the annual per pupil costs are less than $400.00, the business manager reports directly to the board of education.

5. The superintendent delegates the responsibility for business affairs in all of the larger systems and in the systems that spend more than $500.00 annually per pupil.

6. Lack of balance was discovered in the assignment of administrative functions. Some staff members appear to be overloaded in comparison with other staff members.

7. Those in the position of assistant superintendent are often delegated the responsibility for the program of instruction, the department of personnel, and the management of business affairs.

8. More frequently in the larger than in the smaller systems the responsibility for business affairs, the program of instruction, and the department of personnel are delegated to one or more assistant superintendents.

9. An assistant superintendent is responsible for the program of instruction and business affairs more frequently in systems that spend more than $500.00 annually for each pupil. There appears to be no relationship between his responsibility for personnel matters and per pupil costs.

10. There are relatively few systems in which an assistant superintendent is in charge of public relations or research. The systems in which he is delegated this responsibility are the larger ones and those that spend more than $500.00 annually per pupil.

11. A relationship was not discovered between numbers of directors and assistant superintendents in systems and district populations or per pupil costs. Many smaller

systems have as many directors and assistant superintendents as larger systems, and per pupil costs do not appear to be a significant factor.

12. Responsibility for public relations and instruction is often delegated to one who holds the position of director.

13. The responsibilities for public relations and instruction are delegated to directors more frequently in larger than in smaller systems. Directors are in charge of public relations more often in systems that spend more than $500.00 each year per pupil than in systems that spend less. There appears to be no relationship between the number of directors in charge of instruction and pupil costs.

14. Less than one-half of the systems have administrative assistants; though there appears to be no relationship between numbers of administrative assistants in systems and school district populations. They are more frequently found in systems that spend more than $500.00 annually per pupil.

15. In very few of the systems, and in only the smaller ones, are administrative assistants responsible for personnel, business affairs or public relations. There are no systems in which they are delegated the responsibility for the program of instruction.

16. No significant relationship was discovered between the frequency with which administrative assistants are delegated responsibility for personnel and business affairs and the amount spent annually per pupil.

17. The business manager, who is directly responsible to the superintendent in four-fifths of the systems, is one of the principal members of the staff to whom the superintendent delegates the responsibility for business affairs. He is more frequently in charge of business affairs in the larger systems and in systems that spend more than $500.00 annually for each pupil.

18. The majority of the systems have general elementary supervisors assigned to the central staff. They are found more frequently in larger systems and in systems that spend more than $500.00 each year per pupil.

19. One-third of the systems have general secondary supervisors assigned to the central staff. They are found more frequently in larger systems and in systems that spend more than $500.00 each year per pupil.

20. A supervisor in charge of the program of instruction is found in very few systems. None are in charge of instruction in the larger systems, and the systems in which a supervisor is in charge spend less than $500.00 annually per pupil.

21. There are very few systems in which a supervisor is in charge of the department of personnel. None are in charge in the larger systems, and there appears to be no relationship between the number of supervisors in charge of personnel and annual per pupil costs.

RECOMMENDATIONS

Analysis of the data in this study warrants the following recommendations.

1. Job descriptions should be established for all members of the central administrative staff. Although local conditions and available personnel may impose limitations on the selection of administrators, clearly defined areas of operation would eliminate overlapping of authority and duplication of performance of functions.

2. There should be a better understanding and interpretation of the nomen-

clature of titles of administrative positions on the central staff. For example, the role of an assistant superintendent should be more clearly distinguished from the role of an assistant to the superintendent.

3. An analysis of staff-directed functions and building-controlled functions might establish a clearer understanding of the spheres of operation between staff and building administrators.

4. Research is needed to analyze other factors that might lead to the implementation of more uniform and functional practices in central office administrative staffing in suburban school systems. Some suggested areas of study are: (a) the financial ability of school systems in relation to pupil costs and administrative staffing, (b) comparisons between suburban and urban administrative staff organization to discover conditions related to understaffing, and (c) to find relationships between administrative staffing problems in suburban school systems within the population range of this study and a higher population range of suburban systems.

THE NUMBER, INTENSITY, AND PERSISTENCE OF PROFESSIONAL PROBLEMS OF BEGINNING ELEMENTARY SCHOOL TEACHERS AS RELATED TO PATTERNS OF TEACHER PREPARATION

by LUTHER FRANKLIN SIES*

THE PROBLEM

Studies concerned with the problems experienced by elementary school teachers have focused primarily on identifying problems. Few have attempted to determine the possible relationships of professional preparation to actual difficulties experienced in the classroom. Until more is known about these relationships elementary teachers will not be adequately prepared to meet the complex demands made by contemporary American society. This study sought to provide some data regarding these relationships.

This was a study of the number (frequency), intensity, and persistence of professional problems experienced by three groups of beginning female elementary

*A.B. 1948, Ed.M. 1954, Western Maryland College; B.S. in Ed. 1950, Maryland State Teachers College, Towson; Ed.D. conferred June 6, 1962. Professor in charge of research: Anthony Charles LaBue, *Professor of Education*.

school teachers with varied patterns of professional preparation. More specifically the study had two major purposes:

1. To identify the professional problems of three groups of beginning female elementary school teachers.

a. A group of elementary school teachers who graduated from a liberal arts institution with a Bachelor of Arts degree and who had neither completed more than 12 hours of professional education course work, nor performed student teaching. This group was designated as the No Teacher Preparation group.

b. A second group of elementary teachers who have graduated from a school of education, teachers college, or liberal arts college with a Bachelor's degree representing a major in secondary education. This group was designated as the Secondary Teacher Preparation group.

c. A third group of elementary school teachers who graduated from a school of education or teachers college with a Bachelor's degree representing a major in elementary education. This group was designated as the Elementary Teacher Preparation group.

2. To determine the differences in the number (frequency), intensity, and persistence of the professional problems experienced by beginning elementary school teachers with the above patterns of professional preparation.

PROCEDURE

A preliminary and comprehensive review of the literature pertinent to the professional problems reported by both experienced and beginning teachers preceded the organizational phase of this study. This review specifically focused upon the literature relating to various problems experienced by beginning elementary school teachers.

The sample for this study was made up of 119 female elementary school teachers from two county school systems in the greater Washington area. All teachers had completed either their first or second year of teaching.

Two types of data were needed from each teacher in the sample. One type of data was concerned with information related to educational preparation and teaching experience. These data were obtained by means of a background information questionnaire.

The other type of data needed was concerned with the number (frequency), intensity, and persistence of professional problems in carrying out selected professional activities. For securing these data, a self-rating scale was devised. Seventy-one professional activities were included in this scale. Each teacher was asked to rate each professional activity in terms of (1) the difficulty in working with it; (2) its intensity as a professional problem; and (3) its persistence as a professional problem.

The analysis of background information questionnaires permitted the researcher to:

1. Identify preparation factors and experience factors
2. Classify the subjects into three criterion groups

The analysis of the data obtained from the Rating Scale resulted in:

1. Computing mean ratings for each criterion group on each scale (frequency, intensity, and persistence)

2. Testing the significance of the difference between mean ratings among criterion groups for each scale

3. Computing percentages for each specific professional activity representing identification by subjects of the criterion groups as frequent, intense, and persistent professional problems

4. Testing the significance of the differences between percentages among criterion groups for specified professional activities on each scale

SUMMARY OF THE FINDINGS

With respect to the mean ratings for the criterion groups based on the analysis of rating scale responses of frequency, intensity, and persistence, the study showed that:

1. The Elementary Teacher Preparation subjects had fewer professional problems than did the No Teacher Preparation subjects.

2. The Elementary Teacher Preparation subjects had fewer persistent professional problems than did the No Teacher Preparation subjects.

Statistical analysis of the differences between percentages among the criterion groups apparently indicates that significant differences exist. This analysis of the differences between percentages was performed for the factors of frequency (number), intensity, and persistence of professional problems.

With respect to the frequency (number) of professional problems, the study showed that:

1. The Elementary Teacher Preparation group experienced significantly less difficulty with thirty-eight professional activities than did the No Teacher Preparation group.

2. The Elementary Teacher Preparation group experienced significantly less difficulty with nine professional activities than did the Secondary Teacher Preparation group.

3. The Secondary Teacher Preparation group experienced significantly less difficulty with thirteen professional activities than did the No Teacher Preparation group with respect to frequency as a problem.

With respect to the intensity of professional problems, the study shows that:

1. The Elementary Teacher Preparation group experienced significantly less difficulty with eight professional activities than did the No Teacher Preparation group.

2. The Elementary Teacher Preparation group experienced significantly less difficulty with two professional activities than did the Secondary Teacher Preparation group.

3. The Secondary Teacher Preparation group experienced significantly less difficulty with three professional activities than did the No Teacher Preparation group.

With respect to persistence of problems, this study showed that:

1. The Elementary Teacher Preparation group experienced significantly less

difficulty with thirteen professional activities than did the No Teacher Preparation group.

2. The Elementary Teacher Preparation group experienced significantly less difficulty with two professional problems than did the Secondary Teacher Preparation group.

3. The Secondary Teacher Preparation group experienced significantly less difficulty with three professional activities than did the No Teacher Preparation group.

CONCLUSIONS

This investigation seems to support the following generalizations and conclusions:

1. Teachers who had completed an elementary education sequence had fewer and less persistent problems than liberal arts graduates who had not completed a professional sequence of any kind.

2. When specific professional activities are analyzed it appears that teachers who have completed an Elementary Education sequence are better able to recognize and utilize principles underlying the dynamics of learning and individual growth and development than teachers who completed no professional education sequence of any type. The teachers who performed student teaching and completed the course work of the professional education sequence apparently were better able to recognize in advance the requirements of the teaching profession and some of the problems it presents, and to understand the administrative duties and extracurricular participation it entails. A realistic view of teaching, then, in combination with some recognition of, and experience with its problems may account for the differences found between these two groups.

3. Teachers who had completed a professional elementary education sequence experienced significantly fewer problems than did those teachers who completed a professional secondary education sequence and accepted a teaching position in the elementary school.

4. Teachers who had completed an elementary education sequence experienced fewer difficulties with activities related to providing for individual differences which are found among children in the elementary classroom; providing an atmosphere for optimal learning; and the motivating of pupils than did teachers who had completed a secondary education sequence. They also experienced less difficulty using the community as a laboratory for learning experiences. Practice Teaching and course work in the secondary education sequence most likely did not provide the teachers with the experiences and skills needed to teach elementary children.

5. There were no significant differences between the teachers who had completed a professional secondary education sequence and those teachers who had not completed a professional education sequence of any type with respect to the mean number of professional problems experienced in terms of frequency, intensity, and persistence. Teachers who had completed a secondary education sequence experienced less difficulty with activities concerned chiefly with the planning and conducting of group work, the learning process, and co-operating with specialists in remedial programs. The requirements of the teaching profession and its administrative duties

also were activities for which the teachers trained for the secondary school experienced significantly fewer problems than did those who had completed no professional education sequence. Each of these problem areas most likely was related to a lack of knowledge and understanding of the professional aspects of teaching. Although their course work and professional laboratory experiences were not planned primarily to prepare them for teaching in the elementary school it is apparent that the Secondary Teacher Preparation teachers profited from their professional education sequence.

6. Fewer significant differences were found between the Elementary Teacher Preparation and the Secondary Teacher Preparation teachers, than between the Elementary Teacher Preparation and the No Teacher Preparation teachers. When present these differences would appear to be those which specifically concern the duties of the elementary school teacher as contrasted with those of a secondary school teacher. These differences apparently are an outgrowth of the specialized Secondary Education sequence which they had completed. The differences between these two groups with respect to the intensity and persistence of problems appear to indicate that their professional education sequence enabled them to identify and solve professional problems as they arose.

7. Although many professional problems were identified the number identified as intense and persistent were relatively smaller. Student teaching provides learning opportunities to which teachers respond. It seems, however, to provide more opportunity for teachers who have already received professional training. This points up the importance of professional laboratory experiences.

FURTHER RESEARCH

As one analyzes the findings in this study, certain needs for further research and study in the following areas seem apparent:

1. A study of professional problems to determine the possible differences among problems identified by teachers who have experienced varied patterns of student teaching, such as duration of student teaching, part-time or full-time, etc.

2. A follow-up study of teachers who began teaching without professional preparation to determine the effect of classroom experience and in-service training upon the number (frequency), intensity, and persistence of professional problems they experience.

3. A longitudinal study of graduates who have completed an Elementary Teacher Preparation sequence to trace changes in the frequency, intensity, and persistence of professional problems.

4. A study of the number (frequency), intensity, and persistence of professional problems reported by elementary teachers who have had at least ten years' teaching experience. What do they believe was instrumental in helping them solve the professional problems they encountered?

5. A comparative study of the number (frequency), intensity, and persistence of professional problems experienced by beginning male and female elementary school teachers who have completed a professional Elementary Education sequence.
